Edward R. Magnuson

Paulding, N.J.

Pole [illegible]...

President Eisenhower today sent a New Year's message to Russia's leaders, expressing hope for better understanding among the peoples of the world in the year ahead...in particular BETWEEN the citizens of the Soviet Union and the United States. "You may be assured," said Mr. Eisenhower, "that the government of the United States will extend every effort to that end." The President's message was in response to New Year's greetings received from Moscow. The Soviet communication was signed by President Voroshilov, Premier Bulganin and party boss Khrushchev...and called for peaceful coexistence and the strengthening of friendship. At a Kremlin reception last night, Khrushchev toasted the United States and said that agreement between the United States and Russia would, in his words, "solve most of the world's problems." The party newspaper Pravda today accused the United States of preparing a new war.

(4)

"The capitalists," it said, "are forming military blocs and aggressive alignments against the U.S.S.R." (wiley)

The so-called Afro-Asian conference ended today in Cairo...and, as expected, resolutions were approved denouncing NATO, the Eisenhower Doctrine and the Baghdad Pact. The delegates...who did not officially represent their countries...also passed resolutions condemning "imperialism in all forms" and calling for an immediate end to nuclear weapons tests. The final political resolution condemned France for "atrocities" in Algeria. In the last session, efforts by India and Tunisia to modify the anti-Western tone of some of the resolutions were voted down. For example, Tunisia tried to have the condemnation of the Eisenhower Doctrine taken out of the final communique.

In Israel, David Ben Gurion today AGREED CONDITIONALLY TO TRY to form a new government. Ben Gurion resigned as prime minister yesterday in a dispute involving national security. He charged leftist members of his cabinet with leaking government secrets. And if he succeeds in putting together a new coalition, two left-wing parties probably would be left out. Ben Gurion said today

(49) (more)

that he would attempt to form a new government---provided that he finds out, within the next few days, that it would make special provisions "for absolute secrecy regarding deliberations on security and foreign affairs." Reports from Jerusalem say that if Ben Gurion has trouble naming a cabinet, he may ask to have Parliament dissolved and call for new elections.

A revolution broke out today in Venezuela. The revolt is said to have started at the air base at Maracay, 50 miles from the capital city of Caracas, and reportedly is being led by members of the Venezuelan air force. Rebel planes made several passes over Caracas, and were attacked by anti-aircraft fire. The government announces that one of the planes was shot down. It also says the revolt only involves the men at the air base. And it has appealed to the country to keep calm. The outbreak comes just 17 days after the re-election of President Perez to a five-year term. The election was conducted in the form of a plebiscite, in which voters could mark their ballots only "yes" or "no".

(64)

1. One of my colleagues...who are back in this country from their foreign assignments...is Ernest Leiser, who reports to us through the year from Germany and to whom I should now like, ~~did I say,~~ to put a few questions. Next Sunday, West German Chancellor Adenauer will be 82 years old. Tell me, Ernie, what happens when he is no longer in office?

2. What about political agitation for German reunification? How strong is it? [redacted]

3. What are the odds for setting up intermediate range missile bases in West Germany? Any chance of the Germans making a deal with Moscow?

4. Ernie, over here, we're worried about our training of scientists. Did I understand you to say the other day that the West Germans have a similar problem?

5. Whatever happens in the New Year, the most important things may be happening in Germany. What do you think will happen?

6. Tell me, what is the future of German democracy?

(more)

1. What happens when Adenauer no longer is in office?

Ed, there'll be a reasonably orderly transfer of power to someone else within Adenauer's own party -- the Christian Democrats. They hold a comfortable majority of seats in the West German Parliament and it will be the Christian Democrat members in Parliament who pick the next Chancellor. There'll be a personal contest for power -- Vice-Chancellor Erhard, the architect of the German "economic miracle" seems to have the edge now, but any of a half-dozen other leading figures could win -- but whoever wins it's not likely to affect government stability. A change could, however, affect government policy: Adenauer has made full and faithful membership in NATO the key point of his foreign policy; some people even within his own party have begun to question that policy; and without Adenauer's strong old hand on the reins, there may be pressure not to break out of the Alliance but perhaps to ease out.

Of course, I should point out, Ed, that old Adenauer is a remarkably durable 82 and he, at least, figures he'll be around quite a while longer. On his campaign train last summer, I asked him if he really wanted to serve another term at his age. He said that reminded him of the story of Pope Leo Ninth, who was receiving the Dean of the Diplomatic Corps on the Pope's ninetieth birthday. The diplomat expressed the congratulations of his colleagues and said, "Your Holiness, We hope you live to be a hundred." The Pope looked at him, winked, and replied, "Why put limits on Divine Grace?"

2. What about political agitation for German reunification? How strong is it?

Ed, popular agitation for German unity is a lot less strong than most people think -- it's a lot weaker than it would be here in the U.S., I suspect, if our country were divided. No German politician would ever speak out against reunification, of course; it would be almost as bad as opposing motherhood. But there's just not any popular groundswell demanding German unity now. In West Germany, they're a lot more concerned over whether they can graduate from a motor-scooter to a Volkswagen; in East Germany they're numb.

(more)

2-2-2-2 Leiser

I think it's worth noting Ed that, during the election campaign last summer, at no time did Adenauer make any promises of, or hold out any immediate hope for, unity. And Adenauer won the election hands down.

3. What are the odds for setting up intermediate range missile bases in West Germany? Any chance of the Germans making a deal with Moscow?

The question I've been asked most often since I've been back, Ed, is whether the Germans are now seeking a deal with the Russians. I think the best answer is: If we don't try, at least, to work out some deal with the Soviets with and for them; they may try to see what they can do on their own. They're not disposed to negotiate behind our backs; they still are prepared to follow our lead. But they demand that we do lead in trying new exploratory talks with Russia. ~~Their reason for wanting a deal is less an urgent desire to see their own problem, the German problem, resolved, than it is an urgent fear now of a new war if there's no deal; a war that would destroy in ten minutes the cities they've just spent ten years in rebuilding from last time.~~ the last war.

On the question of missile bases, Ed, I just don't know if we'll get them because the Germans still don't know if they'll take them. They do know that they want to try talking with the Russians first, to see if there's any basis for at least a limited pull back on both sides from mid-Germany, before they decide. They've made clear they'll not decide at least until the NATO Foreign Ministers meet again late in spring: I suspect they'll stall even longer than that because the kind of probing operation they propose to undertake in Moscow is a slow one. I would guess that in the long-run, if talks with the Russians get nowhere, and if our own posture of leadership is more impressive than it is now, they will let us put the bases on their soil.

4. Scientists. Did I understand you to say the other day that the West Germans have a similar problem?

We always think, Ed, of Germany as a storehouse of scientific and engineering genius. Well, today, the storehouse is half-empty. They're short forty thousand engineers now; each year the shortage is growing by five thousand. The status of the scientist in Germany is still high -- there's still almost devout respect for the Herr Professor -- but his pay is low. The famous old Universities can't find enough young research men; their high schools, too, are short of teachers. And they're losing some good scientists to us, even now; something that makes them pretty bitter. They still think their educational system is good -- and certainly at grammar and high school level it's far tougher than ours; but the system's best products are now going into business and law and banking -- the "safer" and more profitable professions. in Germany, too, today.

5. Whatever happens in the New Year, the most important things may be happening in Germany. What do you think will happen?

Ed, you're making me break my one New Year's Resolution; not to predict anything about the unpredictable Germans. Well -- I don't foresee 1958 as a year of sweeping political change in Germany, even if Adenauer passes from the political scene. I think it may be a year of beginning of a change as these exploratory talks with the Russians go on; modestly a pretty significant clue to that was the New Year's Day message of West German President Heuss, calling for flexible diplomacy to get out of the arms race. Normally Heuss is only a ceremonial figure; this is almost the first time he's spoken out on any political issue.

I think there's a possibility of something very dangerous happening in Berlin. Almost every week the East German Communists tighten the squeeze on West Berlin just a little more; and if the Soviets allow them to enforce their protests against our use of the air corridors to Berlin -- they claim the air corridors violate East Germany's territorial integrity -- we're really in for trouble.

6. What is the future of German democracy?

Ed, almost all the outward signs that a reporter can find in West Germany are pretty encouraging for the future of German democracy. They have a vigorous free press; their representative institutions are strong; state and local communities are jealous of their rights; they've been generous in restitution to the survivors of Nazism; the intellectual climate is admirably free, if not very impressively creative. But I think, frankly, it's still too early to make any confident prediction about the future of German democracy. ~~After all, there is still no Germany;~~ and when the two provisional parts are put together, no one can surely foresee what will happen. ~~[illegible]~~ The London Times has called West Germany "an economy in search of a country"; that may be a bit harsh but it's not inaccurate. It's ~~[illegible]~~ awfully hard to say anything about Germany's future because the Germans now aren't really looking into the future; they're living, with almost ~~[illegible]~~ single-minded absorption, in the present.

:56

Ernie, thank you for taking time out on this holiday to answer questions. Good luck to you in the New Year.

This is Ed Murrow. I'll be back in a moment with the Word for Today. But first a word from George Bryan.

Word for Today...

At the start of this New Year...in which so much depends on what we do...this wise counsel from Dr. Charles F. Kettering. "If we would quit studying history and go ahead and study the future, we would be much better off. The future course of our lives will be spent in the future, and it ought to be what we think." Goodnight and good luck.

Alternate word

At the start of the New Year...in which so much depends on what we do...this wise counsel from Henry Ward Beecher, who observed, "It is not the going out of port but the coming in that determines the success of a voyage." And Theodore Roosevelt said, "Let us shrink from no strife, moral or physical, provided we are certain that the strife is justified." Goodnight and good luck.

CBS RADIO DIVISION

EDWARD R. MURROW WITH THE NEWS

Wednesday, January 1, 1958

7:45 - 8:00 P.M.

MURROW: ... One of my colleagues, who're back in this country from their foreign assignments, is Ernest Leiser, who reports to us throughout the year from Germany and to whom I should now like to put a few questions. Next Sunday West German Chancellor Adenauer will be eighty-two years old. Tell me, Ernie, what will happen when he is no longer in office?

LEISER: Ed, there'll be a reasonably orderly transfer of power to some one else within Adenauer's own party, the Christian Democrats. They hold a comfortable majority of seats in the West German Parliament, and it will be the Christian Democrat members in Parliament who pick the next chancellor. There'll be a personal contest for power. Vice Chancellor Erhardt, the architect of the German economic miracle, seems to have the edge now. But any of a half dozen other leading figures could win. But whoever wins is not likely to affect government stability. A change could however affect government policy. Adenauer has made full and faithful membership in NATO the key point of his foreign policy. Some people - even within his own party - have begun to question that policy. And without Adenauer's strong old hand on the reigns, there may be pressure not to break out of the alliance but perhaps to ease out.

MURROW: Ernie, what about political agitation for German reunification, how strong is it?

LEISER: Ed, popular agitation for German unity is a lot less strong than most people think. It's a lot weaker than it would be here in the U.S., I suspect, if our country were divided. No German politician would ever speak out against reunification of course, it would be almost as bad as opposing motherhood. But there's just not any popular ground swell demanding German unity now. In West Germany, they're a lot more concerned

over whether they can graduate from a moter-scooter to a Volkswagon. In East Germany, they're numb. I think it's worth noting, Ed, that during the election campaign last summer at no time did Adenauer make any promises of or hold out any immediate hope for unity. And Adenauer of course won the election hands down.

MURROW: What're the odds for setting up intermediate range missile bases in West Germany? Any real chance of the Germans making a deal with Moscow?

LEISER: Well, the question I've been asked most often since I've been back, Ed, is whether the Germans are now seeking a deal with the Russians. I think the best answer is if we don't try at least to work out some deal with the Soviets with and for the Germans, they may try to see what they can do on their own. They're not disposed to negotiate behind our backs. They still are prepared to follow our lead. But they demand that we do lead in trying new exploratory talks with Russia.

On the question of missile bases, Ed, I just don't know if we'll get them, because the Germans still don't know if they'll take them. They do know that they want to try talking with the Russians first to see if there's any basis for at least a limited pull-back on both sides from middle Germany before they decide. They've made clear that they'll not decide at least until the NATO foreign ministers meet again late in the spring. I suspect that they'll stall even longer than that because the kind of probing operation they propose to undertake in Moscow is a slow one. I would guess that in the long run, if talks with the Russians get nowhere and if our own posture of leadership is more impressive than it is now, they will ultimately let us put the bases on their soil.

MURROW: Well, Ernie, as you've undoubtedly discovered since you came home, (poor recording) ...

LEISER: Almost every week the East German Communists tighten

the squeeze on West (indistinct) a little more. And if the Soviets allow them to enforce their protests against our use of the air corridors to Berlin, they claim the air corridors violate East Germany's territorial integrity, we're really in for trouble.

MURROW: Well, Ernie, now that you've broken your New Year's resolution - you said the other day that roots of German democracy were rather tender, how do you feel of the future?

LEISER: Ed, almost all the outward signs that a reporter can find in West Germany are pretty encouraging for the future of German democracy. They have a vigorous free press, their representative institutions are strong, State and local communities are jealous of their rights, the Germans have been generous in restitution to the survivors of Nazism and the intellectual climate is admirably free if not very impressively creative. But I think frankly it's still too early to make any confident prediction - and when the provisional parts of Germany are put together, no one can surely foresee what will happen.

MURROW: Thank you very much indeed, Ernie Leiser, for taking time out on this holiday to answer some questions and good luck to you when you go back to Germany.

LEISER: Thank you, Ed Murrow.

MURROW: This is Ed Murrow. I'll be back in a moment with the word for today.

CBS RADIO NETWORK

JANUARY 1, 1958
7:45 - 8:00 PM EST

This is the news:

A British commercial plane today was reported forced down by fighter aircraft over Albania. The British Foreign Office first reported the plane...a Skymaster DC-4...overdue at Damascus on a flight from West Germany to the Far East. It said a message from the aircraft...picked up yesterday by the Italian radio... spoke of being intercepted by jet fighters. Later, Italian authorities who plotted the course of the aircraft on radar said the plane was intercepted by two fighters and apparently was forced to land at Valone Airport, on the Albanian coast. The Italian radar station is located at Brinisi, directly across the Adriatic Sea from Valone, a distance of some 85 miles. The British owners of the cargo plane say it carried a crew of six...and that it was transporting equipment for another airline. The owners quote an Albanian broadcast as saying that the plane violated the air space of Albania. Britain has not maintained diplomatic relations with the Communist government of Albania. And the British Foreign Office says the French government...which looks after British interests in Albania...is making urgent inquiries of the Albanian authorities on its behalf. A French legation official in Tirana, the capital of Albania, said tonight that all crew members involved in the incident are safe and in good health.

President Eisenhower today sent a New Year's message to Russia's leaders, expressing hope for better understanding among the peoples of the world in the year ahead...in particular between the citizens of the Soviet Union and the United States. "You may be assured," said Mr. Eisenhower, "that the government of the United States will extend every effort to that end." The President's message was in response to New Year's greetings received from Moscow. The Soviet communication was signed by President Vorishilov, Premier Bulganin and party boss Khrushchev...and called for peaceful coexistence and the strengthening of friendship. At a Kremlin reception last night, Khrushchev toasted the United

States, and said that agreement between the United States and Russia would in his words, "solve most of the world's problems." The party newspaper Pravda today accused the United States of preparing a new war. "The capitalists," it said, "are forming military blocs and aggressive alignments against the U.S.S.R."

The so-called Afro-Asian conference ended today in Cairo...and, as expected, resolutions were approved denouncing NATO, the Eisenhower Doctine and the Baghdad Pact. The delegates...who did not officially represent their countries...also passed resolutions condemning "imperialism in all forms" and calling for an immediate end to nuclear weapons tests. The final political resolution condemned France for "atrocities" in Algeria. In the last session, efforts by India and Tunisia to modify the anti-Western tone of some of the resolutions were voted down. For example, Tunisia tried to have the condemnation of the Eisenhower Doctrine taken out of the final communique.

In Israel, David Ben Gurion today agreed conditionally to try to form a new government. Ben Gurion resigned as prime minister yesterday in a dispute involving national security. He charged leftist members of his cabinet with leaking government secrets. And if he succeeds in putting together a new coalition, two left-wing parties probably would be left out. Ben Gurion said today that he would attempt to form a new government---provided that he finds out within the next few days, that it would make special provisions "for absolute secrecy regarding deliberations on security and foreign affairs." Reports from Jerusalem say that if Ben Gurion has trouble naming a cabinet, he may ask to have Parliament dissolved and call for new elections.

A revolution broke out today in Venezuela. The revolt is said to have started at the air base at Maracay, 50 miles from the capital city of Caracas, and reportedly is being led by members of the Venezuelan air force. Rebel planes made several passes over Caracas, and were attacked by anti-aircraft fire. The government announces that one of the planes was shot down. It also says the revolt involves only the men at the air base. And it has appealed to the country to keep

calm. The outbreak comes just 17 days after the re-election of President Perez to a five-year term. The election was conducted in the form of a plebiscite, in which voters could mark their ballots only "yes" or "no."

One of my colleagues, who're back in this country from their foreign assignments, is Ernest Leiser, who reports to us throughout the year from Germany and to whom I should now like to put a few questions. Next Sunday West German Chancellor Adenauer will be eighty-two years old. Tell me, Ernie, what will happen when he is no longer in office?

LEISER: Ed, there'll be a reasonably orderly transfer of power to someone else within Adenauer's own party, the Christian Democrats. They hold a comfortable majority of seats in the West German Parliament, and it will be the Christian Democrat members in Parliament who pick the next chancellor. There'll be a personal contest for power. Vice Chancellor Earhardt, the architect of the German economic miracle, seems to have the edge now. But any of a half dozen other leading figures could win. But whoever wins is not likely to affect government stability. A change could however effect government policy. Adenauer has made full and faithful membership in NATO the key point of his foreign policy. Some people - even within his own party - have begun to question that policy. And without Adenauer's strong old hand on the reigns, there may be pressure not to break out of the alliance but perhaps to ease out.

MURROW: Ernie, what about political agitation for German reunification, how strong is it?

LEISER: Ed, popular agitation for German unity is a lot less strong than most people think. It's a lot weaker than it would be here in the U.S., I suspect, if our country were divided. No German politician would ever speak out against reunification of course, it would be almost as bad as opposing motherhood. But there's just not any popular ground swell demanding German unity now. In West Germany, they're a lot more concerned over whether they can graduate from a motor-scooter to a Volksvagon. In East Germany, they're numb. I think it's worth

noting, Ed, that during the election campaign last summer at no time did Adenauer make any promises of or hold out any immediate hope for unity. And Adenauer of course won the election hands down.

MURROW: What're the odds for setting up intermediate range missile bases in West Germany? Any real chance of the Germans making a deal with Moscow?

LEISER: Well, the question I've been asked most often since I've been back, Ed, is whether the Germans are now seeking a deal with the Russians. I think the best answer is if we don't try at least to work out some deal with the Soviets with and for the Germans, they may try to see what they can do on their own. They're not disposed to negotiate behind our backs. They still are prepared to follow our lead. But they demand that we do lead in trying new exploratory talks with Russia.

On the question of missile bases, Ed, I just don't know if we'll get them, because the Germans still don't know if they'll take them. They do know that they want to try talking with the Russians first to see if there's any basis for at least a limited pull-back on both sides from middle Germany before they decide. They've made clear that they'll not decide at least until the NATO foreign ministers meet again late in the spring. I suspect that they'll stall even longer than that because the kind of probing operation they propose to undertake in Moscow is a slow one. I would guess that in the long run, if talks with the Russians get nowhere and if our own posture of leadership is more impressive than it is now, they will ultimately let us put the bases on their soil.

MURROW: Well, Ernie, as you've undoubtedly discovered since you came home we're having a problem with scientists. Did I understand you to say the other day that the West Germans have a similar problem?

LEISER: We always think, Ed, of Germany as a storehouse of scientifc and engineering genius. Well, today, the storehouse is half-empty. They're short forty thousand engineers now; each year the shortage is growing by five thousand. The status of the scientist in Germany is still high -- there's still almost devout

respect for the Herr Professor -- but his pay is low. The famous old Universities can't find enough young research men; their high schools, too are short of teachers. And they're losing some good scientists to us, even now; something that makes them pretty bitter. They still think their educational system is good and certainly at grammar and high school level it's far tougher than ours; but the system's best products are now going into business and law and banking -- the "safer" and more profitable professions in Germany too today.

MURROW: Whatever happens in the new year, the most important things may be happening in Germany. What do you think will happen?

LEISER: Ed, you're making me break my one New Year's Resolution, not to predict anything about the unpredictable Germans. Well -- I don't foresee 1958 as a year of sweeping politicalchange in Germany even if Adenauer passes from the political scene. I think it may be a year of beginning of a change as these exploratory talks with the Russians go on. Incidentally, a pretty significant clue to that was the New Year's day message of West German Presdient Heuss, calling for flexible diplomacy to get out of the arms race. Normally Heuss is only a ceremonial figure; this is almost the first time he's spoken out on any political issue.

I think there's a possibility of something very dangerous happening in Berlin. Almost every week the East German Communists tighten the squeeze on West Berlin just a little more. And if the Soviets allow them to enforce their protests against our use of the air corridors to Berlin, they claim the air corridors violate East Germany's territorial integrity, we're really in for trouble.

MURROW: Well, Ernie now, that you've broken your New Year's resolution - you said the other day that roots of German democracy were rather tender, how do you feel about the future?

LEISER: Ed, almost all the outward signs that a reporter can find in West Germany are pretty encouraging for the future of German democracy. They have a vigorous free press, their representative institutions are strong, state and local

communities are jealous of their rights, the Germans have been generous in restitution to the survivors of Naziism and the intellectual climate is admirably free if not very impressively creative. But I think frankly, it's still too early to make any confident prediction - and when the provisional parts of Germany are put together, no one can surely foresee what will happen.

GEORGE BRYAN: COMMERCIAL

MURROW: At the start of the New Year...in which so much depends on what we do... this wise counsel from Henry Ward Beecher, who observed "It is not the going out of port but the coming in that determines the success of a voyage." And Theodore Roosevelt said, "Let us shrink from no strife, moral or physical, provided we are certain that the strife is justified."

Good night and good luck!

January 2, 1958

(Via Western Union)

Edward R. Murrow
Rawlings, N.Y.

This is the news...

President Eisenhower returned to Washington today...from Gettysburg... and conferred with Secretary of Defense McElroy on military spending for the next fiscal year. McElroy said after the conference that the defense budget is "almost settled". To think of it in terms of 40-billion dollars, he said, would not be "far off". The President also conferred this afternoon with Secretary of State Dulles, who returned to Washington from a five-day vacation in New York. Tomorrow morning, Mr. Eisenhower will preside at a meeting of his cabinet...and then meet, for the first time, with his new Civil Rights Commission. He plans...after that...to drive back to his Gettysburg farm for the week-end.

The over-all budget figure for the next fiscal year, including COSTS in all categories, is expected to total around 74-billion dollars, making it the biggest peacetime budget in history. Chairman Cannon of

13

(more)

of the House Appropriations Committee warned today against "spenders" who, he said, will take advantage of the defense crisis and try to push through expensive "pork barrel" projects. Cannon said, "We must be careful not to spend ourselves into bankruptcy."

The organization, Americans for Democratic Action, today urged Congress to reject what it called the "Eisenhower as usual" policies and replace them with "bold, far-reaching programs" to meet the threat from Russia and turn the economic tide. Robert Nathan, chairman of the A.D.A., said this might cost an additional 5 to 10 billion dollars. He suggested that if these increased expenditures fail to bolster the economy, then there should be a temporary reduction of taxes of from 3 to 5 billion dollars. He said Democratic leaders in Congress must share blame for the "failures" of the Administration.

State Department officials SAID TODAY that the Administration is reviving the science attache program, which began under President Truman and elapsed in 1955 due to lack of funds. Under the program, special attaches were assigned to foreign capitals to promote the flow of scientific information. Plans to revive the program came to light when Democratic Representative Moss of California wrote a letter to Secretary Dulles

complaining of lack of action in this field. Moss is chairman of the House subcommittee on government information.

A French government spokesman said today...in Paris...that France is interested in the American offer to help it build an atomic-powered submarine. He said France is studying the offer...and will discuss it soon in direct talks with the United States. Secretary Dulles made the offer at the recent NATO conference to all "interested members" of the alliance. A State Department spokesman indicated today that Britain also has shown interest in the American proposal.

Russia today announced higher prices for automobiles, liquor and wines. Prices on most basic consumer goods are unchanged. It was also announced that Marshal Rokossovsky has returned to Moscow to resume his duties as deputy defense minister. At the height of the Turkish-Syrian crisis in October, Rokossovsky took command of Soviet forces along the Turkish frontier. That was also the time that Marshal Zhukov was removed as defense minister.

Red Army troops...armed with submachine guns and automatic rifles... patrolled the streets of East Berlin today for the first time since the East German uprising of June, 1953.

They reportedly were looking for Red Army deserters.

The president of Venezuela went on the air today to announce that the New Year's revolt...staged by members of the Venezuelan Air Force... had been crushed. He said the uprising had been put down "with a minimum of losses in life and material."

~~Hello... Morning-late developments, show is complete.~~

EDWARD R. MURROW WITH THE NEWS

(Via Western Union)

Edward R. Murrow

Dowling, N.Y.

This is approximately last seven minutes of show...

The Educational Policies Commission of the National Education Association today issued a statement on the educational needs of the United States. The commission concedes that instruction in science and technology is "a matter of priority." But the building of peace, it says, calls for knowledge, insights and abilities of many kinds. It says, "The real need is for those qualities of mind and spirit which will enable the American people to survive in times of tension and to achieve their own ideals." that to "imitate" Soviet education would be a mistake. The commission defines the major needs of the present as better educational opportunities for gifted students, better counselling and guidance, improvement in the selection and education of teachers, as well as improvement in their economic status and social prestige. IT ALSO CALLS FOR BETTER equipped schools and improvement in instruction of all subjects, including NOT JUST SCIENCE AND MATHEMATICS, AND THE the languages. The commission says that...at the minimum...expenditures on education should be doubled within a decade, as proposed by the White House Conference on Education more than two years ago.

68

The mothers of three Americans...imprisoned by the Chinese Communists on spy charges...are flying across the Pacific tonight to visit their sons at the invitation of the Peiping government. The three mothers are Mrs. Mary Downey of New B ritain, Connecticut, Mrs. Philip Fecteau of Lynn, Massachusetts, and Mrs. Ruth Redmond of Yonkers, New York. They are making the trip with the permission of the State Department...and will be in Red China about two weeks.

1. With me here tonight is Peter Kalischer, the CBS News correspondent whose headquarters are in Tokyo...but who travels all over the Far East. Pete, as I understand it, the Chinese Communists told these women only they could see their sons. The Peiping government promised nothing about letting the three men out of prison. What propaganda value has this for Red China? What do you think it will do to make the most of this visit?

2. Do you China can be Titoized? What were the effects of Mao Tse-tung's famous "let 100 flowers bloom" statement---the one in which he seemed to encourage individual criticism of the government, as well as art and economics?

(more)

3. Where do the millions of overseas Chinese stand with regard to Nationalist and Communist China?

4. There's been a lot of talk, Pete, about Japanese trade with Red China. Just where do the Japanese stand regarding trade with mainland China and recognition of the Red China government? (Answer will lead into Japan's preference to do business with Southeast Asia---for instance, replace Dutch technicians in Indonesia. Also that Japan and Red China are actually in competition in some areas).

5. You were in Indonesia only last month. You saw a lot of the country. Do you think it will go Communist?

6. Just what kind of person is Sukarno? What legal basis is there to the Indonesian claim to Dutch New Guinea?

Thank you, Pete Kalischer, for answering questions. Good luck. We will be hearing from you when you get back to your post.

This is Ed Murrow. I'll be back in a moment with the Word for Today. Now, here is George Bryan.

EDWARD R. MURROW WITH THE NEWS

Thursday, January 2, 1958
7:45 - 8:00 P.M.

MURROW: ... With me here tonight is Peter Kalischer, the CBS News correspondent whose headquarters are in Tokyo, but who travels all over the Far East. Pete, as I understand it, the Chinese Communists told these women only that they could see their sons. The Peiping government promised nothing about letting the three men out of prison. What propaganda value has this for Red China? What do you think it will do to make the most of this visit?

KALISCHER: Well, I'm not about to predict what a Communist government, certainly a Chinese Communist government, is going to do. But two years ago, when the mothers of these American prisoners made plans to visit them in China, the word in Hong Kong and Tokyo was that the Chinese Communists would release them, these Americans, in a great gesture of generosity and good will from which of course the Chinese expected to squeeze the last ounce of propaganda. It was for this reason that our State Department was reluctant for the mothers to go to China, and in fact, dissuaded them from going at that time. And today the Chinese may be willing to make the same generous gesture. But in the two years that have gone by, there's been a change in atmosphere. Red China is more stabilized, less isolated. Our State Department is on the defensive about keeping people out of Red China and the proof is that they're letting the mothers go although the situation is exactly the same as it was two years ago. Now, the Chinese today don't need to make this dramatic, emotional gesture, as they did perhaps two years ago, and perhaps they'd be willing to just settle for allowing the mothers to see that these three Americans are plump and healthy and well clothed, which I'm sure they are else they wouldn't have been invited. And I'm ... but one thing I am sure of - these American

mothers will be shown every courtesy. They'll be wined and dined and there'll be attempts made to have them make statements to the effect that their sons would not be in prison were it not for the so-called imperialist American policy. And I think the surest and cruelest way for the Chinese to get this message across is to tell the visiting mothers just that, that if they had come to China two years ago their sons would be free men today.

MURROW: Pete, do you think China can be Titoized? What were the effects of Mao-Tse-tung's famous "let one hundred flowers bloom" speech, that was the one in which he rather seemed to encourage individual criticism of the government as well as art and economics.

KALISCHER: Well, as fa... far as Titoizing China in the short run, no; in the long run, I think, inevitably. At the moment, there's nobody Red China can turn to for military or economic support except Russia. It could get political support possibly from Nehru's bloc, the neutralist, but for the hard stuff Russia has the monopoly. Now, when China develops - and this is taking the long view about a nation of 600-million people - the thousands of miles of common border, the inevitable antagonisms of repaying the Russian technical aid program, the conflicts of leadership in the international Communist hierarchy, all these things will be driving wedges between the Chinese and the Russians. And I don't think it'll happen tomorrow or the day after, but it will happen. Now, about this hundred flowers bloom - the effect was an eruption of criticism that so frightened the Orthodox communists in China that if the author of the statement had not been Mao-Tse-tung Mao might have gone the way of Malenkov in Russia. The total effect was to scare the government into backing Moscow all the way on the Hungarian revolt, praise Khrushchev and conduct a so-far bloodless purge of intellectuals and high ranking Chinese officials. One official proposed that there be a 20-yr. moratorium on repaying loans from China and he ... from Russia, and he was called on the mat, and the official said that paying this

would, in effect, starve China because they had to pay with farm products. What was interesting was that the Chinese published the case in full, setting forth all of China's economic grievances against Russia before concluding that the official was wrong and saw the error of his ways. I think they wanted the Russians to see the error of their ways too.

MURROW: Well, Pete, there are millions of overseas Chinese scattered all throughout Asia, how do they stand in regard to Nationalist and Communist China?

KALISCHER: Well, Ed, these Chinese minorities dominate the trade and commerce of southeast Asia; they're businessmen and their loyalties are divided. As businessmen they're anti-Communist and more or less naturally in favor of Chiang-Kai-shek's Nationalist government on Formosa. At the same time, they have a deep-seated allegiance to China, the land itself, whoever governs it, and this desire to remain Chinese is at the bottom of these Chinese minority problems all over southeast Asia. They refuse to become a part of their host country. Even second and third generation Chinese. Well, today the Red Chinese government is gaining face by suggesting to these Chinese that they either become citizens of the countries they're in or return to Red China - and I think that this is putting them in a very good position.

MURROW: Pete, very quickly, do you think there's real danger of Indonesia going Communist?

KALISCHER: The answer is very definitely if matters are allowed to sort of crumble away the way they are now. We can do something about this. We could mediate this but we won't.

MURROW: Thank you very much, Pete Kalischer, for answering questions and good luck when you return to your post. This is Ed Murrow. I'll be back in a moment with the word for today.

Ed. trans. P. O.

EDWARD R. MURROW WITH THE NEWS
CBS RADIO NETWORK

THURSDAY, JANUARY 2, 1958
7:45 - 8:00 PM EST

This is the news:

President Eisenhower returned to Washington today...from Gettysburg...and conferred with Secretary of Defense McElroy on military spending for the next fiscal year. McElroy said after the conference that the defense budget is "almost settled." To think of it in terms of 40-billion dollars, he said, would not be "far off." The President also conferred this afternoon with Secretary of State Dulles, who returned to Washington from a five-day vacation in New York. Tomorrow morning, Mr. Eisenhower will preside at a meeting of his cabinet...and then meet, for the first time, with his new Civil Rights Commission. He plans...after that... to drive back to his Gettysburg farm for the week-end.

The over-all budget figure for the next fiscal year, including costs in all categories, is expected to total around 74-billion dollars, making it the biggest peacetime budget in history. Chairman Cannon of the House Appropriations Committee warned today against "spenders" who, he said, will take advantage of the defense crisis and try to push through expensive "pork barrel" projects. Cannon said, "We must be careful not to spend ourselves into bankruptcy."

The organization, Americans for Democratic Action, today urged Congress to reject what it called the "Eisenhower as usual" policies and replace them with "bold, far-reaching programs" to meet the threat from Russia and turn the economic tide. Robert Nathan, chairman of the A.D.A., said this might cost an additional 5 to 10 billion dollars. He suggested that if these increased expenditures fail to bolster the economy, then there should be a temporary reduction of taxes of from 3 to 5 billion dollars. He said Democratic leaders in Congress must share blame for the "failures" of the Administration.

State Department officials said today that the Administration is reviving the science attache program, which began under President Truman and elapsed in

1955 due to lack of funds. Under the program, special attaches were assigned to foreign capitals to promote the flow of scientific information. Plans to revive the program came to light when Democratic Representative Moss of California wrote a letter to Secretary Dulles complaining of lack of action in this field. Moss is chairman of the House subcommittee on government information.

A French government spokesman said today...in Paris...that France is interested in the American offer to help it build an atomic-powered submarine. He said France is studying the offer...and will discuss it soon in direct talks with the United States. Secretary Dulles made the offer at the recent NATO conference to all "interested members" of the alliance. A State Department spokesman indicated today that Britain also has shown interest in the American proposal.

Russia today announced higher prices for automobiles, liquor and wines. Prices on most basic consumer goods are unchanged. It was also announced that Marshal Rokossovsky has returned to Moscow to resume his duties as deputy defense minister. At the height of the Turkish-Syrian crisis in October, Rokossovsky took command of Soviet forces along the Turkish frontier. That was also the time that Marshal Zhukov was removed as defense minister.

Red Army troops...armed with submachine guns and automatic rifles...patrolled the streets of East Berlin today for the first time since the East German uprising of June, 1953. They reportedly were looking for Red Army deserters.

The president of Venezuela went on the air today to announce that the New Year's revolt...staged by members of the Venezuelan Air Force...had been crushed. He said the uprising had been put down "with a minimum of losses in life and material."

The Educational Policies Commission of the National Education Association today issued a statement on the educational needs of the United States. The commission concedes that instruction in science and technology is "a matter of priority." But the building of peace, it says, calls for knowledge, insights,

and abilities of many kinds. It says, "The real need is for those qualities of mind and spirit which will enable the American people to survive in times of tension and to achieve their own ideals, that to "imitate" Soviet education would be a mistake. The commission defines the major needs of the present as better educational opportunities for gifted students, better counselling and guidance, improvement in the selection and education of teachers, as well as improvement in their economic status and social prestige. It also calls for better instruction of all subjects, including the languages not just science and mathematics, and the commission says that...at the minimum...expenditures on education should be doubled within a decade, as proposed by the White House Conference on Education more than two years ago!

The mothers of three Americans...imprisoned by the Chinese Communists on spy charges...are flying across the Pacific tonight to visit their sons at the invitiaion of the Peiping government. The three mothers are Mrs. Mary Downey of New Britain, Connecticut, Mrs. Philip Fecteau of Lynn, Massachusetts, and Mrs. Ruth Redmond of Yonkers, New York. They are making the trip with the permission of the State Department...and will be in Red China about two weeks.

With me here tonight is Peter Kalischer, the CBS Newscorrespondent whose headquarters are in Tokyo, but who travels all over the Far East. Pete, as I understand it, the Chinese Communists told these women only that they could see their sons. The Peiping government promised nothing about letting the three men out of prison. What propaganda value has this for Red China? What do you think it will do to make the most of this visit?

KALISCHER: Well, I'm not about to predict what a Communist government, certainly a Chinese Communist government, is going to do. But two years ago, when the mothers of these American prisoners made plans to visit them in China, the word in Hong Kong and Tokyo was that the Chinese Communists would release them, these Americans, in a great gesture of generosity and good will from which of course the Chinese expected to squeeze the last ounce of propaganda. It was for this

reason that our State Department was reluctant for the mothers to go to China, and in fact, dissuaded them from going at that time. And today the Chinese may be willing to make the same generous gesture. But in the two years that have gone by, there's been a change in atmosphere. Red China is more stabilized, less isolated. Our State Department is on the defensive about keeping people out of Red China and the proof is that they're letting the mothers go although the situation is exactly the same as it was two yeass ago. Now, the Chinese today don't need to make this dramatic, emotional gesture, as they did perhaps two years ago, and perhaps they'd be willing to just settle for allowing the mothers to see that these three Americans are plump and healthy and well clothed, which I'm sure they are else they wouldn't have been invited. And I'm...but one thing I am sure of - these American mothers will be shown every courtesy. They'll be wined and dined and there'll be attempts made to have them make statements to the effect that their sons would not be in prison were it not for the so-called imperialist American policy. And I think the surest and cruelest way for the Chinese to get this message across is to tell the visiting mothers just that, that if they had come to China two years ago their sons would be free men today.

MURROW: Pete, do you think China can be Titoized? What were the effects of Mao-Tse-tung's famous "let one hundred flowers bloom" speech, that was the one in which he rather seemed to encourage individual criticism of the government as well as art and economics.

KALISCHER: Well, as fa...far as Titoizing China in the short run, no; in the long run, I think, inevitably. At the moment, there's nobody Red China can turn to for military or economic support except Russia. It could get political support possibly from Nehru's bloc, the neutralist, but for the hard stuff Russia has the monopoly. Now, when China develops - and this is taking the long view about a nation of 600-million people - the thousands of miles of common border, the inevttable antagonisms of repaying the Russian technical aid program, the conflicts of leadership in the international Communist hierarchy, all these

things will be driving wedges between the Chinese and the Russians. And I don't think it'll happen tomorrow or the day after, but it will happen. Now, about this hundred flowers bloom - the effect was an eruption of criticism that so frightened the Orthodox communists in China that if the author of the statement had not been Mao-Tse-tung, Mao might have gone the way of Malenkov in Russia. The total effect was to scare the government into backing Moscow all the way on the Hungarian revolt, praise Khrushchev and conduct a so-far bloodless purge of intellectuals and high ranking Chinese officials. One official proposed that there be a 20-year moratorium on repaying loans from China and he...from Russia, and he was called on the mat, and the official said that paying this would in effect, starve China because they had to pay with farm products. What was interesting was that the Chinese published the case in full, setting forth all of China's economic grievances against Russia before concluding that the official was wrong and saw the error of his ways. I think they wanted the Russians to see the error of their ways too.

MURROW: Well, Pete, there are millions of overseas Chinese scattered all throughout Asia, how do they stand in regard to Nationalist and Communist China?

KALISCHER: Well, Ed, these Chinese minorities dominate the trade and commerce of southeast Asia; they're businessmen and their loyalties are divided. As businessmen they're anti-Communist and more or less naturally in favor of Chiang-Kai-shek's Nationalist government on Formosa. At the same time, they have a deep-seated allegiance to China, the land itself, whoever governs it, and this desire to remain Chinese is at the bottom of these Chinese minority problems all over southeast Asia. Well, today the Red Chinese government is gaining face by suggesting to these Chinese that they either become citizens of the countries they're in or return to Red China - and I think that this is putting them in a very good position.

MURROW: Pete, very quickly, do you think there's real danger of Indonesia going Communist?

KALISCHER: The answer is very definitely if matters are allowed to sort of crumble away the way they are now. We can do something about this. We could mediate this but we won't.

MURROW: Thank you very much, Pete Kalischer, for answering questions and good luck when you return to your post. This is Ed Murrow. I'll be back in a moment with the word for today. Now here is George Bryan.

GEORGE BRYAN: COMMERCIAL

MURROW: The United States...in an hour of peril...is getting advice from all sides. Bernard Baruch once said, "If the frenzy of soaring hope can never be realized, we can also avoid the panic of plunging despair---if we learn to think our problems through, decide what it is we value most, and organize ourselves to see that first things come first."

Goodnight and good luck!

Edward R. Murrow Fri., Jan. 3, 1958

This is the news:

The new Civil Rights Commission was sworn in today by Presidential Assistant Sherman Adams./ President Eisenhower witnessed the swearing-in ceremony./ The commission was created under terms of the Civil Rights Bill, passed by Congress last year./ And it has authority to investigate sworn charges of the denial to anyone of the right to vote. It is also directed to make a broad study of existing federal laws...and policies... to see if they afford adequate protection from inequities arising from race, creed or color./ Of the six members of the commission...appointed by Mr. Eisenhower...three are from the North and three from the South. And one of the Northern members is a Negro---J. Ernest Wilkins, assistant

—7

secretary of labor for international affairs. The chairman is Dr. John A. Hannah, president of Michigan State University. Hannah said it is his "expectation" that members of the commission will come to conclusions "agreeable all the way around." Mr. Eisenhower told the commission he was making 200-thousand dollars available from his emergency fund so it "could begin functioning immediately." The members then held a two-hour closed meeting at which they agreed on a panel of "several names", from which the President is expected to appoint a staff director.

Mr. Eisenhower today reviewed the State of the Union message with members of his cabinet. News Secretary Hagerty said some changes were made but none of "any major importance." He said the budget was also discussed "in passing." After the cabinet meeting, Mr. Eisenhower returned once more to his Gettysburg farm.

Republican Senator Dworshak of Idaho charged today that the country is being prepared for "a mass spending program, in the face of statements by scientists that money won't buy scientific discoveries in a short time." "I hope," he said, "that the American people are not going to be victimized by Pentagon panic."

Democratic Senator Johnson said today he is "not optimistic" that the White House will give Congress the secret Gaither Report on the status of American defense. (Published excerpts of the report describe the United States as being in "the gravest danger in its history"). Johnson told a news conference, however, that he has "good reason" to believe Congress already is in possession of most of the information and that his preparedness subcommittee can through testimony "develop the balance." The subcommittee resumes its public hearings on Monday, with Secretary of Defense McElroy among the first witnesses. Johnson denied a charge---by Republican Senator Flanders of Vermont---that Senate Democratic leaders are playing politics with the subcommittee's investigation. And he said he thought the hearings already had done some good.

Johnson said that while there are many pressing domestic problems, the dominant issue when Congress reconvenes will be foreign policy and defense. The two "urgent necessities", he said, are that we "speed up the development of the necessary implements to assure our security and that we push as vigorously as we can for a foreign policy that will bring peace."

The Air Force today announced that it has set up the first two squadrons which will be charged with firing the Thor and Jupiter missiles in case of enemy attack. / The 672nd Strategic Missile Squadron that will eventually get the Thor was activated this week. The 864th squadron...to handle the Jupiter...will be activated on January 15. / Both missiles are ballistic and of intermediate range.

Attorney General Rogers revealed today...in a speech before the National Press Club...that a Polish scientist and his family have been granted asylum in this country. / The scientist---Dr. Jerzy Nowinski---has an international reputation for his study of strains and stresses on metals under varying temperature conditions. He arrived in the United States last October...to lecture at Johns Hopkins University...and asked for asylum in November. / Dr. Nowinski told a news conference at Johns Hopkins this afternoon that he defected to the West because of disappointment with the "political, moral and religious conditions in Poland after the war." He said he would be willing to help this country's missile program "if asked." His wife and daughter are presently in England, but he hopes to send for them as soon as possible.

Soviet Premier Bulganin said tonight...at a Moscow reception...that the recall of Marshal Rokossovsky from his command in the Caucasus is a sign that the Syrian crisis has eased. As for the fate of the first Sputnik, Bulganin said it would burn itself out next Sunday or Monday, "if not before." Scientists in Britain and the United States said today that the earth satellite may already have ceased to exist.

The British Foreign Office...in London...says the Communist government of Albania has promised to release the British cargo plane forced down by Albanian fighter planes on Tuesday. ~~Albania charged that the aircraft,~~ belonging to a private British firm, violated its air space. A British embassy spokesman in Belgrade says it is "assumed" that the crew of ~~six~~ also will be released, along with the aircraft. According to the embassy spokesman, the plane is being allowed to leave tomorrow. Britain ~~does not maintain diplomatic relations with Albania, and the British Embassy in Belgrade received its information through the Albanian legation in~~ the Yugoslav ~~capital~~.

In Cairo, a former Egyptian army officer today was elected chairman of the permanent council set up by the recent Afro-Asian solidarity conference. The chairman...or secretary-general...will serve a two-year term.

Representatives of Russia, India, Algeria and the Sudan were elected vice chairmen. Delegates to the Afro-Asian Conference represented their countries on a non-official basis. And the meeting ended with a series of resolutions reflecting the Communist line.

Sir Edmund Hillary and four other New Zealanders arrived at the South Pole today---the first men to reach the pole by the overland route since Scott made the trip in 1912.

Edward R. Murrow: January 3, 1958. 7.45 p.m.

has been

Another report on the shortcoming of American education ~~was~~ laid before the public ~~today~~. / It was made to the National Education Association by its policy commission, of which President Herman Wells, of Indiana University is Chairman. / While it does not pull its punches in describing the shortcomings of American schools, it much prefers our system to the Soviet system. The Russians, it says, are educating an "elite" class. They are trying to weed out less able students, and relegate them to inferior schools. The Russian ten-year school, it says, is anything but universal. "Apparently only half its students even enter the last three years. And only one-third graduate", it says.

The American tradition, it points out, is entirely different. It does not try to create an "aristocratic class," and has gone in for comprehensive and universal schools. It calls the American record "majestic" and says it has set a standard against which the rest of the world judges the value of universal education. / But adds that the ideal has not been fully realized, and devotes the rest of its report to the failures and the causes of them.

The report does not go in to the dollar-and-cents aspect of school needs. "At a minimum" it says, "expenditures on education should be doubled

in a decade, as proposed by the White House conference on education." / It does not refer to the Administration's present plans to increase expenditure by a billion dollars in four years, in which time local expenditure is expected to go up eight hundred million. This is at a rate of four-and-a-half billion for the decade, or only about one-third of the nation's present school bill, not twice as much. / "It is futile" the report does say, "to expect that a multitude of small, limited projects can do much lasting good. The real need is for an infusion of public and private support on a massive scale."

Much, but not all the trouble is money, the Commission finds. / Lack of motivation also is keeping the able from getting the education they could absorb. / They do not understand their abilities or the advantages to be gained by themselves, or the nation, if they seek the opportunities open to them. / So the Commission urges a much expanded guidance program.

But its heaviest criticism falls on the inadequacy of teaching. / At present, eighty thousand teachers in American public schools, ~~it finds~~, have sub-standard or emergency credentials. / Last year nearly seventy-nine thousand teachers were taken on in the elementary schools, whereas only thirty-eight thousand were graduated with training for such work. / ~~Teachers~~

Teachers of mathematics and science employed last year were about twice as many as were graduated with qualifications to teach these subjects. / The Commission put the highest priority, not on increasing the study of mathematics and science, but on recruiting, educating and retaining all qualified teachers in their profession.

Inequalities in the American school system came in for strong condemnation. / The report finds some regions unable to give even a minimum standard of education. / It speaks of "the educational derelicts of the United States" and points out that the under-educated exact a high price, not only in unhappiness and lost talents, but in the cost of unemployment, public aid, mental illness, crime and delinquency, and the institutions to deal with them. / "It costs far more" it says, "to correct damage done by the ignorant, than it would to have educated them."

The Commission proposes three stages of effort to meet the emergency. It urges a short-term program at the graduate level, to increase opportunities in the study of mathematics, science and technology; an intermediate range program at both college and secondary school level to recruit teachers, not only in math and science, but in most subject matter; and finally a long-term program to improve the underpinning of the entire enterprise of

American education, beginning with the elementary school. "Let no one doubt" the report concludes, "that this will require sacrifice. / Today more than ever before, the survival of this nation depends on the success with which the schools and colleges accomplish their task." #

Back in a moment -

George Bryan

Word for Today

We have a new warning of the importance of education, but Horace Mann said...many years ago..."As an apple is not in any sense an apple until it is ripe, so a human being is not in any proper sense a human being until he is educated." And Cicero said, "What better or greater gift can we offer the republic than to teach and instruct our youth?"

Goodnight and good luck!

EDWARD R. MURROW WITH THE NEWS
CBS RADIO NETWORK

FRIDAY, JANUARY 3, 1958
7:45 - 8:00 PM EST

This is the news:

The new Civil Rights Commission was sworn in today by Presidential Assistant Sherman Adams. President Eisenhower witnessed the swearing-in ceremony. The commission was created under terms of the Civil Rights Bill passed by Congress last year. And it has authority to investigate sworn charges of the denial to anyone of the right to vote. It is also directed to make a broad study of existing federal laws...and policies...to see if they afford adequate protection from inequities arising from race, creed or color. Of the six members of the commission...appointed by Mr. Eisenhower...three are from the North and three from the South. And one of the Northern members is a Negro---J. Ernest Wilkins, assistant secretary of labor for international affairs. The chariman is Dr. John A. Hannah, president of Michigan State University. Hannah said it is his "expectation" that members of the commission will come to conclusions "agreeable all the way around." Mr. Eisenhower told the commission he was making 200-thousand dollars available from his emergency fund so it "could begin functioning immediately." The members then held a two-hour closed meeting at which they agreed on a panel of "several names," from which the President is expected to appoint a staff director.

Mr. Eisenhower today reviewed the State of the Union message with members of his cabinet. News Secretary Hagerty said some changes were made but none of "any major importance." He said the budget was also discussed "in passing." After the cabinet meeting, Mr. Eisenhower returned once more to his Gettysburg farm.

Democratic Senator Johnson said today he is not optimistic that the White House will give Congress the secret Gaither Report on the status of American defense. (Published excerpts of the report describe the United States as being

in "the gravest danger in its history.") Johnson told a news conference, however, that he has "good reason" to believe Congress already is in possession of most of the information and that his preparedness subcommittee can through testimony "develop the balance." The subcommittee resumes its public hearings on Monday, with Secretary of Defense McElroy among the first witnesses. Johnson denied a charge---by Republican Senator Flanders of Vermont---that Senate Democratic leaders are playing politics with the subcommittee's investigation. And he said he thought the hearings already had done some good. Johnson said that while there are many pressing domestic problems, the dominant issue when Congress reconvenes will be foreign policy and defense. The two "urgent necessities," he said, are that we "speed up the development of the necessary implements to assure our security and that we push as vigorously as we can for a foreign policy that wil bring peace."

The Air Force today announced that it has set up the first two squadrons which will be charged with firing the Thor and Jupiter missiles in case of enemy attack. The 672nd Strategic Missile Squadron that will eventually get the Thor was activated this week. The 864th squadron...to handle the Jupiter...will be activated on January 15th. Both missiles are ballistic and of intermediate range.

Attorney General Rogers revealed today...in a speech before the National Press Club...that a Polish scientist and his family have been granted asylum in this country. The scientist---Dr. Yezi Nowinski---has an international reputation for his study of strains and stresses on metals under varying temperature conditions. He arrived in the United States last October...to lecture at Johns Hopkins University...and asked for asylum in November. Dr. Nowinski told a news conference at Johns Hopkins this afternoon that he defected to the West because of disappointment with the "political, moral and religious conditions in Poland after the war." He said he would be willing to help this country's missile program "if asked." His wife and daughter are presently in England, but

he hopes to send for them as soon as possible.

Soviet Premier Bulganin said tonight...at a Moscow reception...that the recall of Marshal Rokossovsky from his command in the Caucasus is a sign that the Syrian crisis has eased. As for the fate of the first Sputnik, Bulganin said it would burn itself out next Sunday or Monday, "if not before." Scientists in Britain and the United States said today that the earth satellite may already have ceased to exist.

The British Foreign Office...in London...says the Communist government of Albania has promised to release the British cargo plane forced down by Albanian fighter planes on Tuesday.

In Cairo, a former Egyptian army officer today was elected chairman of the permanentcouncil set up by the recent Afro-Asian solidarity conference. The chairman...or secretary-general...will serve a two-year term. Representatives of Russia, India, Algeria and the Sudan were elected vice chairmen. Delegates to the Afro-Asian Conference represented their countries on a non-official basis. And the meeting ended with a series of resolutions reflecting the Communist line.

Sir Edmund Hillary and four other New Zealanders arrived at the South Pole today---the first men to reach the pole by the overland route since Scott made the trip in 1912.

Another report on the shortcoming of American education has been laid before the public. It was made to the National Education Association by its policy commission, of which President Herman Wells, of Indiana University is Chairman. While it does not pull its punches in describing the shortcomings of American schools, it much prefers our system to the Soviet system. The Russians, it says, are educating an elite class. They are trying to weed out less able students, and relegate them to inferior schools. The Russian ten-year school, it says, is anything but universal. "Apparently only half its students even enter the last three years. And only one-third graduate," it says.

The American tradition, it points out, is entirely different. It does not try to create an aristocratic class, and has gone in for comprehensive and universal schools. It calls the American record "majestic" and says it has set a standard against which the rest of the world judges the value of universal education. But adds that the ideal has not been fully realized, and devotes the rest of its report to the failures and the causes of them.

The report does not go in to the dollar-and-cents aspect of school needs. "At a minimum" it says, "expenditures on education should be doubled in a decade, as proposed by the White House conference on education." It does not refer to the Administration's present plans to increase expenditure by a billion dollars in four years, in which time local expenditure is expected to go up eight hundred million. This is at a rate of four-and-a-half billion for the decade, or only a out one-third of the nation's present school bill, not twice as much. "It is futile" the report does say, "to expect that a multitude of small, limited projects can do much lasting good. The real need is for an infusion of public and private support on a massive scale."

Much, but not all the trouble is money, the Commission finds. Lack of motivation also is keeping the able from getting the education they could absorb. They do not understand their abilities or the advantages to be gained by themselves, or the nation, if they seek the opportunities open to them. So the Commission urges a much expanded guidance program.

But its heaviest criticism falls on the inadequacy of teaching. At present eighty thousand teachers in American public schools have sub-standard or emergency credentials. Last year nearly seventy-nine thousand teachers were taken on in the elementary schools, whereas only thirty-eight thousand were graduated with training for such work. Teachers of mathematics and science employed last year were about twice as many as were graduated with qualification to teach these subjects. The Commission put the highest priority, not on increasing the study of mathematics and science, but on recruiting, educating and retaining all

qualified teachers in their profession.

Inequalities in the American school system came in for strong condemnation. The report finds some regions unable to give even a minimum standard of education. It speaks of "the educational derelicts of the United States" and points out that the under-educated exact a high price, not only in unhappiness and lost talents, but in the cost of unemployment, public aid, mental illness, crime and delinquency, and the institutions to deal with them. "It costs far more" it says, "to correct damage done by the ignorant, than it would to have educated them."

The Commission proposes three stages of effort to meet the emergency. It urges a short-term program at the graduate level, to increase opportunities in the study of mathematics, science and technology; an intermediate range program at both college and secondary school level to recruit teachers, not only in math and science, but in most subject matter; and finally a long-term program to improve the underpinning of the entire enterprise of American education beginning with the elementary school. "Let no one doubt" the report concludes, "that this will require sacrifice. Today more than ever before, the survival of this nation depends on the success with which the schools and colleges accomplish their task.

This is Ed Murrow. I'll be back in a moment with the word for today. But first, here is George Bryan.

GEORGE BRYAN: COMMERCIAL

MURROW: We have a new warning of the importance of education, but Horace Mann said...many years ago..."As an apple is not in any sense an apple until it is ripe, so a human being is not in any proper sense a human being until he is educated." And Cicero said, "What better or greater gift can we offer the republic than to teach and instruct our youth?"

Goodnight and good luck!

Edward R. Murrow Mon., Jan. 6, 1958

This is the news:

Reports from Moscow say that the Russians have launched a rocket, carrying a human being 186 miles into space./ The man inside the rocket is said to have parachuted safely to earth. /The reports of this experiment are totally unconfirmed. /The Soviet government, so far, makes no claim to such an accomplishment./ Russian scientists have told of retrieving dogs successfully by parachute from lesser heights./ But in discussing plans for manned flight in outer space, they said no missile or satellite would be launched with a human passenger, without further experimentation./ There is speculation that if reports of the launching of a manned rocket are true,

→

then it may constitute some of the "further experimentation" to which Soviet scientists referred. /According to the reports circulating in Moscow, the rocket was not placed in orbit. It was not...in any case...an earth satellite. / In Washington, Dr. Fred Whipple...head of the Smithsonian Astrophysical Observatory...has declined comment. / "I should prefer," he said, "to have a little time for studying the reports." /The director of the world's largest radio-telescope station in England calls the Moscow reports "fantastic...almost unbelievable." / The recognized world altitude record is 126-thousand feet...or nearly 24 miles...set in 1956 by an American pilot flying (an experimental aircraft known as the X-2.

President Eisenhower met for three hours today with the National Security Council...reviewing the military aspects of his State of the Union message, and the reply he will make to Premier Bulganin's letter, proposing new summit talks. There was speculation that the meeting might see a showdown between Secretary of State Dulles and Harold Stassen, on how to approach the Russians on disarmament. Stassen was said to favor a new "liberalized" approach. All Stassen would say after the meeting was, that he would "keep on working for peace."

"Any other statement," he said, "will have to come at another time."

The chief of Army research and development, Lieutenant General Gavin... today gave the Senate preparedness subcommittee the reasons why he plans to resign, as of March 31. Last month, in public testimony before the subcommittee, Gavin recommended abolition of the Joint Chiefs of Staff, to increase efficiency and help the Secretary of Defense get "better professional advice." Today's hearing was closed, but Chairman Johnson quotes Gavin as saying he was "no longer being considered for promotion", because of his criticism...and that he did not want to have to defend the new Army budget because---in his phrase---"I don't believe in it."

→

Secretary of the Army Brucker has said that he was "tremendously disappointed" by General Gavin's decision to resign....that he has urged him repeatedly to stay. The Army chief of staff, General Taylor, said yesterday that Gavin did not have to leave the Army in order to speak his mind. Gavin is quoted as saying today that it was General Taylor who gave him to understand that he was no longer being considered for assignment as head of the Continental Army Command.

In a morning session, the Senate subcommittee heard Admiral Rickover testify with regard to the American missile program. Rickover, the "father of the atomic submarine", said that...two years ago...the Navy high command rejected (a plan---submitted by him---) for developing atomic submarines as missile-launching platforms. Rickover said it is now "almost too late" to match Russia's achievements in this field.

Russia says it is cutting its armed forces by 300-thousand men. According to Moscow, this includes the withdrawal and demobilization of 41-thousand men in East Germany and 17-thousand men in Hungary. It does not say how many Soviet troops will remain in those countries. Nor does it say what the total armed strength of Russia will be after the cuts go into effect. This is the third cutback announced by Russia in three years. Moscow says the new reduction is "in keeping" with the decision of the Supreme Soviet...taken in December...~~and that it is regarded by the Soviet government as "a new major contribution to the cause of lessening world tensions."~~ ~~Moscow claims the money saved will be devoted to "further improving the material and cultural standards of the Soviet people."~~ And it challenges the Western powers to match "this act of goodwill."

Soviet Deputy Foreign Minister Kuznetsov said today that Russia is giving "positive consideration" to British Prime Minister Macmillan's proposal...of last week-end...for an East-West non-aggression pact. A British Foreign Office spokesman in London today qualified the Macmillan proposal...saying that any non-aggression pact could not stand alone "but must be part of a wider settlement." The spokesman said

→

he did not see anything "particularly new" in the idea...and that for this reason other NATO countries had not been consulted in advance.

Britain's chancellor of the exchequer...Peter Thorneycroft...resigned today in protest against the spending policies of the Conservative Government. Prime Minister Macmillan immediately named the minister of agriculture, Derick Heathcoat-Amory, to succeed Thorneycroft in the financial post. Thorneycroft said...in his letter of resignation...that "it was clear" he did not have the prime minister's support in his attempt to hold down government spending in the coming year. His resignation was accepted "with regret".

In Israel, David Ben Gurion today announced the formation of a new coalition government. The new cabinet is composed of the same five parties as were represented before. But Ben Gurion now has assurances that secrets discussed in the course of cabinet deliberations will not be divulged. Tomorrow, he will present the new government to parliament.

Edward R. Murrow: January 6, 1957. 7.45 p.m.

Two reports written on national security by private citizens are now dominating Washington, and promise to affect policy as nothing from non-official sources has done since the days of the Revolution. One is the Gaither report, written at the behest of the National Security Council and still kept secret, though probably its main points have leaked by now. The other is the Rockefeller report, written for the public and published today.

Both reports are the product of studies these private citizens have made after consulting leading experts in the fields of defense, science and education. The commissions were made up of some of the best minds in the country. Both reports cover much of the same ground and come to some of the same conclusions. Both ring the alarm of extreme danger due to the progress of technology in the Soviet Union. Both recognize that the nation must make basic changes in policy and administration if the place [redacted] of the United States in the world is to remain secure. They appear to agree on the same evaluation of the progress in weapons and technology by the Soviet Union. Both call for expenditures on a record-breaking scale for peace times. And while it is for the Administration to set the course for the United States,

and for Congress to accept or alter it, both the Administration and Congress will be judged to some extent by the conclusions drawn in these two reports.

President Eisenhower, in his State of the Union message, will proclaim the official policy. A Grand Debate in Congress will follow. Then for both the President's policy, and the congressional contribution to it, a kind of yardstick is at hand. It has been supplied by citizens, not by officials; by individuals, not by party leaders as such. It is no exaggeration to say that these private citizens have built a fire under both the Administration and Congress. They have raised a demand for changes more far-reaching and much more costly than anything the leaders in Washington have contemplated, or may now be ready to accept. As an example of American democracy in action this is a new experience, even a new kind of experience.

The military budget to be proposed by the Administration this year is now expected to be forty billion dollars, as against thirty-eight and-a-half billion last year, an increase of one-and-a-half billions. The Gaither report calls for an increase reaching eight billions a year in a few years. The Rockefeller report calls for an immediate increase of three billions a year, to last till around 1970, and foresees the probable need for a still

larger increase within a few years.

The gap between the Administration's figure and the recommendations of the two commissions is certainly striking, and even startling. Both the Administration and Congress are put on the defensive. Heretofore the weapons policy has been something of a mystery to the public. Now the country has a non-political appraisal of all the basic facts out of which policy has to be formed. Obviously the two reports are not sacrosanct. They do not pretend to be the last word on national security. But they come from conscientious and able men who had no policies to defend or organizations to protect. They have spoken objectively about the national good, and it may well be that they have made a unique contribution.

One feature of the Rockefeller report that is sure to raise a very gusty controversy, is its recommendation of a complete overhaul of defense administration. It recommends scrapping the entire existing system of unified geographical commands, would substitute functional commands of world-wide scope, and make the chairman of the Joint Chiefs of Staff the principal military advisor of the President and the Secretary of Defense. In practice, as the New York Times sees it, he would be a super-commander-in-chief of all the armed services everywhere. The ~~concentration of so much~~

authority in a single general is already drawing fire. Admiral Arleigh Burke, chief of naval operations, said today that it would "lay the foundation for disaster." Chairman Vinson of the House Armed Services Committee said that it would open the road to national suicide.

Unification of the defense departments has been one of the thorniest problems Congress has grasped, and it has only recently survived one major attempt to bring it about. Now another attempt is called for, not because the previous solution was defective, but because the nature of war has changed and is making it obsolescent.

However, the authors of the Rockefeller report certainly did not intend to have a single proposal of its many, draw all the attention. They want a nation-wide change, not simply a shift of commands within the defense department. In effect, they have challenged the Administration and Congress to produce the change. Congress convenes tomorrow, and the President delivers his State of the Union message on Thursday. The fateful answer to the challenge then will begin taking form.

Word for Today

The role of ~~bodies~~ Groups of American citizens...acting as advisers to the government...is a healthy demonstration of democracy in action. As the ~~Late~~ American historian, George Bancroft, observed, "The best government rests on the people, and not on the few...on persons, and not on property... on the free development of public opinion...and not on authority."

Goodnight and good luck!

the two reports are not sacrosanct. They do not pretend to be the last word on national security. But they come from conscientious and able men who had no policies to defend or organizations to protect. They have spoken objectively about the national good, and it may well be that they have made a unique contribution.

One feature of the Rockefeller report that is sure to raise a very gusty controversy, is its recommendation of a complete overhaul of defense administration. It recommends scrapping the entire existing system of unified geographical commands, would substitute functional commands of world-wide scope, and make the chairman of the Joint Chiefs of Staff the principal military advisor of the President and the Secretary of Defense. In practice, as the New York Times sees it, he would be a super-commander-in-chief of all the armed services everywhere.

Unification of the defense departments has been one of the thorniest problems Congress has grasped, and it has only recently survived one major attempt to bring it about. Now another attempt is called for not because the previous solution was defective, but because the nature of war has changed and is making it obsolescent.

However, the authors of the Rockefeller report certainly did not intend to have a single proposal of its many, draw all the attention. They want a nation-wide change, not simply a shift of commands within the defense department. In effect, they have challenged the Administration and Congress to produce the change. Congress convenes tomorrow, and the President delivers his State of the Union message on Thursday. The fateful answer to the challenge then will begin taking form.

This is Ed Murrow. I'll be back in a moment with the word for today. Now, here is George Bryan.

GEORGE BRYAN: COMMERCIAL

MURROW: The role of groups of American citizens...acting as advisers to the government...is a healthy demonstration of democracy in action. As the American historian, George Bancroft observed, "The best government rests on the people, and not nn the few...on persons, and not on property...on the free development of public opinion...and not on authority."

Goodnight and good luck!

Edward R. Murrow Tues., Jan. 7, 1958

This is the news:

Congress convened today after a recess that saw the launching of two Russian sputniks and the beginning of the space age. / Both houses met for only a few minutes. / The Senate conducted a roll-call and adjourned until Thursday, when it will meet with the House of Representatives to hear President Eisenhower read his State of the Union message. The House meets again tomorrow. / Republican Representative Keating of New York introduced a bill calling for creation of a joint congressional committee on outer space and the appointment of a secretary of research and development who would have cabinet rank. / Democratic Representative

—7

Dingell of Michigan offered a bill that would do away with the Joint Chiefs of Staff...replacing them with a single Chief of Staff. / Chairman Vinson of the House Armed Services Committee has contended this would "open the road to national suicide." And he said today that if the Dingell measure ever reaches his committee, "it won't get out." / Dingell says, on the other hand, that his measure...if passed...would cut down "bickering between the services." A similar move was recommended this week in the Rockefeller Report.

Speaker Sam Rayburn told reporters as Congress reconvened, "I look for a very heavy session and one of considerable controversy." / He ruled out any tax cut and predicted that the national debt ceiling will have to be raised. / He said, "We are in a struggle for survival, or may be at any time."

Democratic Leader Johnson told a caucus of Senate Democrats that the future of civilization may depend on decisions taken in the new session. Johnson said, "The urgent race we are now in---or which we must enter---is not to perfect long-range ballistic missiles." More important than the ultimate weapon, he said, is the ultimate position---"the position of

→

total control over earth that lies somewhere out in space." / Johnson said it had been shown (in the hearings before his preparedness subcommittee) that American evaluation of the importance of control of outer space "has not been based primarily on the judgment of men most qualified to make such appraisal." / He said the decisions "more often than not" had been dictated by budgetary considerations.

Senate Republicans caucused this afternoon...following a White House meeting this morning at which President Eisenhower briefed Republican congressional leaders on his State of the Union message. / Senator Knowland told reporters after the meeting that the message will be "factual but reassuring." / He said Mr. Eisenhower will submit a "strong" program for meeting "the challenges that confront us in the world today." / The President will send Congress a balanced budget, calling for expenditure of about 74-billion dollars. And Knowland said he thinks that "in general, the domestic programs will be carried on." / The senator gathered from what Mr. Eisenhower said that he expects economic conditions to pick up "materially" after the first part of 1958.

President Eisenhower today asked Congress for an additional billion, 260-million dollars for missile development and the construction of →

dispersal facilities for the Strategic Air Command. / The money would be provided in a supplemental appropriations for the current fiscal year. Some of it would go for ballistic missile submarines. / Mr. Eisenhower also asked Congress to authorize the transfer of 10-million dollars in current Defense Department funds for use by the department's newly created space agency.

The President's scientific adviser, Dr. James Killian, said in a speech tonight that too much of America's research has been supported by short-term financing, "subject to stops and starts." / Russia, he said, has not yet passed the United States in the technological field, "but she has a strong will to do so." Dr. Killian warned that if the United States is to hold onto this lead, it must make "a sustained effort to modernize and invigorate science education." / The public, he said, must rid itself of the idea that science is "materialistic".

Secretary of the Army Brucker told a news conference today of inducements which have been offered Lieutenant General Gavin, head of Army research and development, to make General Gavin reconsider his decision to retire. (Gavin said yesterday that he felt an expected promotion had been sidetracked, due to his criticism of the Pentagon's missile policy).

Brucker said he had offered Gavin the choice of staying on in his present post until 1959, or of assuming command of the U.S. 7th Army in Europe. In either case, he said, Gavin in March, 1959, would succeed General Hodes as commander of the United States Army in Europe, and move up to four-star rank. (That is the time General Hodes is scheduled to retire). Gavin...who is now a three-star general...has issued a statement saying that he holds Mr. Brucker "in great esteem" and that he is "seriously considering the matter."

The Communist government of Albania said tonight that Albanian aircraft have forced down an American jet trainer and that the pilot is being held as a prisoner. It claimed that the American plane violated Albanian air space. An American T-33... piloted by Major Howard Curran... has been missing since December 23rd on a flight from France to Naples. This, presumably, is the aircraft to which the Albanian government refers.

The official Soviet news agency Tass said today that it "knows nothing" about the launching of a manned rocket...by Russia... 186 miles into space. Dispatches from Moscow yesterday carried rumors to that effect.

Edward R. Murrow: January 7, 1958. 7.45 p.m.

Nobody expects a congressman to be a great general, a great scientist, a great administrator, that is, to know by himself what is needed in an emergency like the present one. / He has to find the men who are great in their fields and listen to them. / Yesterday the Senate Preparedness sub-Committee listened to such a man, Admiral Hyman Rickover. / He is a witness with unique credentials. / Not only has he been right in understanding the challenge of the nuclear age, he has chalked up one of the outstanding achievements of that age, the building of the first atom-powered submarine. He knows from within what is wrong in government; he knows because he has succeeded, ~~one must say,~~ it must be said in spite of Washington bureaucracy, certainly not with its help. / But he also knows the deficiencies of individuals and what is needed to make them competent in an age calling for super-knowledge and super-competence.

Admiral Rickover holds two of the most important posts in the Administration having to do with the ~~utilization~~ use of nuclear power. / For the Navy he built the Nautilus. For the Atomic Energy Commission he built the world's largest atomic reactor dedicated solely to the generation of power, the 60,000 kilowatt plant at Shippingport. The Russians are ahead of us in

some fields, but not in Admiral Rickover's speciality, the development of nuclear propulsion.

Admiral Rickover is a man for whom the voting of defense dollars is not the one and only answer to Russia. He points out that it takes time to spend money, and too much money may even be a hindrance to good work. What it takes to get things done, he says, is to find the individual capable of doing what is needed, assign the responsibility to him, and then let him alone. He pounded on this theme of responsibility before the Senators yesterday. Many projects, he said, are hampered by red tape. Basically, he said, a project will be successful only where there is a clear line of authority, and someone has the power to make decisions and stick to them. He is no advocate of team work. He says that to him this means a football team with the coach sitting on the sidelines calling the play, or work by a team of horses. Humans, he says, cannot be driven to do a job that requires intellect. Let workers get advice from a leader, or find out what the policy is, he says, but give them the responsibility without meddling with them all the time. He told the Senators yesterday that trained people in research and development programs are being hounded all the time by conferences and committees, and he specifically included congressional

committees, and face a continual demand to offer justification for what they are doing.

He startled the committee by saying that though he did not originate the concept of the missile-firing submarine, he had recommended two years ago that one be built. / The "submariners" he said, without naming which ones, turned it down. / He also startled the committee by saying that he had only been asked for minor comments on the Polaris, the first missile-firing submarine, when it was finally undertaken. Senator Johnson vowed he would find out why a man with Admiral Rickover's qualifications had been largely ignored.

But to Admiral Rickover, better administration by itself is not what it takes to catch up with the Russians. He told the committee that the major problem is getting qualified people and training them. He finds the basic defect in American education to be the lack of a uniform national standard for the high school diploma. He would ~~accredit high schools as medical schools are accredited. Then, he says, parents would have a yardstick to measure the school in their community. If it is sub-standard they would know they~~ had to have more qualified teachers. That in turn

~~would lead to better salaries for teachers, and higher prestige for them.~~

As to Russia, Admiral Rickover believes that when a country with a much lower standard of life than ours, spends a greater share of its national income on education than we do, "it is time we paused and reflected." He has done just that, paused and reflected. And he told the Senators yesterday that he "was very much worried that it is almost too late to match the achievements of the Soviet Union." An opinion from a better qualified judge certainly would be hard to come by.

If we are going to have a serious try at matching the Soviet Union... Admiral Rickover ought to be a usefull man to have around, for in two areas he has done it...and his respect for ability and contempt for red tape are both monumental.....

Back in a moment.

Jane Bryan

Word for Today

Abraham Lincoln told Congress...in 1862..."Fellow citizens, we cannot escape history. We of this Congress and this Administration will be remembered in spite of ourselves. No personal significance or insignificance can spare one or another of us. The fiery trial through which we pass will light us down in honor or dishonor to the latest generation."

Goodnight and good luck!

EDWARD R. MURROW WITH THE NEWS
CBS RADIO NETWORK

TUESDAY, JANUARY 7, 1958
7:45 - 8:00 PM EST

This is the news:

Congress convened today after a recess that saw the launching of two Russian sputniks and the beginnning of the space age. Both houses met for only a few minutes. The Senate conducted a roll-call and adjourned until Thursday, when it will meet with the House of Representatives to hear President Eisenhower read his State of the Union message. The House meets again tomorrow. Republican Representative Keating of New York introduced a bill calling for creation of a joint congressional committee on outer space and the appointment of a secretary of research and development who would have cabinet rank. Democratic Representative Dingell of Michigan offered a bill that would do away with the Joint Chiefs of Staff...replacing them with a single Chief of Staff. Chairman Vinson of the House Armed Services Committee has contended this would "open the road to national suicide." And he said today that if the Dingell measure ever reaches his committee, "it won't get out." Dingell says on the other hand that his measure... if passed...would cut down "bickering between the services." A similar move was recommended this week in the Rockefeller Report.

Speaker Sam Rayburn told reporters as Congress reconvened, "I look for a very heavy session and one of considerable controversy." He ruled out any tax cut and predicted that the national debt ceiling will have to be raised. He said, "We are in a struggle for survival, or may be at any time."

Democratic Leader Johnson told a caucus of Senate Democrats that the future of civilization may depend on decisions taken in the new session. Johnson said, "The urgent race we are now in---or which we must enter---is not to perfect long-range ballistic missiles." More important than the ultimate weapons, he said, is the ultimate position.--"the position of total control over earth that lies somewhere out in space." Johnson said it had been shown (in the hearings

before his preparedness subcommittee) that American evaluation of the importance of control of outer space "has not been based primarily on the judgment of men most qualified to make such appraisal." He said the decisions "more often than not" had been dictated by budgetary considerations.

Senate Republicans caucused this afternoon...following a White House meeting this morning at which President Eisenhower briefed Republican congressional leaders on his State of the Union message. Senator Knowland told reporters after the meeting that the message will be "factual but reassuring." He said Mr. Eisenhower will submit a "strong" program for meeting"the challenges that confront us in the world today." The President will send Congress a balanced budget calling for expenditure of about 74-billion dollars. And Knowland said he thinks that "in general, the domestic programs will be carried on." The senator gathered from what Mr. Eisenhower said that he expects economic conditions to pick up "materially" after the first part of 1958.

President Eisenhower today asked Congress for an additional billion, 260-million dollars for missile development and the construction of dispersal facilities for the Strategic Air Command. The money would be provided in a supplemental appropriations for the current fiscal year. Some of it would go for ballistic missile submarines. Mr. Eisenhower also asked Congress to authorize the transfer of 10-million dollars in current Defense Department funds for use by the department's newly created space agency.

The President's scientific adviser, Dr. James Killian, said in a speech tonight that too much of America's research has been supported by short-term financing, "subject to stops and starts." Russia, he said, has not yet passed the United States in the technological field, "but she has a strong will to do so." Dr. Killian warned that if the United States is to hold onto this lead, it must make "a sustained effort to modernize and invigorate science education." The public, he said, must rid itself of the idea that science is "materialistic."

Secretary of the Army Brucker told a news conference today of inducements which have been offered Lieutenant General Gavin, head of Army research and development, to make General Gavin reconsider his decision to retire. (Gavin said yesterday that he felt an expected promotion had been sidetracked, due to his criticism of the Pentagon's missile policy.) Brucker said he had offered Gavin the choice of staying on in his present post until 1959, or of assuming command of the U.S. 7th Army in Europe. In either case, he said, Gavin in March, 1959, would succeed General Hodes as commander of the United States Army in Europe, and move up to four-star rank. (That is the time General Hodes is scheduled to retire.) Gavin...who is now a three-star general...has issued a statement saying that he holds Mr. Brucker "in great esteem" and that he is "seriously considering the matter."

The Communist government of Albania said tonight that Albanian aircraft have forced down an American jet trainer and that the pilot is being held as a prisoner. It claimed that the American plane violated Albanian air space. An American T-33...piloted by Major Howard Curran... has been missing since December 23rd on a flight from France to Naples. This presumably is the aircraft to which the Albanian government refers.

The official Soviet news agency Tass said today that it knows nothing about the launching of a manned rocket...by Russia...186 miles into space. Dispatches from Moscow yesterday carried rumors to that effect.

Nobody expects a congressman to be a great general, a great scientist, a great administrator, that is to know by himself what is needed in an emergency like the present one. He has to find the men who are great in their fields and listen to them. Yesterday the Senate Preparedness subcommittee listened to such a man, Admiral Hyman Rickover. He is a witness with unique credentials. Not only has he been right in understanding the challenge of the nuclear age, he has chalked up one of the outstanding achievements of that age, the building of the

first atom-powered submarine. He knows from within what is wrong in government; he knows because he has succeeded, it must be said in spite of Washington bureaucracy, certainly not with its help. But he also knows the deficiencies of individuals and what is needed to make them competent in an age calling for super-knowledge and super-competence.

Admiral Rickover holds two of the most important posts in the Administration having to do with the use of nuclear power. For the Navy he built the Nautilus. For the Atomic Energy Commission he built the world's largest atomic reactor dedicated solely to the generation of power, the 60,000 kilowatt plant at Shippingport. The Russians are ahead of us in some fields, but not in Admiral Rickover's speciality, the development of nuclear propulsion.

Admiral Rickover is a man for whom the voting of defense dollars is not the one and only answer to Russia. He points out that it takes time to spend money, and too much money may even be a hindrance to good work. What it takes to get things done, he says, is to find the individual capable of doing what is needed, assign the repponsibility to him, and then let him alone. He pounded on this theme of responsibility before the Senators yesterday. Many projects, he said, are hampered by red tape. Basically, he said, a project will be successful only where there is a clear line of authority, and someone has the power to make decisions and stick to them. He is no advocate of team work. He says that to him this means a football team with the coach sitting on the sidelines calling the play, or work by a team of horses. Humans, he says, cannot be driven to do a job that requires intellect. Let workers get advice from a leader, or find out what the policy is, he says, but give them the responsibility without meddling with them all the time. He told the Senators yesterday that trained people in research and development programs are being hounded all the time by conferences and committees and he specifically included congressional committees, and face a continual demand to offer justification for what they are doing.

He startled the committee by saying that though he did not originate the concept of the missile-firing submarine, he had recommended two years ago that one be built. The "submariners" he said, without naming which ones, turned it down. He also startled the committee by saying that he had only been asked for minor comments on the Polaris, the first missile-firing submarine, when it was finally undertaken. Senator Johnson vowed he would find out why a man with Admiral Rickover's qualifications had been largely ignored.

But to Admiral Rickover, better administration by itself is not what it takes to catch up with the Russians. He told the committee that the major problem is getting qualified people and training them. He finds the basic defect in American education to be the lack of a uniform national standard for the high school diploma.

As to Russia, Admiral Rickover believes that when a country with a much lower standard of life than ours spends a greater share of its national income on education than we do, "it is time we paused and reflected." He has done just that, paused and reflected. And he told the Senators yesterday that he "was very much worried that it is almost too late to match the achievements of the Soviet Union." An opinion from a better qualified judge certainly would be hard to come by.

If we are going to have a serious try at matching the Soviet Union... Admiral Rickover ought to be a useful man to have around, for in two areas he has done it...and his respect for ability and contempt for red tape are both monumental.

This is Ed Murrow. I'll be back in a moment with the word for today. Now here is George Bryan.

GEORGE BRYAN: COMMERCIAL

MURROW: Abraham Lincoln told Congress...in 1862..."Fellow citizens, we cannot

escape history. We of this Congress and this Administration will be remembered in spite of ourselves. No personal significance or insignificance can spare one or another of us. The fiery trial through which we pass will light us down in honor or dishonor to the latest generation."

Goodnight and good luck!

Edward R. Murrow Wed., Jan. 8, 1958

This is the news:

Vice President Nixon said today that "pessimistic talk" to the effect that the United States is weaker than the Soviet Union is "unmitigated nonsense". / Nixon warned, at the same time, against overconfidence. "If we become smug, complacent and overconfident," he said, "we could fall behind." / He added, "I emphasize this could happen. / But I can assure the American people that, under the leadership of President Eisenhower, we are not going to let it happen." / Nixon said "no greater disservice" could be rendered during this session of Congress than to make America's security "a political football". / The vice president was speaking in Philadelphia at the annual meeting of the American Football Coaches Association

Secretary of Defense McElroy told Congress today that "on the whole" our military position is sound. / He said, "There are, however, major areas in which progress could be significantly accelerated if additional funds were made available." / McElroy was testifying before a House appropriations subcommittee in support of President Eisenhower's request for an additional billion, 260-million dollars now to bolster the nation's defense. / The defense secretary told how extra money is needed for missile development and strengthening the Strategic Air Command. / Two hundred and 96 million dollars, he explained, would pay for the construction of three submarines capable of firing ballistic missiles from under water. He said recent Soviet advances make the prompt acceleration of these programs "both desirable and prudent." / House Democratic Leader McCormack predicts an emergency appropriation bill providing the money will be passed. / The House Appropriations Committee expects to be able to send the measure to the floor by the end of next week.

This morning, McElroy held the first of a series of breakfast meetings with congressional leaders. One of the dozen members of Congress...of both parties...attending today's breakfast was Senate Democratic Leader Johnson. Johnson says he told McElroy that if he will "determine what is

→

essential and adequate, and stay with it," he can be assured of Democratic support.

Lieutenant General Gavin told the Senate preparedness subcommittee today that his decision to retire as of March 31 is final. Gavin is head of Army research. He has publicly criticized Pentagon policy. And he told the subcommittee on Monday that he felt, because of his criticism, that he was no longer being considered for promotion. Yesterday, Secretary of the Army Brucker assured Gavin this was not so...that he was slated to become commander of the United States Army in Europe with the rank of four-star general in March, 1959. General Gavin said today that the four-star rank "has nothing to do with it"...that if it were the right kind of army, he would be willing to serve in it as a private. What troubled him, Gavin said, is "the inability to get things done." He spoke of the need for missiles and aircraft. Officers, he said, are placed in "an untenable position", in being asked to defend a budget in which they do not believe. And he cited the fact that in the President's emergency request for new funds there was "not one red penny" for the Army...although, he said, he had been "begging" for money for the Army's space and anti-missile missile programs. He repeated that he felt he could do more for the Army "outside

→

than in," but said he has no plans "to raise a rumpus." Late today, Secretary of the Army Brucker accepted Gavin's resignation "with profound disappointment." "I have done my best," he said, "to persuade him to stay."

The Air Force chief of staff...General White...told the preparedness subcommittee today that the Administration turned down his plea for all-out acceleration of the intercontinental ballistic missile program. The Defense Department, he said, ordered some speed-up in the Atlas missile project...but not to the extent he thought possible. Subcommittee Chairman Johnson quoted White as saying there had been no acceleration at all in the project for developing the Titan intercontinental missile.

A special CBS News report on the state of American preparedness... including science, economics and education...will be heard tonight over many of these stations. The time for the program, called "Where We Stand," is 9:05 p.m., Eastern Standard Time.

Chairman Strauss of the Atomic Energy Commission told a news conference today that both the United States and Britain have made "considerable progress" toward harnessing the power of the hydrogen bomb for peaceful

purposes. He said the two countries...sensing the danger of "invidious comparison" in their achievements...have agreed to cooperate and make their progress reports simultaneously. / And there may be some reports, he said, in a few weeks. In commenting on Russia's claim to have achieved a temperature of a million degrees in its fusion research, Strauss said, "We have long passed that point." / However, he cautioned that development of a "practical" hydrogen power plant is still "years and years away."

Secretary of State Dulles today gave the House Foreign Affairs Committee a three-hour briefing on current foreign policy problems. / The briefing was held behind closed doors, but members of the committee gave reporters this account. / Dulles, they said, feels it would be futile to hold a summit conference with the Russians at this time...but that such a high-level meeting might be useful later, if a specific agenda is agreed on and Russia shows signs of following words with deeds. / The committee members say that Mr. Dulles also stressed the importance of Russia's economic offensive...and its penetration of the less developed countries. Dulles himself termed his meeting with the congressmen "very constructive."

Secretary of Commerce Weeks told Congress today that the new federal highway program may cost 10-billion dollars more than originally estimated. The program calls for the construction of a 41-thousand-mile superhighway system in 13 years. Ten percent of the cost would be met by the states. Secretary Weeks attributed the jump in the cost of the program to an increase in traffic, along with higher construction costs.

Edward R. Murrow: January 8, 1958. 7.45 p.m.

President Eisenhower's State of the Union message tomorrow may prove to be the most fateful in his political career, for it can decide whether he has a firm grasp on the national leadership, or whether that leadership at this critical juncture is to pass to Congress. If it is to go to Congress, Washington onlookers will tell you that a senator of uncommon capability is ready to take it over. This is Senator Lyndon Johnson, the majority leader, whose sub-committee on preparedness has already delved deeply into the deficiencies in defense and struck plenty of ~~rich ore.~~ Pay Dirt.

Senator Johnson had his big day yesterday when he briefed the Senate Democratic caucus on the crisis. Whether he planned it that way or not, he delivered his own State of the Union message. What President Eisenhower says tomorrow is bound to be compared with it and measured by it. Advance speculation on the President's message is that it will be forthright, firm and unalarmed. ~~[It can be taken as a clue to the President's thinking that he unexpectedly asked yesterday for supplementary appropriations for missiles amounting to one billion, two hundred and sixty million dollars. This is in addition to the one-and-a-half billion dollars increase in defense spending to be recommended in the budget. That makes the total increase almost the three billion dollars recommended by the Rockefeller Commission.]~~

The President's chins-up speeches after the launching of the sputniks were on the whole unruffled. And though they promised to tell the rough with the smooth they told mighty little of it, compared with what was to come in the Gaither and Rockefeller reports. These reports also will be yardsticks by which the President's message tomorrow will be measured. But the immediate issue at stake appears to be whether Mr. Eisenhower understands the crisis better than Senator Johnson, and whether his wisdom in dealing with it promises to be greater.

Senator Johnson put himself on record twice yesterday. He did it dramatically in his address to the Democratic caucus, and then again in a closely-packed interview in the New York Herald Tribune. The interview dealt chiefly with the shortcomings in the defense program. He said unequivocally that we are behind the Soviet Union in ballistic missiles, and at the rate of progress in other fields "we may well be behind them in all phases of military capabilities very shortly", meaning a very few years. He said the Strategic Air Command needs to keep more planes in the air, needs a better warning system, more crews, more modernized planes and ~~tanks~~, and more tankers. He said witnesses before his committee reported that we do not have sufficient weapons or the airlift to fight brushfire wars.

He said we have no defense against the intercontinental missile, or in Europe against the intermediate missile. He said we are not doing enough to develop anti-missile missiles. We are not building enough submarines, and the Navy's techniques for dealing with submarines "do not make him feel safe". And he emphasized the ability of the Russians to build a new weapon system much faster than we can.

His address to the caucus took the long view. Indeed, Senator Johnson looked farther than almost anyone in Washington has dared to do, in foreseeing a race with the Soviet Union for the control of outer space, which, he said, will decide the control of the world. He spoke about this with imagination and eloquence. With space control as the ultimate objective -- which will take years to achieve -- he outlined the intermediate program, and included the whole gamut of needs now under discussion, such as education, shelters for civilians and the non-military problems of government, like unemployment, housing and agriculture. It sounded suggestively like the platform of a political candidate. However, the Senator has been scrupulously insisting he does not seek the presidency and is not trying to take partisan advantage of the crisis. Those who know him best say he is quite sincere about this. They think he has grown

in much the same way as the late Senator Vandenberg, and indeed is much more gifted in the technique of personal relationships and political management. They compare him with the late Senator Taft, and give him high marks for having piloted civil rights legislation through the last session with tact, personal persuasion and great industry. They credit him with averting a fatal breakup of the Democratic Party.

Senator Johnson, of course, does not count simply as an alternative leader to President Eisenhower. If in his message tomorrow the President demonstrates that he still has his firm grasp, Senator Johnson does not withdraw to the sidelines. He will go on asserting the role of Congress in making policy. And if the President is strong, the Senator can marshal a stronger Congress to support him.

Back in a moment —

George Bryan —

Word for Today

The State of the Union message President Eisenhower will deliver to Congress tomorrow will represent, f[redacted], a test in leadership.

One recalls a statement the President made three years at a news conference. "A platoon leader," he said, "doesn't get his platoon to go by getting up and shouting, 'I am bigger, I am stronger. I am the leader'. He gets his men to go along with him because they believe in him."

Goodnight and good luck!

EDWARD R. MURROW WITH THE NEWS
CBS RADIO NETWORK

WEDNESDAY, JANUARY 8, 1958
7:45 - 8:00 PM EST

This is the news:

Vice President Nixon said today that "pessimistic talk" to the effect that the United States is weaker than the Soviet Union is "unmitigated nonsense." Nixon warned, at the same time, against overconfidence. "If we become smug, complacent and overconfident," he said, "we could fall behind." He added, "I emphasize this could happen. But I can assure the American people that, under the leadership of President Eisenhower, we are not going to let it happen." Nixon said "no greater disservice" could be rendered during this session of Congress than to make America's security "a political football." The vice president was speaking in Philadelphia at the annual meeting of the American Football Coaches Association.

Secretary of Defense McElroy told Congress today that "on the whole" our military position is sound. This is Ed Murrow. I'll be back in a moment with the word for today. Now here is George Bryan.

GEORGE BRYAN: COMMERCIAL

MURROW: The State of the Union message President Eisenhower will deliver to Congress tomorrow will represent a test in leadership. One recalls a statement the President made three years ago/at a news conference. "A platoon leader," he said, "doesn't get his platoon to go by getting up and shouting, 'I am bigger, I am stronger. I am the leader.' He gets his men to go along with him because they believe in him."

Goodnigtt and good luck!

Lagueur for Murrow Thurs. Jan. 9, 1958

Good evening, everyone. . Here's what happened today:

President Eisenhower gave Congress an eight-point program for strengthening our security...and waging peace. Mr. Eisenhower began his State of the Union message by saying, "There are two tasks confronting us that far outweigh all others." He said: (16) (1)

(#1 Tape runs 3:12
Ends on cue: "---more serious impact
of the Soviet economic offensive."

Mr. Eisenhower said that...as with our military potential.. our economic assets "are more than equal to the task." He noted "some decline in employment and output" in the last part of 1957. But he said, "The basic sources of growth remain unimpaired. There are solid grounds," he said,

→

"for confidence that economic growth will be resumed without an extended interruption."

As the first point...in his eight-point program...Mr. Eisenhower said there must be a reorganization of the Defense Department in order to eliminate jurisdictional disputes between the armed services...and to make for better integration of the defense effort. (2) 38

2 Tape runs :50
Ends on cue: "---American wants them stopped." Include applause, running about 4 seconds.

The President promised that...later...he would send Congress specific proposals dealing with this problem. Mr. Eisenhower's SECOND point dealt with accelerating the defense effort. He said, "We must disperse our striking forces, and increase their readiness." We must speed up our long-range missile program. And he went on to say: 17

3 Tape runs 1:03 (3)
Ends on cue: "---of any realistic threat we face."

Thirdly, Mr. Eisenhower stressed the importance of the military and economic assistance programs. He said: 6- (4)

#4 Tape runs :35
Ends on cue: "---shot down with a slogan."

As his fourth and ~~X~~ fifth points, the President asked for a five-year extension of the Reciprocal Trade Act and the enactment...by Congress... of legislation that would permit the United States to share atomic secrets with its allies. Under point No. 6, Mr. Eisenhower dealt with education. 15

#5 Tape runs 1:00
Ends on cue: "---with his bag of books and his homework." (5)

The 7th point concerned spending. Mr. Eisenhower said the budget for fiscal 1959 would show a total increase of about 4-billion dollars, which would be spent for a wide variety of items, ranging from missiles to science and education. Some new civilian programs, he said, may have to be postponed or eliminated altogether.

The final point consisted of a direct appeal to the Soviet people over the heads of the Kremlin leaders. Mr. Eisenhower made the appeal in these words: -28-

#6 Tape runs 1:12
Ends on cue: "It requires works of peace." (6)

Mr. Eisenhower said that, of all the works of peace, "none is more needed now than a real first step toward disarmament."

The State of the Union message has provoked favorable reaction---not only from Republican members of Congress---but from some Democrats as well. Senate Democratic Leader Johnson praised the message for its "idealism." He went on to say that cooperation would now be necessary, "so that the specific steps which lead to security and peace, can now be built into a program of action." House Speaker Sam Rayburn called it "a very fine message...very much like what Franklin D. Roosevelt and Harry Truman would give." But Democratic Senator Morse described the message as "a sermon of apology, delivered at the wake of a dead administration."

In Moscow, the Soviet news agency Tass complains that most of the President's speech was---in its phrase---"taken up by military problems." It conceded that Mr. Eisenhower did deal with the problem of working constructively for establishment of true peace.

Tonight, Soviet Premier Bulganin sent out a new batch of letters to the heads of 19 countries, including the United States...calling once AGAIN for a summit meeting. Bulganin proposes that the meeting be

attended by leaders of the NATO countries and those of the Warsaw Pact. Such a meeting, says Bulganin, "could be an important initiative towards a fundamental change in the international situation and the cessation of the Cold War." He says the conference would "have" to deal with the immediate termination of nuclear weapons tests for "at least two or three years."

THIS IS LARRY LESUEUR - I'LL BE BACK IN A MOMENT WITH A FOOTNOTE TO THE NEWS

FIRST A WORD FROM GEORGE BRYAN

President Eisenhower faced a democratic-controlled congress today at a time when even some lawmakers OF his own party have questioned his leadership...And he got a far more friendly reception than he did a year ago, when things looked rosier...

Last year his state of the union message was interupted by applause only five times. He got that much applause in the first FEW minutes this time--and thereafter the congressmen applauded HIM ON AN average of onee a minute for entire 44 minutes of his speech.. That's better than PAR! for the country

This is Larry LeSueur---Good-night.

EDWARD R. MURROW WITH THE NEWS
CBS RADIO NETWORK

THURSDAY, JANUARY 9, 1958
7:45 - 8:00 PM EST

LARRY LESUEUR REPORTING

Good evening, everyone...Here's what happened today:

President Eisenhower gave Congress an eight-point program for strengthening our security..and waging peace. Mr. Eisenhower began his State of the Union message by saying, "There are two tasks confronting us that far outweigh all others". He said: "The first is to ensure our safety through strength.

But we could make no more tragic mistake than merely to concentrate on military strength.

For if we did only this, the future would hold nothing for the world but an Age of Terror.

And so our second task is to do the constructive work of building a genuine peace. We must never become so preoccupied with our desire for military strength that we neglect those areas of economic development, trade, diplomacy, education, ideas and principles where the foundation of real peace must be laid.

The Soviets are, in short, waging total cotal cold war.

The only answer to a regime that wages total cold war is to wage total peace.

This means bringing to bear every asset of our personal and national lives upon the task of building the conditions in which security and peace can grow.

The Communist imperialist regimes have for some time been largely frustrated in their attempts at expansion based directly on force. As a result, they have begun to concentrate heavily on economic penetration, particularly of newly developing countries, as a preliminary to political domination.

This non-military drive, if underestimated, could defeat the free world regardless of our military strength.

Admittedly, most of us did not anticipate the intensity of the psychological impact upon the world of the launching of the first earth satellite. Let us not make the same kind of mistake in another field, by failing to anticipate the much

more serious impact of the Soviet economic offensive."

LESUEUR: Mr. Eisenhower said that...as with our military potential...our economic assets "are more than equal to the task." He noted "some decline in employment and output" in the last part of 1957. But he said, "The basic sources of growth remain unimpaired. There are solid grounds," he said, "for confidence that economic growth will be resumed without an extended interruption."

As the first point...in his eight-point program...Mr. Eisenhower said there must be a reorganization of the Defense Department in order to eliminate jurisdictional disputes between the armed services...and to make for better integration of the defense effort.

EISENHOWER: Now, let us by all means proudly remember that the members of the armed forces give their basic and first allegiance solely to the United States. Of that fact all of us are certain. But pride of service and mistaken zeal in promoting particular doctrine has more than once occasioned the kind of difficulty of which I have just spoken.

I am not attempting today to pass judgment on the charge of harmful service rivalries. But one thing is sure. Whatever they are, America wants them stopped.

LESUEUR: The President promised that...later...he would send Congress specific proposals dealing with this problem. Mr. Eisenhower's second point dealt with accelerating the defense effort. He said, "We must disperse our striking forces, and increase their readiness." We must speed up our long-range missile program. And he went on to say:

EISENHOWER: We must maintain freedom of the seas. This means nuclear submarines and cruisers, improved anti-submarine weapons missile ships and the like.

We must maintain all necessary types of mobile forces to deal with local conflicts should there be need. This means further improvements in equipment, mobility, tactics and firepower. Through increases in pay and incentive, we must maintain in the armed forces the skilled manpower modern military forces require. We must be forward-looking in our research and development to anticipate and

achieve the unimagined weapons of the future. With these and other improvements we intend to assure that our vigilance, power and technical excellence keep abreast of any realistic threat we face.

LESUEUR: Thirdly, Mr. Eisenhower stressed the importance of the military and economic assistance programs. He said:

EISENHOWER: One great obstacle to the economic aid program in the past has been not a rational argument against it on the merits, but a catchword: "Give-away program." The fact is that no investment we make in our own security can pay us greater dividends than necessary amounts of economic aid to friendly nations. This is no "give-away." Let's stick to the facts! We cannot afford to have one of our most essential security programs shot down with a slogan!

LESUEUR: As his fourth and fifth points, the President asked for a five-year extension of the Reciprocal Trade Act and the enactment ...by Congress...of legislation that would permit the United States to share atomic secrets with its allies. Under point No. 6 Mr. Eisenhower dealt with education.

EISENHOWER: In the area of education and research, I recommend a balanced program to improve our resources, involving an investment of about a billion dollars over a four-year period. This involves new activities by the Department of Health, Education and Welfare designed to encourage improved teaching quality and student opportunities in the interests of national security. But Federal action can do only a part of the job. In both education and research, redoubled exertions will be necessary on the part of all Americans if we are to rise to the demands of our times. This means hard work on the part of state and local governments, private industries, schools and colleges, private organizations and foundations, teachers, parents, and-perhaps most important of all-the student himself with his bag of books and his homework.

LESUEUR: The 7th point concerned spending. Mr. Eisenhower said the budget for fiscal 1959 would show a total increase of about 4-billion dollars, which would

be spent for a wide variety of items, ranging from missiles to science and education. Some new civilian programs, he said, may have to be postponed or eliminated altogether.

The final point consisted of a direct appeal to the Soviet people over the heads of the Kremlin leaders. Mr. Eisenhower made the appeal in these words:

EISENHOWER: Now, my last call for action is not primarily addressed to the Congress and people of the United States. Rather, it is a message from the people of the United States to all other peoples, especially those of the Soviet Union. This is the spirit of what we Americans would like to say: "In the last analysis there is only one solution to the grim problems that lie ahead. The world must stop the present plunge toward more and more destructive weapons of war, and turn the corner that will start our steps firmly on the path toward lasting peace. "Our greatest hope for success lies in a universal fact: the people of the world, as people have always wanted peace and want peace now. The problem, then is to find a way of translating this universal desire into action. This will require more than words of peace. It requires works of peace."

LESUEUR: Mr. Eisenhower said that, of all the works of peace, "none is more needed now than a real first step toward disarmament."

The State of the Union message has provoked favorable reaction---not only from Republican members of Congress---but from some Democrats as well. Senate Democratic Leader Johnson praised the message for its "idealism." He went on to say that cooperation would now be necessary, "so that the specific steps which lead to security and peace can now be built into a program of action." House Sepaker Sam Rayburn called it "a very fine message....very much like what Franklin D. Roosevelt and Harry Truman would give." But Democratic Senator Morse described the message as "a sermon of apology, delivered at the wake of a dead administration."

In Moscow, the Soviet news agency Tass complains that most of the President's speech was---in its phrase---"taken up by military problems." It conceded that Mr. Eisenhower did deal with the problem of working constructively for establishment

of true peace.

Tonight, Soviet Premier Bulganin sent out a new batch of letters to the heads of 19 countries, including the United States...callling once again for a summit meeting. Bulganin proposes that the meeting be attended by leaders of the NATO countries and those of the Warsaw Pact. Such a meeting, says Bulganin, "could be an important initiative towards a fundamental change in the international situation and the cessation of the Cold War." He says the conference would "have" to deal with the immediate terminiation of nuclear weapons tests for "at least two or three years."

This is Larry LeSueur. I'll be back in a moment with a footnote to the news. First a word from George Bryan.

GEORGE BRYAN: COMMERCIAL

LESUEUR: President Eisenhower faced a democratic-controlled congress today at a time when even some lawmakers of his own party have questioned his leadership... and he got a far more friendly reception than he did a year ago, when things looked rosier.

Last year his state of the union message was interrupted by applause only five times. He got that much applause in the first few minutes this time---and thereafter the congressmen applauded him on an average of once a minute for the entire 44 minutes of his speech. That's better than par!

This is Larry LeSueur---Good-night.

Edward R. Murrow Fri., Jan. 10, 1958

This is the news:

The Air Force today launched ~~the~~ an Atlas intercontinental ballistic missile for the fourth time. The first two firings ended in failure. The Defense Department says that today's launching was a success. It says the test was "not full range" but that the missile traveled its prescribed course. The full range for an Atlas missile is 5-thousand miles.

The successful firing of the Atlas...at Cape Canaveral...was followed four hours later by the launching of a long-range Navaho missile which is much slower than the Atlas and resembles a pilotless jet aircraft. Although the Navaho is obsolete and is no longer in production it is used for testing ram-jet engines.

The Defense Department today authorized the Army to proceed...on a top-priority basis...to develop a solid-fuel replacement for the Redstone missile, which uses liquid propellants./ The authorization, signed by Secretary McElroy, was read to the Senate preparedness subcommittee by General Medaris, director of the Army missile center at Huntsville, Alabama./ Medaris said the new missile...still on the drawing boards... would provide the Army with "a more versatile and flexible weapon." It will be smaller and lighter than the Redstone, but still have the same 200-mile range. The recent multi-million-dollar contract with Chrysler, for the production of Redstone missiles, is not affected by today's announcement. Medaris said the Redstones produced can be adapted, so that solid propellants can still be used.

Nelson Rockefeller appeared before the Senate subcommittee today and defended the findings of the recent Rockefeller Report...based on a study by 30 experts outside the government./ One recommendation...contained in the report...was that the chairman of the Joint Chiefs of Staff be made the principal military adviser to the President and the Secretary of Defense. Rockefeller challenged the argument that such a move would set up

a Prussian-type general staff...pointing out that the chief military adviser would still be under the civilian control of the President, his defense secretary and Congress. Today, he said, each of the services is "striving to put itself in a position to fight a war by itself." He said the Soviets are rapidly catching up...and a single, over-all strategy is needed now, before it is too late.

Chairman Johnson of the Senate preparedness subcommittee revealed today that Admiral Rickover testified...on Monday...that some of the funds voted for his nuclear projects last year still have not been made available. Rickover said the money is being held up by the Bureau of the Budget. The purpose, he said, may be economy. But what it really amounts to is "buying obsolescense."

The White House reported today that hundreds of telegrams have been received, in reaction to yesterday's State of the Union message, and that they run "99½ percent" in favor of the program laid down by the President. News Secretary Hagerty said most of what criticism there is is directed at Mr. Eisenhower's proposals for foreign aid.

Another proposal the President made called for setting up a separate space agency. General Schriever, head of the Air Force missile program, told the preparedness subcommittee yesterday...in secret testimony...that creation of such an agency would represent a costly duplication of Air Force abilities to send a manned satellite to the moon and back in a few years. Schriever referred to the work going forward on the Thor and Titan rockets. And the Air Force made his testimony public tonight.

In Paris today, the permanent NATO council discussed the reply the West plans to make to Soviet Premier Bulganin's proposal for an East-West summit conference in two or three months. It is reported...unofficially... that most of the NATO countries approve of such a meeting, only if thorough preparations are made beforehand. Secretary of State Dulles held a news conference in Washington today, and the questions and answers centered about the Bulganin messages---the letters delivered yesterday, and those of last December. For a direct report on that, we switch to my colleague, Bill Downs, in Washington.

(Downs runs approx 3 mins,
ends on cue: "...to Ed Murrow in N.Y."

Albania today released the American flier...Major Howard Curran... whom the Communist government accused of "flagrant violation of the state frontier." Major Curran was forced down by Albanian jet fighters on December 23. He had disappeared in bad weather on a training flight to Italy from an Air Force base in France.

Here in New York... John Gates, editor of the Daily Worker, today announced that he is quitting the Communist Party. The Daily Worker is scheduled to cease publication on Monday. Gates, however, was to have stayed on as editor of the week-end edition of The Worker, which is being continued. He told a news conference he was leaving the party because (in his phrase) it is "no longer an effective force for democracy, peace and socialism in the United States." For some time, he has been in confliet with a strong faction of the party, led by William Z. Foster, favoring strict adherence to the Moscow line. Gates felt American Communists should follow a more "independent" policy. And this reportedly is a reason why the daily edition of The Worker is being dropped.

The new Civil Rights Commission...in Washington...has failed in its first effort to hire a staff director. The commission chairman, Dr. John Hannah, told reporters that President Eisenhower had been unable "

Edward R. Murrow: January 10, 1958.

Yesterday, before a Senate Committee, Secretary Dulles sounded a somewhat more optimistic note about talks with Russia in the immediate future. There was reason to believe, he said, that the Soviet leaders might be more reasonable, and that the talks would be more meaningful.

In his State of the Union message, the President stressed the need for disarmament negotiations. / Any reasonable proposal, he said, must be heard, discussed, and if possible, negotiated. / He did attach a condition that there must be reliable means to ensure compliance, but tactfully said that the demonstration of integrity had to be made by both sides. / Then he added the phrase that was widely quoted in Europe today, that "we as a nation will always go the extra mile with anyone on earth, if it will bring us nearer genuine peace."

Whether or not the President had "loosened up" Mr. Dulles's inflexibility, as seems possible, this certainly had not been the former Dulles line. / It looked as though the strategists who planned the President's message hoped that it would reassure our allies on our readiness to talk with Russia and so strengthen the President's leadership.

But the Kremlin outmatched this strategy. It sent to each of the fifteen NATO governments, and the four members of the Warsaw Pact, a fresh

invitation to a Heads-of-Government meeting, and went on to propose a non-aggression pact, a Central European zone free of nuclear weapons, a ban on nuclear tests, and an embargo on arms shipments to the Middle East. ~~It even sent Washington a nineteen-page draft of a non-aggression pact.~~

The result in many allied countries was that Bulganin got the headlines, and not Eisenhower. Editorial writers found fault with Mr. Eisenhower's failure to produce concrete proposals, and the London Times was sarcastic about his invitation to the Russians to work with us to stamp out malaria. There was a general failure to measure the Eisenhower message against the background of American political life. If there had not been the broadside of Bulganin notes, the significance of the message would have sunk in, in time. Now that chance is lost. Attention has been turned from the American program to the Russian program. It is quite right to say there is nothing new in the Russian program. But it is a fresh invitation to a Heads-of-Government conference. On the surface, it shows a more urgent desire to negotiate than the Eisenhower message.

This will have its effect, both in the uncommitted countries and with our allies. It follows up Prime Minister MacMillan's personal endorsement

of top-level talks, and the wide interest in the idea of a European zone free of nuclear weapons. That is, it plays up to trends among our allies not shared here, and will tend to pull them loose from Washington. In the meantime, the concerted NATO action in replying to the Bulganin invitations sent out at the time of the last NATO meeting has still to be produced. The clumsy and tedious machinery of consultation has been grinding away. But the Kremlin did not wait for the replies. The Kremlin not only conducts diplomacy, it also specializes in public relations. Its strategy must be called the "play of the week."

Word for Today

The Russians are experts in [redacted] propaganda. And they have the advantage...referred to by Secretary Dulles...of being able to champion peace, without bothering with any of the "fine print." Edward Bernays said, "Propagandists have existed ever since Eve persuaded Adam to eat the first apple...and they will exist as long as one person attempts to convince another of anything."

Goodnight and good luck!

CBS RADIO DIVISION

EDWARD R. MURROW WITH THE NEWS

Friday, January 10, 1958
7:45 - 8:00 P.M.

MURROW: ... Secretary of State Dulles held a news conference in Washington today, and the questions and answers centered about the Bulganin messages, the letters delivered yesterday and those of last December. For a direct report on that, we switch to my colleague Bill Downs in Washington.

DOWNS: Secretary of State Dulles this afternoon denounced the latest Bulganin proposal for an East-West summit meeting as "primarily propaganda." But he later admitted that Soviet propaganda saying "anything everywhere" was much smarter than America's articulation of her own foreign policy. The Secretary of State said the United States is opposed to a summit meeting without adequate preparation on a lower diplomatic level to assure there is a real chance of reaching concrete and workable agreements. Mr. Dulles may have done something else at his news conference today, which could be very important as long as he formulates U.S. foreign policy. In a series of answers to reporters' questions, the Secretary appeared to be carefully destroying the widespread diplomatic image of the 'brink of war' Dulles, tough, intractable, and unmoved by Communist blandishments. At one point he said that he firmly believed there will be more disarmament negotiations between the East and the West because of the tremendous pressure of the world's peoples for peace. The Secretary also denied that the United States has lost the initiative in the struggle for world peace. The Soviet proposals for easing cold war tensions boiled down, Dulles said, to stop nuclear testing, which would only cause devastating weapons to pile up and increase the dangers. "This would not advance world peace one inch." We propose inspection and a ban on the production of nuclear weapons, real limitations,

and Dulles continued "the Soviet proposals are barren, a lot of words. They talk more frequently, more eloquently and passionately about peace but only to cover a vacuum in their policy."

Well, a correspondent interrupted Dulles to ask "Are you saying then that the Soviets are articulating a bad policy better than we are articulating a good policy?" Well, Secretary Dulles paused a moment and said "Quite possibly. They can say anything everywhere. I have to give them credit for developing a propaganda technique better than we." He said the timing of the Bulganin letter to the White House was smart "but smartness is not what is called for in these times."

Dulles denied that he was against negotiating with the Soviets now or at any time. He said he had attended at least fifteen major conferences with them. "We sometimes got agreements, rarely. Sometimes they lived up to them, rarely. But we must keep trying and trying. Neither the Russians nor ourselves," Dulles said "want to live in a world of destruction. We can find areas of common interest," the Secretary went on. "Cultural exchanges, students, peoples, information and science which would not jeopardize the security of the United States. There are many such areas." But Secretary Dulles emphasized "They ask us to rely on their promises. But other nations, who have done this, have disappeared!"

Now, back to Ed Murrow in New York.

Ed. trans. - P. O.

DOWNS: Secretary of State Dulles this afternoon denounced the latest Bulganin

proposal for an East-West summit meeting as "primarily propaganda." But he later admitted that Soviet propaganda saying "anything everythere" was much smarter than America's articulation of her own foreign policy. The Secretary of State said the United States is opposed to a summit meeting without adequate preparation on a lower diplomatic level to assure thare is a real chance of reaching concrete and workable agreements. Mr. Dulles may have done something else at his news conference today, which could be very important as long as he formulates U.S. foreign policy. In a series of answers to reporters' questions, the Secretary appeared to be carefully destroying the widespread diplomatic image of the 'brink of war' Dulles, tough, intractable, and unmoved by Communist blandishments. At one point he said that he firmly believed there will be more disarmament negotiations between the East and the West becuase of the tremendous pressure of the world's peoples for peace. The Secretary also denied that the United States has lost the initiative in the struggle for worldpeace. The Soviet proposals for easing cold war tensions boiled down, Dulles said, to stop nuclear testing, which would only cause devastating weapons to pile up and increase the dangers. "This would not advance world peace one inch." We propose inspection and a ban on the production of nuclear weapons, real limitations, and Dulles continued "the Soviet proposals are barren, a lot of words. They talk more frequently,more elequently and passionately about peace but only to cover a vacuum in their policy."

Well, a correspondent interrupted Dulles to ask "Are you saying then that the Soviets are articulating a bad policy better than we are atticulating a good policy?" Well, Secretary Dulles paused a moment and said "Quite possibly. They can say anything everywhere. I have to give them credit for developing a propaganda technique better than we." He said the timing of the Bulganin letter to the White House was smart "but smartness is not what is called for in these times."

Dulles denied that he was against negotiating with the Soviets now or at any time. He said he had attended at least fifteen major conferances with them. "We sometimes got agreements, rarely. Sometimes they lived up to them, rarely. But

we must keep trying and trying. Neither the Russians nor ourselves," Dulles said, "want to live in a world of destruction. We can find areas of common interest," the Secretary went on. "Cultural exchanges, students, peoples, information and science which would not jeopardize the security of the United States. There are many such areas." But Secretary Dulles emphasized "They ask us to rely on their promises. But other nations, who have done this, have disappeared."

Now, back to Ed Murrow in New York.

MURROW: Albania today released the American flier...Major Howard Curran...whom the Communist government accused of "flagrant violation of the state frontier." Major Curran was forced down by Albanian jet fighters on December 23rd. He had disappeared in bad weather on a training flight to Italy from an Air Force base in France.

Here in New York, John Gates, editor of the Daily Worker, today announced that he is quitting the Communist Party. The Daily Worker is scheduled to cease publication on Monday.

In his State of the Union message, the President stressed the need for disarmament negotiations. Any reasonable proposal, he said, must be heard, discussed and if possible, negotiated. He did attach a condition, that there must be reliable means to ensure compliance, but tactfully said that the demonstration of integrity had to be made by both sides. Then he added the phrase that was widely quoted in Europe today, that "we as a nation will always go the extra mile with anyone on earth, if it will bring us nearer genuine peace."

Whether or not the President had loosened up Mr. Dulles' inflexibility, as seems possible, this certainly had not been the former Dulles line. It looked as though the strategists who planned the President's message hoped that it would reassure our allies on our readiness to talk with Russia and so strengthen the President's leadership.

But the Kremlin outmatched this strategy. It sent to each of the fifteen NATO governments and the four members of the Warsaw Pact, a fresh invitation to

a Heads-of-Government meeting, and went on to propose a non-aggression pact, a Central European zone free of nuclear weapons, a ban on nuclear tests, and an embargo on arms shipments to the Middle East.

The result in many allied countries was that Bulganin got the headlines and not Eisenhower. Editorial writers found fault with Mr. Eisenhower's failure to produce concrete proposals, and the London Times was sarcastic about his invitation to the Russians to work with us to stamp out malaria. There was a general failure to measure the Eisenhower message against the background of American political life. If there had not been the broadside of Bulganin notes, the significance of the message would have sunk in, in time. Now that chance is lost. Attention has been turned from the American program to the Russian program. It is quite right to say there is nothing new in the Russian program. But it is a fresh invitation to a Heads-of-Government conference. On the surface, it shows a more urgent desire to negotiate than the Eisenhower message.

Tiis will have its effect, both in the uncommitted countries and with our allies. It follows up Prime Minister MacMillan's personal endorsement of top-level talks, and the wide interest in the idea of a European zone free of nuclear weapons. That is, it plays up to trends among our allies not shared here, and will tend to pull them loose from Washington. The Kremlin not only conducts diplomacy, it also specializes in public relations. Its strategy must be called the"play of the week."

This is Ed Murrow. I'll be back in a moment with the word for today. Now, here is George Bryan.

GEORGE BRYAN: COMMERCIAL

MURROW: The Russians are experts in propaganda. And they have the advantage... referred to by Secretary Dulles...of being able to champion peace, without bothering with any of the "fine print." Edward Bernays said, "Propagandists have existed ever since Eve persuaded Adam to eat the first apple...and they will exist as long as one person attempts to convince another of anything."

Goodnight and good luck!

Edward R. Murrow Jan. 13, 1958

This is the news:

President Eisenhower today sent Congress a record peacetime budget calling for expenditure of just under 74-billion dollars in the next fiscal year. That's an increase of 1-billion, 146-million dollars over the budget for the current fiscal year, ending in June. Mr. Eisenhower says in his budget message, "I feel confident that this budget expresses the way in which the American people will want to respond to the promises and dangers of the dawning age of space conquest." The response, he says, must rise above political partisanship. "The goal of lasting peace with justice is worth all of our efforts. We must make the necessary

→

sacrifices for it. Our own people demand it, and the nations of the world look to us for leadership." /The President wants an additional 918-million dollars for defense...which brings next year's defense budget up to almost 40-billion dollars. Five billion, 300-million would be spent on the missile program alone, an increase of about a billion over fiscal '58. The Atomic Energy Commission would get 250-million dollars more next year than this year and the over-all figure for mutual security...including military and economic assistance...would be upped 119-million. /Forty-seven billion dollars, or 64 percent of the entire budget, is earmarked for national security and foreign aid. /Only about 20 percent of the budget is allocated to "civil benefits"---all the rest would go for so-called housekeeping expenses and payment of interest on the national debt. /Under the heading of "civil benefits" is the President's four-year, billion dollar education program, emphasizing scientific education and teaching. /Mr. Eisenhower says irrigation and flood control projects should be limited to those already under way. /And he proposes a 300-million-dollar cut in spending on agriculture. Recommendations for "important revisions" in the Administration farm program will be spelled out later in a special

→

message to Congress. There will also be separate messages...proposing changes in the veterans program and in the Taft-Hartley Act. One proposal will be for the "registration and safeguarding of union funds."

Mr. Eisenhower said that...on June 30th...the Treasury will wind up 388-million dollars in the red. / Consequently, there will be no tax cuts, and he is asking Congress "temporarily" to raise the 275-billion-dollar ceiling on the national debt. / He predicts a surplus next year of about 460-million dollars. The prediction is based on "conviction that the expansion of our economy will soon be resumed."

Senate Democratic Leader Johnson says that President Eisenhower's budget will be "analyzed thoroughly." "The question to ask about any budget," he told reporters, "is whether it is the right size to do the job that must be done." / Democratic Senator Byrd, chairman of the Senate Finance Committee, calls it "a reckless budget", leading to deficit spending. But Chairman Cannon of the House Appropriations Committee feels the increase in defense spending is "fully justified"...and predicts it will have the support of Congress.

The House Armed Services Committee today approved the Administration request for half a billion dollars now to build missile bases and disperse the facilities of the Strategic Air Command. / The full House may act on the measure on Thursday.

Secretary of Defense McElroy told a House Armed Services Subcommittee today that provision for another launching base for intercontinental ballistic missiles is made in the new budget. / He did not say where the new base will be located. / The launching sites...presently designated...are Cooke Air Force Base in California and Warren Air Force Base in Wyoming.

David Sarnoff, board chairman of R.C.A., told the House investigating subcommittee that the United States must do more than try to "catch up" with Russia. / Sarnoff expressed confidence that the American economic system can stand the increased spending called for in the Rockefeller report. He urged...specifically...that another half billion dollars be allocated for research and development.

A program for sharing profits with the nation's car manufacturing companies was outlined today by the executive board of the United Auto Workers Union. Under the plan, all profits above 10 percent on net capital before taxes would be split three ways. / One-half of the profit would go to

stockholders and company executives, one-fourth to the employes of the company, and the other fourth to car buyers in the form of rebates.

The U.A.W. served notice that when contract talks get under way this spring it will also seek a general wage increase "based on increased productivity." Attention is centered, however, on the profit-sharing proposal. U.A.W. President Walter Reuther told a news conference, "If the companies make a lot of money, we want our share. It's a very reasonable approach." He said General Motors and Ford already have a bonus system for executives, amounting to profit-sharing. And he pointed out that the union is shelving its demand for a shorter work-week, "as responsible citizens in the light of the world situation." Tonight, President Colbert of Chrysler said the United Auto Workers Union had...in his words..."proposed a whole series of new inflationary demands on the automobile industry." President Curtice of General Motors called the union proposal "a radical scheme...foreign to the concept of the American free enterprise system." A spokesman for American Motors Corporation said the proposal is being given "thorough study." So far, there has been no comment from Studebaker-Packard.

Fond on.

At United Nations headquarters today, Dr. Linus Pauling...the Nobel Prize winner...submitted a petition calling for an international aggeement for the immediate cessation of nuclear bomb tests. The petition is signed by more than 9-thousand scientists from 44 countries on both sides of the Iron Curtain.

Edward R. Murrow: January 13, 1958. 7.45 p.m.

President Eisenhower's letter to Premier Bulganin, like Bulganin's letter to him, can be compared to a big package filled with excelsior, but containing something substantial though small. The letters are stuffed with a high percentage of propaganda, but they have improved somewhat the chances of Western talks with the Russians, and that is the substance that much of Allied opinion is looking for.

The President's letter represents a change, or at least a shift of emphasis, in United States policy. This change set in at the NATO conference last month. When the American delegation reached Paris, it discovered that all our allies laid great store on demonstrating a willingness to negotiate with the Russians. In the end, talks with the Soviet Union had a big place in the final communique. Now it is the main theme of the Eisenhower reply.

It is not derogatory of the President's letter to say that much in it is propaganda. By propaganda is meant eloquently proposing talks on subjects we know the Russians won't talk about. Bulganin in his letters put forward a whole series of topics which he knew from experience we wouldn't discuss. Mr. Eisenhower answered in kind.

Washington certainly doesn't expect the Kremlin to agree at a summit meeting to limit its veto power in the United Nations Security Council; or

to unify Germany through free elections; or to grant greater self-determination to Hungary and other Soviet satellites in Eastern Europe. Mr. Eisenhower was scoring points in the propaganda battle in proposing these subjects.

Had he limited himself to such subjects, the letter would have been a rejection of the Soviet invitation to high-level talks. But he didn't. Indeed he quite carefully avoided making agreement on them pre-conditions for talks, a fact which is vital to an understanding of the purpose of the letter. And he went on to say several things which can help negotiations to develop in time to a summit conference.

He made an effective plea for an undertaking that outer space should only be utilized for peaceful purposes. He proposed to end the unrestricted production of nuclear weapons, and repeated the American suggestion that the nuclear power in existing nuclear weapons be transferred to peacetime uses. Since our stockpile is larger than the Russians', he promised to make a larger transfer from our stockpile, and invited Bulganin himself to suggest what a reasonable ratio would be. If the Russians would go along in this, he said, we would suspend nuclear tests, not only for two or three years, but indefinitely. Then he added an offer of controlled and progressive

reduction of conventional weapons.

This, to be sure, is pretty much a repetition of the Western disarmament plan which the Russians already have flatly rejected. But this time it was not being presented as a package, to be taken as an entirety or not at all. It could be discussed piecemeal. This represents a change in policy, one in which Mr. Dulles, it seems, has not been able to squelch Mr. Stassen.

Mr. Eisenhower comes down to what may be the real brass tack in the letter, a plea that a study be now begun of the techniques of inspection and control required by disarmament. Let the study, he said, be undertaken without commitment to its final acceptance, or "as to inter-dependence of the propositions involved". "I believe" he wrote, "this is the first step that would promote hope in both our countries and the world. Therefore I urge that this first step be undertaken."

One feature of the letter should be mentioned. Mr. Eisenhower did not say "No" to a summit meeting, he only insisted that it be held with adequate preparation through diplomatic channels or at a Foreign Ministers' meeting. He agreed that other countries must be invited. The Russians have told the Egyptians that they want a summit meeting held first, with any Foreign

~~Ministers' meeting to come afterwards. This was the pattern after the last summit meeting~~. It will be recalled that when the Foreign Ministers did meet after the Geneva meeting they could not agree on anything. The Russians are not deterred by that experience. We are.

So we disagree about the procedure to be followed, and as to the first step to be taken. The Russians want to discuss a zone in Central Europe free of nuclear weapons. We want to study the feasibility of international inspection and control. The gulf between East and West, even on how to make a modest start, is considerable. But it is not unbridgeable, and both sides are saying how it might be bridged. And that is why what Mr. Eisenhower has now done is being warmly welcomed today in capitals of our allies.

Back in a moment -
George Bryan -

Word for Today

The disagreement between the United States and Russia on the approach to disarmament is considerable. But it may be possible now to make a modest start. We must keep the door open, for as Sir Philip Sidney observed, "Nothing is achieved until it is thoroughly attempted." And one remembers the old Turkish proverb: "A small key opens big doors."

Goodnight and good luck!

EDWARD R. MURROW WITH THE NEWS
CBS RADIO NETWORK

MONDAY, JANUARY 13, 1958
7:45 - 8:00 PM EST

This is the news:

President Eisenhower today sent Congress a record peacetime budget calling for expenditure of just under 74-billion dollars in the next fiscal year. That's an increase of 1-billion, 146 million dollars over the budget for the current fiscal year, ending in June. Mr. Eisenhower says in his budget message, "I feel confident that this budget expresses the way in which the American people will want to respond to the promises and dangers of the dawning age of space conquest." The response, he says, must rise above political partisanship. "The goal of lasting peace with justice is worth all of our efforts. We must make the necessary sacrifices for it. Our own people demand it, and the nations of the world look to us for leadership." The President wants an additional 918-million dollars for defense...which brings next year's defense budget up to almost 40-billion dollars. Five billion, 300-million would be spent on the missile program alone, an increase of about a billion over fiscal '58. The Atomic Energy Commission would get 250-million dollars more next year than this year and the over-all figure for mutual security...including military and economic assistance ...would be upped 119-million. Forty-seven billion dollars, or 64 percent of the entire budget, is earmarked for national security and foreign aid. Only about 20 percent of the budget is allocated to "civil benefits"---all the rest would go for so-called housekeeping expenses and payment of interest on the national debt. Under the heading of "civil benefits" is the President's four-year, billion dollar education program, emphasizing scientific education and teaching. Mr. Eisenhower says irrigation and flood control projects should be limited to those already underway. And he proposes a 300-million-dollar cut in spending on agriculture. Recommendations for "important revisions" in the Administration farm program will be spelled out later in a special message to Congress. There will also be separate messages...proposing changes in the veterans program and in the

Taft-Hartley Act. One proposal will be for the "registration and safeguarding of union funds."

Mr. Eisenhower said that...on June 30th...the Treasury will wind up 388-million dollars in the red. Consequently, there will be no tax cuts and he is asking Congress "temporarily" to raise the 275-billion-dollar ceiling on the national debt. He predicts a surplus next year of about 460-million dollars. The prediction is based on "conviction that the expansion of our economy will soon be resumed."

Senate Democratic Leader Johnson says that President Eisenhower"s budget will be "analyzed thoroughly." "The question to ask about any budget," he told reporters, "is whether it is the right size to do the job that must be done." Democratic Senator Byrd, chairman of the Senate Finance Committee, calls it "a reckless budget," leading to deficit spending. But Chairman Cannon of the House Appropriations Committee feels tht increase in defense spending is "fully justified"...and predicts it will have the support of Congress.

The House Armed Services Committee today approved the Administration request for half a billion dollars now to build missile bases and disperse the facilities of the Strategic Air Command. The full House may act on the measure on Thursday.

Secretary of Defense McElroy told a House Armed Services Subcommittee today that provision for another launching base for intercontinental ballistic missiles is made in the new budget. He did not say where the new base will be located. The launching sites...presently designated...are Cooke Air Force Base in California and Warren Air Force Base in Wyoming. David Sarnoff, board chairman of R.C.A. told the House investigating subcommittee that the United States must do more than try to "catch up" with Russia. Sarnoff expressed confidence that the American economic system can stand the increased spending called for in the Rockefeller report. He urged...specifically...that another half billion dollars be allocated for research and development.

A program for sharing profits with the nation's car manufacturing companies

was outlined today by the executive board of the United Auto Workers Union. Under the plan, all profits above 10 percent on net capital before taxes would be split three ways. One-half of the profit would go to stockholders and company executives, one-fourth to the employees of the company, and the other fourth to car buyers in the form of rebates. The U.A.W. served notice that when contract talks get underway this spring, it will also seek a general wage increase "based on increased productivity." Attention is centered, however, on the profit-sharing proposal. U.A.W. President Walter Reuther told a news conference, "If the companies make a lot of money, we want our share. It's a very reasonable approach." He said General Motors and Ford already have a bonus system for executives, amounting to profit-sharing. And he pointed out that the union is shelving its demand for a shorter work-week, "as responsible citizens in the light of the world situation." Tonight, President Colbert of Chrysler said the United Auto Workers Union had...in his words..."proposed a whole series of new inflationary demands on the automobile industry." President Curtice of General Motors called the union proposal "a radical scheme...foreign to the concept of the American free enterprise system." A spokesman for American Motors Corporation said the proposal is being given "thorough study." So far, there has been no comment from Ford or Studebaker-Packard.

At United Nations headquarters today, Dr. Linus Pauling...the Nobel Prize winner...submitted a petition calling for an international agreement for the immediate cessation of nuclear bomb tests. The petition is signed by more than 9-thousand scientists from 44 countries on both sides of the Iron Curtain.

President Eisenhower's letter to Premier Bulganin, like Bulganin's letter to him, can be compared to a big package filled with excelsior, but containing something substantial though small. The letters are stuffed with a high percentage of Western talks with the Russians and that is the substance that much of Allied opinion is looking for.

The President's letter represents a change, or at least a shift of emphasis,

in United States policy. This change set in at the NATO conference last month. When the American delegation reached Paris, it discovered that all our allies laid great store on demonstrating a willingness to negotiate with the Russians. In the end, talks with the Soviet Union had a big place in the final communique. Now it is the main theme of the Eisenhower reply.

It is not derogatory of the President's letter to say that much in it is propaganda. By propaganda is meant eloquently proposing talks on subjects we know the Russians won't talk about. Bulganin in his letters put forward a whole series to topics which he knew from expeeience we wouldn't discuss. Mr. Eisenhower answered in kind.

Washington certainly doesn't expect the Kremlin to agree at a summit meeting to limit its veto power in the United Nations Security Council or to unify Germany through free elections or to grant greater self-determination to Hungary and other Soviet satellites in Eastern Europe. Mr. Eisenhower was scoring points in the propaganda battle in proposing these subjects.

Had he limited himself to such subjects, the letter would have been a rejection of the Soviet invitation to high-level talks. But he didn't. Indeed he quite carefully avoided making agreement on them pre-conditions for talks, a fact which is vital to an understanding of the purpose of the letter. And he went on to say several things which can help negotiations to develop in time to a summit conference.

He made an effective plea for an undertaking that outer space should only be utilized for peaceful purposes. He proposed to end the unrestricted production of nuclear weapons, and repeated the American suggestion that the nuclear power in existing nuclear weapons be transferred to peacetime uses. Since our stockpile is larger than the Russians', he promised to make a larger transfer from our stockpile, and invited Bulganin himself to suggest what a reasonable ratio would be. If the Russians would go along in this, he said, we would suspend nuclear tests, not only for two or three years, but indefinitely. Then he added an offer

of controlled and progressive reduction of conventional weapons.

Mr. Eisenhower comes down to what may be the real brass tack in the letter, a plea that a study be now begun of the techniques of inspection and control required by disarmament, "I believe" he wrote, "this is the first step that would promote hope in both our countries and the world. Therefore I urge that this first step be undertaken."

One feature of the letter should be mentioned. Mr. Eisenhower did not say "No" to a summit meeting; he only insisted that it be held with adequate preparation through diplomatic channels or at a Foreign Ministers' Meeting. It will be recalled that when the Foreign Ministers did meet after the Geneva meeting, they could not agree on anything. The Russians are not deterred by that experience. We are.

So we disagree about the procedure to be followed, and as to the first step to be taken. The Russians want to discuss a zone in Central Europe free of nuclear weapons. We want to study the feasibility of international inspection and control. The gulf between East and West, even on how to make a modest start, is considerable. But it is not unbridgeable, and both sides are saying how it might be bridged. And that is why what Mr. Eisenhower has now done is being warmly welcomed today in capitals of our allies.

This is Ed Murrow. I'll be back in a moment with the word for today. Now, here is George Bryan.

GEORGE BRYAN: COMMERCIAL

MURROW: The disagreement between the United States and Russia on the approach to disarmament is considerable. But it may be possible now to make a modest start. We must keep the door open, for as Sir Philip Sidney observed, "Nothing is achieved until it is thoroughly attempted." And one remembers the old Turkish proverb: "A small key opens big doors."

Goodnight and good luck!

Edward R. Murrow Tues., Jan. 14, 1958

This is the news:

The government reports that unemployment last month increased by 186-thousand...bringing the total of unemployed to 3-million, 374-thousand. This is the highest level of unemployment in three years and the largest figure for any December since 1949. The report attributes the December increase mainly to "further sharp cutbacks in manufacturing and construction." And the figure would be higher, it says, except for the hiring of thousands of temporary workers during the holidays. The report indicates that employment in January is still on the decline.

The Administration today asked Congress to authorize a temporary increase of 5-billion dollars in the ceiling on the national debt. The request was made by Secretary of the Treasury Anderson. And a bill

to carry it out was promptly introduced in the House. The House Ways and Means Committee will start hearings on the measure on Friday. In his budget message yesterday, President Eisenhower called the present debt limit of 275-billion dollars "too restrictive in view of rising defense expenditures." A higher ceiling, he said, would also make for "more efficient and economical debt management."

The Defense Department has asked Congress for half a billion dollars to raise the pay of men in the armed forces. Under the proposal, every man with more than two years' service...regardless of rank...would get at least a 6 percent raise. The emphasis in determining how much a man gets over 6 percent would be placed on merit, not on the length of time served. The Administration will also ask Congress for comparable pay raises for postal workers and other civil service employes...to bring their income more in line with the income of persons performing jobs of equal responsibility outside of government.

Republican leaders told President Eisenhower today...at their weekly White House meeting...that his hope for a balanced budget may be upset because of new public works projects. Senator Knowland says it was

→

pointed out that some members of Congress will press for various reclamation and flood control projects important to their home districts. The new budget...submitted by the President...calls for no new projects of this sort. Mr. Eisenhower was also told to expect some opposition in Congress to any proposal that would concentrate authority in the chairman of the joint chiefs of staff.

President Eisenhower said today that the United Nations has shown that it can relax tensions and solve disputes, "if nations are willing to respect the opinions of mankind." As an example, Mr. Eisenhower compared the compliance of Britain, France and Israel with United Nations resolutions after their invasion of Egypt, with the non-compliance of Russia to similar resolutions in the case of Hungary. In the case of Hungary, he said, "the blame lies not with the United Nations but squarely on the shoulders of the men in the Kremlin." Mr. Eisenhower said the United States seeks constantly to develop the effectiveness of the world organization as an instrument of peace.

The Senate Democratic leader...Lyndon Johnson...proposed in a speech tonight that all members of the United Nations be invited to join in an effort to win outer space as "an outpost of peace." "The dimensions of

space," he ~~will say,~~ said, "dwarf our national differences on earth. If we are to win space as the outpost of peace, all men may...and should...share in that endeavor." Senator Johnson ~~will also say~~ ALSO SAID, that we are paying too high a price for conformity, and that American foreign and domestic policies need to be reappraised. And he ~~will warn~~ WARNED against preoccupation with the mistakes of the past. ~~(The senator's speech will be carried by most of these CBS Radio stations at 10:05 tonight, Eastern Standard Time).~~

An official of the Glenn L. Martin Company testified today that development of the Titan intercontinental ballistic missile could be speeded up "at relatively small financial risk." George M. Bunker told the Senate preparedness subcommittee that "red tape" is holding up production of the Titan...that too many persons in the Pentagon have what he is said to have described as the power of "negative endorsement."

France told Russia tonight that ~~a meeting of foreign ministers~~ any East-West summit conference must be preceded by a meeting of foreign ministers. The French reply to Soviet Premier Bulganin's letter of last month was made by Premier Gaillard, who took a stand very similar to that of President Eisenhower last week-end. ~~The French premier~~ Gaillard said the agenda for a top-level East-West meeting would have to be carefully prepared in advance.

The Associated Press reports that the guerrilla war in Cuba...against the Batista government...spread for the first time today to the outskirts of MÄN-SÄ-NĒ'-YO Manzanillo, a large seaport on the southeast coast. The A.P. says that guerrilla fighters under Fidel Castro seized control of highways leading into the city, set fire to sugar cane fields and threw roadblocks under cover of darkness.

A federal district judge in Washington ruled today that the armed forces have the right to courtmartial their civilian employes overseas. The U.S. Supreme Court ruled last year that civilian dependents of members of the armed forces stationed overseas can not be tried by military courts. Today's decision...affecting civilian employes...is also expected to go to the Supreme Court.

The Tuskegee Institute said today...in its annual report...that race relations in the South are "more unsettled and disturbed" than they were a year ago. "Divergent segregationist and de-segrationist points of view," it noted, "are held more resolutely now than in the recent past." The Negro college said, "There is an urgent need for realistic and constructive communication on the southern scene, if serious difficulties are to be avoided in the near future."

Edward R. Murrow: January 14, 1958. 7:45 p.m.

The budget which President Eisenhower sent to Congress yesterday has been greeted by headline writers as our first in the space age. A closer look at it does not show it to be as vigorous a response to the sputniks as the Gaither and Rockefeller reports might have led the public to expect.

A shift is taking place in the balance of power between this country and the Soviet Union. The Russians are ahead in missiles, and for the first time are able to threaten most targets within "fortress America". The United States, instead of being ahead in power, is about to share first place or to lose it altogether. A more momentous statement about a nation could hardly be made. And one should expect the budget in this fateful year to say which we are doing - sharing first place, or falling behind. One would expect it to answer the question so clearly that every American knows the answer, as well as every Russian who is allowed to hear it.

But the answer certainly is not made clearly in the budget. Its most significant silence is on a big shelter program, one to protect American civilians against all but the blast damage of nuclear explosions to which we are now exposed. Both the Gaither and Rockefeller reports urged a vast shelter program. The budget ignores it altogether. In the new power alignment, deterrence no longer is our monopoly. While we still can deter the

Russians from making an all-out attack, the Russians now can deter us from deterring them. By not building shelters for civilians we are resigning ourselves to the full deterrent power of the Russian missiles.

Another feature of the shift of power is the importance it gives to the capacity to fight or prevent small wars. Heretofore we have been able to prevent small wars, started or inspired by the Soviet Union, by threatening massive retaliation. Now we cannot do it any more, for we would be inviting our own destruction, which presumably no small war is worth. So to maintain our equal place in the world of power, we must be able to win or deter small wars. And this, both the Gaither and the Rockefeller reports stressed. They called for the build-up of conventional forces, highly mobile and heavily weaponed, that can be transported to any part of the globe on short notice. The Pentagon knows this and has such plans, though they are far from fulfilment. The budget does not boldly undertake to carry those plans through with utmost speed.

The additional net amount the budget appropriates for missiles above last year is just over a billion dollars. Any figure above this - and of course, more than this <u>will</u> go into missiles - is to be taken away from present expenditure on conventional forces. So what the Administration

actually is focusing on is to catch up with the Russians in the power to deter all-out war, and to do this it is pinching conventional forces. It is not going all out to deter small wars as well.

This gives us a pretty clear picture of what the Administration expects in the years immediately ahead. It does not expect an all-out war with the Soviet Union, and so is willing to leave civilians exposed to their new potential perils. It does not expect the Soviet Union to plan, execute or inspire small wars on a scale that our present forces are unable to cope with. We may be in the space age, but massive retaliation remains the main pillar of our policy.

If the Administration is right in its forecast for the immediate future, there is little to criticize in the size of the budget. But the more distant future can hardly be as confidently predicted.

Our present outlay for education is not keeping pace with the growth of population, let alone our staying ahead of the Russians in science and technology. If we are to do that we cannot wait for later budgets. It takes years for investment in education to bear fruit, and the heavy investment must start right away. But this budget makes no such heavy

investment. It adds less than a quarter of a billion dollars to the present expenditure.

Obviously a massive program for civilian shelters and education would have made it next to impossible to balance the budget. Undoubtedly, too, the present congress, in an election year, would not vote such vast sums. So one must hope that the Administration's implied promise of immediate safety holds up. But for the first budget in the space age, this one will Not be Regarded as having ~~[illegible] to have~~ met the challenge.

Back in a moment.

Jane Bryan -

Word for Today

The new budget reflects how the Administration feels about the challenges of the Space Age. Certainly this is, for the United States, a crucial hour. Dr. Charles Gibbony gave sound advice when he said, "In the worst of times, do the best things." ~~For as Cyrus Eaton recently observed, "Never have the penalties of follies been so great."~~

Goodnight and good luck!

Goodnight and good luck!

Edward R. Murrow Wed., Jan. 15, 1958

This is the news:

The Federal Reserve Board today cut the margin requirement on stock purchases from 70 to 50 percent. The effect is to make it easier to buy stocks on credit. Effective tomorrow, buyers will have to pay cash for no more than half of the stock purchased. ~~The Federal Reserve Board does not explain the action---except to say "it was felt that 50 percent would be a more appropriate rate at this time."~~ But it is generally accepted that the margin was reduced to bolster the nation's economy in the face of a business decline. Investment brokers said tonight that the Stock Market, as a result, should get "a temporary lift." On the Pacific Coast exchange, prices jumped as soon as the news became known. Exchanges in New York and

Chicago already were closed.

The government reported today that industrial production slumped again in December for the third straight month. Production in 1957, it said, failed to register any gain over the previous year.

President Eisenhower told his first news conference in two and a half months that he has no intention of asking Congress for any direct economic controls. The Federal Reserve Board, he said, has the power to apply indirect controls on the supply of money for the country...and that these "indirect controls" can have "a very strong effect."

The first question put to President Eisenhower...as he faced the reporters...was whether he thought the budget for the next fiscal year would, in the final analysis, be balanced. The correspondent asking the question referred to the statement by Republican Representative Martin that the new budget was in his opinion "precariously balanced". The correspondent wanted to know whether the President...if Congress wanted to spend more money...would prefer to go to deficit spending, rather than raise taxes. Here is Mr. Eisenhower's reply.

#1 Tape runs 2:15,
ends on cue: "---as easily to be done as
to be said."

Later in the news conference, a reporter asked Mr. Eisenhower to expand on what he said...in his State of the Union message...about unification of the armed forces.

#2 Tape (which also includes reference to Dulles) runs 3:10. It ends on cue: "---on the job, and that's where he belongs."

Mr. Eisenhower was then asked about the state of his health. The reporter referred to suggestions made by some people after his mild stroke last November, that he resign. The reporter wanted to know if Mr. Eisenhower had considered resigning.

#3 Tape runs :50
Ends on cue: "--no recourse except to resign."

In answer to other questions, Mr. Eisenhower said he has "no intention" of releasing the Gaither Report. He said the conclusions of the Gaither committee are of a privileged character...and that the publication of such documents would defeat their purpose. # The President said that, in answering Soviet Premier Bulganin's proposal for a summit meeting, he had no thought of Red China being invited. He said the subject matter for such a meeting would

have to be gone over thoroughly in advance through normal diplomatic channels, and at a conference of foreign ministers. But Mr. Eisenhower said he was willing to negotiate with Russia on what topics at the summit would be discussed. The proposals he made to Bulganin last week-end, he said, are not "hard and fast."

Tonight, the Moscow radio gave Russia's first reaction to President Eisenhower's reply. The broadcast...quoting the Soviet news agency Tass... accused the President of trying to blame Russia for the existence of world tensions. It frowned on Mr. Eisenhower's proposal for a meeting of foreign ministers preliminary to any summit conference...claiming the summit conference idea had received "wide support in many countries, including the United States." But the over-all tone of the Moscow reaction was mild.

West German Chancellor Adenauer today rejected the Communist proposal for an "atom free zone" in Central Europe. Under the proposal, nuclear weapons in Poland, Czechoslovakia and East and West Germany would be prohibited. Adenauer warned...in a broadcast to the German people...that creation of

such a ~~de-nuclearized~~ zone "would mean the end of NATO and, with it, the end of freedom in Western Europe." / It would mean, he said, the end of freedom in West Germany. / Adenauer agreed with President Eisenhower, that an East-West summit conference should be called "only after very careful diplomatic preparation." ~~And, he said, there should not be "too large~~ a number of ~~participants.~~"

Secretary of Defense McElroy said today in Washington that he has asked ~~him~~ three of America's top military leaders to advise him on how TO reorganize the defense command. He identified his three military advisers as General Twining, chairman of the Joint Chiefs of Staff, and two retired officers---Admiral Radford and General Omar Bradley. / ~~Both Radford and Bradley~~ are former chairmen of the Joint Chiefs of Staff. / ~~McElroy~~ said he would also have some civilian advisers. ~~But the final recommendation submitted to the President, he said, will be his own.~~

The House of Representatives this afternoon passed an emergency bill authorizing half a billion dollars for dispersal of ~~strategic~~ bases for the Strategic Air Command, for developing missiles, and for improving systems for detecting enemy attack. / The bill was passed unanimously and rushed to the Senate. / ~~. the first measure to be passed in the eight days since Congress reconvened.~~ Back in the mountains George Bookman

Word for Today

There is found...in the writings of Theodore Roosevelt...some very good advice for America in this new age. He said, "Believe in the future! But don't sit back and wait for the future to work itself out. Get into action and make it the kind of future you want it to be." And of course he also said, "Walk softly, and carry a big stick."

Goodnight and good luck!

EDWARD R. MURROW WITH THE NEWS

Wednesday, January 15, 1958
7:45 - 8:00 P.M.

MURROW: ... President Eisenhower told his first news conference in two and a half months that he has no intention of asking Congress for any direct economic controls. The first question put to President Eisenhower, as he faced the reporters, was whether he thought the budget for the next fiscal year would in the final analysis be balanced. The correspondent wanted to know whether the President - if Congress wanted to spend more money - would prefer to go to deficit spending rather than to raise taxes. Here is Mr. Eisenhower's reply:

PRES. EISENHOWER: I'd say this, we can't tell exactly what's going to happen because you used the word 'precarious' balance which means at least narrowly balanced. And there could be additional cost because after all we are estimating expenditures and receipts over a bas... basis of eighteen months. This means things can happen, things can - in the financial world - things can happen in the political world. So no one knows for certain. My own feeling would be this, a reasonable amount of expenditure even if that did mean somewhat of upsetting of that precarious balance, you call, is better than talking about a tax bill at this time.

McGAFFNON: Mr. President, McGaffnon of the Chicago Daily News. Mr. President, a year ago, when you were asked about the size of the fiscal '58 budget, you said you thought the Congress should cut it if it could. Sir, have you extended the same invitation to Congress to cut your fiscal '59 budget, if it can.

PRES. EISENHOWER: Well, I think that I've asked Congress again in this way, to help the Executive to find ways in which expenditures of less importance and priority can be either deferred or at least not increased. Now, that's exactly what I've asked before.

SPEAKER: Well, Mr. President, even so, the size is larger

than it's ever been before in peacetime and there's been some claim that you didn't trim the budget, the non-military part of it, as heavily as you indicated you were going to in your Oklahoma City speech.

PRES. EISENHOWER: I put it this way - I personally believe that all of these expenditures of lower priority should be reduced if it is humanly possible. Now, when you say 'humanly possible' this means can it be done with agreement between the Congress ... the Executive Department get it done - and it's not as easily done as it is to be said.

MURROW: Later, in the news conference, a reporter asked Mr. Eisenhower to expand on what he said in his State of the Union Message about unification of the armed forces.

PRES. EISENHOWER: It is perfectly clear - it certainly must be clear to most of you people - that my own convictions about the proper organization of the Defense Department are rather fixed. Since 1947 I've given many, many active hours to this kind of study. I have reviewed the whole military record as I have known it for 45-yrs., therefore I think my views are completely objective and with nothing whatsoever of personal bias in them. But I am this - I am the Commander-in-Chief for a fixed period and at least we know that I am not going to be in this job more than three years. Now, my personal convictions - no matter how strong - cannot be the final answer, there must be a consensus reached with the Cab... with the Congress, with the people, that have the job of operating the services, to get the very finest kind of organization we can - and I am certainly hopeful that it goes in the direction of what I believe, but I would be the last to ask for a detailed organization in which I believe because I (indistinct) organization has got to be effective, after there's passed from the scene a man who happens to have pareitular, strong convictions in the matter.

O'NEIL: Mike O'Neil of the New York Daily News. Mr. Pre-

sident, Secretary Dulles has been coming under increasing criticism, as you know, both here and abroad - it's been reported that he recently submitted his resignation to you and you've rejected it. (indistinct) this report and tell us whether or not you feel this criticism is in any way (indistinct)

PRES. EISENHOWER: Have you seen that report? ...? yourself?

O'NEIL: No, sir, and it wasn't in the newspaper.

PRES. EISENHOWER: Well, then I'd say - I would class it as trash. I ... the last person that I would want to see resign is Mr. Dulles. I don't mind saying this, I think he is the wisest, most dedicated man that I know. I believe he has got a greater knowledge in his field than any other man that I know and in spite of the fact that many criticisms of him have been voiced in the newspapers and so on, I cheerfully admit that. The fact is that I ... I assume that I know as many of the leading figures of the world as does the average governmental official and their personal, intimate evaluations of Mr. Dulles as to furnish ... as given to me, by no means indicate any desire except that he stay right squarely on the job. Andthat's where he belongs.

MURROW: Mr. Eisenhower was then asked about the state of his health. The reporter referred to suggestion made by some people after his mild stroke last November, that he resign. The reporter wanted to know if Mr. Eisenhower had considered resigning?

PRES. EISENHOWER: Well, I have not considered it in a specific way, in (indistinct) with that particular illness. As a matter of fact, in a matter of a couple of hours doctors were assuring me that there at least - there was no damage to whatever intellectual faculties I have and therefore I wasn't (laughter) I was not feeling any compulsion to make a specific decision at that time. But I will say this, any time that I believe or any group of doctors ... the doctors would say that I am not really up to the ... to doing my job then I would personally - feelings I do - I'd have no

recourse except to resign.

MURROW: In answer to other questions, Mr. Eisenhower said he has no intention of releasing the Gaither Report. He said the conclusions of the Gaither Committee are of a privileged character and that the publication of such documents would defeat their purpose.

MURROW: In answer to other questions, Mr. Eisenhower said he has no intention of releasing the Gaither Report. He said the conclusions of the Gaither Committee are of a privileged character and that the publication of such documents would defeat their purpose. The President said that, in answering Soviet Premier Bulganin's proposal for a summit meeting, he had no thought of Red China being invited. He said the subject matter for such a meeting would have to be gone over thoroughly in advance through normal diplomatic channels and at a conference of foreign ministers. But Mr. Eisenhower said he was willing to negotiate with Russia on what topics at the summit would be discussed. The proposals he made to Bulganin last week-end, he said, are not "hard and fast."

Tonight, the Moscow Radio gave Russia's first reaction to President Eisenhower's reply. The broadcast....quoting the Soviet news agency Tass...accused the President of trying to blame Russia for the existence of world tansions. It frowned on Mr. Eisenhower's proposal for a meeting of foreign ministers preliminary to any summit conference...claiming the summit conference idea had received "wide support in many countries, including the United Stttes." But the over-all tone of the Moscow reaction was mild.

West German Chancellor Adenauer today rejected the Communist proposal for an "atom free zone" in Central Europe. Under the proposal, nuclear weapons in Poland, Czechoslovakia and East and West Germany would be prohibited. Adenauer warned in a broadcast to the German people...that creation of such a zone "would mean the end of NATO and, with it, the end of freedom in Western Europe." It would mean he said, the end of freedom in West Germany. Adenauer agreed with President

Eisenhower that an East-West summit conference should be called "only after very careful diplomatic preparation."

Secretary of Defense McElroy said today in Washington that he has asked three of America's top military leaders to advise him on how to reorganize the defense command. He identified his three military advisers as General Twining, chairman of the Joint Chiefs of Staff, and two retired officers---Admiral Radford and General Omar Bradley.

The House of Representatives this afternoon passed an emergency bill authorizing half a billion dollars for dispersal of bases for the Strategic Air Command, for developing missiles, and for improving systems for detecting enemy attack. The bill was passed unanimously and rushed to the Senate.

This is Ed Murrow. I'll be bakk in a moment with the word for today. Now, here is George Bryan.

GEORGE BRYAN: COMMERCIAL

MURROW: There is found r..in the writings of Theodore Roosevelt...some very good advice for America in this new age. He said, "Believe in the future! But don't sit back and wait for the future to work itself out. Get into action and make it the kind of future you want it to be." And of course he also said, "Walk softly, and carry a big stick."

Goodnight and good luck!

Edward R. Murrow Thurs., Jan. 16, 1958

This is the news:

President Eisenhower today sent Congress a special farm message asking for authority to cut price supports. Supports for cotton, corn, wheat, rice, peanuts and tobacco...under this proposal...could fall as low as 60 percent of parity. The present minimum is 75 percent of parity. The minimum support price for dairy products would also be reduced to 60 percent. The acreage reserve section of the soil bank program would be done away with altogether, and so would the so-called "escalator clause". Under this clause, price supports have been pegged to the rise and fall of farm surpluses. And its elimination would give Secretary Benson a freer rein in determining the level at which support prices are to be paid. It is

estimated...unofficially...that if these proposals were put in effect, it would save the government a billion dollars a year.

Mr. Eisenhower said, in his message, that present price support laws are "unrealistic". He reported that, since 1940, farm production per man-hour has doubled, due largely to "a major breakthrough in agricultural science and technology." In recognition of this basic fact, he said, a means of expanding markets must be found. And he proposed extension of the law, authorizing the Agriculture Department to sell farm surpluses abroad for foreign currencies. He also recommended more research for the development of new industrial uses for farm products.

This program has received a cool reception in Congress. Chairman Cooley of the House Agriculture Committee calls it "a blueprint for bankruptcy, that will drive many more thousands of our farm people off the land." The ranking Republican member of the Senate Agriculture Committee---Aiken of Vermont---said he would not introduce the legislation proposed by the President. He said, "I will not put my name to a bill that puts the squeeze on the dairy farmer," although, he added, there are some parts of the program of which he approves. ~~Chairman Ellender of the Senate committee said the President's proposals "don't have a ghost of a chance, particularly~~

on reducing support prices and making Benson a czar." Republican Representative Hallock of Indiana defended the proposals. "Nobody, he said, least of all the President, is recommending that the government withdraw help to agriculture." He said that under the program, farmers would have greater freedom, more opportunity to adjust."

The State Department said today that it will give "urgent consideration" to India's plea for an emergency shipment of surplus wheat in order to combat famine. The State Department also promised to loan India 225-million dollars to help it realize its five-year development program.

Secretary of the Treasury Anderson told the House Ways and Means Committee today that [redacted] the national economy now has the "basic ingredients" necessary for an improvement in the business situation. He advocated some tax relief for small business but said any general tax reductions "do not seem prudent at this time."

The Federal Reserve Board action...reducing the margin requirement for stock purchases...caused a burst of activity on the New York Stock Market today, with prices moving up one to three points at the opening. But after the first hour, the market ran into profit-taking. Prices were up slightly at the close.

The House Government Operations Committee voted today for a "complete review" of America's military aid program. / It approved a report charging that millions of dollars are wasted under the program. / And the committee said that when arms assistance is requested for political, rather than for purely military reasons, it wants to know. / The report...criticizing the military aid program...was drawn up by several members of the committee who made a tour of Europe last fall.

The National Science Foundation warned Congress today that the United States should place more emphasis on high-energy, or basic, nuclear research. This nuclear research is useful in the development of industrial power from the atom. The foundation issued the warning in its seventh annual report.

Senate Democratic Leader Johnson said today he hopes President Eisenhower will "not retreat" from his announced determination to see that a Pentagon reorganization is carried out. / Johnson referred to Mr. Eisenhower's statement in his State of the Union message. Democratic Senator Symington charged today...that on the basis of what Mr. Eisenhower said in his news conference yesterday...the President had withdrawn from the earlier position.

The United States Court of Appeals today upheld the right of the House Committee on Un-American Activities to investigate Communism in the field of education. The split 5-to-4 decision was returned in the case of Lloyd Barenblatt, a teacher convicted of contempt for refusing to tell the committee whether he had ever been a Communist. The court had upheld the conviction on a previous occasion. But last year the Supreme Court asked it to review the case in light of the so-called Watkins decision. The Supreme Court said in that decision that a witness before a congressional committee is entitled to know the purpose of the investigation...and to receive an explanation of how the questions are pertinent. The appeals court said today that Barenblatt had been made "fully aware of the subject under inquiry" and had been properly convicted.

In Paris, Premier Gaillard today won a vote of confidence in the French National Assembly...on his program for holding up the pensions of war veterans. The vote for Gaillard was narrow---252 to 235.

Edward R. Murrow: January 16, 1958. 7.45 p.m.

Three Western Powers have now replied to Bulganin's proposal for an early summit meeting - the United States, Britain and Germany. The replies are similar but not identical.

Germany's Konrad Adenauer, who led the parade of our Allies demanding talks with the Russians, at the NATO meeting in Paris, now appears somewhat disenchanted. / He said last night that the more he studied the Bulganin letters, the more convinced he was that they were a large-scale maneuver of distraction" - in no sense a serious attempt to reach an understanding. / He tore to shreds the Russian proposal of a confederation of West and East Germany; and said that the establishment of an atom-free zone in Central Europe would mean the end of NATO - the end of freedom in Western Europe, and the end of freedom for the Germans.

Today, in Ceylon, British Prime Minister MacMillan took a middle-of-the-road, "let's-don't-rush-into-anything" attitude. He thought the Russian proposals could be propaganda, if so that would be rather sad; but they could also be a genuine desire to come to an agreement. / MacMillan thinks that any summit meeting should be preceded by diplomatic discussions, and a meeting of Foreign Ministers. He said if the Soviet leaders are

sincere in their proposals, "then let's get down to talking". / He suggested that groups of experts get to work at once on the technical details of disarmament and inspection. / This brings the Americans, British, Germans, Italians and French into agreement on one point: they are prepared to attend a summit meeting, but they are not willing to do so until a lot of preliminary explorations and negotiations have been carried out. / Both the British and the Americans are obviously fearful of the propaganda use Russia would make of a failure at the summit. / MacMillan said: "We must not forget that much would be expected by the world from such a meeting; and failure or disappointment would be correspondingly grave." And Secretary of State Dulles said today: "It would be a disaster if the leaders of the Western World were forced to break off a summit conference in an atmosphere of hostility, because that could intensify the cold war and make more likely that it would turn into a hot war."

Mr. Dulles discussed many subjects before the National Press Club in Washington today. He challenged the Russians to go along with President Eisenhower's proposal for peaceful control of outer space under the United Nations. He denied that we're afraid to negotiate with the Russians; but he was fearful that peaceful platitudes proclaimed from a summit meeting

would be a triumph for the Russians. Mr. Dulles [redacted] contended that the Russian Sputniks might boomerang against the Russians, because they had "jolted the American people into a reaction of mortification, anger and fresh determination." He warned that unless we wage successfully the political economic war that is now being fought in Africa and Asia, communist imperialism can win without ever a gun being fired." Mr. Dulles thinks Communist China should be barred from any summit meeting, because, he said: "It is not an indispensible or proper authority to discuss world problems." He sees no reason why we should grant diplomatic recognition to Communist China, but we will recognize that government "any time that it serves the interests of the United States to do so."

According to Mr. Dulles, American prestige "stands higher than ever before" with Allied governments; but he said he couldn't "say the same for public opinion, which is somewhat misled."

Several times Mr. Dulles employed the word "formidable" in describing Russia's military, industrial and propaganda strength. [redacted] He described the Russians as "tough, hard, highly legalistic negotiators with inexhaustible patience." Obviously Mr. Dulles does not expect early, easy or fruitful negotiations with the Russians. Mr. Eisenhower indicated

yesterday, or rather implied that the State Department is not at this time going out in search of any agreement or understanding through the old ambassadorial technique of simply asking questions in Moscow. When there is a deadlock, and formal negotiations seem to be unwanted, it is always open to an ambassador to go around to the Foreign Office and ask for further light on something that has been said or written. Khrushchev has said plenty of things that could be usefully explored in this way. So did the Bulganin letters. [This diplomatic procedure is slow, and requires much patience. But if or when relations with the Soviet Union improve, it is a good bet that the start will have been made in this way.]

As of right now the major powers are [illegible] in agreement that they are willing to try to climb to the summit -- they are arguing about the route to be followed -- where to establish the base camps - and they would like a little insurance, if possible, that they won't fall off when they get up there. It looks like being a long climb.

Back in a moment —

George Bryan —

Word for Today

The question about arranging for a summit meeting appears to be---where to begin and who will make the first move. It was the German poet Goethe, who said, "If you miss the first buttonhole, you will not succeed in buttoning up your coat." And Socrates observed, in his time, "He who considers too much will perform little."

Goodnight and good luck!

EDWARD R. MURROW WITH THE NEWS
CBS RADIO NETWORK

THURSDAY, JANUARY 16, 1958
7:45 - 8:00 PM EST

This is the news:

President Eisenhower today sent Congress a special farm message asking for authority to cut price supports. Supports for cotton, corn, wheat, rice, peanuts and tobacco...under this proposal...could fall as low as 60 percent of parity. The present minimum is 75 percent of parity. The minimum support price for dairy products would also be reduced to 60 percent. The acreage reserve section of the soil bank program would be done away with altogether, and so would the so-called "escalator clause." Under this clause, price supports have been pegged to the rise and fall of farm surpluses. And its elimination would give Secretary Benson a freer rein in determining the level at which support prices are to be paid. It is estimated...unofficially...that if these proposals were put in effect, it would save the government a billion dollars a year.

Mr. Eisenhower said, in his message, that present price support laws are "unrealistic." He reported that since 1940, farm production per man-hour has doubled, due largely to "a major breakthrough in agricultural science and technology." In recognition of this basic fact, he said, a means of expanding markets must be found. And he proposed extension of the law authorizing the Agriculture Department to sell farm surpluses abroad for foreign currencies. He also recommended more research for the development of new industrial uses for farm products.

This program has received a cold reception in Congress. Chairman Cooley of the House Agriculture Committee calls it "a blueprint for bankruptcy, that will drive many more thousands of our farm people off the land." The ranking Republican member of the Senate Agriculture Committee---Aiken of Vermont---said he would not introduce the legislation proposed by the President. He said, "I will not put my name to a bill that puts the squeeze on the dairy farmer," although, he added, there are some parts of the program of which he approves.

The State Department said today that it will give "urgentconsideration" to India's plea for an emergency shipment of surplus wheat in order to combat famine. The State Department also promised to loan Indaa 225-million dollars to help it realize its five-year development program.

Secretary of the Treasury Anderson told the House Ways and Means Committee to today that the national economy now has the "basic ingredients" necessary for an improvement in the business situation. He advocated some tax relief for small business but said any general tax reductions "do not seem prudent at this time."

The Federal Reserve Board Action... reducing the margin requirement for stock purchases...caused a burst of activity on the New York Stock Market today, with prices moving up one to three points at the opening. But after the first hour, the market ran into profit-taking. Prices were slightly up at the close.

The House Government Operations Committee voted today for a "complete review" of America's military aid program. It approved a report charging that millions of dollars are wasted under the program. And the committee said that when arms resistance is requested for political, rather than for purely military reasons, it wants to know. The report...criticizing the military aid program...was drawn up by several members of the committee who made a tour of Europe last fall.

The National Science Foundation warned Congress today that the United States should place more emphasis on high-energy, or basic, nuclear research. This nuclear research is useful in the development of industrial power from the atom. The foundation issued the warning in its seventh annual report.

Senate Democratic Leader Johnson said today he hopes President Eisenhower will "not retreat" from his announced determination to see that a Pentagon re-organization is carried out. Johnson referred to Mr. Eisenhower's statement in his State of the Union message. Democratic Senator Symington charged today... that on the basis of what Mr. Eisenhower said in his news conference yesterday... the President had withdrawn from the earlier position.

The United States Court of Appeals today upheld the right of the House

Committee on Un-American Activities to investigate Communism in the field of education. The split 5-to-4 decision was returned in the case of Lloyd Barenblatt, a teacher convicted of contempt for refusing to tell the committee whether he had ever been a Communist.

In Paris, Premier Gaillard today won a vote of confidence in the French National Assembly...on his program for holding up the pensions of war veterans. The vote for Gaillard was narrow---252-to 235.

Three Western Powers have now replied to Bulganin's proposal for an early summit meeting - theUnited States, Britain and Germany. The replies are similar but not identical.

Germany's Konrad Adenauer, who led the parade of our Allies demanding talks with the Russians, at the NATO meeting in Paris, now appears somewhat disenchanted. He said last night that the more he studied the Bulganin letters, the more convinced he was that they were a "large-scale maneuver of distraction" - in no sense a serious attempt to reach an understanding. He tore to shreds the Russian proposal of a confederation of West and East Germany; and said that the establishment of an atom-free zone in Central Europe would mean the end of NATO - the end of freedom in Western Europe, and the end of freedom for the Germans.

Today, in Ceylon, British Prime Minister MacMillan took a middle-of-the-road, "let's-don't-rush-into-anything" attidude. He thought the Russian proposals could be propaganda, if so that would be rather sad; but they could also be a genuine desire to come to an agreement. MacMillan thinks that any summit meeting should be preceded by diplomatic discussions and a meeting of Foreign Ministers. He said if the Soviet leaders are sincere in their proposals, "then let's get down to talking." He suggested that groups of experts get to work at once on the technical details of disarmament and inspection. This brings the Americans, British, Germans, Italians and French into agreement on one point: they are prepared to attend a summit meeting, but they are not willing to do so until a lot of preliminary explorations and negotiations have been carried out. Both the

British and the Americans are obviously fearful of the propaganda use Russia would make of a failure at the summit. MacMillan said: "We must not forget that much would be expected by the world from such a meeting; and failure or disappointment would be correspondingly grave." And Secretary of State Dulles said today: "It would be a disaster if the leaders of the Western World were forced to break off a summit conference in an atmosphere of hostility, because that could intensify the cold war and make more likely that it would turn into a hot war."

Mr. Dulles discussed many subjects before the National Press Club in Washington today. He challenged the Russians to go along with President Eisenhower's proposal for peaceful control of outer space under the United Nations. He denied that we're afraid to negotiate with the Russians; but he was fearful that peaceful platitudes proclaimed from a summit meeting would be a triumph for the Russians. Mr. Dulles contended that the Russian Sputniks might boomerang against the Russians, because they had "jolted the American people into a reaction of mortification, anger and fresh determination." He warned that unless we "wage successfully the political economic war that is now being fought in Africa and Asia, communist imperialism can win without ever a gun being fired." Mr. Dulles thinks Communist China should be barred from any summit meeting, because, he said: "it is not an indispensible or proper authority to discuss world problems." He sees no reason why we should grant diplomatic recognition to Communist China, but we will recognize that government "any time that it serves the interests of the United States to do so."

According to Mr. Dulles, American prestige "stands higher than ever before" with Allied governments; but he said he couldn't say the same for public opinion, which is somewhat misled."

Several times Mr. Dulles employed the world "formidable" in describing Russia's military, industrial and propaganda strength. He described the Russians as "tough, hard, highly legalistic negotiators with inexhaustible patience." Obviously Mr. Dulles does not expect early, easy or fruitful negotiations with

the Russians. Mr. Eisenhower indicated yesterday, or rather implied that the State Department is not at this time going out in search of any agreement or understanding through the old ambassadorial technique of simply asking questions in Moscow. When there is a deadlock, and formal negotiations seem to be unwanted, it is always open to an ambassador to go around to the Foreign Office and ask for further light on something that has been said or written. Khrushchev has said plenty of things that could be usefully explored in this way. So did the Bulganin letters. This diplomatic procedure is slow, and requires much patience. But if or when relations withthe Soviet Union improve, it is a good bet that the start will have been made in this way.

As of right now the major powers are in agreement that they are willing to try to climb to the summit - they are arguing about the route to be followed - where to establish the base camps - and they would like a little insurance, if possible, that they won't fall off when they get up there. It looks like being a long climb.

This is Ed Murrow. I'll be back in a moment with the word for today. Now, here is George Bryan.

GEORGE BRYAN: COMMERCIAL

MURROW: The question about arranging for a summit meeting appears to be---where to begin and who will make the first move. It was the German poet Goethe, who said, "if you miss the first buttonhole, you will not succeed in buttoning up your coat." And Socrates observed, in his time, "He who considers too much will perform little."

Goodnight and good luck!

Edward R. Murrow Fri., Jan. 17, 1958

This is the news:

The Air Force will soon undertake construction of three Arctic facilities for detecting the approach of enemy missiles. This was revealed today in testimony released by the House Armed Services Committee. The three detection centers will be built about a thousand miles apart...and will cost 189-million dollars, not including radar equipment. The location of the new facilities in the Far North is designed to provide a warning time of about 15 minutes on the basis that if Russia fired an intercontinental ballistic missile from that direction, it would take half an hour to reach the United States.

The facilities would supplement the existing "Distant Early Warning" system for spotting enemy aircraft.

Other testimony...released by the Senate preparedness subcommittee... reveals that the chairman of the Joint Chiefs of Staff, General Twining, refused to give his views on President Eisenhower's new budget./ In appearing before the subcommittee on Tuesday, Twining argued that once the budget has been fixed by the President, military officers should not be placed in the position of criticizing it if they fail to get all the money they want./ "If he says it is inadequate, I think he is approaching insubordination. And if he says it is adequate, he has more or less perjured himself. Some of these boys," he said, "are taking a pretty good beating."

An aircraft manufacturer told the Senate subcommittee today that "penny-pinching" has crippled the nation's effort to defend itself against missile attack./ Donald Douglas, chairman of the board of Douglas Aircraft, said the Pentagon needs "more guts and less gobbledygook." Another witness, H.W. Merrill of the Martin Company, said his firm can---with minor changes--- give the United States a vehicle for reaching the moon first. The vehicle, he said, would be a modified Titan intercontinental ballistic missile.

At Cape Canaveral, the Navy today launched a "test vehicle" in its program for developing the Polaris intermediate range missile. The Polaris uses a solid---not a liquid---propellant and will have the capability of being fired from submarines while submerged. The rocket fired today is officially described as "a test vehicle in the Navy polaris program," and William Holaday, missiles director in the Defense Department, said the launching was a success. He did not elaborate---except to say that the device tested included "a forerunner of the Polaris propulsion engine." Secretary of Defense McElroy has indicated the Navy may have a fully developed Polaris missile by early 1960.

The chief of naval operations, Admiral Burke, said today: "The answer to the survival problem is mobility." He said...in a Chicago speech...that when the Polaris goes to sea "it will have all the qualities of an invulnerable missile system. It will be mobile and capable of concealment. It will deny the enemy any advantage in initiative or surprise." The admiral went on to say that the United States needs a diversity of missile systems, based on the concept of mobility on land as well as sea.

The House Ways and Means Committee voted today to raise the national debt ceiling...temporarily...by 5-billion dollars. The measure now goes to the full House. The committee voted after hearing Secretary Anderson testify that the cash balance in the Treasury is "distressingly low."

Secretary Benson went before Congress today to defend the farm program laid down yesterday by the President. Benson told the Senate Agriculture Committee that he must be given "administrative discretion" to reduce price supports if necessary down to 60 percent of parity. He said Congress must face up to the fact that present measures have not solved the farm problem. And, he added, those measures have been expensive. Benson predicted that a "wider range" of price supports will help farmers in the long run because the range is now "too narrow to permit the expansion of markets." Benson was frequently interrupted as he read his prepared statement. One interruption came when he said prices received by farmers "have been running 3 percent above a year ago." Chairman Ellender accused him of failing to give "the other side of the picture"...which Ellender said is that the cost of things farmers have to buy have gone up more than 3 percent. Benson said his department's figures on 1957

→

net income are not complete...but that he was sure farm income "will not be as great as we had expected." At one point the questioning became so hostile that Democratic Senator Holland of Florida suggested ~~him~~ Benson be granted a fair hearing. Ellender remarked that he had been in the Senate for 21 years. "No one," he said, "has ever accused me of being unfair."

The State Department said today that our ambassador to Moscow... Llewelyn Thompson...is coming home for consultations. The department spokesman said Thompson will confer with Secretary of State Dulles on American-Soviet relations and noted that "the question of the moment" is a possible summit conference. Thompson is expected to leave Moscow late next week. Dulles will be flying to Turkey...at about that same time...to attend a meeting of the Baghdad Pact. But he will be back in Washington to confer with Ambassador Thompson around the first of next month.

Moscow announced today that Nikita Khrushchev has had new secret talks with Polish leaders. According to Moscow, the conversations took place in "a cordial and friendly atmosphere." The subject matter is not divulged. Khrushchev reportedly went to Poland at the invitation of Party Leader Gomulka and was there for three days.

Edward R. Murrow: January 17, 1958. 7.45 p.m.

The month of January will go into the books as the time when the United States went seriously into the consideration of outer space. It brought Senator Lyndon Johnson's call for the American control of outer space - the first ever made; President Eisenhower's invitation to the Russians to join in using outer space exclusively for peaceful purposes; and yesterday the first Congressional action to start the development of a manned and nuclear-powered space ship. It also brought Secretary Dulles's proposal to the Russians yesterday for an immediate international commission to insure the use of outer space solely for peace.

It may look as though Congress is going in one direction, seeking the American control of outer space, and the Administration in another, seeking its internationalization. But assuming that the work really gets going on the projects proposed yesterday by Senator Gore and Representative Holifield, it may take just this kind of enterprise to induce the Russians to consider internationalization. For the Administration is asking the Russians to give up a monopoly they now enjoy. Presumably they are enjoying it only briefly. But so long as the Russians are ahead they are unlikely to yield their advantage voluntarily.

James Reston of the New York Times writes that when he saw Khrushchev last Fall, the Soviet boss told him that once a broad disarmament agreement was reached, it should be possible to restrict outer space to peacetime uses. That is, he thought of giving up the Russian advantage only after a general disarmament agreement. We ask the Russians to give it up now as a step toward a disarmament agreement. So long as they are ahead they are not likely to go along. But once we catch up - or get ahead with a space vehicle - the tune can be expected to change.

Senator Gore and Congressman Holifield are not content with catching up. They want to forge ahead. And they propose that we press the advantage we now have over the Russians in nuclear propulsion. They ask for a kind of Nautilus of outer space. And Mr. Holifield urged that Admiral Rickover, the creator of the Nautilus, be put in charge of a space-ship project, and that it be of a scope comparable with the Manhattan project of World War II. Senator Gore introduced a Bill yesterday on a more modest scale, appropriating one billion dollars to step up the atomic reactor program as well as for rockets. He suggested seven hundred millions for reactors, the rest to go into speeding up the program for nuclear propulsion, into the control of the fusion of the hydrogen atom, and to start a project to develop the space ship.

The Bill states that such a vehicle be of controlled mobility and manned for travel. He believes two hundred million dollars will be enough to get started on the space ship, but expects the ultimate cost to be no less than one billion dollars.

Mr. Holifield, who is senior House member of the Joint Committee on Atomic Energy, made a speech that twenty years ago would have been unthinkable except to disciples of Jules Verne. "Just think of a Nautilus in outer space rather than the ocean" he exclaimed. "A space vehicle" he said, "might even be a craft which would carry humans outside the earth's atmosphere and gravitational force. Once outside, it would have powerful sources for travel and conceivably could go to the moon and to other planets. If we were to develop the space vehicle" he declared, "the intercontinental ballistic missile would not necessarily be the decisive factor, because the control of space would restore the threat of retaliation and restore the power of deterrence. From space, I.C.B.M. launching sites could be destroyed. Perhaps interception in flight would be feasible. Above all, the development of such a vehicle would restore our world leadership."

Mr. Holifield was distressed that we are playing the game of following the leader - the leader being Russia. "I can assure you" he said, "that no

new and imaginative program is being advocated by the Atomic Energy Commission, or the Department of Defense. Nothing startling is on the drawing boards or in the computors. If we lose," he said, urging his program, "we lose only dollars. If we win, we buy time to achieve the peace."

Word for Today

In bargaining with Russia...on the question of de-militarizing space, or on any other subject dealing with defense...one does well to recall the words of [redacted] Lord Vansittart. "Nggotiate from strength," he said, "not from weakness, or else you will find yourself negotiating first at (some one) [redacted] else's expense---which is dirty---and then at your own, which is disastrous."

Goodnight and good luck!

EDWARD R. MURROW WITH THE NEWS
CBS RADIO NETWORK

FRIDAY, JANUARY 17, 1958
7:45 - 8:00 PM EST

This is the news:

The Air Force will soon undertake construction of three Arctic facilities for detecting the approach of enemy missiles. This was revealed today in testimony released by the House Armed Services Committee. The three detection centers will be built about a thousand miles apart...and will cost 189-million dollars, not including radar equipment. The location of the new facilities in the Far North is designed to provide a warning time of about 15 minutes on the basis that if Russia fired an intercontinental ballistic missile from that direction, it would take half an hour to reach the United States. The facilities would supplement the existing "Distant Early Warning" system for spotting enemy aircraft.

Other testimony...released by the Senate preparedness subcommittee... reveals that the chairman of the Joint Chiefs of Staff, General Twining, refused to give his views on President Eisenhower's new budget. In appearing before the subcommittee on Tuesday, Twining argued that once the budget has been fixed by the President, military officers should not be placed in the position of criticizing it if they fail to get all the money they want. "If he says it is inadequate, I think he is approaching insubordination. And if he says it is adequate, he has more or less perjured himself. Some of these boys," he said, "are taking a pretty good beating."

An aircraft manufacturer told the Senate subcommittee today that "penny-pinching" has crippled the nation's effort to defend itself against missile attack. Donald Douglas, chairman of the board of Douglas Aircraft, said the Pentagon needs "more guts and less gobbledygook." Another witness, H. W. Merrill of the Martin Company, said his firm can---with minor changes--- give the United States a vehicle for reaching the moon first. The vehicle, he said, would be a modified Titan intercontinental ballistic missile.

At Cape Canaveral, the Navy today launched a "test vehicle" in its program

for developing the Polaris intermediate range missile. The Polaris uses a solid---not a liquid---propellant and will have the capability of being fired from submarines while submerged. The rocket fired today is officially described as "a test vehicle in the Navy polaris program,"and William Holaday, missiles director in the Defense Department, said the launching was a success. He did not elaborate---except to say that the device tested included "a forerunner of the Polaris propulsion engine." Secretary of Defense McElroy has indicated the Navy may have a fully developed Polaris missile by early 1960.

The chief of naval operations, Admiral Burke, said today: "The answer to the survival problem is mobility." He said...in a Chicago speech...that when the Polaris goes to sea "it will have all the qualities of an invulnerable missile system. It will be mobile and capable of concealment. It will deny the enemy any advantage in initiative or surprise." The admiral went on to say that the United States needs a diversity of missile systems, based on the concept of mobility on land as well as sea.

The House Ways and Means Committee voted today to raise the national debt ceiling...temporarily...by 5-billion dollars. The measure now goes to the full House. The committee voted after hearing Secretary Anderson testify that the cash balance in the Treasury is "distressingly low."

Secretary Benson went before Congress today to defend the farm program laid down yesterday by the President. Benson told the Senate Agriculture Committee that he must be given "administrative discretion" to reduce price supports if necessary down to 60 percent of parity. He said Congress must face up to the fact that present measures have not solved the farm problem. And, he added, those measures have been expensive. Benson predicted that a "wider range" of price supports will help farmers in the long run because the range is now "too narrow to permit the expansion of markets." Benson was frequently interrupted as he read his prepared statement. One interrupti came when he said prices received by farmers "have been running 3 percent above a year ago." Chairman Ellender accused him of failing

to give "the other side of the picture"...which Ellender said is that the cost of things farmers have to buy have gone up more than 3 percent. Benson said his department's figures on 1957 net income are not complete...but that he was sure farm income "will not be as great as we had expected." At one point the questioning became so hostile that DemocraticSenator Holland of Florida suggested Benson be granted a fair hearing. Ellender remarked that he had been in the Senate for 21 years. "No one," he said, "has ever accused me of being unfair."

The State Department said today that our ambassador to Moscow...Llewelyn Thompson...is coming home for consultations. The department spokesman said Thompson will confer with Secretary of State Dulles on American-Soviet relations and noted that "the question of the moment" is a possible summit conference. Thompson is expected to leave Moscow late next week. Dulles will be flying to Turkey...at about that same time...to attend a meeting of the Baghdad Pact. But he will be back in Washington to confer with Ambassador Thompson around the first of next month.

Moscow announced today that Nikita Khrushchev has had new secret talks with Polish leaders. According to Moscow, the conversations took place in "a cordial and friendly atmosphere." The subject matter is not divulged. Khrushchev reportedly went to Poland at the invitation of Party Leader Gomulka and was there for three days.

The month of January will go into the books as the time when the United States went seriously into the consideration of outer space. It brought Senator Lyndon Johnson's call for the American control of outer space - the first ever made; President Eisenhower's invitation to the Russians to join in using outer space exclusively for peaceful purposes; and yesterday the first Congressional action to start the development of a manned and nuclear-powered space ship. It also brought Secretary Dulles' proposal to the Russians yesterday for an immediate international commission to insure the use of outer space solely for peace.

It may look as though Congress is going in one direction, seeking the

American control of outer space, and the Administration in another, seeking its internationalization. But assuming that the work really gets going on the projects proposed yesterday by Senator Gore and Representative Holifield, it may take just this kind of enterprise to induce the Russians to consider internationalization. For the Administration is asking the Russians to give up a monopoly they now enjoy. Presumably they are enjoying it only briefly. But so long as the Russians are ahead they are unlikely to yield their advantage voluntarily.

James Reston of the New York Times writes that when he saw Khrushchev last Fall, the Soviet boss told him that once a broad disarmament agreement was reached, it should be possible to restrict outer space to peactime uses. That is, he thought of giving up the Russian advantage only after a general disarmament agreement. We ask the Russians to give it up now as a step toward a disarmament agreement. So long as they are ahead they are not likely to go along. But once we catch up - or get ahead with a space vehicle - the tune can be expected to change.

Senator Gore and Congressman Holifield are not content with catching up. They want to forge ahead. And they propose that we press the advantage we now have over the Russians in nuclear propulsion. They ask for a kind of Nautilus of outer space. And Mr. Holifield urged thatAdmiral Rickover, the creator of the Nautilus be put in charge of a space-ship project, and that it be of a scope comparable with the Manhattan project of World War II. Senator Gore introduced a bill yesterday on a more modest scale, appropriating one billion dollars to step up the atomic reactor program as well as for rockets. He suggested seven hundred millions for reactors, the rest to go into speeding up the program for nuclear propulsion, into the control of the fusion of the hydrogen atom, and to start a project to develop the space ship. The bill states that such a vehicle be of controlled mobility and manned for travel. He believes two hundred million dollars will be enough to get started on the space ship, but expects the ultimate cost to be no less than one billion dollars.

Mr. Holifield, who is senior House member of the Joint Committee on Atomic

Energy, made a speech that twenty years ago would have been unthinkable except to disciples of Jules Verne. "Just think of a Nautilus in outer space rather than the ocean" he exclaimed. "A space vehicle" he said, "might even be a craft which would carry humans outside the earth's atmosphere and gravitational force. Once outside, it would have powerful sources for travel and conceivably could go to the moon and to other planets. If we were to develop the space vehicle" he declared, "the intercontinental ballistic missile would not necessarily be the decisive factor, because the control of space would restore the threat of retaliation and restore the power of deterrence. From space, I.C.B.M. launching sites could be destroyed. Perhaps interception in flight would be feasible. Above all, the development of such a vehicle would restore our world leadership."

Mr. Holifield was distressed that we are playing the game of following the leader - the leader being Russia. "I can assure you" he said, "that no new and imaginative program is being advocated by the Atomic Energy Commission, or the Department of Defense. Nothing startling is on the drawing boards or in the computors. If we lose," he said, urging his program, "we lose only dollars. If we win, we buy time to achieve the peace."

This is Ed Murrow. I'll be back in a moment with the word for today. Now, here is George Bryan.

GEORGE BRYAN: COMMERCIAL

MURROW: In bargaining with Russia...on the question of de-militarizing space, or on any other subject dealing with defense...one does well to recall the words of Lord Vansittart. "Negotiate from strength," he said, "not from weakness, or else you will find yourself negotiating first at someone else's expense---which is dirty ---and then at your own, which is disastrous."

Goodnight and good luck!

Edward R. Murrow Mon., Jan. 20, 1958

This is the news:

President Eisenhower launched the Republican congressional campaign tonight by advising local party leaders to choose the "most talented and devoted members of their communities" as candidates. Mr. Eisenhower said, "When we consider what is at stake, we realize that America cannot afford to send in a third-string team. Both parties will have their candidates," he said. "We want theirs to be good, but we must make ours a team of all-stars." Mr. Eisenhower spoke in Chicago at a 100-dollar-a-plate dinner. And his words were carried...over a cpast-to-coast network...to 43 other fund-raising dinners in 27 states, and the District of Columbia. Mr. Eisenhower said, "Our first objective---security and a just peace---is not a partisan or political matter." But he also said that, under the

→

five years of his administration, "the nation's security has been guarded and markedly strengthened." The defenses of America, he said, "command the respect of all the world." He spoke again of his plans for "effective modernization" of the defense set-up but gave no details.

Mr. Eisenhower said the Republican Party believes in the "system of American private enterprise, with its individual opportunities and built-in drives. "And we believe that, to provide the necessary amount of governmental vigilance over our economy, it is not necessary to abuse business as though it were an evil thing. It is not necessary to dictate to workers," he said, "or to load agriculture with self-perpetuating governmental control."

Mr. Eisenhower asked that matters of American security be kept out of politics. Presidential assistant Sherman Adams...addressing another dinner meeting in Minneapolis...charged that Democrats have been "politicking with defense." And the American people, he said, ought to call them "strictly to account." Vice President Nixon...speaking here in New York... said the American people under the Eisenhower Administration had enjoyed "the most prosperous times, the greatest progress and the best government in any five-year period of our history." Nixon characterized the →

Democratic Party as "so divided that it is incapable of effectively leading the nation in these times." "There is nothing wrong with the Republican Party," he said, "that good candidates, strong organization and hard work won't cure."

President Eisenhower today sent Congress his report on the nation's economy. National production in the last quarter is down 6-billion dollars, or one and one-half percent. Corporate earnings appear to have "declined significantly". Unemployment is up. So are prices. But the President was generally optimistic. He said, "There are good grounds for confidence...not only that economic growth can be resumed without prolonged delay...but also that a vigorous expansion of our economy can be maintained over the years." Mr. Eisenhower listed as reasons for confidence strong consumer demand, total buying power (which has shown "very little" decline) and stimulation from stepped up defense spending. Economic recovery can be delayed, he said, if labor makes wage demands beyond those warranted by gains in productivity...and if management fails to hold its price increases down to those warranted by increased production costs. He called again for a five-year extension of the

→

Reciprocal Trade Act. If we are going to increase exports, American markets must be opened to more foreign goods./ Mr. Eisenhower expressed faith that the Russian challenge can be met without distorting our economy, if we follow "suitable" policies. He said, "Whatever our national security requires, our economy can provide, and we can afford to pay."

Senate Democratic Leader Johnson says it is the hope of members of Congress that "the President's generally optimistic forecast concerning the immediate future will be borne out by events." / The first reaction from a labor leader came from James B. Carey, president of the International Union of Electrical Workers. Carey said the country needs "an expansion in mass purchasing power." "And the only way to get it, is through wage increases, and not piddling wage increases either."

President Eisenhower said today that Soviet Premier Bulganin's second letter of January 8th...proposing a summit meeting...already has been answered in substance./ Mr. Eisenhower said this in a brief note to Bulganin, acknowledging receipt of the second message./ Last week in answering the earlier message Mr. Eisenhower said that any summit meeting would have to be preceded by careful preparation and a meeting of foreign ministers. He

→

also suggested an agreement for the peaceful use of outer space.

One of President Eisenhower's scientific advisers told a House government information subcommittee today that scientific research is being hampered by too much secrecy. Dr. Lloyd Berkner, president of Associated Universities, Incorporated, said, "I'm afraid some day we may have to fight a war with pieces of paper marked 'secret', rather than with weapons and men ready to fight."

Admiral Burke, chief of naval operations, is revealed to have told another House committee last week that the advent of missiles "does not destroy our capability to destroy Russia." "What has happened," he said, "is that now for the first time, they have the prospect of a capability to destroy us quickly." Burke expressed the view that even if the United States were hit first, it could still "knock Russia out."

Yugoslavia today protested French seizure...over the week-end...of a Yugoslav freighter off the North African coast. French authorities insist that the ship carried more than a hundred tons of arms and ammunition, destined for the Algerian rebels. They say the ship was intercepted in French territorial waters, that the weapons were confiscated by them, and the vessel released. Yugoslavia demands that the arms and ammunition be

returned. It claims the ship...when intercepted...was sailing in the open sea, 45 miles from the Algerian coast.

Latest returns in the Guatamela election show the rightist candidate leading his leftist rival for the presidency. Complete, official returns are not expected until later in the week.

In Little Rock, a stick of dynamite was found today in an empty locker at the integrated Central High School. The stick of dynamite did not have a fuse. School Superintendent Virgil Blossom said it "appeared" to be "part of a campaign to force us to close the school."

Edward R. Murrow: January 20, 1958. 7.45 p.m.

This year is probably the first in which people in Washington are beginning to realize that a decline in the economy bears directly on our ability to stay safely ahead of the Russians. The two problems, today producing the most anxiety in the capital are missiles and the recession. They are by no means the same problem. But both can affect world leadership. We are determined to match the Russians in missiles, but even if we do, we also have to match them in economic growth. If we don't, we ultimately could slip into second place. It was a double warning for Washington that at the time the Sputniks went up, the American economy was already going down.

President Eisenhower in his economic report to Congress today, did not elaborate on the economic race with the Russians. He was sending a message intended to hearten business. But it did point out, that last year we were enjoying an almost record-breaking prosperity, with goods and services and personal incomes, up five percent over the year before. All but one percent of this rise was due simply to higher prices, but still there was expansion. Then in the final quarter an actual decline set in. Not only had the rate of expansion slowed down, but production and personal incomes both fell. Unemployment rose about one-fifth from September to December. Since the

population was growing, and prices had not fallen, this setback was more significant than the figures indicate.

The rate of economic expansion in the Soviet Union is considerably higher than ours in the best of our recent years. We still are about double the Russians in per capita production and national income, which are the figures that count. But the Russians have concentrated heavily on machinery and plant expansion so that they can expect to maintain a high rate of expansion, though probably lower than at present. Our rate not only has been slowing down, last year the economy fell back. The population grew, but production, incomes and employment actually were smaller.

We are in no early danger of being surpassed by the Russians economically. But that is not the point. There are things we must do now, as in education and research, to be sure of staying ahead of the Russians ten or fifteen years from now. If we fail to do them now, our advantage may be short-lived. It can be like the advantage we had -- and lost - in nuclear weapons.

The President's report records, but does not explain, the sudden switch in economic thinking in the course of last year. A year ago, the dread word was inflation. Not only the President and Secretary Humphrey dreaded it, so did nearly everybody in Congress. Today the dread word is "recession." The

heavy spending on missiles, research and other defense items, which was being cut from last year's budget has now become desirable. The President says the task last year was to restrain inflationary pressures. Now, to use his language, "it is to facilitate readjustments in the economy, essential to the resumption of sustainable economic growth, but do so without reviving inflationary pressures."

If the restraints last year were overdone, the President does not say so. But he does say that the restraints are being reversed. "Credit" he says, "is more readily available, and its cost is lower. Financial conditions are increasingly favorable to the resumption of financial growth." But how the inflationary pressures of last year are to be kept down when growth is resumed he does not spell out.

The President admitted that the setback last year began sooner and hit harder than his advisers had told him to expect. But he believes that the recovery, due to defense spending, and easier credit, also may come more quickly than some are predicting. He is encouraged that some strong points in the economy haven't been hit as much as others, and with improved conditions he hopes they will outweigh those that have suffered more. He

told Congress that he expects a reversal in the trend of business and employment by the Fourth of July.

This optimism is not shared by all business experts. Some believe the upturn will not come before November or December, since it may wait until inventories in the durable goods industries have been drastically reduced. What is notable, however, is that the pessimists only differ as to the timetable of recovery. Nobody doubts it will come. But neither does anyone say how the advantage the Russians already have gained from the recession, is to be wiped out.

Barbara a moment—

George Bryan—

Word for Today

If the United States wants to stay ahead of Russia, it must ~~needs~~ look to its economy, even as it looks to ~~weapons,~~ education and research. For all of these together with missiles go hand in hand. On the subject of preparedness, Thomas Jefferson said, "Our duty is to act upon things as they are, and to make reasonable provision for whatever they may be."

Goodnight and good luck!

EDWARD R. MURROW WITH THE NEWS
CBS RADIO NETWORK

MONDAY, JANUARY 20, 1958
7:45 - 8:00 PM EST

This is the news:

President Eisenhower launched the Republican congressional campaign tonight by advising local party leaders to choose the "most talented and devoted members of their communities" as candidates. Mr. Eisenhower said, "When we consider what is at stake, we realize that America cannot afford to send in a third-string team. Both parties will have their candidates," he said. "We want theirs to be good, but we must make ours a team of all-stars." Mr. Eisenhower spoke in Chicago, at a 100-dollar-a-plate dinner. And his words were carried...over a coast-to-coast network...to 43 other fund-raising dinners in 27 states and the District of Columbia. Mr. Eisenhower said, "Our first objective---security and a just peace---is not a partisan or political matter." But he also said that, under the five years of his administration, "the nation's security has been guarded and markedly strengthened." The defenses of America, he said, "command the respect of all the world." He spoke again of his plans for "effective modernization" of the defense set-up but gave no details.

Mr. Eisenhower asked that matters of American security be kept out of politics. Presidential assistant Sherman Adams...addressing another dinner meeting in Minneapolis...charged that Democrats have been "politicking with defense." And the American people, he said ought to call them "strictly to account." Vice President Nixon...speaking here in New York...said the American people under the Eisenhower Administration had enjoyed "the most prosperous times, the greatest progress and the best government in any five-year period of our history." Nixon characterized the Democratic Party as "so divided that it is incapable of effectively leading the nation in these times." "There is nothing wrong with the Republican Party," he said, "that good candidates, strong organization, and hard work won't cure."

President Eisenhower today sent Congress his report on the nation's economy.

National production in the last quarter is down 6-billion dollars, or one and one-half percent. Corporate earnings appear to have "declined significantly." Unemployment is up. So are prices. But the President was generally optimistic. He said, "there are good grounds for confidence...not only that economic growth can be resumed without prolonged delay...but also that a vigorous expansion of our economy can be maintained over the years." Mr. Eisenhower listed as reasons for confidence strong consumer demand, total buying power (which has shown "very little" decline) and stimulation from stepped up defense spending. Economic recovery can be delayed, he said, if labor makes wage demands beyond those warranted by gains in productivity...and if management fails to hold its price increases down to those warranted by increased production costs. He called again for a five-year extension of the Reciprocal Trade Act. If we are going to increase exports, American markets must be opened to more foreign goods. Mr. Eisenhower expressed faith that the Russian challenge can be met without distorting our economy, if we follow "suitable" policies. He said, "Whatever our national security requires, our economy can provide, and we can afford to pay."

Senate Democratic Leader Johnson says it is the hope of members of Congress that "the President's generally optimistic forecast concerning the immediate future will be borne out by events." The first reaction from a labor leader came from James B. Carey, President of the International Union of Electrical Workers. Carey said the country needs "an expansion in mass purchasing power. And the only way to get it is through wage increases and not piddling wage increases either."

President Eisenhower said today that Soviet Premier Bulganin's second letter of January 8th...proposing a summit meeting...already has been answered in substance. Mr. Eisenhower said this in a brief note to Bulganin, acknowledging receipt of the second message. Last week in answering the earlier message, Mr. Eisenhower said that any summit meeting would have to be preceded by careful preparation and a meeting of foreign ministers. He also suggested an agreement

for the peaceful use of outer space.

One of President Eisenhower's scientific advisers told a House government information subcommittee today that scientific research is being hampered by too much secrecy. Dr. Lloyd Berkner, president of Associated Universities, Incorporated, said, "I'm afraid some day we may have to fight a war with pieces of paper marked 'secret,' rather than with weapons and men ready to fight."

Admiral Burke, chief of naval operations, is revealed to have told another House committee last week that the advent of missiles "does not destroy our capability to destroy Russia." "What has happened," he said, "is that now for the first time they have the prospect of a capability to destroy us quickly." Burke expressed the view that even if the United States were hit first, it could still "knock Russia out."

Yugoslavia today protested French seizure...over the week-end...of a Yugoslav freighter off the North African coast. French authorities insist that the ship carried more than a hundred tons of arms and ammunition destined for the Algerian rebels. They say the ship was intercepted in French territorial waters, that the weapons were confiscated by them and the vessel released. Yugoslavia demands that the arms and ammunition be returned. It claims the ship...when intercepted...was sailing in the open sea, 45 miles from the Algerian coast.

In Little Rock, a stick of dynamite was found today in a empty locker at the integrated Central High School. The stick of dynamite did not have a fuse. School Superintendent Virgil Blossom said it "appeared" to be "part of a campaign to force us to close the school."

This year is probably the first in which people in Washington are beginning to realize that a decline in the economy bears directly on our ability to stay safely ahead of the Russians. The two problems, today producing the most anxiety in the capital are missiles and the recession. They are by no means the same problem. But both can affect world leadership. We are determined to match the Russians in missiles, but even if we do, we also have to match them in economic

growth. If we don't, we ultimately could slip into second place. It was a double warning for Washington that at the time the Sputniks went up, the American economy was already going down.

President Eisenhower in his economic report to Congress today, did not elaborate on the economic race with the Russians. He was sending a message intended to hearten business. But it did point out, that last year we were enjoying an almost record-breaking prosperity, with goods and services and personal incomes, up five percent over the year before. All but one percent of this rise was due simply to higher prices, but still there was expansion. Then in the final quarter an actual decline set in. Not only had the rate of expansion slowed down, but production and personal incomes both fell. Unemployment rose about one-fifth from September to December. Since the population was growing, and prices had not fallen, this setback was more significant than the figures indicate.

The rate of economic expansion in the Soviet Union is cosniderably higher than ours in the best of our recent years. We still are about double the Russians in per capita production and national income, which are the figures that count. But the Russians have concentrated heavily on machinery and plant expansion so that they can expect to maintain a high rate of expansion, though probably lower than at present. Our rate not only has been slowing down, last year the economy fell back. The population grew, but production, incomes and employementactually were smaller.

We are in no early danger of being surpassed by the Russians economically. But that is notthe point. There are things we must do now, as in education and research, to be sure of staying ahead of the Russians ten or fifteen years from now. If we fail to do them now, our advantage may be short-lived. It can be like the advantage we had - and lost - in nuclear weapons.

The President's report records, but does not explain, the sudden switch in economic thinking in the course of last year. A year ago, the dread word was

inflation. Not only the President and Secretary Humphrey dreaded it, so did nearly everybody in Congress. Today the dread word is "recession." The heavy spending on missiles, research and other defense items, which was being cut from last year's budget has now become desirable. The President says the task last year was to restrain inflationary pressures. Now, to use his language, "it is to facilitate readjustments in the economy, essential to the resumption of sustainable economic growth, but do so without reviving inflationary pressures." He told Congress that he expects a reversal in the trend of business and employment by the Fourth of July.

This optimism is not shared by all business experts. Some believe the upturn will not come before November or December, since it may wait until inventories in the durable goods industries have been drastically reduced. What is notable, however, is that the pessimists only differ as to the timetable of recovery. Nobody doubts it will come. But neither does anyone say how the advantage the Russians already have gained from the recession, is to be wiped out.

This is Ed Murrow. I'll be back in a moment with the word for today. Now, here is George Bryan.

GEORGE BRYAN: COMMERCIAL

MURROW: If the United States wants to stay ahead of Russia, it must look to its economy, even as it looks to education and research. For all of these together with missiles go hand in hand. On the subject of preparedness, Thomas Jefferson said, "Our duty is to act upon things as they are, and to make reasonable provision for whatever they may be."

Goodnight and good luck!

Edward R. Murrow Tues., Jan. 21, 1958

This is the news:

The government took another step today, away from the Administration's "tight money" policy. / The Federal Reserve Board, authorized the Federal Reserve Bank of Philadelphia to cut its discount rate to two and three-quarters percent. / The rate has been three percent. / The reduction is effective tomorrow. / And in a few days, other reserve banks are expected to follow suit. The lowering of the discount rate is designed to make credit easier to come by, and bolster the economy. / Only last week, the Reserve Board cut the margin requirement on stock purchases.

The government reported today that the cost of living in December remained unchanged...leaving the consumer price index at the all-time peak reached in November. / A Labor Department spokesman said living costs would have advanced in December, except that new car prices declined. He could hold out no hope that the cost of living has leveled off. Food prices, for example, are still going up.

The House Appropriations Committee today voted an emergency fund of 1-billion, 410-million dollars to speed up the missile program and strengthen the Strategic Air Command. / The measure increases by 40-million dollars the authority President Eisenhower requested for transferring funds from accounts which otherwise would not be spent. / The extra money is earmarked to further Army development of short-range missiles. All the money is in addition to the nearly 40-billion dollars recommended in the defense budget for the next fiscal year. / Nine hundred and ten million dollars of the money voted today...by the House committee...would go for dispersal of SAC bases, new aircraft warning facilities, and development of the Atlas, Thor and Jupiter ballistic missiles. / Work would also be stepped up on the long-range Titan missile and an anti-missile missile. The committee sent the bill to the House floor with a warning that the expenditures called for are "conservative" when compared with missile needs. / The committee said money "is not the only answer." And it asked Secretary of Defense McElroy "to cut through the maze of administrative red tape." / In the business of missiles, it said, the United States "cannot afford to be in second place."

Secretary McElroy today named the three civilians who will join him in a study looking toward possible reorganization of the defense command. His three military advisers...Generals Twining and Bradley and Admiral Radford...were appointed last week. The three civilians are William C. Foster, former deputy secretary of defense, Nelson A. Rockefeller, chairman of the President's advisory committee on government organization, and Charles A. Coolidge, former assistant secretary of defense. Coolidge made a study of the military organization several years ago, and is the only one of the consultants named today who will serve fulltime. McElroy said the group will make its study on a top-priority basis and have a report ready "in several weeks." The recommendations will then be submitted to the President.

The Senate preparedness subcommittee today heard conflicting testimony from two of America's military leaders of World War Two---General Spaatz of the Air Force and Fleet Admiral Nimitz. For purposes of efficiency, Spaatz urged appointment of a single chief of staff for the secretary of defense, in place of what he called "the committee system we have now." Nimitz testified that setting up a single

→

chief of staff to take the place of the joint chiefs would be "totally wrong." He suggested, instead, that the assistant secretaries of defense be removed from "the chain of administrative control" and that the decision-making power be left directly in the hands of the defense secretary. He also suggested that the Joint Chiefs of Staff be reduced to three members...instead of four...with the chairmanship rotating between the Chiefs of Staff of the Army, Navy and Air Force.

President Eisenhower flew back to Washington today, after his Chicago speech, and conferred with the defense secretary. News Secretary Hagerty says it would be a "good guess" that defense reorganization...among other things...was discussed.

~~House Speaker Sam Rayburn commented caustically today on~~ (the political speeches ~~made last night by Mr. Eisenhower and other Republican leaders.~~ He said, ~~"Sometimes when I listen to their speeches---including the President's---~~ I wonder if ~~Ike~~ he thinks he can pass his program through Congress without ~~Democratic votes."~~

~~The House Commerce Committee opened public hearings today on pay-as-you-see television. The first witness, Robert Sarnoff of N.B.C.,~~

said that pay television... "with a box office in every subscriber's home"...would "easily" outbid free television for the same programs and talent.

The United Auto Workers Union today invited President Curtice of General Motors to address their special convention, opening tomorrow. The union's executive board said it wanted his ideas as to what would be "a sound and realistic" collective bargaining program. There was no immediate reply from Curtice. With the heads of the other major auto companies, he recently turned down the union's proposal for a "share the profits" system. Play.

West Germany Chancellor Adenauer told Soviet Premier Bulganin today that "the public exchange of letters does not seem to me the appropriate method of clarifying fundamental differences of opinion. I suggest," he said, "that we should more than hitherto make use of the proven possibilities of diplomatic negotiations." Adenauer said diplomatic talks and a foreign ministers conference "might" lead to a summit meeting. But, at the same time, he criticised Bulganin for Russia's charge that West Germany has "aggressive aims". His over-all position was that taken by other Western leaders.

Fighting has broken out in Caracas, the capital of Venezuela....with the start of a general strike. The extent of the outbreak is unknown. Reports reaching Washington say 20 persons are dead.

Here in New York today, United Nations Secretary General Hammarskjold said that the world organization with try "in one way or another" to break the East-West deadlock on disarmament. And he indicated that he may soon go to Moscow, if he thinks that will help.

Russia today proposed the creation of a "zone of peace" in the Middle East---free of nuclear weapons and missiles. It also warned the Middle East countries...belonging to the Baghdad Pact...that if they allow American missile bases to be set up on their territory, they risk being dragged into a nuclear war. ~~The full-scale meeting of the Baghdad Pact countries opens next week in Turkey. And today's Russian statement is interpreted, in Washington, as an effort to disrupt that conference.~~

A CBS News correspondent has gone behind the Iron Curtain...to Budapest.. for a first-hand look at that city which defied the armed force of Russia in the fall of 1956. Here is the report of Dan Karasik, recorded in Budapest.

Back in a moment
George Bryan

Tape runs 4:55

Ends on cue "--to CBS News in N.Y."

Word for Today

Budapest is quiet... with the quietness that exists wherever tyranny for the time being is in control. Tacitus said of the conquering Roman legions, "They make a solitude and they call it peace." And that would seem to be what the Red Army is still doing in Budapest today with its solitudinous machine guns and tanks.

Goodnight and good luck!

CBS RADIO DIVISION

EDWARD R. MURROW WITH THE NEWS

Tuesday, January 21, 1958
7:45 - 8:00 P. M. EST.

E. R. MURROW: A CBS NEWS correspondent has gone behind the Iron Curtain to Budapest. Here is the report of Dan Karasik recorded in Budapest.

KARASIK: One of the remarkable aspects about Budapest today is the way the Russian troops stationed here keep out of sight. Observers estimate that the Russians have about 7 divisions in Hungary, some one-hundred thousand men. One knows that they are here, but they are seldom seen.

As this correspondent drove from Vienna to Budapest, he saw his first sign of the Russians just after passing the provincial center Gyor not far from the Austrian border. There we saw a few soldiers riding the backs of two Russian trucks. These can be identified by their serial numbers, a letter of the Cyrillic alphabet and five numerals. About 60-miles from Budapest, just beyond the 98 kilometer marker, we came upon a Russian platoon of about 30 men. They were marching in neat order with their rifles slung muzzle down to protect them from the pouring rain. And, still farther on, and only about 17-miles from Budapest, we came upon Russian barracks right at the sides of the road. They struck one as extremely orderly installations, newly painted in black with well tended grounds and paths of crushed reddish stone, all laid out in apple pie order. It was raining hard, so few soldiers appeared. One unit though, was apparently for dependents. Russian wives were testing the weather with their hands thrust out of the entrance of a large auditorium like building. Dependents who were evacuated during the revolt in October of 1956 were evidently permitted to return to Hungary last fall. The camps are lightly guarded with a single soldier posted in the sentry box beside the gates which are almost always topped by a large red star. Some

of the camps we saw were protected by only a light wire fence. No where did we see corner watch towers with machine guns.

One gets the impression that the troops are definitely not on an emergency basis. In the city of Budapest itself, uniformed Russians are an infrequent sight - and, then they are usually riding in trucks. One sees an occasional uniformed officer in such places as Ibus, the Hungarian Government travel agency or at one of the city's railroad stations. But, generally it is believed the officers change to civilian clothes for their off-duty recreation in the city. If one should drive along the Hungarin Ring near the Arpade Bridge over the Danube, one comes upon a whole series of Russian barracks, but few Russian soldiers. The troops here are mostly young recruits who get little or no time off outside their own installations. It is believed that all of the units that took part in the suppression of the revolt have long since been withdrawn. Even the most prejudiced observers here will admit that the Russian troops display excellent discipline under a corps of professional officers. One American official told this correspondent, "don't ever make the mistake of under estimating them. Their behavior would be a credit to the United States Army."

In another district of Budapest, near Bitza Street, Russian women dependents usually in pairs can be observed as they go forth from their nearby apartments to shop. Women here pick them out easily by their clothing which seems unfashionable to the style conscious Budapester's. Tanks or guns have not appeared on the streets of Budapest for many months. One is told that the heavy equipment is kept out of sight behind the high concrete of brick walls one finds on some of the barracks. When it does appear, it is probably on the way to maneuvers which are sometimes held in the scenically Balaton area.

Commenting on the Russian announcement that

17,000 troops would be withdrawn from Hungary. Observers here point out that that figure corresponds to about the number of troops that are normally rotated each year. The regular rotation which was expected in October and November has not yet been observed. In Hungary today, it is estimated that there are almost twice the number of Russian troops that were stationed here during the worst part of the Stalinist era under the dictatorship of Matyas Rakosi. But, the people now have practically no immediate contact with the soldiers. Consequently, some of the hatred for the Russian uniform has been tempered by time. One Hungarian told this correspondent, "I don't hate them as much as I hated them a year ago, but still we must not let ourselves forget."

And, now back to CBS NEWS in New York.

E. R. MURROW: That was Dan Karasik reporting from Budapest. This is Ed. Murrow. I'll be back in a moment with the word for today. Now, here is George Bryan.

BRYAN: (F O R D C O M M E R C I A L)

E. R. MURROW: Budapest is quiet - with the quietness that exists where ever tyranny for the time being is in control. Tacitus said of the conquering Roman legions, "they make a solitude and they call it peace." And, that would seem to be what the Red Army is still doing in Budapest today, with its solitudinous machine guns and tanks.

Good night and good luck.

It also warned the Middle East ountries...belonging to the Baghdad Pact...that if they allow American missile bases to be set up on their territory, they risk being dragged into a nuclear war.

A CBS News correspondent has gone behind the Iron Curtain...to Budapest... for a first-hand look at that city which defied the armed force of Russia in the fall of 1956. Here is the report of Dan Karasik, recorded in Budapest.

KARASIK: One of the remarkable aspects about Budapest today is the way the Russian troops stationed here keep out of sight. Observers estimate that the Russians have about 7 divisions in Hungary, some one-hundred thousand men. One knows that they are here, but they are seldom seen.

As this correspondent drove from Vienna to Budapest, he saw his first sign of the Russians just after passing the provincial center Gyor not far from the Austrian border. There we saw a few soldiers riding the backs of two Russian trucks. These can be identified by their serial numbers, a letter of the Cyrillic alphabet and five numerals. About 60 miles from Budapest, just beyond the 98 kilometer marker, we came upon a Russian platoon of about 30 men. They were

marching in neat order with their rifles slung muzzle down to protect them from the pouring rain. And, still farther on, and only about 17-miles from Budapest, we came upon Russian barracks right at the sides of the road. They struck one as extremely orderly installations, newly painted in black with well tended grounds and paths of crushed reddish stone, all laid out in apple-pie order. It was raining hard, so few soldiers appeared. One unit though was apparently for dependents. Russian wives were testing the weather with their hands thrust out of the entrance of a large auditorium-like building. Dependents who were evacuated during rhe revolt in October of 1956 were evidently permitted to return to Hungary last fall. The camps are lightly guarded with a single soldier posted in the sentry box beside the gates which are almost always topped by a large red star. Some of the camps we saw were protected by only a light wire fence. Nowhere did we see corner watch towers with machine guns.

One gets the impression that the troops are definitely not on an emergency basis. In the city of Budapest itself, uniformed Russians are in infrequent sight - and, then they a re usually riding in trucks. One sees an occasional uniformed officer in such places as Ebus, the Hungarian Government travel agency or at one of the city's railroad stations. But, generally it is believed the officers change to civilian clothes for their off-duty recreation in the city. If one should drive along the Hungaria Ring near the Arpade Bridge over the Danube, one comes upon a whole series of Russian barracks, but few Russian soldiers. The troops here are mostly young recruits who get little or no time off outside their own installations. It is believed that all of the units that took part in the suppression of the revolt have long since been withdrawn. Even the most prejudiced observers here will admit that the Russian troops display excellent discipline under a corps of professional officers. One American official told this oorrespondent, "Dont ever make the mistake of underestimating them. Their behavior would be a credit to the United States Army."

In another district of Budapest, near Bitza Street, Russian women dependents usually in pairs can be observed as they go forth from their nearby apartments to shop. Women here pick them out easily by their clothing which seems unfashionable to the style conscious Budapesters. Tanks or guns have not appeared on the streets of Budapest for many months. One is told that the heavy equipment is kept out of sight behind the high concrete of brick walls one finds on some of the barracks. When it does appear, it is probably on the way to maneuvers which are sometimes held in the scenically Balaton area.

Commenting on the Russian announcement that 17,000troops would be withdrawn from Hungary, observers here point out that the figure corresponds to about the number of troops that are normally rotated each year. The regular rotation which was expected in October and November has not yet been observed. In Hungary today, it is estimated that there are almost twice the number of Russian troops that were stationed here during the worst part of the Stalinist era under the dictatorship of Matyas Rakosi. But, the people now have practically no immediate contact with the soldiers. Consequently, some of the hatred for the Russian uniform has been tempered by time. One Hungarian told this correspondent, "I don't hate them as much as I hated them a year ago, but still we must not let ourselves forget."

And, now back to CBS News in New York.

MURROW: That was Dan Karasik reporting from Budapest. This is Ed Murrow. I'll be back in a moment with the word for today, Now here is George Bryan.

GEORGE BRYAN: COMMERCIAL

MURROW: Budapest is quiet...with the quietness thet exists wherever tryanny for the time being is in control. Tacitus said of the conquering Roman legions, "They make a solitude and they call it peace." And that would seem to be what the Red Army is still doing in Budapest today with the "solitudinous" machine guns and tanks.

Goodnight and good luck!

Edward R. Murrow Wed., Jan. 22, 1958

This is the news:

The violence in Venezuela appears to have taken a more serious turn. Dispatches from the capital city of Caracas are held up by heavy censorship, but informed sources in Washington say that rioting against the dictatorship of President Perez (He-mén-es) Jimenez has increased and that "hundreds" of persons have been killed in street fighting. These reports are not confirmed. The State Department says no American casualties are reported. ~~The Venezuelan government claimed earlier in the day that "disturbances" in the interior of the country has been quashed.~~

Edward R. Murrow Wed., Jan. 22, 1958

(1A)

This is the news:

The State Department today branded Russia's charge...that the United States is trying to "force" Middle East countries to accept American missile bases...as "totally false." / Russia said yesterday that Secretary of State Dulles was attending the Baghdad Pact meeting in Turkey next week "to step up the activity of the Baghdad military alignment." And it warned Middle East members of the alliance that if they allow missile bases to be set up on their territory, they risk being involved in a nuclear war. / Today, in a brief, four-paragraph statement, the State Department said the purpose of Mr. Dulles' trip "is to show

—>

American sympathy and support for the security and independence of Russia's southern neighbors...who now are and for long have been menaced by the imperialistic aggressive design of their powerful neighbors to the north." Before leaving for the Middle East this afternoon, Mr. Dulles conferred with President Eisenhower at the White House. "The President," he said afterward, "has authorized me to express the deep concern of the United States for the security and economic development of this part of the free world. ~~and our constant and unwavering support for the principle of collective security symbolized by the Baghdad Pact.~~" The United States is not a member of the pact although it belongs to its military, economic and anti-subversion committees. The five full members of the alliance are Britain, Turkey, Pakistan, Iran and Iraq. ~~Dulles is flying to Turkey by way of Morocco and Iran.~~

~~Egyptian newspapers today warned the Baghdad Pact countries not to agree to the establishment of missile bases on their soil. One paper said a missile agreement would be tantamount to agreeing to "annihilation".~~

~~The United Nations Security Council today unanimously adopted a resolution involving Jordan and Israel. Jordan had protested Israel's~~

tree-planting activities in a no man's land, south of Jerusalem. The resolution...sponsored by the United States and Britain...called for an end to these activities. (Actually, Israel stopped planting orange trees in the disputed area two months ago).

In Paris, Foreign Minister Pineau told the National Assembly today that France is "resolutely opposed" to any change in the Israeli frontier, or in the frontier of any other nation in the Middle East. / Pineau said...in the course of a foreign policy debate...that France has little choice but to accept the American offer of missile bases. / The assembly then gave the Gaillard government a vote of confidence. ~~to insure its security, he said, must adapt itself to the new military situation.~~

The NATO council...meeting in Paris...is reported tonight to be in "broad agreement" that the ~~Russian~~ Communist proposal for an atom free ~~demilitarized~~ zone in Central Europe is unacceptable. This does not, however, constitute a flat rejection of the idea by the NATO powers.

President Eisenhower today informed Senate Deomcratic Leader Johnson by letter that he cannot allow congressional committees to see either the Killian or Gaither reports...dealing with the military preparedness of the United States. / The Killian Report, compiled ~~last year~~ in 1955

under the direction of Dr. James Killian...is said to have urged early development of an American intercontinental ballistic missile. The more recent Gaither document reportedly warned that the United States is in "grave danger", due to Russian advances in the military and scientific fields. The President told Johnson he could not "properly" furnish the reports to Congress, or release them for publication, on grounds that they were prepared on a confidential basis for use by the executive branch of government. Mr. Eisenhower said the information contained in the reports "is essentially the same information which has been available to congressional committees studying the same problems."

The Army's deputy chief for research and development...Major General Wood...said tonight that "excellent progress" is being made toward the development of two weapons for destroying enemy missiles. He identified the two anti-missile missiles as the Plato and the Zeus.

Democratic Senator Jackson, of Washington State, charged today that the Administration is "virtually ignoring" the development of a radar system to warn of the approach of missiles launched by enemy submarines.

Reports from Cape Canaveral say the United States may be about to make a new effort to launch an earth satellite. The three-stage Vanguard rocket →

is in position and undergoing last-minute tests.

Republican Representative Lawrence Smith of Wisconsin, died today of a heart attack. And the House after hearing several eulogies adjourned for the day out of respect. Representative Smith had served in Congress since 1941 and as a member of the House Foreign Affairs Committee was a vigorous opponent of foreign aid.

The Senate Judiciary Committee today unanimously approved the nomination of William P. Rogers as attorney general of the United States. Rogers has been serving in the post since his recess appointment last fall.

The House Commerce Committee heard more testimony today against pay-as-you-see television. President Frank Stanton of CBS said that, with toll television, the average family would pay more than 400 dollars a year to watch fewer programs than it now sees for nothing. And Leonard Goldenson of ABC predicted that toll TV "would soon strip free television of its most popular programs." President Robert Sarnoff of NBC gave similar testimony yesterday.

The Labor Department has designated nearly one-third of the major industrial centers of the country as areas of "substantial" unemployment.

This means that 45 of the 149 areas surveyed are now eligible for special consideration in the award of government contracts.

The United Auto Workers' bargaining convention opened in Detroit today with a speech by Union President Walter Reuther. Reuther defended his proposal...already turned down by the major auto producers...for a program for sharing company profits. Reuther said he made an unusual proposal "because these are unusual times." And he accused "big business" of trying "to corrupt the public [illegible] believing that wages have been the chief cause of inflation." President Curtice of General Motors declined an invitation to speak before the convention. Instead, he sent a letter urging the union to adopt a program "tailored to the economic facts of life."

The Agriculture Department today reversed a previous prediction and said that net farm income last year showed a decline. The drop...as compared to 1956...amounted to a little more than one and one-half percent.

Edward R. Murrow: January 22, 1958. 7.45 p.m.

The State Department finds itself at an interesting stage in a kind of chess game with the Soviet Union over Poland. Negotiations of a Polish loan of around ninety-five million dollars are far along, and might be completed in a couple of weeks. Last week the Soviet Government leaked the news of a secret meeting between Khrushchev and Gomulka in a hunting lodge on the Russian-Polish border. Warsaw was embarrassed to have the news come out at just this time. Moscow obviously wanted Warsaw to be embarrassed, and according to C.B.S. NEWS correspondent Alexander Kendrick, it is believed in London that Moscow broke the story to hurt the chances of Poland getting the American loan.

At the same time the Communist regime in China advised Poland not to accept any American aid whatever. The Chinese who originally backed and protected Gomulka, are now backing Khrushchev, and plugging for communist solidarity.

According to the London version of the secret meeting on the Polish border, it was Khrushchev who whistled, and Gomulka who came. And a frank exchange on the aid problem followed. Poland is desperately weak economically, and unless it can be quickly strengthened, the complaints of industrial workers will mount, and uprisings like the one in Poznan might follow.

Only two countries can provide large-scale aid - the Soviet Union and the United States. Both are deeply concerned - for opposite reasons - over the state of Polish independence. The Soviet Union wants anything like national communism uprooted in the satellite empire, and would love to have Poland under the thumb again, as in the Stalin era. / The United States is immensely interested in such independence as Poland has gained, and is ready to nurture it. / We made a loan last year and are preparing to make another. / We did not lay down political conditions for the first loan, as Gomulka has publicly stated. We are not expected to lay down political conditions for the second, for the State Department is bound not to by a promise in President Eisenhower's speech in Dallas in October over a year ago.

All the same, Gomulka knows he cannot expect to get American help if he loses his independence. He also knows the State Department is worried over recent trends in Warsaw, where press and literary freedom have been sharply curtailed, presumably under Russian pressure. / And the State Department is troubled by Gomulka having signed the manifesto issued by the communist conclave in Moscow last fall. / Deputy Under-Secretary of State Dillon called in the Polish Ambassador and told him so.

So Gomulka is in a dilemma. He can't get what he needs from Moscow,

without losing all his independence, and he can't get our economic aid, unless he hangs on to his limited independence. Soviet pressure obviously is stronger than ours, but ours continues to count, for the Poles cherish independence, and the gains Gomulka made in guaranteeing private farming and in church relations, still are intact. The Poles explain, that while Gomulka did sign the Moscow communist manifesto, he opposed the revival of either a Comintern or a Cominform, and refused to have anything to do with a new international communist periodical.

If Gomulka talked freely with Khrushchev he must have told him of his dilemma. Now the Poles are angry with Khrushchev for leaking news of the meeting. For they are afraid Washington will think Gomulka is playing off the United States against the Soviet Union and will break off loan negotiations. They are sure that is what Khrushchev wants.

If Washington does break off negotiations Khrushchev will have won the chess game. But there is no evidence that the negotiations will be broken off. Some differences about it are reported, but they seem to be minor.

The chief argument for the loan is that it will do something to keep Gomulka from submitting more than he is doing to the Kremlin. That would serve the cause of political independence generally. Moscow and Peiping,

in showing that they don't want the Poles to have the loan, seem to make the argument stand up.

Back in a moment—

Jerry Bryan—

Word for Today

Economic aid...as in the case of Poland...has long since become an accepted weapon in the cold war. Of course, it costs money. But as Josh Billings remarked, "All money that iz well spent iz a good investment." Mere sympathy for the Polish people avails little. For as Josh Billings also said, "Pitty costs nothing and ain't worth nothing."

Goodnight and good luck!

EDWARD R. MURROW WITH THE NEWS
CBS RADIO NETWORK

WEDNESDAY, JANUARY 22, 1958
7:45 - 8:00 PM EST

This is the news:

The violence in Venezuela appears to have taken a more serious turn. Dispatches from the capital city of Caracas are held up by heavy censorship. Informed sources in Washington say that rioting against the dictatorship of President Perez Jimenez has increased and that "hundreds" of persons have been killed in street fighting. These reports are not confirmed. The State Department says no American casualties are reported.

The State Department today branded Russia's charge..that the United States is trying to force Middle East countries to accept American missile bases...as "totally false." Russia said yesterday that Secretary of State Dulles was attending the Baghdad Pact meeting in Turkey next week "to step up the activity of the Baghdad military alignment." And it warned Middle East members of the alliance that if they allow missile bases to be set up on their territory, they risk being involved in a nuclear war. Today, in a brief, four-paragraph statement, the State Department said the purpose of Mr. Dulles' trip "is to show American sympathy and support for the security and independence of Russia's southern neighbors...who are now and for long have been menaced by the imperialistic aggressive design of their powerful neighbors to the north." Before leaving for the Middle East this afternoon, Mr. Dulles conferred with President Eisenhower at the White House. "The President," he said afterward, "has authorized me to express the deep concern of the United States for the security and economic development of this part of the free world. The United States is not a member of the pact although it belongs to its militrry, economic and anti-subversion committees. The five full members of the alliance are Britain, Turkey, Pakistam, Iran and Iraq.

In Paris, Foreign Minister Pineau told the National Assembly today that France is "resolutely opposed" to any change in the Israeli frontier, or in the frontier of any other nation in the Middle East. Pineau said...in the course of a foreign

policy debate...that France has little choice but to accept the American offer of missile bases. The assembly then gave the Gaillard government a vote of confidence.

The NATO council...meeting in Paris...is reported tonight to be in "broad agreement" that the Communist proposal for an atom free zone in Central Europe is unacceptable. This does not, however, constitute a flat rejection of the idea by the NATO powers.

President Eisenhower today informed Senate Democratic Leader Johnson by letter that he cannot allow congressional committees to see either the Killian or Gaither reports...dealing with the military preparedness of the United States. The Killian Report, compiled in 1955 under the direction of Dr. James Killian... is said to have urged early development of an American intercontinental ballistic missile. The more recent Gaither document reportedly warned that the United States is in "grave danger," due to Russian advances in the military and scientific fields. The President told Johnson he could not "properly" furnish the reports to Congress, or release them for publication, on grounds that they were prepared on a confidential basis for use by the executive branch of government.

The Army's deputy chief for research and development...Major General Wood... said tonight that "excellent progress" is being made toward the development of two weapons for destroying enemy missiles. He identified the two anti-missile missiles as the Plato and the Zeus.

Democratic Senator Jackson, of Washington State, charged today that the Administration is "virtually ignoring" the development of a radar system to warn of the approach of missiles launched by enemy submarines.

Reports from Cape Canaveral say the United States may be about to make a new effort to launch an earth satellite. The three-stage Vanguard rocket is in position and undergoing last-minute tests.

The Senate Judiciary Committee today unanimously approved the nomination of William P. Rogers as attorney general of the United States. Rogers has been

serving in the post since his recess appointment last fall.

The House Commerce Committee heard more testimony today against pay-as-you-see television. President Frank Stanton of CBS said that, with toll television, the average family would pay more than 400 dollars a year to watch fewer programs than it now sees for nothing. And Leonard Goldenson of ABC predicted that toll TV "would soon strip free television of its most popular programs." President Robert Sarnoff of NBC gave similar testimony yesterday.

The Labor Department has designated nearly one-third of the major industrial centers of the country as areas of "substantial" unemployment. This means that 45 of the 149 areas surveyed are now eligible for special consideration in the award of government contracts.

The United Auto Workers' bargaining convention opened in Detroit today with a speech by Union President Walter Reuther. Reuther defended his proposal... already turned down by the major auto producers...for a program for sharing company profits. Reuther said he made an unusual proposal "because these are unusual times." President Curtice of General Motors declined an ivvitation to speak before the convention. Instead, he sent a letter urging the union to adopt a program "tailored to the economic facts of life."

The Agriculture Department today reversed a previous prediction and said that net farm income last year showed a decline. The drop...as compared to 1956... amounted to a little more than one and one-half percent.

Tje State Department finds itself at an interesting stage in a kind of chess game with the Soviet Union over Poland. Negotiations of a Polish loan of around ninety-five million dollars are far along, and might be completed in a couple of weeks. Last week the Soviet Government leaked the news of a secret meeting between Khrushchev and Gomulka in a hunting lodge on the Russian-Polish border. Warsaw was embarrassed to have the news come out at just this time. Moscow obviously wanted Warsaw to be embarrassed, and according to C.B.S. new correspondent, Alexander Kendrick, it is believed in London that Moscow broke the story

to hurt the chances of Poland getting the American loan.

At the same time the Communist regime in China advised Poland not to accept any American aid whatever. The Chinese who originally backed and protected Gomulka, are now backing Khrushchev, and plugging for communist solidarity.

According to the London version of the secret meeting on the Polish border, it was Khrushchev who whistled and Gomulka who came. And a frank exchange on the aid problem followed. Only two countries can provide large-scale aid - the Soviet Union and the United States. Both are deeply concerned - for opposite reasons - over the state of Polish independence. The Soviet Union wants anything like national communism uprooted in the satellite empire, and would love to have Poland under the thumb again, as in the Stalin era. The United States is immensely interested in such independence as Poland has gained, and is ready to nurture it. We made a loan last year and are preparing to make another. We did not lay down political conditions for the first loan, as Gomulka has publicly stated. We are not expected to lay down political conditions for the second, for the State Depattment is bound not to by a promise in President Eisenhower's speech in Dallas in October over a year ago.

All the same, Gomulka knows he cannot expect to get American help if he loses his independence. He also knows the State Department is worried over recent trends in Warsaw, where press and literary freedom have been sharply curtailed, presumably under Russian pressure. And the State Department is troubled by Gomulka having signed the manifesto issued by the communist conclave in Moscow last fall. Deputy Under-Secretary of State Dillon called in the Polish Ambassador and told him so.

So Gomulka is in a dilemma. He can't get what he needs from Moscow, without losing his independence, and he can't get our economic aid unless he hangs on to his limited independence. Soviet pressure obviously is stronger than ours, but

ours continues to count, for the Poles cherish independence, and the gains Gomulka made in guaranteeing private farming and in church relations still are intact.

If Gomulka talked freely with Khrushchev he must have told him of his dilemma. Now the Poles are angry with Khrushchev for leaking news of the meeting. For they are afraid Washington will think Gomulka is playing off the United States against the Soviet Union and will break off loan negotiations. They are sure that is what Khrushchev wants.

If Washington does break off negotiations Khrushchev will have won the chess game. But there is no evidence that the negotiations will be broken off. Some differences about it are reported, but they seem to be minor.

The chief argument for the loan is that it will do something to keep Gomulka from submitting more than he is doing to the Kremlin. That would serve the cause of political independence generally. Moscow and Peiping in showing that they don't want the Poles to have the loan, seem to make the argument stand up.

This is Ed Murrow. I'll be back in a moment with the word for today. Now, here is George Bryan.

GEORGE BRYAN: COMMERCIAL

MURROW: Economic aid...as in the case of Poland...has long since become an accepted weapon in the cold war. Of course, it costs money. But as Johh Billings remarked, "All money that iz well spent iz a good investment." Mere sympathy for the Polish people avails little. For as Johh Billings also said, "Pity costs nothing and ain't worth nothing."

Goodnight and good luck!

Edward R. Murrow Thurs., Jan. 23, 1958

This is the news:

The Senate preparedness subcommittee today ended the current phase of its investigation... and issued an interim report based on 7-thousand pages of testimony. The report was approved unanimously (by the seven members of the subcommittee) and made no attempt to fix blame for any lag in the United States missile program. "The past," it said, "is already for historians. Let us seek solutions so that the future may be written by historians of the free world." The report...read by Chairman Lyndon Johnson...contained 17 recommendations, all expressed in broad terms. And on a good many of them, the government already has made a start. The recommendations of the subcommittee include:

Expansion of military research and development, modernization of the Strategic Air Force, acceleration of the long-range missile program, including development of the ~~anti-submarine~~ Polaris missile system, stepped up development of the anti-missile and anti-submarine programs, and reorganization and strengthening of the Defense Department. The subcommittee said more effort should be put into the development of manned missiles. And it called for a prompt start on a program to develop a rocket with a thrust of one million pounds. (This would give a rocket enough thrust to reach the moon). It also suggests that "serious consideration" be given to the question of shelters and stockpiles in connection with civilian defense. The report said "decisive action" needs to be taken on all these recommendations. "The facts we have been investigating," it said, "are the facts of the future, and while the future is very close---extremely close---it is still under our control." The report concluded, "We are in a race for survival, and we intend to win that race. But the truly worthwhile goal is a world of peace."

Almost as the report was being issued, the House of Representatives passed and sent to the Senate an emergency bill...calling for an additional

billion, 410-million dollars for defense. / The vote for the measure was unanimous.

The House also voted today for a temporary increase of 5-billion dollars in the ceiling on the national debt. / The vote on that was 328 to 71, and that measure also goes to the Senate.

At Cape Canaveral, Florida, there has been further delay in the new attempt to launch an earth satellite. / The three-stage Vanguard rocket has been in position for firing all day. There have been repeated count-downs. But there is still no definite word on when the rocket may be launched.

A military junta has taken over control in Venezuela... ending the nine-year dictatorship of President Perez Jimenez (HE-MEN-ES), who has fled with his family to the Dominican Republic. / The leader of the junta...a rear admiral...has promised "a legal and political organization that will be in accordance with the universal practices of democracy." / But he said nothing about holding an election. // More than a hundred persons are now reported to have died in the revolt, which had the support of the armed forces. A curfew has been ordered for tonight.

President Eisenhower today sent Congress a special message outlining the Administration program for curbing abuses in the labor-management field. The program is virtually the same as that presented last month by Secretary of Labor Mitchell at the convention of the AFL-CIO. / Mr. Eisenhower said the disclosures of corruption made by the Senate rackets committee cannot be ignored...and that while most union officials are "decent, honest Americans," voluntary corrective action is not enough. / He asked for legislation to strengthen federal supervision of union funds and require the secret election of most union officers. / All unions would have to file detailed financial reports, including full disclosure of welfare fund operations. The same would apply to welfare plans administered by management. / Unions refusing to file statements would be stripped of their income tax exemptions. Failure of either union or management to file accurate reports could lead to forfeiture of federal bargaining rights. All employers would be required to report their financial dealings with unions. And collusion between union and management to produce a "sweetheart" contract would be prohibited. / There would be created... within the Labor Department...a new office of Commissioner of Labor Reports, with full power to investigate alleged irregularities. Republican

→

Senator Smith of New Jersey promptly introduced bills for carrying out the President's proposals.

Senate Republican Leader Knowland also introduced labor legislation today along similar lines. Knowland's office said this was a coincidence.

~~Here in New York,~~ Federal Judge F. Dickinson Letts today dissolved his temporary injunction barring James Hoffa from taking over as head of the Teamsters Union. The judge acted as the result of a compromise settlement... reached between union officials and the 13 rank-and-file members, who charged that Hoffa's election had been "rigged".

The settlement prescribes that Hoffa shall serve as president of the union under the supervision of a three-man board of monitors. One member of the board will be named by the rank-and-file group, another by the teamsters executive board, and ~~a~~ the third member...who will serve as a neutral chairman...will be chosen by both factions. The order signed by Judge Letts said that, henceforth, no officer of the union "shall have a personal financial interest which conflicts with the full performance of his duties."

In Detroit, the United Auto Workers convention voted today to make ~~[illegible]~~ the profit-sharing plan...proposed by Union President Walter Reuther...

→

its major goal in this year's bargaining with the auto companies. The vote came after two and a half hours of debate... in which Carl Stellato, president of Local 600 of the Ford Rouge plant, opposed Reuther's bargaining program. He fought to retain the shorter work-week demand, which Reuther had abandoned in favor of his profit-sharing proposal. The plan already has been denounced by the major auto producers.

The chairman of the Federal Communications Commission...John C. Doerfer... today disputed the findings of a House committee, which said some members of the F.C.C. had illegally accepted industry favors. Mr. Doerfer called the committee report "most inaccurate and misleading." Referring to the charge that some members of the commission had received color television sets for their personal use, he said the sets had been received on a loan basis. "To us," he said, "it's not a luxury. It's part of our job to see how it works." The F.C.C. chairman also hit at the charge that members of the commission had their expenses paid by private industry and also turned in expense accounts to the government. "Ommitted," he said, "is that provision in the Communications Act which provides that commissioners may accept a reasonable honorarium, or compensation, for delivery of an address." The House committee has not concluded its investigation.

In London tonight, the Conservative Government won a vote of confidence for its anti-inflationary policies. The vote...in the House of Commons... was 324 to 262.

Edward R. Murrow: January 23, 1958. 7.45 p.m.

The reports of the Central Intelligence Agency hereafter are to be abbreviated, simplified, put in headline style and buttressed by maps with red arrows, so that American policy makers will take the trouble to read them. This is the outcome of a complaint that Allen Dulles, head of the C.I.A., made at a recent meeting of the National Security Council, according to Warren Unna in today's Washington Post. He says that Mr. Dulles told President Eisenhower that there was little use in having a mammoth government agency devote its full energies to an appraisal of foreign intelligence, if the government's policy makers ignored its findings. This, the Post reporter says, annoyed Mr. Eisenhower and he retorted that the C.I.A. reports were far too ponderous to read. He said that they should include maps of the areas under discussion with red arrows pointing to strategic spots, and be made up of headline summaries and much briefer text discussions. If that was done, he promised Mr. Dulles that he would order the twenty to thirty top policy makers in the Administration to read them.

The White House today confirmed that the C.I.A. reports are coming in a different format, but denied that the President had ordered it, or that it was done to make them easier for the President to read. It said

that Mr. Dulles had ordered the change and the President had approved.

More lies behind this story than meets the eye. The country still is feeling the shock of the Sputniks, and the discovery that the Russians are ahead of us in some fields of science, technology and education. An obvious question is how the government could have been taken by surprise if the C.I.A. knew its business. ALLEN Dulles is reported to have told a closed session of the Senate Preparedness Committee that Russian advances in missile and satellite techniques had long been predicted in the C.I.A.'s daily intelligence summaries. How well it dramatized this information, or how strikingly it predicted the effect on American and world opinion of the launching of a satellite is of course not known, since C.I.A. reports are among the best guarded secrets in Washington. But there is no doubt that many individuals in and outside the armed services knew about Soviet progress in rocketry, and certainly many knew about the remarkable expansion of the Soviet educational system, which was certainly not classified information. The C.I.A. was the source of both kinds of intelligence. So it appears that if there was a failure, it was the failure to grasp the implication of information, not the lack of it. If the Washington Post story is correct, Mr. Allan Dulles felt that the failure was the fault of the policy makers.

The President believed it was in the way the information was presented. Mr. Eisenhower himself received a daily report of the C.I.A. every morning, brought under armed guard by his staff secretary, Brigadier General Andrew Goodpaster. As a commanding General he was accustomed to brief and terse analyses, to maps and their red arrows. Now as President he will find the C.I.A. reports on his desk in that guise.

It is a common complaint of all high officials in Washington that they are much too busy to read all the papers that flow across their desks, even the important ones. The President does not have the reputation of being a "glad reader." So it is not unfair to say that while the Russian gains in missiles and education may be due to complacency and false economy, they also may be due simply to the rush of modern life. For it has pushed aside patient reading as one of the first duties of both citizenship and leadership.

Back in a moment.

George Bryan

Word for Today

The reports of the Central Intelligence Agency, hereafter, will be easier to read. The objective, of course, is to communicate information. Mark Twain observed on this subject: "I think it is best to put up with information the way you get it...and seem satisfied with it, and grateful for it...and say, 'My word!' and never let on."

Goodnight and good luck!

EDWARD R. MURROW WITH THE NEWS
CBS RADIO NETWORK

THURSDAY, JANUARY 23, 1958
7:45 - 8:00 PM EST

This is the news:

The Senate preparedness subcommittee today ended the current phase of its investigation...and issued an interim report based on 7-thousand pages of testimony. The report was approved unanimously (by the seven members of the subcommittee) and made no attempt to fix blame for any lag in the United States missile program. "The past," it said, "is already for historians. Let us seek solutions so that the future may be written by historians of the free world." The report...read by Chairman Lyndon Johnson...contained 17 recommendations, all expressed in broad terms. And on a good many of them, the government already has made a start. The recommendations of the subcommittee include: Expansion of military research and development, modernization of the Strategic Air Force, acceleration of the long-range missile program, including development of the Polaris missile system, stepped up development of the anti-missile and anti-submarine programs, and reorganization and strengthening of the Defense Department. The subcommittee said "more effort" should be put into the development of manned missiles. And it called for a prompt start on a program to develop a rocket with a thrust of one million pounds. (This would give a rocket enough thrust to reach the moon.) It also suggests that "serious consideration" be given to the question of shelters and stockpiles in connection with civilian defense. The report said "decisive action" needs to be taken on all these recommendations. "The facts we have been investigating," it said, "are the facts of the future, and while the future is very close---extremely close---it is still under our control." The report concluded, "We are in a race for survival, and we intend to win that race. But the truly worthwhile goal is a world of peace."

Almost as the report was being issued, the House of Representatives passed and sent to the Senate an emergency bill...calling for an additional billion,

410-million dollars for defense. The vote for the measure was unanimous.

The House also voted today for a temporary increase of 5-billion dollars in the ceiling on the national debt. The vote on that was 328 to 71, and that measure also goes to the Senate.

At Cape Canaveral, Florida, there has been further delay in the new attempt to launch an earth satellite. The three-stage Vanguard rocket has been in position for firing all day. There have been repeated count-downs. But there is still no definite word on when the rocket may be launched.

A military junta has taken over control in Venezuela...ending the nine-year dictatorship of President Perez Jimenez, who has fled with his family to the Dominican Republic. The leader of the junta...a rear admiral...has promised "a legal and political organization that will be in accordance with the universal practices of democracy." But he said nothing about holding an election.

President Eisenhower today sent Congress a special message outlining the Administration program for curbing abuses in the labor-management field. The program is virtually the same as that presented last month by Secretary of Labor Mitchell at the convention of the AFL-CIO. Mr. Eisenhower said the disclosures of corruption made by the Senate rackets committee cannot be ignored...and that while most union officials are "decent, honest Americans," voluntary corrective action is not enough. He asked for legislation to strengthen federal supervision of union funds and require the secret election of most union officers. All unions would have to file detailed financial reports, including full disclosure of welfare fund operations. The same would apply to welfare plans administered by management. Unions refusing to file statements would be stripped of their income tax exemptions. Failure of either union or management to file accurate reports could lead to forfeiture of federal bargaining rights. All employers would be required to report their financial dealings with unions. And collusion between union and management to produce a "sweetheart" contract would be prohibited. There would be created...within the Labor Department....a new office of

Commissioner of Labor Reports, with full power to investigate alleged irregularities. Republican Senator Smith of New Jersey promptly introduced bills for carrying out the President's proposals.

Senate Republican Leader Knowland also introduced labor legislation today along similar lines. Knowland's office said this was a coincidence.

Federal Judge F. Dickinson Letts today dissolved his temporary injunction barring James Hoffa from taking over as head of the Teamsters Union. The judge acted as the result of a compromise settlement...reached between union officials and the 13 rank-and-file members, who charged that Hoffa's election had been "rigged." The settlement prescribes that Hoffa shall serve as president of the union under the supervision of a three-man board of monitors. One member of the board will be named by the rank-and-file group, another by the teamsters executive board, and the third member...who will serve as a neutral chairman...will be chosen by both factions. The order signed by Judge Letts said that, henceforth, no officer of the union "shall have a personal financial interest which conflicts with the full performance of his duties."

In Detroit, the United Auto Workers convention voted today to make the profit-sharing plan...proposed by Union President Walter Reuther...its major goal in this year's bargaining with the auto companies. The vote came after two and a half hours of debate...in which Carl Stellato, president of Local 600 of the Ford Rouge plant, opposed Reuther's bargaining program. He fought to retain the shorter work-week demand, which Reuther had abandoned in favor of his profit-sharing proposal. The plan already has been denounced by the major auto producers.

In London tonight, the Conservative Government won a vote of confidence for its anti-inflationary policies. The vote...in the House of Commons was 324 to 262.

The reports of the Central Intelligence Agency hereafter are to be abbreviated, simplified, put in headline style and buttressed by maps with red arrows, so that American policy makers will take the trouble to read them. This

is the outcome of a complaint that Allen Dulles, head of the C.I.A. made at a recent meeting of the National Security Council, according to Warren Unna in today's Washington Post. He says that Mr. Dulles told President Eisenhower that there was little use in having a mamoth government agency devote its full energies to an appraisal of foreign intelligence, if the government's policy makers ignored its findings. This, the Post reporter says, annoyed Mr. Eisenhower and he retorted that the C.I.A. reports were far too ponderous to read. He said that they should include maps of the areas under discussion with red arrows pointing to strategic spots, and be made up of headline summaries and much briefer text discussions. If that was done, he promised Mr. Dulles that he would order the twenty to thirty top policy makers in the Administration to read them.

The White House today confirmed that the C.I.A. reports are coming in a different format, but denied that the President had ordered it, or that it was done to make them easier for the President to read. It said that Mr. Dulles had ordered the change and the President had approved.

More lies behind this story than meets the eye. The country still is feeling the shock of the Sputniks, and the discovery that the Russians are ahead of us in some fields of science, technology and education. An obvious question is how the government could have been taken by surprise if the C.I.A. knew its business. Allen Dulles is reported to have told a closed session of the Senate Preparedness Committee that Russian advances in missile and satellite techniques had long been predicted in the C.I.A.'s daily intelligence summaries. How well it dramatized this information, or how strikingly it predicted the effect on American and world opinion of the launching of a satellite is of course not known, since C.I.A. reports are among the best guarded secrets in Washington. But there is no doubt that many individuals in and outside the armed services knew about Soviet progress in rocketry and certainly many knew about the remarkable expansion of the Soviet educational system, which was

certainly not classified information. The C.I.A. was the source of both kinds of intelligence. So it appears that if there was a failure, it was the failure to grasp the implication of information, not the lack of it. If the Washington Post story is correct, Mr. Allen Dulles felt that the failure was the fault of the policy makers. The President believed it was in the way the information was presented. Mr. Eisenhower himself received a daily report of the C.I.A. every morning, brought under armed guard by his staff secretary, Brigadier General Andrew Goodpaster. As a commanding General he was accustomed to brief and terse analyses, to maps and their red arrows. Now as President he will find the C.I.A. reports on his desk in that guise.

It is a common complaint of all high officials in Washington that they are much too busy to read all the papers that flow across their desks, even the important ones. The President does not have the reputation of being a "glad reader." So it is not unfair to say that while the Russian gains in missiles and education may be due to complacency and false economy, they also may be due simply to the rush of modern life. For it has pushed aside patient reading as one of the first duties of both citizenship and leadership.

This is Ed Murrow. I'll be back in a moment with the word for today. Now, here is George Bryan.

GEORGE BRYAN: COMMERCIAL

MURROW: The reports of the Central Intelligence Agency, hereafter, will be easier to read. The objective, of course, is to communicate information. Mark Twain observed on this subject: "I think it is best to put up with information the way you get it...and seem satisfied with it, and grateful for it...and say, 'My word!' and never let on."

Goodnight and good luck!

Edward R. Murrow Fri., Jan. 24, 1958

This is the news:

The United States and Britain issued reports today on their progress toward harnessing the power of the hydrogen bomb. Both countries said they had achieved "fruitful and promising results" in their experiments dealing with the fusion of hydrogen atoms...attaining temperatures higher than the measured surface temperatures of any star. However, it was agreed that much experimentation remains to be done and that it will be "years" before the new power can be put in practical use. (I should like to discuss this subject further in a few minutes).

The United States has reminded Russia that is it willing...through diplomatic channels...to explore the possibilities of a summit meeting. The State Department says the United States ambassador to Moscow, Llewellyn Thompson, called on Soviet Foreign Minister Gromkyo yesterday and reaffirmed the American position. / In a letter to Premier Bulganin, President Eisenhower recently declared his readiness to meet Russia's leaders on condition that the arrangements "be worked on in advance through diplomatic channels and by our foreign ministers." / Ambassador Thompson was instructed to seek Russia's reaction. / Gromyko is quoted as saying that the President's letter will be studied and an answer given "in due course." / Thompson is due back in the United States for consultations in a few days.

Vice President Nixon saw Russian Ambassador Zarubin for 40 minutes today in Washington. / Nixon said there was no discussion of a possible summit conference but that their conversation covered the "broad field of the exchange of persons"---a reference to the cultural exchange program now being negotiated between the two countries. / Zarubin told reporters they agreed that such a program would be of "extreme usefulness."

But according to informed sources, Nixon also brought up President Eisenhower's proposal for international control of outer space for peaceful purposes...stressing the importance of the proposal. And Zarubin is said to have suggested that Congress exchange delegations with the Supreme Soviet, Russia's version of parliament... the idea being that a congressional delegation would sit in and observe a meeting of the Supreme Soviet, and vice versa. The Russian ambassador is leaving his Washington post after five years and called on Mr. Nixon to say goodbye. Nixon said Zarubin saw him, instead of Mr. Eisenhower, "because the President has such a heavy schedule."

Secretary of State Dulles arrived in Teheran today for talks with Iranian leaders, before going on to Turkey this week-end for the meeting of the Baghdad Pact. ~~Mr. Dulles said he hoped...while in Iran...to review "recent developments on the international scene which, one way or another, can affect us all." Iranian officials suggested that they may ask for more economic aid.~~

Chinese Communist Premier Chou En-lai today rejected the appeal...made by three American mothers...for the release of their sons imprisoned on spy charges. A statement, broadcast by Peiping radio, [redacted]

indicated the Americans may be released later on a basis of good behavior. The mothers are Mrs. Ruth Redmond of Yonkers, New York... Mrs. Jessie Fecteau of Lynn, Massachusetts, and Mrs. Mary Downey of New Britain, Connecticut. They made their appeal in Communist China through the Chinese Red Cross.

In Washington, the retiring Army chief of research... Lieutenant General Gavin... told the House Armed Services Committee today that Army rockets already have demonstrated "our capability to enter outer space." He noted that the Army is charged with providing the defense establishment with worldwide mapping and surveying services. And this mission, he said, "can best be carried out through a family of earth satellites."

The House committee revealed that Secretary of the Army Brucker had informed it... last Tuesday...that the Army plans to launch a 30-pound satellite "very soon". The launching vehicle, he said, will be the Jupiter C rocket. (The Navy is still preparing to test its satellite-bearing Vanguard rocket at Cape Canaveral).

In a speech today...in Norfolk, Virginia...Deputy Defense Secretary Quarles said, "We are in a nip-and-tuck race (with Russia) in which

→

neither side can with assurance be said to be ahead." Quarles said that, in these troublesome times, civilian policy-makers should take responsibility "and do all we can to shield the professional military man from involvement in political affairs."

Postmaster General Summerfield told Congress today that if postal rates are not increased, it may be necessary to raise the national debt ceiling by another 5-billion dollars. He emphasized that this would be in addition to the 5-billion-dollar increase now being sought by the Administration and which is almost certain to be approved.

In Detroit, the special United Auto Workers convention has voted to set up a 50-million-dollar strike fund to back up its 1958 contract demands. A major demand is that the auto companies share whatever profits they earn above 10 percent on net capital before taxes. Bargaining talks are due to start around April first.

Edward R. Murrow: January 24, 1958. 7.45 p.m.

The statements on the controlled fusion of hydrogen atoms made by the British and American Atomic Energy Commissions are cautious, admittedly incomplete, but incontestably historic. The control of atomic fusion is not as far along as the first chain reaction in Stagg Field in 1942, but it is well on the way. The reports speak of "fruitful and promising results" and say with careful reserve that the experiments suggest that fusion reactions have been achieved. But they go on to say that this has been for a limited time only, and at temperatures lower than would be needed for practical use. We are told that years of experiments will be needed to develop a laboratory device that yields more electrical power than it consumes, and further years to develop a full-scale fusion reactor. But the glimpse has been authoritatively given of a fabulously cheap, unlimited supply of electrical power, derived from the unlimited source of sea-water.

One reason more time will be needed to perfect the fusion process is that fusion is more difficult to control than fission. In a sense fission is natural, fusion is unnatural. The atoms used for fission are heavy and unstable and do not resist breaking up. But before atoms can fuse, strong electrical repulsion has to be overcome. This can be brought about only

by creating the high temperatures of the sun, of from ten to hundreds of million degrees centigrade. / Laboratories are on the way to producing the heat needed. / The Americans have reached six million degrees, the British five million. / But an instant of such a high temperature is not enough to bring about fusion, it has to be held. The British have held theirs for two to five-thousands of a second, the Americans for a few millionths of a second. The British report says that much longer times -- perhaps several seconds -- will be needed for a useful power output, but adds that "there appears to be no fundamental reason why these longer times, together with higher temperatures, cannot be achieved."

The layman may ask how power for world use is to come from anything as brief as a few seconds of high temperature. / The answer is that fusion is a process in pulsations, as distinct from the steady process of fission. / The fuel charge in a fission power station lasts from three to five years. / The gas in the tube where fusion takes place is burned up in a second or less. Then the tube has to be recharged, and the voltage reapplied. / Fusion stations would use up a great deal of their own electricity, how much remains to be seen. / But in theory, using ideal fuel, the fusion process would make a hundred times as much electricity as it consumes. / And even under conditions

much less than ideal the fusion reactor, when completed, should be as economical as the best fission reactor yet conceived of.

A writer in the London Economist points out that a fusion power station would do much more than produce electricity. It also would make nuclear fuels such as are made in the breeder reactors now being built. But it will make its fuels much faster. That suggests a future in which a fusion reactor not only makes electricity, but also becomes the source of fuel for a network of fission reactors, and this might become the pattern production in the atomic era.

A further prospect is reported in The Economist. The fusion reactor may be able to produce electricity direct. That is, without all the cumbersome intervention of heat exchangers, boilers, steam-raising and turbines. The gas in the doughnut-shaped tube is pinched into a dense thin column when the magnetic current passes through. When fusion takes place under the high temperature, the gas expands. Theoretically this gas expansion could be fed into the transformer that provided the original voltage for heating the gas.

~~How many of these doughnut-shaped tubes it will take to make a fusion power station is not certain. Some scientists believe a battery of them~~

will be needed. Others think a single one will be enough, since it would be potentially capable of releasing a million megawatts of heat in a single pulse.

This, then, can be part two of the story of the hydrogen atom. Part one already is written; it is the hydrogen bomb, a few hundred of them capable of wiping out life on this planet. If the planet is spared, then part two can be written, and life on the planet can become something hardly dreamed of.

Word for Today

We are told...on good authority...that Man has now created temperatures higher than the measured surface temperatures of any star. E.B. White once commented on the fact that the heat generated in a nuclear blast is equal to the interior heat of stars. "This," he said, "is of the utmost interest to scientists every one of whom owes his existence to the earth's having cooled off."

Goodnight and good luck!

EDWARD R. MURROW WITH THE NEWS
CBS RADIO NETWORK

FRIDAY, JANUARY 24, 1958
7:45 - 8:00 PM EST

This is the news:

The United States and Britain issued reports today on their progress toward harnessing the power of the hydrogen bomb. Both countries said they had achieved "fruitful and promising results" in their experiments dealing with the fusion of hydrogen atoms...attaining termperatures higher than the measured surface temperatures of any star. However, it was agreed that much experimentation remains to be done and that it will be "years" before the new power can be put in practical use. (I should like to discuss this subject further in a few minutes.)

The United States has reminded Russia that it is willing...through diplomatic channels...to explore the possibilities of a summit meeting. The State Department says the United States ambassador to Moscow, Llewellyn Thompson, called on Soviet Foreign Minister Gromkyo yesterday and reaffirmed the American position. In a letter to Premier Bulganin, President Eisenhower recently declared his readiness to meet Russia's leaders on condition that the arrangements "be worked on in advance through diplomatic channels and by our foreign ministers." Ambassador Thompson was instructed to seek Russia's reaction. Gromyko is quoted as saying that the President's letter will be studied and an answer given "in due course." Thompson is due back in the United States for consultations in a few days.

Vice President Nixon saw Russian Ambassador Zarubin for 40 minutes today in Washington. Nixon said there was no discussion of a possible summit conference but that their conversation covered the "broad field of the exchange of persons" a reference to the cultural exchange program now being negotiated between the two countries. Zarubin told reporters they agreed that such a program would be of "extreme usefulness." The gas in the doughnut-shaped tube is pinched into a dense thin column when the magnetic current passes through. When fusion takes place under the high temperature, the gas expands. Theoretically this gas expansion could be fed into the transformer that provided

the original voltage for heating the gas.

This, then, can be part two of the story of the hydrogen atom. Part one already is written; it is the hydrogen bomb, a few hundred of them capable of wiping out life on this plantt. If the planet is spared, then part two can be written, and life on the planet can become something hardly dreamed of,

This is Ed Murrow. I'll be back in a moment with the word for today. Now here is George Bryan.

GEORGE BRYAN: COMMERCIAL

MURROW: We are told..on good authority...that Man has now created temperatures higher than the surface temperatures of any star. E.B.White once commented on the fact that the heat generated in a nuclear blast is equal io the interior heat of stars. "This," he said, "is of the utmost interest to scientists every one of whom owes his existence to the earth's having cooled off."

Goodnight and good luck!

Edward R. Murrow Mon., Jan. 27, 1958

This is the news:

The United States and Russia today signed an agreement for expanding cultural exchanges between the two countries. / For a direct report on that story, we switch to Bill Downs in Washington.

(Downs runs approx 3 mins
returns on cue, "--to Ed Murrow
in N.Y.

President Eisenhower today sent Congress his four-year program of aid to education. / The program, altogether, would cost the Federal Government 1-billion dollars. States and local communities are asked to put up 600-million dollars. As announced previously, the programs calls for 10-thousand

federal scholarships a year for the next four years, with the emphasis on science and mathematics. No federal money is requested for school construction. And Democratic Senator Kennedy of Massachusetts has attacked the program on that ground...saying he will introduce a measure to provide one and a half billion dollars for school construction in the next five years. Most Republican members of Congress say the President has submitted a "sound and sensible" program.

Chairman Byrd of the Senate Finance Committee today opposed the Administration bill to raise the national debt ceiling by 5-billion dollars. Byrd argued that raising the ceiling temporarily by 3-billion dollars ought to be enough. Secretary of the Treasury Anderson told Byrd's committee that...in his opinion...the 5-billion-dollar increase is necessary "to provide a modest provision for the contingencies we deem essential to prudent and economical debt management." A full 5-billion-dollar increase already has been voted by the House.

A House subcommittee today opened hearings on the operation of the Interstate Commerce Commission and the Civil Aeronautics Board. Later the inquiry will go into the operation of four other regulatory agencies, including the Federal Communications Commission. Some members of the F.C.C.

have been accused...in a staff memorandum...of accepting favors from the broadcasting industry. A number of these members HAVE denied any impropriety, and Chairman Harris of the House Commerce Committee said today there will be "no witchhunt or character assassination." He also said that if there has been any wrongdoing, his group "will find out and act accordingly."

The meeting of the Baghdad Pact council opened today in Ankara, with the four Middle East members asking for more economic aid. The premier of Pakistan expressed the view of Turkey, Iran and Iraq...as well as his own country...when he cited Russia's new program of economic aid for underdeveloped countries and said it is a challenge which needs to be met. The premier also spoke of arming the Baghdad Pact countries as soon as possible "with weapons similar to those they may encounter." Secretary Of State Dulles then addressed the meeting and said members of the alliance "can be confident that mobile power of great force would...as needed...be brought to bear against any Communist aggression" in the Middle East. At the same time, he called on member countries to have their own forces of national defense. For this, he said, there is "no push-button substitute."

Syrian newspapers say that a political union of Egypt and Syria will be proclaimed on Saturday. Plans for federation of the two Arab states were discussed in Cairo over the week-end, and some details are reported tonight in the Egyptian press. The newspaper Al Akhbar says the union "will create one state with one army, one government, one flag." Syrian political parties, it says, will be dissolved.

In Hungary today, Janos Kadar submitted his resignation as premier... with the suggestion that he be succeeded by his deputy, Ferenc Muennich. The rubber-stamp National Assembly immediately approved. Kadar will continue to serve as first secretary of the Communist Party in Hungary, and will remain in the cabinet as Minister of State.

The State Department said today that the new government of Venezuela has asked for formal recognition by the United States... and that the request is "under consideration." Admiral Larrazabal, head of the ruling junta, told a news conference today that a constituent election will be held before the end of the year to reform the election laws, and that general elections will be called within 18 months. Former dictator Peron of Argentina flew out of Venezuela tonight to the Dominican Republic.

At Cape Canaveral, Florida, the Army is reported...unofficially... to be preparing to launch an earth satellite with its Jupiter C rocket. The Vanguard rocket...with which the Navy hoped to launch a satellite last week...has been partly dismantled.

In Washington tonight, the Atomic Energy Commission formally asked Congress for legislation that would allow the United States to share hitherto secret atomic information with our allies.

And at a reception in Moscow, Nikita Khrushchev suggested that a summit meeting be held which would start with the less difficult problems dividing the East and West. Tougher, more basic problems, he said, could be taken up later.

Edward R. Murrow: January 27, 1958. 7.45 p.m.

The conclusions of another secret and grim report on United States unpreparedness reached the public today. This is the so-called Johns Hopkins report made for the Pentagon. It was available to both the Gaither and Rockefeller commissions, and to the Senate Preparedness sub-committee, but its contents have only been whispered about in Washington corridors. Today the Director of the Operations Research Office of Johns Hopkins University talked freely about the report in a copyrighted interview in the United States News and World Report. He is Dr. Ellis A Johnson, a physicist, described as knowing more about United States and Soviet military power than anyone in this country.

The Johns Hopkins report, he said, is somewhat more pessimistic than the Gaither report, which was somewhat more so than the Rockefeller report. "We" he said, "are somewhat more optimistic about the possibilities if we want to pay the price. The price" he went on to say, "is about fifteen billions a year more for defense for an indefinite number of years." This tops the Gaither recommendation for an eight-billion-dollar increase and the four-billion increase in the Rockefeller report.

The discrepancy is due to different approaches, Dr. Johnson explained.

"We approached it as the price for survival for the United States - what you need to spend to be sure to change the balance, which now favors the Soviet Union, to one which will favor the United States. The price is unfortunately high, and you can like it or lump it, but you can't change the price very much. The Rockefeller Report approaches it from the viewpoint that the price is very high indeed, and is thus impractical, because that actually would take some sacrifice -- and God forbid we should have any sacrifice. So the Rockefeller Report says, let's see how much we think we could increase it and hope for the best. The Gaither Report is somewhere in between."

An adequate defense system, in Dr. Johnson's opinion, starts with the ability to knock out the enemy's strategic attack forces, and sufficient of the enemy's industry and population to break his will to resist. That is what he would expect the Soviet Union to try if it attacked us; it would make the Strategic Air Command the principal target, but would have enough additional power to kill twenty to thirty million people, and wreck from ten to twenty percent of our economy. For our part, the Strategic Air Command must be big enough and well enough defended so that it can hit back

with enough power to overcome the Russian will to resist.

Dr. Johnson does not start with the Russian superiority in rocketry. He believes that the Soviet Union as of today can send over manned bombers and missile-firing submarines for which we are not sufficiently prepared. "I think" he said, "they could throw several hundred bombers at us and perhaps fifty or more submarines, and it would be more than adequate. More than half would get through."

But Dr. Johnson wants to see something better than the equalization of this striking power. We cannot, he explains, wage preventive war, for that would be to exchange a few ten millions of American and NATO dead for a hundred million or more Soviet dead. "We must" he said, "spend much more than the Russians on thermo-nuclear attack and defense systems, since we will be attacked if we are so weak as to invite attack. We can only survive by having a very superior defense and retaliation system which they -- the Russians - know about -- thus continuing indefinitely the thermo-nuclear stalemate."

But the crux of Dr. Johnson's recommendation is that, having reached this stage, we must give up pure defense. "From a military point of view"

he said, "the side using the initiative in skirmishes, raids and minor wars has a ten to twenty-fold advantage." So he recommends that we seize the initiative. "If we take the most vigorous action through political communications to free the satellites, using political, economic and military measures when necessary" he said, "we will face the Soviet ~~XXXXXX~~ with the need to spend ten to twenty times our military effort in the areas we threaten. This we can afford. We cannot afford the purely defensive position."

In so many words, Dr. Johnson urges us to spend fifteen billions a year more so as to be able to cut down the Soviet empire through the initiation of minor wars and other action. As an evaluator of modern weapons, Dr. Johnson is an expert. But this is not scientific information, it is the outline of a policy. And it is not a policy the Administration, Congress and the public are likely to adopt. [One must hope that it will be clear, here and abroad, that Dr. Johnson, as head of the John Hopkins Research Office, in saying such things is only speaking to ~~the~~ the government, not for it.]

Back in a moment—

George Rupp

Word for Today

Dr. Johnson has said...in his report...that we cannot "afford" a purely defense position. He has also said, in so many words, that we might gain on Russia through the initiation of minor wars. ~~This is bad policy.~~ In this connection we might recall that Shakespeare said, "It is excellent to have a giant's strength...but it is tyrannous to use it like a giant."

Goodnight and good luck!

CBS RADIO DIVISION

EDWARD R. MURROW WITH THE NEWS

Monday, January 27, 1958
7:45 - 8:00 P.M.

MURROW: ... The United States and Russia today signed an agreement for expanding cultural exchanges between the two countries. For a direct report on that story, we switch to Bill Downs in Washington.

DOWNS: That's the big news in Washington tonight, Ed. The United States and the Soviet Union have agreed on something. A lengthy joint communique announces a two-year Russo-American agreement on a series of so-called cultural exchanges of radio and TV broadcasts, groups of scientists, students, artists, motion pictures and even weight lifters. Signed by Ambassador William Lacy and departing Soviet Ambassador Georgi Zarubin, the joint communique terms the agreement a significant first step in the improvement of mutual understanding between the Russian and American peoples.

The Geneva summit conference in 1955 brought the first suggestion for greater people-to-people contacts between the East and West. However, the idea made little progress until a CBS News Face the Natio broadcast last June when Nikita Khrushchev for the first time answered the questions of American reporters for all the United States to hear and see. The effectiveness of that broadcast brought Congressional demands that the State Department investigate the possibility of getting the American viewpoint before the Russian people by radio and TV. The Russians agreed to discuss the matter of broadcasts and also the broader question of general cultural exchange.

Well, three months of hard bargaining followed and what has emerged may be significant. Last year, outside of regular diplomati missions here and at the United Nations, there were only about 100 Russians who visited this country, mostly technicians. Under the new agreement - some 500 Russians from all walks of Soviet scientific, artistic, university

and athletic life will come to the United States in 1958, and another 500 in 1959. The same number from America will visit the Soviet Union, not counting our tourists.

The two governments also agreed on an exchange of radio and television broadcasts on the subjects of science, education, public health and sports. And a special section of that agreement reads: "For the purpose of strengthening mutual understanding and developing friendly relations between the two peoples, it's agreed to organize from time to time an exchange of broadcasts devoted to discussion of such international political problems as may be agreed upon between the two parties.

However, in a separate letter of understanding, the two governments got themselves off a potentially dangerous propaganda hook. They also agreed that each has the veto power over the other's political broadcasts.

Well, both Washington and Moscow made this agreement only because they saw certain advantages, selfish and unselfish, in signing. The Kremlin hopes to convince the American people that all Russians do not carry bombs and say some cynics "to make this nation complacently ripe for Communist pickings."

Well, the United States wants to convince the Russianm people that we are not the Fascist beasts or capitalistic imperialist exploiters of the world's poor defenseless working man as we are portrayed in Communist propaganda. And we hope that enough evidence of our human freedoms and individual dignities will ealk through to the Soviet man in the street that he will demand some of the same from his own government. Now, back to Ed Murrow in New York.

EDWARD R. MURROW WITH THE NEWS
CBS RADIO NETWORK

MONDAY, JANUARY 27, 1958
7:45 - 8:00 PM EST

This is the news:

The United States and Russia today signed an agreement for expanding cultural exchanges between the two countries. For a direct report on that story, we switch to Bill Downs in Washington.

DOWNS: That's the big news in Washington tonight, Ed. The United States and the Soviet Union have agreed on something. A lengthy joint communique announces a two-year Russo-American agreement on a series of so-called cultural exchanges of radio and TV broadcasts, groups of scientists, students, artists, motion pictures and even weight lifters. Signed by Ambassador William Lacy and departing Soviet Ambassador Georgi Zarubin, the joint communique terms the agreement a significant first step in the improvement of mutual understanding between the Russian and American peoples.

The Geneva summit conference in 1955 brought the first suggestion for greater people-to-people contacts between the East and West. However, the idea made little progress until a CBS News Face the Nation broadcast last June when Nikita Khrushchev for the first time answered the questions of Ameiican reporters for all the United States to hear and see. The effectiveness of that broadcast brought Congressional demands that the State Department investigate the possibility of getting the American viewpoint before the Russian people by radio and TV. The Russians agreed to discuss the matter of broadcasts and also the broader question of general cultural exchange.

Well, three months of hard bargaining followed and what has emerged may be significant. Last year, outside of regular diplomatic missions here and at the United Nations, there were only about 100 Russians who visited this country, mostly technicians. Under the new agreement - some 500 Russians from all walks of Soviet scientific, artistic, university and athletic life will come to the United States in 1958, and another 500 in 1959. The same number from America

will visit the Soviet Union, not counting our tourists.

The two governments also agreed on an exchange of radio and television broadcasts on the subjects of science, education, public health and sports. And a special section of that agreement reads: "For the purpose of strengthing mutual understanding and developing friendly relations between the two peoples, it's agreed to organize from time to time an exchange of broadcasts devoted to discussion of such international political problems as may be agreed upon between the two parties.

However, in a separate letter of understanding, the two governments got themsleves off a potentially dangerous propaganda hook. They also agreed that each has the veto power over the other's political broadcasts.

Well, both Washington and Moscow made this agreement only because they saw certain advantages, selfish and unselfish, in signing. The Kremlin hopes to convince the American people that all Russians do not carry bombs and say some cynics "to make this nation complacently ripe for Communist pickings."

Well, the United States wants to convince the Russian people that we are not the Fascist beasts or capitalistic imperialist exploiters of the world's poor defenseless working man as we are protrayed in Communist propaganda. And we hope that enough evidence of our human freedoms and individual dignities will talk through to the Soviet man in the street that he will demand some of the same from his own government. Now, back to Ed Murrow in New York.

MURROW: President Eisenhower today sent Congress his four-year program of aid to education. The program, altogether, would cost the Federal Government 1-billion dollars. States and local communities are asked to put up 600-million dollars. As announced previously, the program calls for 10-thousand federal scholarships a year for the next four years, with the emphasis on science and mathematics. No federal money is requested for school construction.

A House subcommittee today opened hearings on the operation of the Interstate Commerce Commission and the Civil Aeronautics Board. Later the inquiry will go

into the operation of four other regulatory agencies, including the Federal Communications Commission. Some members of the F.C.C. have been accused...in a staff memorandum...of accepting favors from the broadcasting industry. A number of these members have denied any impropriety, and Chairman Harris of the House Commerce Committee said today there will be "no witchhunt or character assassination." He also said that if there has been any wrongdoing, his group "will find out and act accordingly."

The meeting of the Baghdad Pact council opened today in Ankara, with the four Middle East members asking for more economic aid. The premier of Pakistan expressed the view of Turkey, Iran and Iraq...as well as his own country...when he cited Russia's new program of economic aid for underdeveloped countries and said it is a challenge which needs to be met. The premier also spoke of arming the Baghdad Pact countries as soon as possible "with weapons similar to those they may encounter." Secretary of State Dulles then addressed the meeting and said members of the alliance "can be confident that mobile power of great force would...as needed be brought to bear against any Communist agression" in the Middle East. At the same time, he called on member countries to have their own forces of national defense. For this, he said, there is "no push-button substitute."

Syrian newspapers say that a political union of Egypt and Syria will be proclaimed on Saturday.

In Hungary today, Janos Kadar submitted his resignation as premier...with the suggestion that he be succeeded by his deputy, Ferenc Muennich. The rubber-stamp National Assembly immediately approved. Kadar will continue to serve as first secretary of the Communist Party in Hungary and will remain in the cabinet as Minister of State.

At Cape Canaveral, Florida, the Army is reported...unofficially to be preparing to launch an earth satellite with its Jupiter C rocket. The Vanguard rocket...with which the Navy hoped to launch a satellite last week...has been

partly dismantled.

In Washington tonight, the Atomic Energy Commission formally asked Congress for legislation that would allow the United States to share hitherto secret atomic information with our allies.

And at a reception in Moscow, Nikita Khrushchev suggested that a summit meeting be held which would start with the less difficult problems dividing the East and West. Tougher, "more basic" problems, he said, could be taken up later.

The conclusions of another secret and grim report on United States unpreparedness reached the public today. This is the so-called Johns Hopkins report made for the Pentagon. It was available to both the Gaither and Rockefeller commissions and to the Senate Preparedness sub-committee, but its contents have only been whispered about in Washington corridors. Today the Director of the Operations Research Office of Johns Hopkins University talked freely about the report in a copyrighted interview in the United States News and World Report. He is Dr. Ellis A. Johnson, a physicist, described as knowing more about United States and Soviet military power than anyone in this country.

The Johns Hopkins report, he said, is somewhat more pessimistic than the Gaither report, which was somewhat more so than the Rockefeller report. "We" he said, "are somewhat more optimistic about the possibilities if we want to pay the price. The price" he went on to say, "is about fifteen billions a year more for defense for an indefinite number of years." This tops the Gaither recommendation for an eight-billion-dollar increase and the four-billion increase in the Rockefeller report.

The discrepancey is due to different approaches, Dr. Johnson explained. "We approached it as the price for survival for the United States - what you need to spend to be sure to change the balance, which now favors the Soviet Union, to one which will favor the United States. The price is unfortunately high, and you can like it or lump it, but you can't change the price very much. The Rockefeller Report approaches it from the viewpoint that the price is very high indeed, and

is thus impractical because that actually would take some sacrifice - and God forbid we should have any sacrifice. So the Rockefeller Report says, let's see how much we think we could increase it and hope for the best. The Gaither Report is somewhere in between."

An adequate defense system, in Dr. Johnson's opinion, starts with the ability to knock out the enemy's strategic attack forces and sufficient of the enemy's industry and population to break his will to resist. That is what he would expect the Soviet Union to try if it attacked us; it would make the Strategic Air Command the principal target, but would have enough additional power to kill twenty to thirty million people, and wreck from ten to twenty percent of our economy. For our part, the Strategic Air Command must be big enough and well enough defended so that it can hit back with enough power to overcome the Russian will to resist.

Dr. Johnson does not start with the Russian superiority in rocketry. He believes that the Soviet Union as of today can send over manned bombers and missile-firing submarines for which we are not sufficiently prepared. "I think" he said, "they could throw several hundred bombers at us and perhaps fifty or more submarines, and it would be more than adequate. More than half would get through."

But Dr. Johnson wants to see something better than the equalization of this striking power. We cannot, he explains, wage preventive war, for that would be to exchange a few ten millions of American and NATO dead for a hundred million or more Soviet dead. "We must" he said, "spend much more than the Russians on thermo-nuclear attack and defense systems, since we will be attacked if we are so weak as to invite attack. We can only survive by having a very superior defense and retaliation system which they - the Russians - know about - thus continuing indefinitely the thermo-nuclear stalemate."

But the crux of Dr. Johnson's recommendation is that, having reached this stage, we must give up pure defense. "From a military point of view," he said,

"The side using the initiative in skirmishes, raids, and minor wars, has a ten to twenty-fold advantage." So he recommends that we seize the initiative. "If we take the most vigorous action through political communications to free the satellites, using political, economic and military measures when necessary" he said, "we will face the Soviet with the need to spend ten to twenty times our military effort in the areas we threaten. This we can afford. We cannot afford the purely defensive position."

In so many words, Dr. Johnson urges us to spend fifteen billions a year more so as to be able to cut down the Soviet empire through the initiation of minor wars and other action. As an evaluator of modern weapons, Dr. Johnson is an expert. But this is not scientific information, it is the outline of a policy. And it is not a policy the Administration, Congress and the public are likely to adopt. One must hope that it will be clear, here and abroad, that Dr. Johnson, as head of the Johns Hopkins Research Office, in saying such things is only speaking to the government, not for it.

This is Ed Murrow. I'll be back in a moment with the word for today. Now, here is George Bryan.

GEORGE BRYAN: COMMERCIAL

MURROW: Dr. Johnson has said...in his report...that we cannot "afford" a purely defense position. He has also said, in so many words, that we might gain on Russia through the initiation of minor wars. In this connection, we might recall that Shakespeare said, "It is excellent to have a giant's strength... but it is tyrannous to use it like a giant."

Goodnight and good luck!

Edward R. Murrow Tues., Jan. 28, 1958

This is the news:

The Air Force today successfully launched another Thor missile at Cape Canaveral, Florida. A Defense Department spokesman says the rocket "flew its prescribed course and landed in the pre-selected impact area." He gives no details, but a Thor missile...tested last October...traveled 26-hundred miles. There is speculation that the rocket test-fired today was more complete.

The Associated Press says that the Army may try to launch an earth satellite "within a day or so" using a Jupiter-C rocket. The Navy, which had hoped to launch an earth satellite last week with its Vanguard

→

rocket, also is expected to make another attempt soon.

The Army announced tonight that its new anti-aircraft guided missile... the Nike-Hercules...will be set up ready for action at four locations this June. It identified the locations as being in the New York, Washington-Baltimore, Chicago and Philadelphia areas. The announcement said this will give the North American Defense Command "its first operational surface-to-air missile which can use an atomic warhead."

The Army's timetable for developing an effective anti-missile missile was disclosed today in testimony released by the House Armed Services Committee. The army director of special weapons...Major General Daley... told the committee that the Nike-Zeus anti-missile program has been given a priority "just below the Jupiter." "If deployment is accelerated," he said, "we believe that a significant capability can be gotten against ballistic missiles by 1962."

The Senate Armed Services Committee today authorized an additional 549-million dollars for defense. The committee made one change in the measure, as passed last week by the House. It killed the provision...added on the House floor...authorizing the Secretary of Defense

—7

to set up an advanced research project or outer space agency in the Pentagon. It was the committee's view that this should be dealt with in a separate measure.

Senate Republican Leader Knowland said today that President Eisenhower may send Congress more than one special message on defense reorganization. Knowland made the statement after seeing the President with other Republican congressional leaders. He said, "I was left with the strong impression that there will be no unnecessary delay."

The State Department said today that it "cannot believe" that the recent utterances of Nikita Khrushchev are "intended as an adequate reply to President Eisenhower's letter of January 12th." The department spokesman referred to Khrushchev's informal remarks last week at a farm rally in Minsk and last night at a Moscow reception. / In Minsk, the Russian leader cold-shouldered Mr. Eisenhower's proposal for control of outer space...saying it would have to be tied in with a general disarmament agreement. / He charged, at the same time, that the United States "would like to keep the whole world in a state of fear." And both in Minsk and at last night's reception, Khrushchev called for a summit meeting without what the United States regards as "adequate preparation". / He suggested at the reception that a summit meeting be held "to agree on simple things first," then go on to the "main course". The State Department spokesman said, "Mr. Khrushchev's distorted view of United States policies and motivations emphasizes the difficulties which would beset a short, unprepared meeting of heads of government such as the Soviet government has proposed." (I should like to discuss this question of a possible summit meeting further in a few minutes).

4A

The Syrian cabinet today gave final approval to union of Syria and Egypt./ The Syrian premier [redacted] says a proclamation of union will be issued within "the next few days."

The Senate Foreign Relations Committee decided today to start hearings next week on the general subject of foreign policy. The hearings will be conducted intermittently over a period of two or three months.

In Turkey today, the five Baghdad Pact countries agreed to set up a permanent military planning staff. The action is described as a "step" toward a unified command---no actual decision has been taken on joint military control. And it had the approval of Secretary of State Dulles, who is attending the meeting. The new military planning staff will he headed...in 1958...by a Turkish general with Major General Daniel Campbell of the U.S. Air Force serving as his deputy.

Israel charges that Syrian troops ~~[illegible]~~ violated its frontier today, killing two Israeli policemen and wounding at least six other persons. An Israeli spokesman says there were from 40 to 50 soldiers in the attacking force and that they opened fire on Israeli workers who were probing for mines in a demilitarized zone. The scene of the incident was placed near the settlement of Dan. No Syrian losses were reported.

Four Turks were killed today on the island of Cyprus, when Turkish Cypriots rioted against British troops.

The United States today recognized the new provisional government of Venezuela.

Walter Reuther, president of the United Auto Workers, charged today that the pricing policies of the "big three" auto producers are "socially irresponsible." He suggested that large corporations be required to justify their price increases in advance before a special government agency. Reuther made his suggestion in testifying before the Senate anti-monopoly subcommittee. Leaders of the auto industry also are scheduled to testify.

The four and a half hour operation performed on Dodger star Roy Campanella was a success. And doctors say it is "possible" he may some day play baseball again. Campanella suffered a broken neck last night in an auto accident in Glen Cove, New York.

Edward R. Murrow: January 28, 1958. 7.45 p.m.

The puzzle of negotiations with the Russians certainly has not been solved by the accord on cultural exchanges between the United States and the Soviet Union signed yesterday. Nikita Khrushchev, in his latest outburst of vodka diplomacy at the Indian anniversary party in Moscow last night, asked: "Why not start by agreeing on the simplest things? It is like eating a meal. You begin with the hors d'oeuvres, move on to the fish and then come to the meat." The accord on cultural exchanges is undeniably a start with the hors d'oeuvres. But a close look at it shows little reason to expect the fish to follow, let alone the meat. For the pact, while it does include some final agreements, is mostly an agreement to go on negotiating about cultural exchanges.

Few of the big differences were straightened out. Voice of America broadcasts will continue to be jammed. The exchange of radio and T.V. programs on political subjects, though accepted in principle must be agreed to by both parties in each instance, which is to say that they have not been agreed to yet. Movie films are to be exchanged, but here, too, only such films as are accepted by both sides. Unrestricted travel in the two countries is not to be permitted. We wanted it; the Russians balked.

Regular air travel between Moscow and New York is agreed to in principle, but will not start before the United States has jet passenger planes and the Russians muffle the sound of theirs. Prolonged negotiations still must be held.

The exchange of teachers and a small number of students has been agreed to unconditionally, with Columbia and Moscow universities paired, as are Harvard and Leningrad universities. This is the first exchange of the sort since the cold war began and is a positive result. There also will be the exchange of a much larger number of delegations, artists and athletes, and while this is a positive gain, it is not new.

Now the agreement is being used as an argument that better progress can be made with the Russians on the ambassadorial level than at summit meetings. Khrushchev in his metaphor of the hors d'oeuvre, was not thinking of meetings on the ambassadorial level. It was the summit meetings he wanted to have begin doing easy things first. He was talking specifically about the failure of disarmament talks at the lower level, and he said that when you first invite a man to your house you may take him into the parlor or the dining room, but not into your bedroom. He has said on other occasions that disarmament, in the nature of things, has to come last. And

it is fairly obvious that he does not intend to start negotiations by discussing the Eisenhower proposal for international control of outer space.

Secretary Dulles keeps hammering away on the theme that there can be no summit meeting without prior agreements reached on lower levels. President Eisenhower apparently isn't so drastic, and would be prepared to go to a summit meeting so long as the agenda is agreed to in advance. That is the impression given by News Secretary Haggerty. If there is a difference between them, Mr. Eisenhower may be nearer the reality than his Secretary of State. For it is clear that the Russians find it hard to initiate agreements on the ambassadorial level. Big decisions in Russia are not made by ambassadors or even foreign ministers. They are made by the top man or men in the Kremlin. President Truman used to say that he never could get anything done by Molotov unless he went to Stalin first. The Russian concept of a summit meeting seems to be one where the Kremlin boss hears first-hand what other chiefs of state have to tell him, and then gives the green light to his subordinates to negotiate whatever he thinks will suit his book. It didn't work out that way after the last summit meeting, where Khrushchev agreed to the unification of Germany through free elections, but

changed his mind by the time the foreign ministers got around to negotiate a settlement. Even so, the summit meeting seems to be the procedure that suits the Russian dictatorship best. Moscow may make minor concessions, but if it holds out for a summit meeting we may find we have to agree, or be blamed for the delay of talks. The agreement signed yesterday hardly is an overwhelming argument for insisting on holding ambassadorial talks first.

Back in a moment—

George Bryan

Plainly, the United States and Russia are at loggerheads on how to go about holding a meeting at the summit. But they would appear to agree...for entirely different reasons...on the down-to-earth advice of Josh Billings, who said, "It iz better to leap one rod and strike on your feet than to leap two rods and strike on your head. This iz a well-known fact."

Goodnight and good luck!

VIA TWX RUSK

Edward R. Murrow
Care Dr. Stumpf
USIA, Kansas City

This is the news...

Soviet Premier Bulganin said tonight that the agreement signed by the United States and Russia....for expanding cultural exchanges...has "a positive significance." He said, "Implementation of the agreement undoubtedly will help the Soviet and American peoples to understand each other, [illegible] and contribute to better understanding between the two governments." Mr. Bulganin, "we cannot forget about those important international political problems which still remain outstanding." The Soviet premier's statement appeared in the Russian government newspaper Izvestia.

F

Bulganin made no direct reference to Russia's proposal for a summit conference. But in Washington today, a State Department spokesman said there has been no change in basic United States policy with regard to such a meeting. The department spokesman, Lincoln White, said the United States adheres firmly to the position laid down by President Eisenhower in his letter to Premier Bulganin on January 12. And White underscored the point by reading the paragraph of the letter which said it would be "essential" to work on problems in advance of a summit meeting "through diplomatic channels and by our foreign ministers."

Secretary of State Dulles today pledged the four Moslem countries belonging to the Baghdad Pact an additional 10-million dollars to help them build up a modern communications network. Mr. Dulles made the promise at the Baghdad Pact meeting in Ankara, which he is attending as an observer since the United States is not a formal member of the alliance. The full members are Britain, Turkey, Pakistan, Iran and Iraq. Mr. Dulles said figures on economic aid given by Russia are misleading. He conceded that Russian interest rates are low. But the advantages of such loans, he said,

25 (more)

are "more apparent than real"....because of the prices fixed by Russia for what it sells. The Baghdad conference ends tomorrow with a final communique.

Egypt and the Soviet Union today signed an economic agreement, climaxing negotiations which have been going on in Moscow for three weeks. Under the agreement, Russia will supply technical aid...including machinery...for Egypt's industrial development program. Egypt will pay for this assistance through a long-term loan, and by sending Russia cotton and other agricultural goods.

President Eisenhower flew to Kansas today...to attend the funeral of his eldest brother, Arthur, who died on Sunday. Fog compelled the President to land at the Navy air station at Olathe, Kansas, instead of at Kansas City as originally planned. Olathe is about 27 miles from Kansas City, and Mr. Eisenhower made the rest of the trip by car. He is flying back to Washington tonight.

Bad weather may delay the Army's attempt to launch an earth satellite at Cape Canaveral. High altitude winds of up to 140 miles an hour are reported. However, plans for launching a satellite "in a day or so"...using the Army's Jupiter-C rocket...have not been called off.

The department spokesman, Lincoln White, said the United States adheres firmly to the position laid down by President Eisenhower in his letter to Premier Bulganin on January 12th. And White underscored the point by reading the paragraph of the letter which said it would be "essential" to work on problems in advance of a summit meeting "through diplomatic channels and by our foreign ministers."

Secretary of State Dulles today pledged the four Moslem countries belonging to the Baghdad Pact an additional 10-million dollars to help them build up a modern communications network. Mr. Dulles made the promise at the Baghdad Pact meeting in Ankara, which he is attending as an observer since the United States is not a formal member of the alliance. The full members are Britain, Turkey, Pakistan, Iran and Iraq. Mr. Dulles said figures on economic aid given by Russia are misleading. He conceded that Russian interest rates are low. But the advantages of such loans, he said, are "more apparent than real"...because of the prices fixed by Russia for what it sells. The Baghdad conference ends tomorrow

with a final communique.

Egypt and the Soviet Union today signed an economic agreement, climaxing negotiations which have been going on in Moscow for three weeks. Under the agreement, Russia will supply technical aid...including machinery...for Egypt's industrial development program. Egypt will pay for this assistance through a long-term loan, and by sending Russia cotton and other agricultural goods.

President Eisenhower flew to Kansas today...to attend the funeral of his eldest brother, Arthur, who died on Sunday. Fog compelled the President to land at the Navy air station at Olathe, Kansas, instead of Kansas City as originally planned. Olathe is 27 miles from Kansas City, and Mr. Eisenhower made the rest of the trip by car. He is flying back to Washington tonight.

Bad weather may delay the Army's attempt to launch an earth satellite at Cape Canaveral. High altitude winds of up to 140 miles an hour are reported. However, plans for launching a satellite "in a day or so"...using the Army's Jupiter-C rocket...have not been called off.

The Defense Department announced tonight that a new ballistic msssile firing range will be set up on the West Coast...to supplement the work being carried on at Cape Canaveral. The new installation will be located at Cooke Air Force Base, which already is an Air Force missile training center.

In Douglas, Wyoming, a sheriff's deputy has captured a man identified as Charles Starkweather. Starkweather...who is 19...is suspected of killing nine persons in Nebraska in the past week.

John Doerfer, chairman of the Federal Communications Commission, today gave Congress a first-hand report on the operation of his agency. He testified before the House subcommittee investigating the F.C.C. and five other federal agencies, to see if they are carrying out the intent of Congress. Doerfer said,... in his two hours of testimony...that the F.C.C. is"independent"of the executive branch of government. He made no reference to charges that some members of the commission have improperly received favors from the broadcasting industry. Those

charges will be taken up at a public hearing on Monday.

The world's expert on overcoming illiteracy is Dr. Frank Laubach, the American missionary who has been working since 1915 with the three-fifths of the world population that cannot read and write. He has been kind enough tonight to answer a few questions.

Dr. Laubach, you have undoubtedly taught more people to read than any living man. In how many countries have you worked?

LAUBACH: Ninety-five countries.

MURROW: Well, you've spent most of your life looking at our country from the outside, haven't you?

LAUBACH: Yes, Forty-one years of my life I've been out there. Thirty-one years here.

MURROW: Well, sir, having spent so much time looking at our country from the outside, what do you think we must most urgently do?

LAUBACH: You couldn't have asked me a more important question, because we've got to do it very fast - and I think I know exactly what we could do. I have a sort of worm's eye view. One man said I'd been looking up through ninety-five worm holes at the world, because I've-worked through these masses of people down there - and I know the reason why they're going Communist, and the reason is because they're hungry, and they're getting more so all the time.

MURROW: What's the cure?

LAUBACH: If they're hungry,help them to help themselves. Perhaps you thought I was going to say 'send them our surplus.' I am in favor of that. I think we oughtn't to have seven billion dollars here of surplus while they're hungry. But they won't settle for that. They want to come out. They don't want to be paupers; they dont want charity. They want our know-how. They want our secrets. And first thing they must get is literacy. And then we must give them the books they need, which tell them the things that we know, that make us able to get so much. And then they want people to be sent out there, agriculture experts,

people with a warm heart - and if our country moves in an all-out nationwide way, the Government doing what it can but - not expecting the Government to do even half of it. The church, the Protestant, the Catholic, the Jews, altogether, could have tremendous influence if they began to send missionaries out who have agricultural experience and who know these other...? -literacy and writing and all the other things. And then business could enter into this thing, and philanthropy. And if we had an all-out movement like that around the world, I'm sure from my experience that it wouldn't be very long before we would see a tremendous change in the attitude of the world toward America.

MURROW: Well, then the danger is really a combination of hunger and ignorance, is that right?

LAUBACH: That's right. Ignorance causes hunger. These people that I've worked with - I'be milled around through millions of them in these countries - I sat down besides thousands of them and taught them these little books that we make and I know that they realize that the reason they're hungry is because they're ignorant. And that's true too. The dividing line between barbarism and poverty and progress is at this point of literacy more than anywhere else.

MURROW: How long does it take you to teach people to read, let's say in an aboriginal tribe in New Guinea for example?

LAUBACH: Well, it depends on the language. Some languages are very, very simple. The Malaya language is only 16 letters. But, on an average, in two or three weeks, they can get so they can stumble, they can pronounce. I won't say they're good readers yet, but then it's a matter of improving their reading.

MURROW: Now, what is the reaction in a village when the first man learns to read?

LAUBACH: Oh, he's crazy. For example, one of my missionaries whom I had trained, went out in Tanganyika to a village that had never been approached before. She met a man and she said "I'd like to taach you to read." So, she put up the charts, we'd just made, and he went crazy. He began to shout and

laugh and cry and dance and the whole village came out to see him - and then the class broke up. But they said "We want you to come and stay" - so she said "I'll be back in two weeks." And when she got out there the whole village was there to meet her, because they're just like everybody else. I never found an illiterate in the world who isn't crazy to get out of that ignorance, because it's a prison that holds him down in poverty. All over the world it's the same way. When we go out there to start these campaigns we have thousands of people coming to learn to read, because they know that's the first step in this new progress, upward.

MURROW: Then does each one try to teach another one to read?

LAUBACH: We make these books so easy that you don't have to have any education to teach somebody else. All you have to do is follow the line and smile, not talk very much, and give them a lot of praise. And then they can each one teach one - that makes it possible to learn by geometiical progression, you see. And, that's the reason why the governments are after this so much. Now, that leads me to say this: If America decides that our only hope is to go and help those people up, we've got the world wide open. First of all - we've got all the masses with us right away; and, second, these governments they're frightened; they used to be callous and indifferent but they aren't any more, they're scared to death. And they welcome us if we come out there and offer them our help, not because we have an ulterior motive or any axe to grind, but just because we believe in helping people. If this country got started in a big movement like this we wouldn't have to finish it but we could later - if we do this, I think in 20 or 25 years, perhaps less, we will see this world, the entire world where it's underprivileged and hungry rising gradually, helping itself up out of its misery up to a middle level, a middle type of life like we have here in the United States, and there would no longer be any threat of losing the world to communism or any other desperate thing.

MURROW: Are you convinced that once they have learned to read that they will then reject the Communist literature to which they will be subjected?

LAUBACH: When we teach them to read, we have the inside track. The next thing we do is to begin to give them a newspaper and information that will help them up the right way. Yes, they...the Communists can only promise them in all of these governments outside of the Iron Curtain - they can't do anything, they have an alibi, they say we - should overthrow your government first. We can act. And one deed is worth a thousand promises. I think there's one more thing that the people of the United States need to know - because I believe that millions and millions of people from my experience are desperate for a new direction, they hate the way we're going, they want to find out what to do but they don't know what to do, they're frustrated.

MURROW: All right, what should they do?

LAUBACH: Well, they ought to help organizations - now I mean not the Government but people-to-people organizations like World Neighbors, for example, the people that will help the world help itself up. And, the Friends Service Committee is doing that kind of thing too. And our literacy program and movements like that; they're here but the people don't know where to take hold. As soon as they do, I'm sure that they will help.

MURROW: Thank you very much Dr. Laubach.

LAUBACH: Thank you.

This is Ed Murrow. I'll be back in a moment with the word for today. Now here is George Bryan.

GEORGE BRYAN: COMMERCIAL

MURROW: It is Dr. Laubach's policy for those whom he has taught to read to teach others. In one of his second readers...written in Burmese...he promotes this method by having a villager say, "The best friend a man can ever have is the man who teaches him to read, and who helps him get good books. For a man who cannot read is like a blind man." Goodnight and good luck!

This is the news:

The Baghdad Pact conference ended in Ankara today with a warning that "Communist imperialism has increased its efforts to dominate the Middle East." The warning was contained in a final, 2-thousand-word communique, which "noted with satisfaction" that despite the attacks made against the Baghdad Pact it had "developed into a strong and cohesive organization representing the best hope for safeguarding peace, liberty and independence in the area." The communique praised the way that Turkey had stood up to Russian threats. And it deplored the way Russia had sought to exploit nationalism, Afro-Asian sentiment, economic distress and the plight of the Arab refugees for its own ends. The communique urged more extensive

→

use of the United Nations police force. But it made no direct reference to the Arab-Israeli dispute or to the question of Cyprus. ~~The communique duly recorded Secretary of State Dulles' offer of 10-million dollars for a modern communications system and the decision to create a combined military planning staff...which was reported earlier this week.~~ The United States is still not a full member of the alliance, but Mr. Dulles said at the close of the meeting that he hoped the United States had made it clear that it "participates wholeheartedly in the commitment of the Baghdad Pact to cooperate for security and defense." (I should like to discuss this conference further in a few minutes).

A credit agreement was signed in Washington today to help France through its economic crisis. The agreement gives France 655-million dollars in emergency aid---274-million dollars from the United States and the rest, amounting to 381-million, from the International Monetary Fund and the European Payments Union.

President Eisenhower today formally asked Congress to extend the Reciprocal Trade Act for five years. The legislation would give the President authority to cut tariffs. And Republican Representative Reed of the House Ways and Means Committee immediately attacked the program...calling it →

"a trade policy that has proved a demonstrable failure in the last 25 years." /Mr. Eisenhower called a five-year extension of the Reciprocal Trade Act "essential to America's vital interests." /He said it would provide "a powerful force for waging peace", in that it would "enhance the economic health of the free world."

Secretary of Labor Mitchell said today that...next month...he expects more than 4-million persons in this country to be unemployed. /This would be the highest unemployment figure since 1950. Mitchell told a news conference that he does not expect next month's employment figure to exceed four and a half million. After that, he expects the situation to improve.

President Curtice of General Motors said today that for his company, the cost of making cars has gone up faster than its prices. Curtice made the statement ~~[illegible]~~ before the Senate committee, which has been looking into ~~[illegible]~~ pricing practices of the auto industry. With regard to G.M.'s '58 models, he said the price has increased "only 60 cents" for every dollar of increase in cost. And increased wages, he said, have been the biggest single factor in boosting costs. Curtice said he found it hard to reconcile Walter Reuther's "professed concern over inflation"

with the union leader's latest bargaining demands. The G.M. president did not specifically mention Reuther's profit-sharing program...but did say he would not "at any time" negotiate on the basis of ability to pay.

Allan P. Kirby, president of the Alleghany Corporation, today was named chairman of the board...succeeding the late Robert R. Young. Alleghany is a holding company controlling the New York Central Railroad. Kirby, a long-time associate of Young's, also was named chairman of the Alleghany executive committee, a new post. And this makes him the chief operating officer of the company.

The Senate today passed an emergency bill authorizing an additional 549-million dollars for defense. The measure now goes to a conference committee because of a few changes made in the version passed by the House. The amount of money...for dispersing the Strategic Air Command and constructing ballistic missile facilities...is the same in both bills.

Senate passage came after a speech on the floor by Democratic Senator Jackson, who called for the stepped-up production of B-52 bombers and long-range missiles. And Republican Senator Case of New Jersey said in a speech tonight that concentration "solely on the missile and satellite

→

programs" would be a mistake. The United States, he said, must be capable and willing to fight "little wars", since the hope of preventing such wars rests on this capacity and willingness. And he said it must be recognized that military strength alone is not enough. Among the other prerequisites he listed improvement of the educational system and foreign aid.

The House Armed Services Committee released testimony today to the effect that Russia may have a 5-thousand-mile intercontinental ballistic missile in operation by July. The testimony was given to the committee last Thursday by the Army's missile director, Major General Beach. He added that, in his opinion, Russia's capability at that time would be "very limited." In the testimony released today there was no elaboration of this remark.

Today...in Johannesburg... 95 South Africans were ordered to stand trial for treason. The order was issued by a magistrate's court after a preliminary hearing that lasted 13 months. Fifty-eight of the defendants are Negroes. The rest are Indians and whites and two persons described as being of "mixed race". The prosecution says they tried to overthrow the

→

government and set up a Communist state. The defense says they only spoke up against the government's white supremacy policy.

Edward R. Murrow: January 30, 1958. 7.45 p.m.

The Bagdad Pact meeting at Ankara ended in a mild glow of satisfaction that things had gone off as well as they did. Its accomplishments certainly do not look big in the show-window. The two concrete results were the ten million dollar contribution offered by Secretary Dulles for the regional communications system, and the transformation of the joint military planning organization into a permanent staff. Neither result can be called impressive. The ten million dollars contribution was toward a wire-and-radio network to which we already have given eight millions, and which is far from completion.

The regional members of the pact pressured Mr. Dulles to attend in the hope that he would feel challenged to announce an imposing answer to the Soviet economic aid offensive. They wanted something impressive, like a Marshall Plan for the Middle East. Mr. Dulles deflated these expectations with a good deal of skill. He did it by showing that Soviet aid is not what it seems. It is always publicized in lump sums that look big but are spread out over several years, whereas American aid has to be announced in small yearly figures. Moreover American aid, he argued, is distributed over a whole region, while Soviet aid is concentrated at certain strategic points. Soviet aid figures also include commercial transactions, omitted from the American

figures. Comparing American and Russian aid in the same terms, he said the United States had given more in 1957 to the Bagdad pact countries alone, than the Soviet Union had given the whole non-Soviet world in the last few years.

The tightening of the pact's military structure has been called a big step toward making the pact into a Middle Eastern NATO. But the fact is, that the Bagdad allies have no central command organization and no troops committed to it, and are not likely to get either in the foreseeable future. The combined military joint planning staff now decided on is closer co-ordination, and no more.

The Bagdad meeting was held under the shadow of two anxieties. One was a vague fear that Iraq, the only Arab member, might drop out, or even walk out. The other was that the union of Egypt with Syria would be proclaimed while the session was going on, and so turn into an anti-Bagdad demonstration that would whip up a lot of Arab animosity. But neither development took place.

The Egyptian-Syrian union ran into last-minute difficulties and will not be announced for several days. Even when it is proclaimed, it is not going to hurt the Bagdad pact as much as had been anticipated. It is at least possible that Nasser is rushing through with the union at this time, not to

offset the Bagdad pact, but to keep Syria from falling still more under Soviet domination.

Iraq, the only Arab member of the pact, also is the only member not represented at Ankara by its Prime Minister or Foreign Secretary. That made it look as though the government of Iraq was reluctant to be sitting in. Prime Minister Menderes of Turkey flew to Bagdad before the meeting, presumably to try to keep the King and Prime Minister in line. It never has been learned what he accomplished. But one thing became clear. Iraq insisted on the Israeli question being taken up at Ankara. The Iraqi representative, pressed for it in his public speech. Mr. Dulles answered by saying that the problem belonged to the United Nations, not the Bagdad pact. However, Iraq wanted Israel mentioned in the communique, and when it was omitted, the Prime Minister of Iraq was reported to have flown to Ankara to insist on a re-draft. This turned out to be incorrect.

But it threw light on the basic weakness of the pact. Iran distrusts communism far less than it distrusts Israel. For Turkey, Iran and Pakistan it is the other way around. This makes the American policy difficult. We want three things that don't add up. We want strong regional resistance to communism, Arab friendship, and Israel permanently saved from Arab destruction

We cannot support the rights of Israel without reducing Arab friendship, and we cannot keep the alliance strong against communism without increasing Arab friendship. The Ankara meeting did strengthen the organization of anti-communism somewhat, and did so without the defection of Iraq. / Whether it has correspondingly weakened our support of Israel remains to be seen.

Back in a moment—

George Bryan—

Word for Today

The United States has a difficult role [redacted] in that it must support Israel and the Arab states, and help them resist Communism all at the same time. The United States thus maintains neutrality in the Arab-Israeli dispute, and this can make for misunderstanding. In the words of the old German proverb, it is the fate of neutrals "to be doused from above and singed from below."

Goodnight and good luck!

EDWARD R. MURROW WITH THE NEWS
CBS RADIO NETWORK

THURSDAY, JANUARY 30, 1958
7:45 - 8:00 PM EST

This is the news:

The Baghdad Pact conference ended in Ankara today with a warning that "Communist imperialism has increased its efforts to dominate the Middle East." The warning was contained in a final, 2-thousand-word communique, which "noted with satisfaction" that despite the attacks made against the Baghdad Pact, it had "developed into a strong and cohesive organization representing the best hope for safeguarding peace, liberty and independence in the area." The communique praised the way that Turkey had stood up to Russian threats. And it deplored the way Russia had sought to exploit nationalism, Afro-Asian sentiment, economic distress and the plight of the Arab refugees for its own ends. But one thing became clear. Iraq insisted on the Israeli question being taken up at Ankara.

The Iraqi representative, pressed for it in his public speech. Mr. Dulles answered by saying that the problem belonged to the United Nations, not the Baghdad Pact. However, Iraq wanted Israel mentioned in the communique, and when it was omitted, the Prime Minister of Iraq was reported to have flown to Ankara to insist on a redraft. This turned out to be incorrect.

But it threw light on the basic weakness of the Pact. Iran distrusts communism far less than it distrusts Israel. For Turkey, Iran and Pakistan it is the other way around. This makes the American policy difficult. We want three things that don't add up. We want strong regional resistance to communism, Arab friendship and Israel permanently saved from Arab destruction. We cannot support the rights of Israel without reducing Arab friendship, and we cannot keep the alliance strong against communism without increasing Arab friendship. The Ankara meeting did strengthen the organization of anti-communism somewhat, and did so without the defection of Iraq. Whether it has correspondingly weakened our support of Israel remains to be seen.

This is Ed Murrow. I'll be back in a moment with the word for today. Now, here is George Bryan.

GEORGE BRYAN: COMMERCIAL

MURROW: The United States has a difficult role in that it must support Israel and the Arab states and help them resist Communism all at the same time. The United States thus maintains neutrality in the Arab-Israeli dispute, and this can make for misunderstanding. In the words of the old German proverb, it is the fate of neutrals "to be doused from above and singed from below."

Goodnight and good luck!

Edward R. Murrow Fri., Jan. 31, 1958

This is the news:

Reports from Washington say there is "some evidence" that the Russians have launched a new missile into outer space. / There is speculation it may have been another sputnik, but this is doubted since no beep signal has been picked up on any radio tracking device. / Other speculation has it that the Soviet Union has test fired an intercontinental ballistic missile. / All these surmises are based on information reportedly received by United States Intelligence. / The information is said to be of "undetermined reliability". / None of it has been officially confirmed.

Here in New York tonight, the president of the United Nations General Assembly...Sir Leslie Munro... called for an international conference of scientists and diplomats to deal with the problem of controling outer space. Such a meeting, he said, should be held "within the next two or three months."

The Atomic Energy Commission said today that the nuclear tests to be held next spring in the Pacific will advance the development of weapons for defense against missiles. The commission made the statement in its regular semi-annual report to Congress. It said another objective will be the "further development of nuclear weapons with greatly reduced radio-active fallout." The average level of radio-active Strontium in the bone structure of Americans has increased in the past year. But this average, it said, is still far below the maximum acceptable level. The commission reported that radio-active isotopes are saving industry an estimated half-billion dollars a year. In the field of agriculture, there was improved management of crops and livestock through the use of isotopes. And "considerable" progress, it said, has been made in the diagnosis and localization of brain tumors with the use of radio-active iodine.

The Senate Appropriations Committee today approved an emergency bill earmarking a billion, 410-million dollars for weapons for the space age. Committee Chairman Hayden said the measure will be ready for action by the full Senate on Monday.

Admiral Burke, chief of naval operations, told the House Armed Services Committee today that the Navy plans to install missiles with thermonuclear warheads on its fleet aircraft. Burke made the disclosure in urging the committee not to underestimate the role of the super-carrier.

In a speech tonight...here in New York...Dr. James Killian again warned against pushing too hard for progress in one scientific field at the expense of other research. "No planning group," he said, "can take the place of the imaginative individual scientist following his own interests." Dr. Killian is President Eisenhower's special science adviser.

Syrian leaders flew to Egypt today to be on hand for the proclamation of political union between the two countries, expected this week-end. President Kuwatly of Syria said on arriving in Cairo that he hoped the move would be the first step "toward realizing the unity of all Arabs."

Red China today announced the dismissal of three cabinet ministers because of their "anti-Communist activities." (Presumably for speaking out too freely against the party). Peiping radio identified those dismissed as the ministers of forestry, transportation and food.

The three American mothers...who visited their sons imprisoned in Red China...arrived back in this country today by plane. The personal appeal for the release of their sons was turned down.

The French parliament today gave final approval to a bill granting Algeria limited home rule. The law provides for local assemblies, elected by universal sufferage....which would in turn nominate a single federal assembly in Algiers. Police powers...as well as powers relating to foreign affairs, finance and defense...are left with the French government. And the program has been rejected by the Algerian rebel movement in advance.

The United States Court of Appeals in Washington today upheld the conviction of New York attorney Harry Sacher on charges of contempt of Congress. Sacher has frequently represented American Communist leaders. In 1955, he refused to tell the Senate Internal Security Subcommittee whether he himself ever was a Communist. Last spring, the Supreme Court ordered the Court of Appeals to review his conviction in the light of its decision in the Watkins case. The Supreme Court said...in that decision...that a witness may not be required to answer questions, if their pertinency to the inquiry has not been explained. Today the Court of Appeals ruled...5 to 4...that Sacher's conviction was valid and that he could not have failed to understand the pertinency of the questions that were being asked.

The three-man "watchdog committee"...to oversee the activities of James Hoffa as president of the teamsters union...was named today by Federal Judge F. Dickinson Letts in Washington. The three are Godfrey P. Schmidt, the attorney who represented the New York rank-and-file teamsters challenging the legality of Hoffa's election; L.N.D. Wells, Jr., of Dallas, an attorney selected by teamster leaders to serve on the committee, and

→

Nathan Cayton, of Washington, D.C., a retired municipal judge./ Judge Letts chose Cayton to serve as neutral member, and chairman of the committee.

President Eisenhower flew to Augusta, Georgia today for a week-end of golf./ But before leaving Washington, he gave a political pep talk to the Republican National Committee./ Mr. Eisenhower denounced the "dismal wails of despair" of some Democrats and described the current business slump as "a period of consolidating the gains of recent years." The economy, he said, is "catching its breath for a new advance."/ He praised the record of his Administration and promised he would give modernization of the defense establishment his "closest personal attention." At the conclusion of his talk, Mr. Eisenhower said every member of his cabinet has been doing "a fine job". He specifically supported the farm policies of Secretary Benson. And he put in a plug for the Administration's foreign aid and reciprocal trade programs. Later at a luncheon meeting, Vice President Nixon told the national committee that he did not believe national defense would be an issue in this year's congressional elections./ He said, "The answer on the issue of national defense is going to be given---not by what is said---but by what is done." He predicted there will be an effective launching of an American earth satellite "months" before November.

Edward R. Murrow: January 31, 1958. 7.45 p.m.

Two predictions are almost uncontradicted about the present Congress. It will vote all the money needed to catch up with the Russians in the missile race, and it will not extend the reciprocal trade agreement act for five years. That is, it will only go halfway with the Administration.

The Administration believes that the great struggle with the Russians has to be waged in both fields, military and economic. It certainly does not rank the economic struggle as secondary. Indeed it hopes that with sufficient military power in our hands, the struggle can be confined to the arena of economics. But even then it will be relentless rivalry, with the Soviet Union confident it can master the world.

The Reciprocal Trade Act is only part of the Administration's economic program. Congress also is being asked for a steady and increasing expenditure on foreign aid. And the prediction is confidently made that this also will not get through without drastic cuts. In other words, Congress appears to take the Soviet military threat seriously, but not the economic threat.

To put it this way misrepresents the situation somewhat. The majority in Congress, if it refuses to support the full economic program of the Administration, will not do so because it thinks it knows more about world trade or the Russian economic potential than the Administration. It will do

so because tariff cuts can hurt local interests and it is the business of a Congressman to protect local interests. / It is always easy to get money for weapons. / Weapons are dramatic and exciting. / They do not reduce employment, and though they cost money, the Congressman hopes he can make savings in other directions. / But trade isn't dramatic, and tariffs aren't either. / It may increase the national volume of trade to reduce tariffs and so make for more employment. But a cut in a tariff may hit some particular industry, and the Congressman wants to protect the workers in his district.

It is a standing problem in a democratic country to strike the right balance between local interests and the national welfare. / Congressmen aren't expected to think nationally all the time. / Their Party leaders are there to do that, and to apply their discipline as needed. / However, discipline in both Parties has not always been effective in economic matters. / Many Democrats obstructed the trade policies of Cordell Hull, and go on opposing the same policies under President Eisenhower. / Protectionist Republicans continue to be ardently protectionist, as though we still were a debtor country.

On the whole, the record of the Eisenhower Administration has been good in getting tariffs lowered, and the volume of American trade has reached new

heights. But it did not help Republican discipline that President Eisenhower himself seemed to depart from his policy in 1954 in raising the tariff on Swiss watches.

Compromise on extending the Reciprocal Trade Act is predicted, and it may be extended for three instead of five years. But President Eisenhower's message to Congress yesterday put up a strong argument for a minimum period of five years. The new European economic community, with its common market and a population nearly as large as ours, will be setting up a common tariff applying to imports from the United States. The steps are due in 1962, about four-and-a-half years from the renewal date of our trade agreement legislation. We will need adequate time to prepare for negotiations on these tariffs, and adequate authority to do so. A three-year extension would miss the mark altogether.

The ability of the Russians to use trade to promote political interests is being shown dramatically in the Middle East. Now they are pressing us closer to home, in Latin America. A new trade agreement between Brazil and the Soviet is about ready, and Brazil may soon recognize the Moscow government. El Salvador is preparing to sell coffee to Russia. Uruguay is being offered Soviet oil. Argentine has just concluded a deal to take three million

dollars' worth of Soviet products.

These items are pittances compared to the vast volume of our present trade. But last year's Sputniks testified to more than the Russian capacity to make weapons. They demonstrated that Russian industry and technology no longer are backward. And with Russia expanding its production at a higher rate than ours, its competition for world trade and world friends is sure to mount. High tariffs do not cope with such a competitor. If anything, they can lose us both markets and friends.

Word for Today

It is going to take some persuasion to get Congress to approve a five-year extension of the Reciprocal Trade Act...touching as it does on the personal interests of certain folks back home. That is the way of politics...and does no harm...so long as the politician remembers how Rutherford B. Hayes said that he serves himself and his party best who best serves his country.

Goodnight and good luck!

EDWARD R. MURROW WITH THE NEWS
CBS RADIO NETWORK

FRIDAY, JANUARY 31, 1958
7:45 - 8:00 PM EST

This is the news:

Reports from Washington say there is "some evidence" that the Russians have launched a new missile into outer space. There is speculation it may have been another sputnik, but this is doubted since no beep signal has been picked up on any radio tracking device. Other speculation has it that the Soviet Union has test fired an intercontinental ballistic missile. All these surmises are based on information reportedly received by United States Intelligence. The information is said to be of "undetermined reliability." None of it has been officially confirmed.

Here in New York tonight, the president of the United Nations General Assembly...Sir Leslie Munro...called for an international conference of scientists and diplomats to deal with the problem of controling outer space. Such a meeting, he said, should be held "within the next two or three months."

The Atomic Energy Commission said today that the nuclear tests to be held next spring in the Pacific will advance the development of weapons for defense against missiles. The commission made the statement in its regular semi-annual report to Congress. It said another objective will be the "further development of nuclear weapons with greatly reduced radio-active fallout." The average level of radio-active Strontium in the bone structure of Americans has increased in the past year. But this average, it said, is still far below the maximum acceptable level. The commission reported that radio-active isotopes are saving industry an estimated half-billion dollars a year. In the field of agriculture, there was improved management of crops and livestock through the use of isotopes. And "considerable" progress, it said, has been made in the diagnosis and localization of brain tumors with the use of radio-active iodine.

The Senate Appropriations Committee today approved an emergency bill earmarking a billion, 410-million dollars for weapons for the space age. Committee

Chairman Hayden said the measure will be ready for action by the full Senate on Monday.

Admiral Burke, chief of naval operations, told the House Armed Services Committee today that the Navy plans to install missiles with thermonuclear warheads on its fleet aircraft. Burke made the disclosure in urging the committee not to underestimate the role of the super-carrier.

In a speech tonight....here in New York...Dr. James Killian again warned against pushing too hard for progress in one scientific field at the expense of other research. "No planning group" he said, "can take the place of the imaginative individual scientist following his own interests." Dr, Killian is President Eisenhower's special science advisor.

Syrian leaders flew to Egypt today to be on hand for the proclamation of political union between the two countries expected this week-end. President Kuwatly of Syria said on arriving in Cairo that he hoped the move would be the first step "toward realizing the unity of all Arabs."

Red China today announced the dismissal of three cabinet ministers because of their "anti-Communist activities." Peiping radio identified those dismissed as the ministers of forestry, transportation and food.

The French parliament today gave final approval to a bill granting Algeria limited home rule. The law provides for local assemblies, elected by universal sufferage..which would in turn nominate a single federal assembly in Algiers. Police powers...as well as powers relating to foreign affairs, finance and defense...are left with the French government. And the program has been rejected by the Algerian rebel movement in advance.

The three-man "watchdog committee"...to oversee the activities of James Hoffa as president of the teamsters union...was named today by Federal Judge F. Dickinson Letts in Washington. The three are Godfrey P. Schmidt, the Attorney who represented the New York rank-and-file teamsters challenging the legality of Hoffa's election; L.N.D. Wells, Jr., of Dallas, and attorney selected by teamster

leaders to serve on the committee, and Nathan Cayton, of Washington, D. C., a retired municipal judge. Judge Letts chose Cayton to serve as neutral member and chairman of the committee.

President Eisenhower flew to Augusta, Georgia today for a week-end of golf. But before leaving Washington, he gave a political pep talk to the Republican National Committee. Mr. Eisenhower denounced the "dismal wails of despair" of some Democrats and described the current business slump as "a period of consolidating the gains of recent years." The economy, he said, is "catching its breath for a new advance." He praised the record of his Administration and promised he would give modernization of the defense establishment his "closest personal attention." At the conclusion of his talk, Mr. Eisenhower said every member of his cabinet has been doing "a fine job." He specifically supported the farm plicies of Secretary Benson. And he put in a plug for the Administration's foreign aid and reciprocal trade programs. Later at a luncheon meeting Vice President Nixon told the national committee that he did not believe national defense would be an issue in this year's congressional elections.

Two predictions are almost uncontradicted about the present Congress. It will vote all the money needed to catch up with the Russians in the missile race, and it will not extend the reciprocal trade agrrement act for five years. That is, it will only go halfway with the Administration.

The Administration believes that the great struggle with the Russians has to be waged in both fields, military and economic. It certainly does not rank the economic struggle as secondary. Indeed it hopes that with sufficient military power in our hands, the struggle can be confined to the arena of economics. But even then it will be relentless rivalry, with the Soviet Union confident it can master the world.

The Reciprocal Trade Act is only part of the Administration's economic program. Congress also is being asked for a steady and increasing expenditure on foreign aid. And the prediction is confidently made that this also will not

get through without drastic cuts. In other words, Congress appears to take the Soviet military threat seriously, but not the economic threat.

To put it this way misrepresents the situation somewhat. The majority in Congress, if it refuses to support the full economic program of the Administration will not do so because it thinks it knows more about world trade or the Russian economic potential than the Administration. It will do so because tariff cuts can hurt local interests and it is the business of a Congressman to protect local interests. It is always easy to get money for weapons. Weapons are dramatic and exciting. They do not reduce employment, and though they cost money, the Congressman hopes he can make savings in other directions. But trade isn't dramatic, and tariffs aren't either. It may increase the national volume of trade to reduce tariffs and so make for more employment. but a cut in a tariff may hit some particular industry, and the Congressman wants to protect the workers in his district.

It is a standing problem in a democratic country to strike the right balance between local interests and the national welfare. Congressmen aren't expected to think nationally all the time. Their Party leaders are there to do that, and to apply their discipline as needed. However, discipline in both Parties has not always been effective in economic matters. Many Democrats obstructed the trade policies of Cordell Hull, and go on opposing the same policies under President Eisenhower. Protectionist Republicans continue to be ardently protectionist, as though we still were a debtor country.

On the whole, the record of the Eisenhower Administration has been good in getting tariffs lowered, and the volume of American trade has reached new heights. But it did not help Republican discipline that President Eisenhower himself seemed to depart from his policy in 1954 in raising the tariff on Swiss watches.

Compromise on extending the Reciprocal Trade Act is predicted, and it may be extended for three instead of five years. But President Eisenhower's message to Congress yesterday put up a strong argument for a minimum period of five years.

These items are pittances compared to the vast volume of our present trade. But last year's Sputniks testified to more than the Russian capacity to make weapons. They demonstrated that Russian industry and technology no longer are backward. And with Russia expanding its production at a higher rate than ours, its competition for world trade and world friends is sure to mount. High tariffs do not cope with such a competitor. If anything, they can lose us both markets and friends.

This is Ed Murrow. I'll be back in a moment with the word for today. Now, here is George Bryan.

GEORGE BRYAN: COMMERCIAL

MURROW: It is going to take some persuasion to get Congress to approve a five-year extension of the Reciprocal Trade Act...touching as it does on the personal interests of certain folks back home. That is the way of politics...and does no harm so long as the politician remembers how Rutherford B. Hayes said that he serves himself and his party best who best serves his country.

Goodnight and good luck!

Edward R. Murrow Mon., Feb. 3, 1958

This is the news:

The answer of Soviet Premier Bulganin to President Eisenhower's letter of January 12 was published today in Moscow. Bulganin said Russia is willing to work out arrangements for a summit meeting "through normal diplomatic channels," but he rejected the idea of a preparatory conference of foreign ministers. A foreign ministers conference, he said, might create additional obstacles because of the "preconceived position of certain possible participants"---an apparent reference to Secretary of State Dulles. The Soviet premier rejected Mr. Eisenhower's proposal for a separate agreement on the control of outer space for peaceful purposes.

→

Such an agreement, he said, would have to be part of a package disarmament program...including the cessation of nuclear weapons tests and the liquidation of Western bases on foreign soil. / Bulganin then went on and listed nine subjects he thought ought to be taken up at a meeting of heads of government. In addition to a ban on nuclear tests, he included establishment of an "atom free" zone in Central Europe, an East-West non-aggression pact, renunciation of the use of nuclear weapons, and measures for preventing surprise attack. Bulganin ~~reiterated~~ Repeated- the Soviet view that the German problem cannot be Solved- "without the ~~rapprochement~~ agreement and understanding of the two sovereign Germanies."

Secretary of State Dulles discussed the Bulganin message today with Llewellyn Thompson, the United States ambassador to Moscow, who came home last week for consultations. / President Eisenhower also studied the message, and tonight the White House issued a statement saying that it had consisted mostly of a repetition of previous Soviet proposals, that it had revealed ~~a negative attitude~~ ("attitude" toward Mr. Eisenhower's letter of January 12th, but that it was being "further considered." The White House statement goes on to say, "It is, however, already apparent that further clarification of

→

the Soviet position will be necessary before---to use President Eisenhower's words of January 12th---it can be ascertained that such a top-level meeting would, in fact, hold good hope of advancing the cause of peace and of justice in the world." ~~Mr. Dulles was to have conferred with today with the President, as well as with Ambassador Thompson, but did not because of a slight cold.~~

Democratic Leader Lyndon Johnson told the Senate today that the ~~Democratic Senate Leader~~ launching of America's first earth satellite...and the new Bulganin message.. offers a "golden opportunity" for peace. And he again urged a program of joint exploration of outer space by the United Nations as a means of preventing a "disorderly arms race" which, he said, can only end in destruction.

In another Senate speech, Democratic Senator Clark of Pennsylvania ~~maintain~~ said the Russian sputniks "woke up Rip VanWinkle." "I hope," he said, "that the Explorer does not put him back to sleep."

After these speeches, the Senate unanimously approved an emergency bill of 1-billion, 410-million dollars...to step up the missile program and strengthen the Strategic Air Command. The measure already has been approved by the House.

Dr. Alan Waterman, director of the National Science Foundation, said today that the United States must seize the initiative in the space age. He said, "Competition on such a broad front cannot be met by keeping an eye on the particular advance others are making and then seeking to outstrip these as they come up. We must seize the initiative in this matter," he said, "and not permit ourselves to be forced into one crash program after another. We must advance along the lines appropriate to our efforts, taking prompt advantage of the ideas and break-throughs that science may uncover." Dr. Waterman spoke in New Haven, Connecticut at a conference of more than 100 leaders in the science, education and communications fields. Another speaker at the conference was President Eisenhower's science adviser, Dr. James Killian...who said what America needs to do is "de-emphasize the hot-rodders among our youth and encourage the hot minds." Dr. Killian said that instead of trying to engage in a numbers race with Russia for scientists and engineers, the emphasis should be on specialists who also have the general education necessary for meeting democratic needs.

Congressional investigators today accused Chairman John Doerfer of the

Federal Communications Commission of making "fraudulent" claims against the government. / Specifically, Bernard Schwartz, counsel for the House commerce subcommittee...which has been investigating six of the government's regulatory agencies...accused Doerfer of accepting travel expenses for a trip made in 1954, both from the federal government and from the National Association of Broadcasters. / Doerfer said he was being subjected to trial "by innuendo." He said the five hundred and seventy-five dollars was, in actuality, a Fee for addressing a convention of broadcasters in Spokane, Washington. The subcommittee wanted to know why the money was not paid directly to the FCC chairman, but through a regional official in Portland. Robert Richards, a public relations man, who was formerly a vice president of the broadcasters association, said this was "merely a bookkeeping problem." / The public hearing continues tomorrow.

Edward R. Murrow: February 3, 1958. 7:45 p.m.

The launching of "Explorer" was certainly a scientific and political event, but its greatest significance was psychological. It restored our self-esteem, and some of our prestige with our allies. / The Sputniks, followed by the over-advertised failure of the Vanguard, sent this country into a deep trough of humiliation. "Explorer" at once raised us to a corresponding height of exhilaration. Presumably it was irrational to have been so depressed by the Vanguard fizzle. If so, it is irrational to be so elated over "Explorer". / Acute depression and elation are symptoms not usually associated with normal health, in individuals or nations.

It may be helpful to try to state simply some of the basic facts about "Explorer". Its instruments are better than those of the Sputniks, and it will teach us more about outer space. / "Explorer" was sent to a greater height than either Sputnik. It went seventeen hundred miles, compared with five hundred and sixty by Sputnik number one, and a thousand and fifty-six miles by Sputnik number two. / But in all other respects the Sputniks outmatch it. / "Explorer" is of light and unimpressive bulk. It weighs thirty point eight pounds. Sputnik number one was six times larger, Sputnik number two was - or is -- thirty-seven times larger.

The thrust from the rocket engines that launched "Explorer" was seventy-five thousand pounds, that of the engines that launched the Sputniks must have been around two hundred and fifty thousand pounds. It is true that Jupiter C could have launched a satellite twice as big as "Explorer". But we have made nothing, or so far as is known are making nothing, that will match the thrust of the Russian engines.

Unquestionably we have more rockets and several satellites ready, and at any time will be able to launch one or more of them. Vanguard, which is a better if more complicated device than Jupiter C, may [illegible] any day. We also are talking of sending a rocket to the moon, and of launching a manned satellite, as well as a satellite capable of photographing the earth for military information. But this is talk, and it is getting published, not because it is new, but because interest in "Explorer" has made it newsworthy. Such talk has been going on for years, wherever rocket experts foregather. The Russians also talk about moon rockets, and manned space ships. But since the Russians are ahead of us in rocketry, their talk is that much closer to realization. Wernher von Braun, the creator of Jupiter C, yesterday stuck to his estimate that they are five years ahead.

What may not be appreciated, is that the Russians may at any moment, send up a bigger satellite than the second Sputnik. There are reports that it will weigh a ton, which, if true, would mean that an engine has been developed with a much greater thrust than two hundred and fifty thousand pounds. The Russians were quite courteous in congratulating us on the success of "Explorer". Since courtesy is not a characteristic of the cold war, the Russians may feel they can afford to appear cordial, because they are about to make "Explorer" look even less significant to us and the world. If we expect this to happen, and it does, then we do not need to go into another tailspin of abnormal depression.

We have much hard work before we draw even with the Russians in rockets. We have not really moved any closer in launching "Explorer". In fact, "Explorer" might have been launched some time ago, even before the Sputniks, and Dr. von Braun has it to his credit, that he begged to be allowed to do so. I might add that Dr. von Braun also has to his credit a statement yesterday that what we have in orbit is a rival to the Sputniks "only in spirit".

It belongs in a statement of fact about satellites to say that "Explorer" is not in any sense a new military factor in our relations with the Soviet Union, even though the Sputniks are. The Sputniks, too, are not weapons,

but the thrust that launched them can launch weapons far more powerful than anything we have completed. This being true, it also is a fact that "Explorer" has not put us in a better bargaining position with the Russians.

What has changed is, that our faces are not so red. / But in dealing with the Russians, the factors that count are things like weapons and thrust, rather than our confidence in ourselves. / In asking the Russians to give up weapons in outer space, as we are intent on doing, we still will be asking them to give up something they have, or will soon have, that we have not matched. And we should not expect "Explorer" to dispel their reluctance to do so.

Back in a moment.—

George Bryan

Wordfor Today

The free world is heartened by the successful launching of an American earth satellite, but we must not lose sight of what the Russians have achieved, or become [redacted] complacent. John G. Winant expressed it well when he said, "Whatever we accomplish is of little importance because what we accomplish is always measured by what others do in relation to it."

Goodnight and good luck!

MURROW: The free world is heartened by the successful launching of an American earth satellite, but we must not lose sight of what the Russians have achieved, or become complacent. John G. Winant expressed it well when he said, "Whatever we accomplish is of little importance because what we accomplish is always measured by what others do in relation to it."

Goodnight and good luck!

Edward R. Murrow Tues., Feb. 4, 1958

This is the news:

Weather conditions have improved at Cape Canaveral. And the Navy Vanguard rocket is in position for firing...as preparations are underway for the possible launching of America's second earth satellite. The Explorer satellite, successfully launched last week by the Army, continues in orbit, circling the earth every hour and 55 minutes.

The Martin Company said tonight that before the year is out it will test flight a Titan rocket, capable of putting up a satellite weighing more than a ton. The company said, "Rocket engines already in production are quite capable of boosting a Titan to the moon."

President Eisenhower has asked his science adviser, Dr. James Killian, to direct a survey as to whether the country's space program should be

shifted from military to civilian control---that is, from the Defense Department to a new civilian agency, set up perhaps along the lines of the Atomic Energy Commission. / Mr. Eisenhower made this known today, at his weekly White House meeting with Republican congressional leaders.

Senate Democratic Leader Johnson...when he heard of this...promptly served notice that the final decision will be up to Congress, "just as it was," he said, "in the case of atomic energy." / Senate-House conferees agreed late this afternoon, to let the Pentagon go ahead with any space projects which President Eisenhower may authorize in the coming year. / Republican Senator Case of South Dakota called the measure a "stop-gap" to enable space programs to go forward while Congress takes time to decide the issue.

The White House announces that Mr. Eisenhower will hold a news conference tomorrow, despite "a very slight cold." / ~~News Secretary Hagerty says the President has no fever.~~

The President's Committee on Scientists and Engineers ended a two-day meeting at Yale University, and submitted a set of general conclusions for meeting Russia's challenge in the space age. The committee calls for

→

the expenditure of more money for education, harder work in schools with higher quality education, and continued and increased scientific cooperation with our allies. The committee says secrecy should not be a barrier to freedom of exchange of scientific knowledge. And training in the liberal arts should not be sacrificed to any increased emphasis on science. The goal, it says, ought to be to train citizens who will be able to deal with both technical and cultural problems.

President Meany of the AFL-CIO today revoked the charters of the separate AFL and CIO state organizations in Michigan. The action was a move to dislodge Teamsters President James Hoffa from control of the AFL machinery in Michigan. And a charter has been issued to a newly merged state organization.

A vice president of the Ford Motor Company told a Senate investigating committee today that Union President Walter Reuther is "talking nonsense" when he says his labor proposals are not inflationary. Theodore Yntema attacked Reuther's profit-sharing plan...declaring that it would be "difficult to contrive a plan more damaging to the preservation of competition in a free society, or to the integrity of our currency."

In Detroit....Walter Reuther said on another front that he had sent a letter to President Eisenhower suggesting that he call a national conference to take up the "problems of unemployment and recession."

Chairman Doerfer of the Federal Communications Commission told a House investigating committee today that, altogether, he probably has received about 2-thousand dollars for speaking engagements in the past five years. He told the committee...investigating alledged favors received by members of the commission from the broadcasting indistry...that there was nothing improper in the payments, since they represented relatively small fees for speaking engagements. Doerfer said that...two weeks ago...he repaid 165 dollars received from an Oklahoma television station in 1954. He had banked the money, he said, under the misapprehension that it was reinbursement for transportation he had paid for himself and Mrs. Doerfer, when they flew to Oklahoma City for the station dedication. He said it was much later before he discovered that his secretary had not paid for the flight.

Attorney General Rogers said today that he will recommend the veto of any legislation providing for the transfer of executive powers to an acting president in case of presidential disability. / Rogers told a news conference that, in his opinion, a constitutional amendment would be required.

He expressed this view only a few hours after House Speaker Rayburn went on public record for the first time as favoring legislation to cope with the problem of presidential disability. / Rayburn took the position that a constitutional amendment would not be necessary. He said a law could be passed setting up a commission which would determine, if necessary, whether a president actually is incapacitated. If the commission finds that the president is unable to perform his functions, the vice president would temporarily take over the duties and powers of president. A special House committee is still considering the question.

In Yugoslavia, a state court today sentenced three socialists to prison for allegedly plotting the overthrow of the Communist government. The sentences...handed down after a four-day trial...ranged from ~~[illegible]~~ eight and a half to four years.

The Associated Press reports from Washington that the United States has agreed to give Poland 95-million dollars in new economic aid. The new assistance in dollars is the same as that provided Poland last year, and will again consist, to a large degree, of surplus cotton and wheat. Negotiations are still going on.

Democratic Senator Humphrey said today that any United States effort to get a "package" disarmament agreement is "doomed to defeat and ridicule." Humphrey believes we can do better with Russia by negotiating one point at a time. Specifically, he suggests that we try...first...to get agreement on a two-year ban on nuclear weapons tests. After that, he says, we can try to get an end to the production of fissionable material for weapons purposes. ~~Right now, it is United States policy to tie the two questions together...conditioning agreement on one to agreement on the other...and Humphrey calls this an "unnecessarily rigid position.~~

Edward R. Murrow: February 4, 1958. 7.45 p.m.

It is hard to reconcile the Bulganin letter to President Eisenhower with reports from West European capitals, that a summit meeting is sure to be held before the end of the year. The Bulganin letter was a reply to specific proposals by Mr. Eisenhower, and it rejected them all with one or two small exceptions. It did agree to preparatory discussions through normal diplomatic channels, so long as they are limited to the choice of an agenda. But this was no concession to Mr. Eisenhower, for the Russians categorically refuse to go to a summit meeting where they cannot veto any topic proposed for discussion.

Premier Bulganin gave no hint of Russian willingness to start negotiation of actual issues at the lower level. All that he offered was a discussion of procedural matters. He put his foot down on a Foreign Ministers' meeting, and did so with a statement that must be a novelty in the history of diplomacy. He said that any conference attended by certain ministers - meaning Secretary Dulles and presumably British Secretary Selwyn Lloyd - might create obstacles to a summit meeting and nip it in the bud. Mr. Bulganin, in effect, was saying to Mr. Eisenhower: "Don't let that man Dulles discuss our problems; he is prejudiced and will only make it impossible

for us to meet. If we meet we may find we can agree, and then we can tell our Foreign Secretaries what to do." / There is a certain naive sincerity in this; it is the way things have always been done in the Soviet Union. But it shows how little the Kremlin understands how foreign policy is made in a democracy, and how wide the gulf is between the two systems.

Actually the Bulganin letter, like the one from President Eisenhower, is a proposal for an agenda. / Mr. Eisenhower raised a number of points, starting with the control of outer space. / Mr. Bulganin countered with nine of his own. There is little in common between them. / The Russians will not talk about the control of outer space separately. They are willing to talk about an agreement to end the possibility of surprise attack, and to discuss the extension of trade. But in the main, both Bulganin and the President want to limit discussions at a summit meeting to their own programs. / So the first difficulty to overcome is to decide what to talk about, and this looms very large indeed. / One can well ask, if this is so hard, how any agreement on the issues themselves can be expected.

Perhaps the Bulganin letter has to be understood as a kind of facade, behind which things are a bit more flexible. My colleague Charles Collingwood cables from London that the Russians there are explaining that

they look forward to a whole series of negotiations, starting with a summit meeting, then continuing through ministerial study groups, then turning again into summit meetings, this going on indefinitely. They want these summit meetings to consist of the heads of state of eight countries, four from each side. They want the first meeting to be held in April, and are willing to settle for a short agenda. One item on it would be an endorsement of the status quo in Europe. Another would be the Polish proposal for a Central European zone free of nuclear weapons and stockpiles, which they are willing to combine with a suggestion Sir Anthony Eden once made of a mid-European zone from which troops are withdrawn under international inspection.

But these proposals also are anything but promising. If the West were to agree to the European status quo, it would accept everything the Kremlin has done to establish its satellite empire. It would freeze existing eastern European boundaries, and agree to the communist regime imposed on East Germany. Laying out a zone free of nuclear weapons might lead straight off to the neutralization of West Germany.

It is as clear as daylight what the Kremlin has to gain from an agreement along these lines. It is not in the least clear that the West has anything to gain. If it should accept the entire Soviet program as set

forth by Premier Bulganin, it might be rid of atomic bombs, missiles, bases and a costly security system. / But the Soviet Union, with its formidable ground forces and its well-nigh impregnable land-mass, would be the unchallenged and unchallengeable military master of the world.

Back in a moment
George Reedy

Word for Today

As usual, in negotiating with Russia, we find ourselves in difficulty. Even the negotiations over what to negotiate about — are discouraging. But to succumb to a sense of futility in this time would be fatal. In the words of Abraham Lincoln, "The occasion is piled high with difficulty, and we must rise high with the occasion."

Goodnight and good luck!

EDWARD R. MURROW WITH THE NEWS
CBS RADIO NETWORK

TUESDAY, FEBRUARY 4, 1958
7:45 - 8:00 PM EST

This is the news:

Weather conditions have improved at Cape Canaveral. And the Navy Vanguard rocket is in position for firing...as preparations are underway for the possible launching of America's second earth satellite. The Explorer satellite, successfully launched last week by the Army continues in orbit, circling the earth every hour and 55 minutes.

The Martin Company said tonight that before the year is out it will test flight a Titan rocket, capable of putting up a satellite weighing more than a ton. The company said, "Rocket engines already in production are quite capable of boosting a Titan to the moon."

President Eisenhower has asked his science adviser, Dr. James Killian, to direct a survey as to whether the country's space program should be shifted from military to civilian control---that is, from the Defense Department to a new civilian agency, set up perhaps along the lines of the Atomic Energy Commission. Mr. Eisenhower made this known today at his weekly White House meeting with Republican congressional leaders.

Senate Democratic Leader Johnson...when he heard of this...promptly served notice that the final decision will be up to Congress "just as it was," he said, "in the case of atomic energy." Senate-House conferees agreed late this afternoon to let the Pentagon go ahead with any space projects which President Eisenhower may authorize in the coming year. Republican Senator Case of South Dakota called the measure a "stop-gap" to enable space programs to go forward while Congress takes time to decide the issue.

The White House announces that Mr. Eisenhower will hold a news conference tomorrow, despite "a very slight cold."

The President's Committee on Scientists and Engineers ended a two-day meeting at Yale University and submitted a set of general conclusions for meeting [illegible]'s

Russia's challenge in the space age. The committee calls for the expenditure of more money for education, harder work in schools with higher quality education, and continued and increased scientific cooperation with our allies. The committee says secrecy should not be a barrier to freedom of exchange of scientific knowledge. And training in the liberal arts should not be sacrificed to any increased emphasis on science. The goal, it says, ought to be to train citizens who will be able to deal with both technical and cultural problems.

President Meany of the AFL-CIO today revoked the charters of the separate AFL and CIO state organizations in Michigan. The action was a move to dislodge Teamsters President James Hoffa from control of the AFL machinery in Michigan. And a charter has been issued to a newly merged state organization.

A vice president of the Ford Motor Company told a Senate investigating committee today that Union President Walter Reuther is "talking nonsense" when he says his labor proposals are not inflationary. Theodore Yntema attacked Reuther's profit-sharing plan...declaring that it would be "difficult to contrive a plan more damaging to the preservation of competition in a free country, or to the integrity of our currency."

In Detroit...Walter Reuther said on another front that he had sent a letter to President Eisenhower suggesting that he call a national conference to take up the "problems of unemployment and recession."

Chairman Doerfer of the Federal Communications Commission told a House investigating committee today that, altogether, he probably has received about 2-thousand dollars for speaking engagements in the past five years. He told the committee...investigating alledged favors received by members of the commission from the braodsasting industry...that there was nothing improper in the payments since they represented relatively small fees for speaking engagements.

Attorney General Rogers said today that he will recommend the veto of any legislation providing for the trnnsfer of executive powers to an acting president in case of presidential disability. Rogers told a news conference that, in his

opinion, a constitutional amendment would be required.

He expressed this view only a few hours after House Speaker Rayburn went on public record for the first time as favoring legislation to cope with the problem of presidential disability. Rayburn took the position that a constitutional amendment would not be necessary. He said a law could be passed setting up a commission which would determine, if necessary, whether a president actually is incapacitated. If the commission finds that the president is unable to perform his functions, the vice president would temporarily take over the duties and powers of president. A special House committee is still considering the question.

Democratic Senator Humphrey said today that any United States effort to get a "package" disarmament agreement is "doomed to defeat and ridicule." Humphrey believes we can do better with Russia by negotiating one point at a time. Specifically, he suggests that we try...first...to get agreement on a two-year ban on nuclear weapons tests. After that, he says, we can try to get an end to the production of fissionable material for weapons purposes.

It is hard to reconcile the Bulganin letter to President Eisenhower with reports from West European capitals, that a summit meeting is sure to be held before the end of the year. The Bulganin letter was a reply to specific proposals by Mr. Eisenhower, and it rejected them all with one or two small exceptions. It did agree to preparatory discussions through normal diplomatic channels, so long as they are limited to the choice of an agenda. But this was no concession to Mt. Eisenhower, for the Russians categorically refuse to go to a summit meeting where they cannot veto any topic proposed for discussion.

Premier Bulganin gave no hint of Russian willingness to start negotiation of actual issues at the lower level. All that he offered was a discussion of procedural matters. He put his foot down on a Foreign Ministers' meeting, and did so with a statement that must be a novelty in the history of diplomacy. He said that any conference attended by certain ministers - meaning Secretary Dulles

and presumably British Secretary Selwyn Lloyd - might create obstacles to a summit meeting and nip it in the bud. Mr. Bulganin, in effect, was saying to Mr. Eisenhower: "Don't let that man Dulles discuss our problems; he is prejudiced and will only make it impossible for us to meet. If we meet we may find we can agree, and then we can tell our Foreign Secretaries what to do." There is a certain naive sincerity in this; it is the way things have always been done in the Soviet Union. But it shows how little the Kremlin understands how foreign policy is made in a democracy, and how wide the gulf is between the two systems.

Actually the Bulganin letter, like the one from President Eisenhower, is a proposal for an agenda. Mr. Eisenhower raised a number of points, starting with the control of outer space. Mr. Bulganin countered with nine of his own. There is little in common between them. The Russians will not talk about the control of outer space separately. They are willing to talk about an agreement to end the possibility of surprise attack, and to discuss the extension of trade. But in the main, both Bulganin and the President want to limit disucssions at a summit meeting to their own programs. So the first difficulty to overcome is to decide what to talk about, and this looms very large indeed. One can well ask, if this is so hard, how any agreement on the issues themselves can be expected.

Perhaps the Bulganin letter has to be understood as a kind of facade behind which things are a bit more flexible. My colleague Charles Collingwood cables from London that the Russians there are explaining that they look forward to a whole series of negotiations, starting with a summit meeting, then continuing through ministerial study groups, then turning again into summit meetings, this going on indefinitely. They want these summit meetings to consist of the heads of state of eight countries, four from each side. They want the first meeting to be held in April, and are willing to settle for a short agenda. One item on it would be an endorsement of the status quo in Europe. Another would be the Polish proposal for a Central European zone free of nuclear weapons and stockpiles, which

they are willing to combine with a suggestion Sir Anthony Eden once made of a mid-European zone from which troops are withdrawn under international inspection.

But these proposals also are anything but promising. If the West were to agree to the European status quo, it would accept everything the Kremlin has done to establish its satellite empire. It would freeze existing eastern European boundaries, and agree to the communist regime imposed on East Germany. Laying out a zone free of nuclear weapons might lead straight off to the neutralization of West Germany.

It is as clear as daylight what the Kremlin has to gain from an agreement along these lines. It is not in the least clear that the West has anything to gain. If it should accept the entire Soviet program as set forth by Premier Bulganin, it might be rid of atomic bombs, missiles, bases and a costly security system. But the Soviet Union, with its formidable ground forces and its well-nigh impregnable land-mass, would be the unchallenged and unchallengeable military master of the world.

This is Ed Murrow. I'll be back in a moment with the word for today. Now, here is George Bryan.

GEORGE BRYAN: COMMERCIAL

MURROW: As usual, in negotiating with Russia, we find ourselves in difficulty. Even the negotiations over what to negotiate about are discouraging. But to succumb to a sense of futility in this time would be fatal. In the words of Abraham Lincoln, "The occasion is piled high with difficulty, and we must rise high with the occasion."

Goodnight and good luck!

Edward R. Murrow Wed., Feb. 5, 1958

This is the news:

The Navy says it failed to launch an earth satellite last night with the Vanguard rocket because of trouble in the control system. A preliminary report...issued by the Naval Research Laboratory... says, "The first 57 seconds of the flight were smooth, with all components of the rocket functioning normally. Between the 57th and 60th seconds after take-off, small irregularities occurred in the first-stage engine control system. After the 60th second, a failure in the control system caused the engine to deflect far to the right, and the resultant abnormally high forces caused the rocket to break

→

in the middle." / The laboratory report adds that "parts are being recovered for further study." / Dr. John P. Hagen, director of Project Vanguard, says his group will make a third attempt to launch an earth satellite "as soon as we can." / The first Vanguard attempt ended disastrously in December, when the rocket exploded only a few feet off the ground. The Army succeeded in placing an earth satellite in orbit last Friday night. And that satellite---dubbed the Explorer---is radioing technical information back to earth.

The Senate Rules Committee voted today to set up a select committee / to decide whether the country's outer space program should be under the Defense Department / or a civilian agency. Senate Democratic Leader Johnson suggested the creation of the committee, and won the immediate support of Republican Leader Knowland. President Eisenhower already has asked his science adviser, Dr. James Killian, to make a similar survey. And at his news conference today, Mr. Eisenhower said that Secretary McElroy will be in charge of all outer space work being done within the Defense Department / at this time. He said that in the meantime, Dr. Killian would work out a broader program of "outer space achievement."

Mr. Eisenhower held the conference despite a slight cold, and his voice was hoarse. One of the first questions put to him was whether he feels that the exchange of letters with Soviet Premier Bulganin has increased understanding between the United States and Russia and advanced the likelihood of a summit meeting. Here is his reply:

#1 tape runs 2:40
ends on cue: "---some effect against surprise attack."

Next, a reporter wanted to know how Mr. Eisenhower feels about the proposal for the creation of an "atom free" zone in Central Europe.

#2 tape runs 1:15
ends on cue: "--any weapon that the Soviets want to use."

On January 20th...in Chicago...President Eisenhower made a speech in which he expressed hope that the defense issue would be kept out of this year's congressional campaign. On the same night...in Milwaukee... the President's assistant, Sherman Adams, made a speech attacking the record of the Democrats on the defense question. [redacted] With this apparent discrepancy in mind, [redacted] a reporter

→

asked Mr. Eisenhower today about his concept of the White House staff and whether he "cleared" speeches made by White House personnel. The President replied:

#3 tape runs :50
ends on cue: "--I mean and is not invalidated."

The reporter pressed the point, asking whether the President did not see a condradiction in the two speeches.

#4 tape runs :40
ends on cue: "--I think he still had a right to say it."

Later, the questioning turned to the state of the nation's economy, and Mr. Eisenhower said he thought "things ought to stabilize as summer comes along and we have freer credit and more money is available."

When a reporter asked about giving the economy a "shot in the arm" with a tax cut, the President said:

#5 tape runs :30
ends on cue: "--how we were always talking about inflation."

On the subject of education, he was "distressed" to hear that an effort is being made in Congress to tie his four-year education program in with the [redacted] question of integration in the public schools. He said he did not suggest a bigger program because he thought the major [redacted] endeavor should be made on the local, non-federal level.

[redacted]

The White House announced tonight that....because of his cold...the President has cancelled an engagement to appear tomorrow at a "prayer breakfast". The breakfast is sponsored by the International Council for Christian Leadership. The White House says that Mr. Eisenhower still plans to attend tomorrow's meeting of the National Security Council....that he "has no fever."

A bill was introduced in Congress today to provide employment through a new public works program. The measure...sponsored by Democratic Senator Gore of Tennessee...would create a federal public works administration. It would have 500-million dollars to work with, and money to provide jobs would be allocated to states in need of such assistance.

The parliaments of Egypt and Syria today approved a temporary constitution, under which the union of the two countries will be governed until a permanent constitution goes in effect. President Nasser... appearing before the Egyptian national assembly...described the new state as an "independent, sovereign democratic republic." / It will be divided, he said, into two provinces---Egypt and Syria---and will have a joint legislative assembly appointed by presidential degree. President Kuwatly of Syria nominated Nasser to be president of the republic, and the nomination also was approved by both parliaments. / Kuwatly is expected to be vice president.

The action took place as the crown prince of Yemen arrived in Cairo to discuss the federation of his kingdom with Syria and Egypt.

George Reasons —

Word for Today

President Eisenhower today held his second news conference since October, and again the American people received a direct report from the Chief Executive. As an institution, the news conference reveals, as Professor Edward Corwin said, "the daily drama of the Presidency, the reciprocal interplay of human character and legal concepts that no other office on earth can quite emulate."

Goodnight and good luck!

CBS RADIO DIVISION

EDWARD R. MURROW WITH THE NEWS

Wednesday, February 5, 1958
7:45 - 8:00 P. M.

E. R. MURROW: One of the first questions put to him was whether he feels that the exchange of letters with Soviet Premier Bulganin has increased understanding between the United States and Russia and advanced the likelihood of a Summit meeting. Here is his reply.

PRES. EISENHOWER: Well, I think at this moment you would have no real facts on which to reach a truly favorable conclusion on either of these points. But, I will say this: We are working very hard at this minute; as a matter of fact, I have an appointment with the Secretary of State this afternoon to see whether there is any possible approach that we can make that will be appealing and which might lead under ... after proper preparation - to some kind of a meeting.

REPORTER: PETER LISAGOR of the Chicago Daily News - Mr. President, on the summit meeting, could you clarify for us whether you would require merely an agreement on the agenda issues to be discussed at that summit meeting, or whether you would require a substantial negotiation on a lower level that gave some promise of an agreement at the summit?

PRES. EISENHOWER: Well, obviously, there has to be some clarification: What are the subjects that we both believe should be discussed, with some hope that there would be an agreement; manifestly, there is no use of going to a summit conference with the knowledge that neither will adjust himself to the arguments of the other at all and, frankly, you would just be glaring at each other across the table and home.

And in the last, I think it was eight points I had in my last bill, my last letter, and I cannot recall in this last letter, I had been studying, trying to answer it and I don't remember that there is a single one that they indicated they would study or even believed was a reasonable subject to discuss.

For example, the space problem, the division of Germany, things of that kind we put out, they just said "nyet."

Oh yes, Yes, I should have made the exception of the one I forgot about, the possibility of a zone being established that might have some effect against a surprise attack.

E. R. MURROW: Next, a reporter wanted to know, how Mr. Eisenhower feels about the proposal for the creation of an atom free zone in central Europe.

PRES. EISENHOWER: Free nations, of which we are only one, and though we may be the strongest we are simply another equal among equals, cannot make decisions respecting other free nations unilaterally or bilaterally with the Soviets.

There has got to be an agreement in which the affected countries must be participants. That is all there is to it. So, for the United States to say that we are going to treat all Western Europe or Central Europe in such and such and such a way is just unthinkable for us.

Now, if you talk about the virtue, I mean the value of such, admitting that everybody wants this thing, at least you have an arguable question; but the problem is: What do you do about the Central Europe which now lies within the range of anything, any weapon that the Soviets want to use.

E. R. MURROW: On January 20th in Chicago, President Eisenhower made a speech, in which he expressed hope that the defense issue would be kept out of this year's Congressional campaign. On the same night in Milwaukee, the President's assistant, Sherman Adams made a speech attacking the record of the Democrats on the defense question. With this apparent discrepency in mind, a reporter asked Mr. Eisenhower today, about his concept of the White House staff and whether he cleared speeches made

by White House personel. The President replied:

PRES. EISENHOWER: No staff officer of mine, including General ... Secretary Adams, can possibly make a decision without getting my general approval or a decision which is consonant with the general policies that have been laid out by me. And he is responsible, specifically responsible, that those decisions, and they are nearly always some item of administration in the government, are so stated and promulgated and carried out that the general policy is observed and stands as, I mean is not invalidated.

E. R. MURROW: The reporter pressed the point, asking whether the President did not see a contridiction in the two speeches.

PRES. EISENHOWER: There was no basic difference, because both he ... because I read parts of his speech; he said, as I said, that there should be no partisanship in defense, He did undertake to say that he had a rebuttal to make in the case of some individuals that he thought were not observing this bipartisanship spirit. I didn't make any rebuttal and I never have and I never expect to make it, but he did, and he was honest in the way he did it, and even if you, or anybody else differs with it, I think he still had a right to say it.

E. R. MURROW: Later, the questioning turned to the state of the nation's economy. Mr. Eisenhower said, he thought things ought to stabalize as summer comes along and we have freer credit and more money is available. When the reporter asked about giving the economy a shot in the arm with a tax cut, the President said:

PRES. EISENHOWER: Well, I'd say this: in my extent, if things got to the point where you felt it was necessary, it would be one thing, it would have a very real, great stimulus on the economy, no aquestion about that; but, on the other hand, this is something you can take hold of and going to far with trying to fool with our economy, then you get something else started, and you just remember, all of you here, a year ago,

how we were always talking about inflation.

E. R. MURROW: On the subject of education, the President was distressed to hear that an effort is being made in Congress to tie his 4-year education program in with the question of integration in the public schools. He said, he did not suggest a bigger program, because he thought the major endeavor should be made on the local non-Federal level. The White House announced tonight that because of his cold, the President has cancelled an engagement to appear tomorrow at a prayer breakfast. The breakfast is sponsored by the International Council for Christian Leadership. The White House says, that Mr. Eisenhower still plans to attend tomorrow's meeting of the National Security Council and that he has no fever.

EISENHOWER: Well, obviously, there has to be some clarification: What are the subjects that we both believe should be discussed, with some hope that there would be an agreement; manifestly, there is no use of going to a summit conference with the knowledge that neither will adjust himself to the arguments of the other at all and, frankly, you would just be glaring at each other across the table and home.

And in the last, I think it was eight points I had in my last bill, my last letter, and I cannot recall in this last letter, I had been studying, trying to answer it and I don't remember that there is a single one that they indicated they would study or even believed was a reasonable subject to discuss.

For example, the space problem, the division of Germany, things of that kind we put out, they just said "nyet."

Oh yes, yes, I should have made the exception of the one I forgot about, the possibility of a zone being established that might have some effect against

a surprise attack.

MURROW: Next, a reporter wanted to know, how Mr. Eisenhower feels about the proposal for the creation of an atom free zone in central Europe.

PRES. EISENHOWER: Free nations, of which we are only one, and though we may be the strongest we are simply another equal among equals, cannot make decisions respecting other free nations unilaterally or bilaterally with the Soviets.

There has got to be an agreement in which the affected coutries must be participants. That is all there is to it. So, for the United States to say that we are going to treat all Western Europe or Central Europe in such and such a way is just unthinkable for us.

Now, if you talk about the virtue, I mean the value of such, admitting that everybody wants this thing, at least you have an arguable question; but the problem is: What do you do about the Central Europe which now lies within the range of anything, any weapons that the Soviets want to use.

MURROW: On January 20th in Chicago, President Eisenhower made a speech, in which he expressed hope that the defense issue would be kept out of this year's Congressional campaign. On the same night in Milwaukee, the President's assistant, Sherman Adams made a speech attacking the record of the Democrats on the defense question. With this apparent discrepency in mind, a reporter asked Mr. Eisenhower today, about his concept of the White House staff and whether he cleared speeches made by White House personnel. The President replied:

PRES. EISENHOWER: No staff officer of mine, including General...Secretary Adams can possibly make a decision without getting my general approval or a decision which is consonant with the general policies that have been laid out by me. And he is responsible, specifically responsible, that those decisions, and they are nearly always some item of administration in the government, are so stated and promulgated and carried out that the general policy is observed and stands as, I mean is not invalidated.

MURROW: The reporter pressed the point, asking whether the President did not see

a contradiction in the two speeches.

PRES. EISENHOWER: There was no basic difference, because both he...because I read parts of his speech; he said, as I said, that there should be no partisanship in defense. He did undertake to say that he had a rebuttal to make in the case of some individuals that he thought were not observing this bipartisanship spirit. I didn't make any rebuttal and I never have and I never expect to make it, but he did, and he was honest in the way he did it, and even if you, or anybody else differs with it, I think he still had a right to say it.

MURROW: Later, the questioning turned to the state of the nation's economy. Mr. Eisenhower said, he thought things ought to stabilize as summer comes along and we have freer credit and more money is availalle. When the reporter asked about giving the economy a shot in the arm with a tax cut, the President said:

PRES. EISENHOWER: Well, I'd say this: in my extent, if things got to the point where you felt it was necessary, it would be one thing, if would have a very real great stimulus on the economy, no question about that; but on the other hand, this is something you can take hold of and going too far with trying to fool with our economy, then you get something else started, and you just remember, all of you here, a year ago, how we were always talking about inflation.

MURROW: On the subject of education, the President was distressed to hear that an effort is being made in Congress to tie his 4-year education program in with the question of integration in the public schools. He said, he did not suggest a bigger program, because he thought the major endeavor should be made on the local non-Federal level. The White House announced tonight that because of his cold, the President has cancelled an engagement to appear tomorrow at a"prayer breakfast." The breakfast is sponsored by the International Council for Christian Leadership. The White House says, that Mr. Eisenhower still plans to attend tomorrow's meeting of the National Security Council and that he has no fever.

A bill was introduced in Congress today to provide employment through a new public works program. The measure...sponsored by Democratic Senator Gore

of Tennessee...would create a federal public works administration. It would have 500-million dollars to work with, and money to provide jobs would be allocated to states in need of such assistance.

The parliaments of Egypt and Syria today approved a temporary constitution under wiich the union of the two countries will be governed until a permanent constitution goes in effect. President Nasser...appearing before the Egyptian national assembly...described the new state as an "independent, sovereign democratic republic." It will be divided, he said, into two provinces---Egypt and Syria---and will have a joint legislative assembly appointed by presidential degree. President Kuwatly of Syria nominated Nasser to be president of the republic, and the nomination also was approved by both parliaments. Kuwatly is expected to be vice president.

The action took place as the crown prince of Yemen arrived in Cairo to discuss the federation of his kingdom with Syria and Egypt.

This is Ed Murrow. I'll be back in a moment with the word for today. Now here is George Bryan.

GEORGE BRYAN: COMMERCIAL

MURROW: President Eisenhower today held his second news conference since October, and again the American people received a direct report foom the Chief Executive. The news conference reveals, as Professor Edward Corwin said, "the daily drama of the Presidency, the reciprocal interplay of human character and legal concepts that no other office on earth can quite emulate."

Goodnight and good luck!

Edward R. Murrow Thurs., Feb. 6, 1958

This is the news:

The Senate voted today to set up a special committee to decide whether the American space program shall be under military or civilian control. The committee will be composed of 13 senior senators. And it will study all aspects of the problem. Senate Democratic Leader Johnson suggested creation of the committee in a resolution introduced only yesterday. He had the immediate support of Republican Leader Knowland, and the resolution was passed by a vote of 78 to 1. Democratic Senator Ellender of Louisiana was the lone dissenter. His opposition was not immediately explained.

President Eisenhower already has asked his science adviser, Dr. James Killian, to make a similar survey. And Mr. Eisenhower said at his news conference yesterday that "space business" involving the military will continue in the meantime, to be headed up by the Secretary of Defense.

Congress completed action today on an emergency bill...providing an additional 1-billion, 410-million dollars for defense./ The final action was taken by the House after earlier passage by the Senate. /The extra money is for the present fiscal year. And it will be spent mostly for expansion of the missile program and dispersal of the Strategic Air Command. Some of the money also will go for the construction of three atomic submarines, equipped to fire the Navy's 15-hundred-mile Polaris missile. It is written into this measure that the Defense Department has authority to proceed with outer space projects for the next year. Senator Johnson has called this "merely an expediency" while Congress determines policy.

Republican Senator Bridges took the Senate floor today to defend the conduct of foreign policy by Secretary of State Dulles. Bridges said that Democrats who demand ~~[illegible]~~ Dulles' resignation because of his "inflexibility" are playing into Communist hands./"Mr. Dulles is inflexible," he said, "concerning the interests of the United States. He is rigid in matters of principle."

Secretary Dulles said today that Russia now has a new opportunity "to demonstrate that its words of peace mean something more than a mere effort to lull the non-Communist world." Dulles made the statement in a letter to the British magazine New Statesman. It was in reply to an appeal by Bertrand Russell...published in the same magazine...for the United States and Russia not to try to spread their creeds "by force of arms." Dulles said America "certainly" does not try to spread its creed by force. "But unhappily," he said, "the same cannot be said of Soviet Communism." Mr. Dulles recalled how the United States hoped 10 years ago...when it had a monopoly on nuclear weapons...that such weapons would be placed under strict international control but Russia refused to go along. Later on, he said, the United States suggested a ban on the production of fissionable material for weapons purposes, and again Russia balked. Dulles pointed out that President Eisenhower now proposes control of outer space for peaceful purposes...and that Russia, for the third time, has a chance to demonstrate its sincerity. "At the moment," he said, Russia is trying...through its propaganda...to see that Western Europe "shall be armed only with weapons of the pre-atomic age, while the Soviet Union uninterruptedly develops the most modern weapons of the nuclear age and the age of outer space."

United Nations Secretary General Hammarskjold said today that he has received a formal invitation to visit Moscow, presumably for "private diplomacy." Hammarskjold [illegible] said he has no "firm" plan to visit Moscow...but that he [illegible] would "attempt" to arrange it in the course of his travels.

The new Russian ambassador to the United States, Mikhail Menshikov, arrived in this country today by Soviet jet airliner. He said on his arrival, "I have been sent as an ambassador of peace, friendship and cooperation."

A British airliner crashed on take-off in Munich, Germany today, killing 21 of the 44 persons on board. Seven of the victims were members of Britain's championship soccer team...returning to England after playing a European Cup game with Yugoslavia.

The Navy...in Washington...says that the failure to launch an earth satellite last Tuesday night "seems" to have been due to defective wiring in the Vanguard rocket and not to the malfunctioning of any "device". Recovery operations at Cape Canaveral are continuing.

The American Newspaper Publishers Association asked Congress today to amend the U.S. Code so that heads of government agencies cannot withhold information of a non-security nature to which the association argued the public has a right. The association spokesman testified before the House government information subcommittee.

The House Commerce Committee today passed a resolution asking the Federal Communications Commission to postpone the try-out of pay television. The F.C.C. has said it will start considering applications for pay TV next month on a three-year trial basis. Chairman Harris said his committee does not want to "close the door" on pay TV but feels that the F.C.C. should delay action "until the matter has been gone into thoroughly by Congress." He said his committee plans to hold hearings late next summer or fall.

The president of the International Union of Operating Engineers... William Maloney...resigned today. Maloney...who is 77...said he was resigning for reasons of health. The union is under fire...before the Senate Rackets Committee...on corruption charges.

Edward R. Murrow February 6, 1958 14 7:45 p.m.

When the news of the union between Egypt and Syria first reached Washington, an official remarked that the test of its reality would be the suppression of political parties in Syria. Union had been proclaimed before, in fact the armies of the two countries have been united under Egyptian command for some time. Now the union has passed this test. The political parties in Syria have been wiped out, and their place is to be taken by a National Union party like Egypt's and under Nasser's leadership.

The danger of a rise of communism in Syria apparently had something to do with timing the union. Nasser was warned that Syria's Deputy Premier, who negotiated the recent trade agreement for Syria in Moscow, had decided to launch a new party of his own, which would be communist in all but name and promised to sweep the country. This triggered Nasser into action, and negotiations with Syrian leaders, which had been expected to last months, were packed into a few days.

The union that now has emerged is domestically quite real. It is genuine union and not federation. Syria becomes part of Egypt. Whether it is quite as genuine internationally remains to be seen. Here the test will be whether the new state gives up one of its two votes in the

United Nations and Arab Federation. Syria's separate diplomatic representation abroad already is being eliminated.

Nasser's fear of communism in Syria does not mean that he has become ~~[illegible]~~ more pro-Western, or that the creation of the new state is good news for the West. Its policy will be neutralism, which means non-alignment in the cold war. This, however, is not neutrality in spirit. Both Egypt and Syria are highly suspicious of what they call Western imperialism, and both have a naive faith in the safety of accepting Soviet arms, advisers and aims. Nasser wasn't afraid of communism ideologically. He simply didn't want it to go too far and make it harder to do business with both sides, playing one against the other. And another reason he wanted to keep communism down is to prevent the Kremlin from having a veto of his ambition to head a completed Arab federation. He aspires to this as nothing else, for it would make him the greatest Egyptian ~~since the Middle Ages~~ of modern Time

The union with Syria is certainly a stride in the direction of an all-inclusive Arab federation. Egypt and Syria between them have about 60 percent of the gross national product of all Arab states, and about 66 percent of the population. However they do only 38 percent of the

trade. And the merger, being between two agricultrual populations, does not promise early economic benefits. / Yemen is fairly sure to join, and Lebanon is under internal pressure to come in. / But Iraq, Saudi Arabia and Jordan are not friendly either to union or federation with a Nasser dictatorship. / If anything, they are now set to form a closer bond to keep themselves out of Nasser's clutches. Nasser, however, has an advantage in that Arab unity is a powerful slogan to which subjects of the Arab kings respond quite as much as any other Arabs.

Nasser has the same advantage in his relations with the outside world. The West certainly does not like this particular union. / It gives Nasser dictatorial control of the territories and waters through which more than 90 percent of Middle Eastern oil reaches the Western world. And it automatically encloses Israel in a kind of sealed compartment between them, which can hardly be called conducive to peace.

Nasser calls the new union a presidential democracy, and thereby abuses both words. He is no president as we understand the term. He is a dictator, as absolute as any in the world today. / And the new state will know only one element of democracy familiar to us; it is promised an independent judiciary. It will have a parliament, but Nasser will

appoint every member in it. It will hold an election, but voters will have no choice between candidates. There is to be a plebiscite, but it will be a replica of the rubber-stamp affairs run behind the Iron Curtain. His regime is even more Hitlerian than Hitler's. And the only reason this State of Affairs sentiment isn't trumpeted from the housetops is that no one likes to offend the Arabs at this sensitive time.

Nasser got his power largely through Soviet help, which he is not likely to forget. He kept it largely through American intervention in the Suez crisis, which he already has forgotten. Washington is quietly saying it hopes the new union will serve the cause of peace. Under the circumstances it could not say less; and it could not truthfully say more.

Word for Today

President Nasser had more than one reason for desiring the union of Egypt and Syria. It helps keep the Communists out of the driver's seat, and certainly it is a step toward realizing his dream of a powerful pan-Arab state. J.P. Morgan pretty well summed up the situation when he said, "A man always has two reasons for doing anything---a good reason and a real reason."

Goodnight and good luck!

EDWARD R. MURROW WITH THE NEWS
CBS RADIO NETWORK

THURSDAY, FEBRUARY 6, 1958
7:45 - 8:00 PM EST

This is the news:

The Senate voted today to set up a special committee to decide whether the American space program shall be under military or civilian control. The committee will be composed of 13 senior senators. And it will study all aspects of the problem. Senate Democratic Leader Johnson suggested creation of the committee in a resolution introduced only yesterday. He had the immediate support of Republican Leader Knowland, and the resolution was passed by a vote of 78 to 1. Democratic Senator Ellender of Louisiana was the lone dissenter. His opposition was not immediately explained.

President Eisenhower already has asked his science adviser, Dr. James Killian, to make a similar survey. And Mr. Eisenhower said at his news conference yesterday that "space business" involving the military will continue in the meantime to be headed up by the Secretary of Defense.

Congress completed action today on an emergency bill...providing an additional 1-billion, 410-million dollars for defense. The final action was taken by the House after earlier passage by the Senate. The extra money is for the present fiscal year. And it will be spent mostly for expansion of the missile program and dispersal of the Strategic Air Command. Some of the money also will go for the construction of three atomic submarines, equipped to fire the Navy's 15-hundred-mile Polaris missile. It is written into this measure that the Defense Department has authority to proceed with outer space projects for the next year. Senator Johnson has called the "merely an expediency" while Congress determines policy.

Republican Senator Bridges took the Senate floor today to defend the conduct of foreign policy by Secretary of State Dulles. Bridges said thet Democrats who demand Dulles' resignation because of his "inflexibility" are playing into Communist

hands. "Mr. Dulles is inflexible," he said, "concerning the interests of the United States. He is rigid in matters of principle."

Secretary Dulles said today that Russia now has a new opportunity "to demonstrate that its words of peace mean something more than a mere effort to lull the non-Communist world." Dulles made the statement in a letter to the British magazine New Statesman. It was in reply to an appeal by Bertrand Russell... published in the same magazine...for the United States and Russia not to try to spread their creeds "by force of arms." Dulles said America "certainly" does not try to spread its creed by force. "But unhappily," he said, "the same cannot be said of Soviet Communism." Mr. Dulles recalled how the United States hoped 10 years ago...when it had a monopoly on nuclear weapons...that such weapons would be placed under strict international control but Russia refused to go along. Later on, he said, the United States suggested a ban on the production of fissionable material for weapons purposes, and again Russia balked. Nasser calls the new union a presidential democracy, and thereby abuses both words. He is no president as we understand the term. He is a dictator, as absolute as any in the world today. And the new state will know only one element of democracy familiar to us; it is promised an independent judiciary. It will have a parliament, but Nasser will appoint every member in it. It will hold an election, but voters will have no choice between candidates.

Nasser gothis power largely through Soviet help, which he is not likely to forget. He kept it largely through American intervention in the Suez crisis, which he already has forgotten. Washington is quietly saying it hopes the new union will serve the cause of peace. Under the circumstances it could not say less; and it could not truthfully say more.

This is Ed Murrow. I'll be back in a moment with the word for today. Now, here is George Bryan.

GEORGE BRYAN: COMMERCIAL

MURROW: President Nasser had more than one reason for desiring the union of Egypt and Syria. It helps keep the Communists out of the driver's seat and certainly it is a step toward realizing his dream of a powerful pan-Arab state. J. P. Morgan pretty well summed up the situation when he said, "A man always has two reasons for doing anything---a good reason and a real reason."

Goodnight and good luck!

Edward R. Murrow Fri., Feb. 7, 1958

This is the news:

The Administration has chosen Roy W. Johnson, a vice president of General Electric, to be director of the new space agency in the Defense Department. / The appointment was announced by Secretary of Defense McElroy, who said Johnson will formally take over on April first. / The new agency will be known officially as "the Advanced Research Projects Agency," and McElroy said that as its head Johnson will "be backed up by the most highly qualified scientists we can find." / Johnson himself is an electronics expert with experience as an administrator. / McElroy said...in answer to a reporter's question...that he believes the operation of manned

satellites "seems very naturally to fall within the scope of Air Force responsibility." The defense secretary also said that the 200-mile limitation on the role of the Army with respect to missiles has been lifted. But it can be assumed, he said, that the Army will not "stretch this out to get into a long-range strategic mission." He said the main reason for removing the 200-mile limitation was to give the Army greater mobility. McElroy told reporters that...under compromise legislation passed by Congress yesterday...the Defense Department is charged with handling military space programs "indefinitely". Non-military programs, he said, will be turned over to any appropriate agency that may be set up after Congress decides whether those programs should be under military or civilian control.

At Cape Canaveral today, the Air Force tested its Atlas intercontinental ballistic missile for the fifth time. The last two firings...in December and January...were a success. Today, the missile got off smoothly then exploded after several thousand feet. A brief Air Force announcement said the missile "destroyed itself" after completing the powered phase of its flight. [redacted]

The secretary of the Air Force....James Douglas...told the House Armed Services Committee today that testing of the Atlas missile "will continue at

an accelerated rate." He said the country's first operational unit to have an intercontinental ballistic missile will be ready at its post by next December. He identified the missile as the Atlas. And it "appears", he said, that combinations of rocket engines presently developed may have the capability of exploring space "beyond the moon." He said the power plant of the Titan missile is "particularly adaptable" to the exploration of space.

The House committee also received testimony today from Admiral Burke, chief of naval operations. He said Russia will have an atom-powered submarine by 1961 and that devising a defense against it will be "real rough."

Russia's new ambassador to the United States called on Secretary of State Dulles today, less than 24 hours after his arrival in Washington. Dulles described their talk as "the normal conversation that takes place when an ambassador presents his credentials. We didn't settle the disarmament question."

Harold Stassen said today that he will continue for the time being to serve as President Eisenhower's adviser on disarmament. Stassen has

—)

criticized Secretary Dulles' approach to Russia on disarmament, and there have been reports that he would resign to seek the Republican nomination for governor of Pennsylvania. One report was that if he did not submit his resignation voluntarily, it would be requested. Stassen saw the President today for about 45 minutes...and told reporters he neither submitted his resignation, nor was asked to do so. He said he may still run for governor...and that he will be seeing the President again soon, "at the President's request."

The United States ambassador to Moscow...Llewellyn Thompson...showed up today at a meeting of the cabinet. The White House says that Mr. Thompson gave the cabinet his views regarding the possibility of a summit meeting. Mr. Eisenhower attended the cabinet meeting despite his cold, then took the rest of the day off.

The House Appropriations Committee deferred action today on President Eisenhower's request for 750-thousand dollars with which to finance the new Civil Rights Commission. The committee noted that the commission is still in the process of being organized in that it has not employed a staff director. In a separate action, the committee approved nearly

→

43 and a half million dollars in emergency funds for unemployment compensation for veterans and federal employes. The Senate Appropriations Committee also approved the compensation measure, without waiting for it to pass the House.

The Senate anti-trust subcommittee today heard George Romney, president of American Motors, suggest that General Motors and Ford ought to be broken up into smaller companies. He also advocated breaking up the bargaining power of the United Auto Workers Union. Such power, he argued, should be "limited and divided" for the good of the country.

Secretary of the Treasury Anderson told Congress today that he can "conceive" of a situation in which a tax cut might "appropriately be brought into play" to stimulate the national economy. But the present state of the economy, he said, does not warrant such action. Anderson said he "would not be surprised to see even more bad news in certain sectors of our economy." On the other hand, he said, there are a "number of favorable factors"---such as lower inventories and an increase in home construction. He said that, in the long run, the outlook is good.

Edward R. Murrow: February 7, 1958. 7.45 p.m.

More light on the difficulty of getting started on negotiations with the Russians is thrown by the State Department's rejection of the Polish proposal for a nuclear-free zone in Central Europe. This is not a formal refusal to discuss the proposal, but it is just as official, since it comes in a guidance statement the State Department has sent to all embassies for use of our diplomats in their talks with other diplomats. It calls the Polish plan "highly dangerous", and enumerates the reasons for thinking so.

Both sides in the cold war say they want to improve their relations and decrease tensions. Both say they want to negotiate. The first difficulty is to know where to begin. Any fundamental changes are not to be hoped for at the start, and it is pretty widely agreed that the only way to reach the state of big steps is to succeed in a series of small ones. Mutual confidence is now wholly lacking. If it is to be built up, it needs to be strengthened bit by bit through minor successes. That makes the choice of the first steps important, more important, actually, than the minor problems themselves.

When the first hint came of setting up a nuclear-free zone in Central Europe, it was seized upon by many Western observers as a possible first step. Polish Foreign Minister ~~Rapacki~~ Rapuski formalized the idea in a speech at the United

Nations General Assembly, and the Kremlin subsequently endorsed it. Later Mr. Rapuski was asked by an American inquirer whether he included inspection in his plan, and he said he did. He believed a system of inspection could be worked out, presumably through the United Nations. Since then the Rapocki plan has been widely discussed and has found a degree of welcome among members of the British Labor Party and the German Social Democrats. Paris didn't like it, and it has been vaguely stated that Washington didn't either. Now the American objections are spelled out.

According to the N.Y. Times,

The State Department memo says that SHAPE, the Supreme Headquarters of the Western Powers in Europe, believes that acceptance of the Polish plan would require a complete re-assessment of the forward strategy and air defense of NATO. The concept of a NATO shield calls for the existence of strong forces stationed on the forward defense line. They aren't presumed to be strong enough to overwhelm any attack, but they must force the invader to fight his way in, rather than to advance freely across unprotected territory, and thus make the other side use major weapons first. The memorandum points out that Soviet forces in Central Europe are larger than those of the West. Russian divisions in East Germany alone come to twenty-two, as against the total NATO command of sixteen divisions, five of them American. It is

argued that the elimination of nuclear stockpiles would hurt the West more than the East, and so give the Russians a distinct military advantage. The view at SHAPE, however, is that the Polish plan would not require NATO to change the strategy of missiles or of the Strategic Air Command bombers.

On the question of inspection, the memo says there is no known inspection technique which would make it easy to hunt down the nuclear warheads designed for use in weapons capable of firing both nuclear and non-nuclear charges. And the memo goes on to say that the chief military problem at the moment is not in Central Europe, but in peripheral areas, notably the Middle East.

It may be asked whether the fact that Central Europe is less dangerous than the other areas is not an argument for talking first about Central European problems. Agreement there might be easier to reach. It also can be asked whether the expansion of the Strategic Air Command has not made the concept of the NATO shield fairly obsolete. Only a small force need be kept at the frontiers to force the other side to fight its way in, and it is the Strategic Air Command, not affected by the Polish proposal, and not the ground forces, that would deliver the heavy counter-blow.

What the State Department memo shows is that the Polish proposal by itself is fraught with difficulties, as presumably will be any subject dealing with the problems of power. But the memo does not attempt to weigh the disadvantages of the plan with the advantage of discussing it as a first step to further negotiations. Maybe the State Department has other steps in mind. If so, it has not yet told anybody what they are.

Back in a moment.—

George Bryan

Word for Today

This reporter is going to take leave of this microphone for a week or two for a vacation. And my good friend, Larry Lesueur, will be taking my place. Vacations are great restorers of energy. Mark Twain once spent a vacation at Lake Tahoe and said that camping on the shores of Lake Tahoe "would restore an Egyptian mummy to his pristine vigor. I do not mean the oldest and driest mummies," he said, "but the fresher ones".

Goodnight and good luck!

EDWARD R. MURROW WITH THE NEWS
CBS RADIO NETWORK

FRIDAY, FEBRUARY 7, 1958
7:45 - 8:00 PM EST

This is the news:

The Administration has chosen Roy W. Johnson, a vice president of General Electric, to be director of the new space agency in the Defense Department. The appointment was announced by Secretary of Defense McElroy, who said Johnson will formally take over on April first. The new agency will be known officially as the Advanced Research Projects Agency, and McElroy said that as its head Johnson will "be backed up by the most highly qualified scientists we can find." Johnson himself is an electronics expert with experience as an administrator. McElroy said...in answer to a reporter's question...that he believes the operation of manned satellites "seems very naturally to fall within the scope of Air Force responsibility." The defense secretary also said that the 200-mile limitation on the role of the Army with respect to missiles has been lifted. But it can be assumed, he said, that the Army will not "stretch this out to get into a long-range strategic mission." He said the main reason for removing the 200-mile limitation was to give the Army greater mobility. McElroy told reporters that... under compromise legislation passed by Congress yesterday...the Defense Department is charged with handling military space programs "indefinitely." Non-military programs, he said, will be turned over to any appropriate agency that may be set up after Congress decides whether those programs should be under military or civilian control.

At Cape Canaveral today, the Air Force tested its Atlas intercontinental ballistic missile for the fifth time. The last two firings...in December and January...were a success. Today, the missile got off smoothly then exploded after several thousand feet. A brief Air Force announcement said the missile "destroyed itself" after completing the powered phase of its flight.

The secretary of the Air Force...James Douglas...told the House Armed Services Committee today that testing of the Atlas missile "will continue at

an accelerated rate." He said the country's first operational unit to have an intercontinental ballistic missile will be ready at its post by next December. He identified the missile as the Atlas. And it "appears," he said, that combinations of rocket engines presently developed may have the capability of exploring space "beyond the moon." He said the power plant of the Titan missile is "particularly adaptable" to the exploration of space.

The House committee also received testimony today from Admiral Burke, chief of naval operations. He said Russia will have an atom-powered submarine by 1961 and that devising a defense against it will be "real rough."

Russia's new ambassador to the United States called on Secretary of State Dulles today, less than 24 hours after his arrival in Washington. Dulles described their talk as "the normal conversation that takes place when an ambassador presents his credentials. We didn't settle the disarmament question."

Harold Stassen said today that he will continue for the time being to serve as President Eisenhower's adviser on disarmament. Stassen has criticized Secretary Dulles' approach to Russia on disarmament, and there have been reports that he would resign to seek the Republican nomination for governor of Pennsylvania. one report was that if he did not submit his resignation voluntarily, it would be requested. Stassen saw the President today for about 45 minutes... and told reporters he neither submitted his resignation nor was asked to do so. He said he may still run for governor...and that he will be seeing the President again soon "at the President's request."

The United States ambassador to Moscow...Llewellyn Thompson...showed up today at a meeting of the cabinet. The White House says that Mr. Thompson gave the cabinet his views regarding the possibility of a summit meeting. Mr. Eisenhower attended the cabinet meeting despite his cold, then took the rest of the day off.

The House Appropriations Committee deferred action today on President Eisenhower's request for 750-thousand dollars with which to finance the new

Civil Rights Commission. The committee noted that the commission is still in the process of being organized in that it has not employed a staff director. In a separate action, the committee approved nearly 43 and a half million dollars in emergency funds for unemployment compensation for veterans and federal employees. The Senate Appropriations Committee also approved the compensation measure without waiting for it to pass the House.

Secretary of the Treasury Anderson told Congress today that he can "conceive" of a situation in which a tax cut might "appropriately be brought into play" to stimulate the national economy. But the present state of the economy, he said, does not warrant such actions. Anderson said he "would not be surprised to see even more bad news in certain sectors of our economy." On the other hand, he said, there are a "number of favorable factors"---such as lower inventories and an increase in home construction. He said that, in the long run, the outlook is good.

The Senate anti-trust subcommittee today heard George Romney, president of American Motors, suggest that General Motors and Ford ought to be broken up into smaller companies. He also advocated breaking up the bargaining power of the United Auto Workers Union. Such power, he argued, should be "limited and divided" for the good of the country.

More light on the difficulty of getting started on negotiations with the Russians is thrown by the State Department's rejection of the Polish proposal for a nuclear-free zone in Central Europe. This is not a formal refusal to discuss the proposal, but it is just as official, since it comes in a guidance statement the State Deparmment has sent to all embassies for use of our diplomats in their talks with other diplomats. It calls the Polish plan "highly dangerous" and enumerates the reasons for thinking so.

Both sides in the cold war say they want to improve their relations and decrease tensions. Both say they want to negotiate. The first difficulty is to know where to begin. Any fundamental changes are not to be hoped for at the

start, and it is pretty widely agreed that the only way to reach the state of big steps is to succeed in a series of small ones. Mutual confidence is now wholly lacking. If it is to be built up, it needs to be strengthened bit by bit through minor successes. That makes the choice of the first steps important, more important, actually than the minor problems themselves.

When the first hint came of setting up a nuclear-free zone in Central Europe, it was seized upon by many Western observers as a possible first step. Polish Foreign Minister Rapocki formalized the idea in a speech at the United Nations General Assembly, and the Kremlin subsequently endorsed it. Later Mr. Rapocki wasasked by an American inquirer whether he included inspection in his plan, and he said he did. He believed a system of inspection could be worked out, presumably through the United Nations. Since then the Rapocki plan has been widely discussed and has found a degree of welcome among members of the British Labor party and the German Social Democrats. Paris didn't like it, and it has been vaguely stated that Washington didn't either. Now the American objections are spelled out.

According to the New York Times, the State Department memo says that SHAPE, the Supreme Headquarters of the Western Powers in Europe, believes that acceptance of the Polish plan would require a complete re-assessement of the forward strategy and air defense of NATO. The concept of a NATO shield calls for the existence of strong forces stationed on the forward defense line. They aren't presumed to be strong enough to overwhelm any attack, but they must force the invader to fight his way in rather than to advance freely across unprotected territory, and thus make the other side use major weapons first. The memorandum points out that Soviet forces in Central Europe are larger than those of the West. Russian divisions in East Germany alone come to twenty-two, as against the total NATO command of sixteen divisions, five of them American. It is argued that the elimination of nuclear stockpiles would hurt the West more than the East, and so give the Russians a distinct military advantage. The view at SHAPE, however,

is that the Polish plan would not require NATO to change the strategy of missiles or of the Strategic Air Command bombers.

On the question of inspection, the memo says there is no known inspection technique which would make it easy to hunt down the nuclear warheads designed for use in weapons capable of firing both nuclear and non-nuclear charges. And the memo goes on to say that the chief military problem at the moment is not in Central Europe, but in peripheral areas notably the Middle East.

It may be asked whether the fact that Central Europe is less dangerous than the other areas is not an argument for talking first about Central European problems. Agreement there might be easier to reach. It also can be asked whether the expansion of the Strategic Air Command has not made the concept of the NATO shield fairly obsolete. Only a small force need be kept at the frontiers to force the other side to fight its way in, and it is the Strategic Air Command, not affected by the Polish proposal, and not the ground forces, that would deliver the heavy counter-blow.

What the State Department memo shows is that the Polish proposal by itself is fraught with difficulties, as presumably will be any subject dealing with the problems of power. But the memo does not attempt to weigh the disadvantages of the plan with the advantage of discussing it as a first step to further negotiations. Maybe the State Department has other steps in mind. If so, it has not yet told anybody what they are.

This is Ed Murrow. I'll be back in a moment with the word for today. Now, here is George Bryan.

GEORGE BRYAN: COMMERCIAL

MURROW: This reporter is going to take leave of the microphone for a week or two for a vacation. And my good friend, Larry Lesueur, will be taking my place. Mark Twain once spent a vacation at Lake Tahoe and said that camping on the shores of Lake Tahoe "would restore an Egyptian mummy to his pristine vigor. I do not mean the oldest and driest mummies," he said, "but the fresher ones."

Goodnight and good luck!

Lesueur for Murrow Mon., Feb. 10, 1958

Good evening, everyone... Here's what happened today:

Tunisia asked the United States to take action./.in the crisis growing out of the French bombing of that Tunisian border village. The French say they bombed the village because one of their planes was shot down by anti-aircraft fire from inside the Tunisian frontier. They insist their plane was over Algerian territory...and that their bombing raid was directed against military targets.//The Tunisian government calls the raid "a premeditated act of aggression."// It lists many of the 78 victims as women and children. //Most of the medium bombers used in the attack were made in the United States.// The Tunisian ambassador to the United States, Mongi Slim (who is also the Tunisian ambassador to the United Nations), called on Secretary of State Dulles this afternoon in Washington.

→

Their conversation lasted MORE THAN an hour. And when Ambassador Slim emerged from the meeting, he said, "I have asked the United States as a common friend of Tunisia and France to take action in this act of aggression." He told reporters that the "principle" of appeal to the United Nations had been decided by his government, but that the "procedures" are yet to be decided. The Tunisian ambassador said he had been "deeply [redacted] moved" by Mr. Dulles' feeling over the incident. Mr. Dulles had assured him, he said, that President Eisenhower ALSO was "profoundly disturbed". [redacted]

The incident is having profound repercussions [redacted] in France. [redacted] For that story, here is CBS News Correspondent David Schoenbrun reporting from Paris.

Tape runs 2:55
Ends on cue, "--to CBS News
in New York."

Its clear that this country and Britain are banking [redacted]
ANTI-N
on the hitherto "moderate" policies of Tunisian President Bourgiba, and hoping that the friendliness demonstrated by last year's anglo-american arms shipments, will keep Tunisia from bringing the case before the UN Security Council..//

But although Bourgiba is one of the most popular and firmly entrenched leaders in the world, [redacted] Tunisia is a democracy and President Bourgiba faces an aroused public opinion at home..

The Tunisian President
This is the second day running that he has refrained from asking his U.N. Ambassador to CALL FOR A [redacted] U.N. Security Council meeting. But Bourgiba will certainly TRY to [redacted] present his own people with SOME [redacted] concessions, if he keeps [redacted] the bombing incident out of court..."

But it seems likely that any concessions demanded from France, will fall short of [redacted] Bourgiba's maximum [redacted] hope for French evacuation of the IMPORTANT Naval base at Bizerte..

Thus far the Tunisian's have merely "reserved" the right to bring the subject before the U.N. Security Council.. Their caution may be tempered by the fact that Russia heads the Security Council this month..

The Russians would obviously welcome any such opportunity that at worst would cause this country and Britain to choose between France and the Arabs, or at least, force France into a veto..

Actually there is nothing to prevent the Russian Chairman, Arkady Sobelev, from summoning the U.N. Security Council himself, with a charge that the bombing incident is a threat to world peace.

But the Russians of course are aware that if Tunisia fails to support this charge, then the Soviet Union would be out on a limb..

However, this bombing incident, the biggest in many months of skirmishing along the Algerian-Tunisian frontier, cannot be swept under the rug... Some action will demanded, short of U.N. intervention.

It could take the form of a private settlement between Secretary General Dag Hammarshuld and the French and Tunisians... That's the best that can be hoped for.

U.N. Diplomats agree that the foremost issue at the moment, is to keep the situation from getting worse.. And that requires some solution of the problem we once faced in Korea.. The issue of "hot pursuit" by french troops after Algerian rebels, who use the Tunisian frontier as a "privileged sanctuary."

In Congress, Democratic Senator WAYNE Morse took the Senate floor today // and called the French bombing "an unconscionable act of aggression on the part of France." // The [redacted] use of American aircraft, he said, showed a "shocking" misuse of American aid. // And he suggested that the United States might do better to send underdeveloped countries more economic aid and cut down on the military assistance program. // Senate Republican Leader Knowland voiced a "sense of shock and disappointment" // in France. He said: "The friends of France hope this incident will not be repeated."

Tonight, Moscow radio began "cashing in" // on the bombing. [redacted] "The policy of the imperialist countries," it said, "carries persecution and death to the peoples of the East.

In East Germany today, Communist party boss Walter Ulbricht presented the puppet East German parliament with a draft law...placing over-all direction of the country's shaky economy under a powerful state planning commission. The change calls for the elimination of eight government ministries and ties-in East German production more closely with that of the Soviet Union.

In Peiping, Communist Premier Chou En-lai made his first MAJOR foreign policy speech today in nearly a year...and supported Russian proposals for a summit meeting. The Chinese leader told the National Peoples Congress that sentiment for a summit conference is---in his phrase---"surging up rapidly all over the world." But the United States, he claimed, is trying with "all sorts of excuses" to obstruct East-West negotiations. He accused the United States of maintaining a "rigid and hostile attitude" toward Red China. He again demanded the withdrawal of American forces from Formosa, together with the evacuation of ALL foreign troops from Korea. And he complimented Russia on being first to launch an earth satellite. The Russians, he said, "definitely have outstripped the United States in many important fields of science and technology."

Peiping Radio says the rubber-stamp congress APPLAUDED Chou En-lai

→

many times, as he delivered his 10-thousand-word address.

President Sukarno of Indonesia received an ultimatum tonight from Colonel Hussein, leader of the rebel movement centered on the island of Sumatra. The ultimatum, broadcast by the rebel radio, gives Sukarno five days to dissolve the cabinet of Premier Djuanda, tells Sukarno that if he FAILS to act, "We will declare ourselves free from any obligation to obey your orders." Rebel leaders say the outer islands of Indonesia are entitled to more self-rule. And they accuse the present cabinet of being too lenient--if, indeed, not in cahoots--with the Communists. Sukarno is hurrying home from Japan to try to cope with the situation.

Congress completed action today on an emergency appropriation of more than 43-million dollars, to be used TO PAY unemployment compensation to veterans and federal employes. Democratic Senator Douglas of Illinois cited rising unemployment today...when he proposed a series of tax cuts. (One of them would reduce income taxes by about 50 dollars a person). And, over in the House, Democratic Representative Flood of Pennsylvania, introduced legislation to create a public works program.

The House POSTPONED a showdown today on President Eisenhower's request for 750-thousand dollars for the new Civil Rights Commission. Opponents of the commission are in favor of denying the request, on grounds that it was drawn up by "persons not associated with the commission." They also cite the fact that the commission still does not have a staff director. The postponement voted today is to give the Administration time to "justify" the money request.

—Insert

In the Senate, nineteen Democrats and Republicans are sponsoring a 12-million-dollar program to help school integration projects. The bill would also authorize the Justice Department to start Civil Court action against persons who deprive anyone of civil rights generally.

The PROVISIONS OF THE LAW PASSED LAST year apply TO VOTING RIGHTS →

4 Opcc

THE ~~provisions of the law passed last year apply to VOTING rights.~~

The House subcommittee investigating the Federal Communications Commission met all day...debating ~~[illegible]~~ how to deal with its chief counsel, Bernard Schwartz. Schwartz first came under fire last month, when he "leaked" a staff memorandum...accusing some members of the commission of receiving improper favors from the broadcasting industry. This morning, the House investigating group voted 6 to 5 NOT to fire him at this time. And the rest of the day was spent questioning him behind closed doors. Schwartz came out of ~~[illegible]~~ THAT session...charging that ~~[illegible]~~ what most members of the subcommittee want is a "whitewash." Then came This afternoon's SESSION - AND THE FIRING OF Doctor SCHWARTZ JUST A FEW MINUTES ~~ago~~ -

This is Larry Lesueur. I'll be back in a moment with a Footnote to the Day's News. NOW A WORD ~~Finish this message~~ from Ford.

The country's first simulated space-man, going strong after MORE THAN 33 HOURS in solitary...The Air Force says Airman Donald Farrell of New York, is "holding up, beyond expectations."

H ermetically sealed in a three-by-five capsule, Farrell intends to stay inside until next saturday--about the length of time it would take to get to the moon...

But thus far young Farrell DEVOTING himself to furthering his career on earth...He's studying an english grammar, and an accounting text-book... GETTING READY PERHAPS for income tax day..

This is Larry LeSueur---good nite.

CBS RADIO DIVISION

EDWARD R. MURROW WITH THE NEWS - LARRY LESUEUR

Monday, February 10, 1958
7:45 - 8:00 P.M.

LESUEUR: ... The incident is having profound repercussions in France. For that story here is CBS News correspondent David Schoenbrun reporting from Paris.

SCHOENBRUN: The shock waves of the bombing at Sakiet have reached Paris and are shaking the government here tonight. Rarely has divided France been so deeply and emotionally split as on this issue of the bombing of a Tunisian village. All France is dividing into two parts: those who condemn and those who justify the air raid. On only one point is there any unanimity. Hardly anyone actually condones the bombing. Even those who justify it do so with evident embarrassment, deploring the means employed while justifying the act itself which they characterize as a legitimate act of self defense. This is the position taken publicly by the French Defense Minister Jacques Chaban-Delmas, who at this moment is reporting on the incident to an emergency cabinet meeting that has been in session all night. It's no secret that other Cabinet ministers, notably Foreign Minister Christian Pineau, have not followed Mr. Chaban-Delmas's lead; they have not approved the bombing raid. In fact, as one official put it to me today - "they might just as well have dropped the bomb on the Quai d' Orsay itself for this act can wreck French diplomacy." That's another point on which there's some agreement, that the net effect of this raid is negative. Even those who justify it as self defense against the rebels admit that it accomplished almost nothing. At most, it destroyed about two machine gun nests, which the rebels can easily replace. At the same time, the indiscriminate bombing of a civilian village killed many innocent people and dishonored the name of France. Many officials and many citizens told me today that this is a disgrace, and pleaded with me to tell fellow-Americans that Frenchmen are also outraged by this brutal act. Three

members of Parliament have already put down questions demanding a government explanation. Former Premier Mendes-France is leading the opposition. In an act of political courage, Mr. Mendes-France today went to express his personal regrets to the Tunisian Ambassador as he left Paris and told him he hoped he'd be back soon.

Among the critics of the bombing are such conservative and nationalistic papers as Paris Presse, which usually supports the Army of Algeria. This time, in a front page editorial entitled: "An accomplished fact," the paper denounces the bombing and suggests that the government itself had not been consulted. It implies that this has been a deliberate attempt by the military to create an incident to sabotage liberal reforms in North Africa. This kind of opposition suggests that the Colonial and military clique, which has so often sabotaged peace in the colonies, is beginning to lose popular support. Perhaps they went too far this time. The final answer is not in yet. Much depends on tonight's Cabinet meeting and the subsequent Parliamentary debate later this week. This affair of Sakiet may be a turning point in North Africa.

Now, back to CBS News in New York.

Ed. trans. P. O.

EDWARD R. MURROW WITH THE NEWS
CBS RADIO NETWORK

MONDAY, FEBRUARY 10, 1958
7:45 - 8:00 PM EST

LARRY LESUEUR REPORTING

Good evening, everyone...Here's what happened today:

Tunisia asked the United States to take action...in the crisis growing out of the French bombing of that Tunisian border village. The French say they bombed the village because one of their planes was shot down by anti-aircraft fire from inside the Tunisian frontier. They insist their plane was over Algerian territory...and that their bombing raid was directed against military targets. The Tunisian government calls the raid "a premeditated act of aggression." It lists many of the 78 victims as women and children. Most of the medium bombers used in the attack were made in the United States.The Tunisian ambassador to the United States, Mongi Slim (who is also the Tunisian ambassador to the United Nations,) called on Secretary of State Dulles this afternoon in Washington. Their conversation lasted more than an hour. And when Ambassador Slim emerged from the meeting, he said, "I have asked the United States as a common friend af Tunisia and France to take action in this act of aggression." He told reporters that the "piinciple" of appeal to the United Nations had been decided by his government, but that the "procedures" are yet to be decided. The Tunisian ambassador said he had been "deeply moved" by Mr. Dulles' feeling over the incident. Mr. Dulles had assured him, he said, that President Eisenhower also was "profoundly disturbed."

The incident is having profound repercussions in France. For that story, here is CBS News Correspondent David Schoenbrun reporting from Paris.

SCHOENBRUN: The shock waves of the bombing at Sakiet have reached Paris and are shaking the government here tonight. Rarely has divided France been so deeply and emotionally split as on this issue of the bombing of a Tunisian village. All France is dividing into two parts: those who condemn and those who justify the air raid. On only one point is there any unanimity. Hardly anyone actually condones the bombing. Even those who justify it do so with evident embarrassment,

deploring the means employed while justifying the act itself which they characterize as a legitimate act of self-defense. This is the position taken publicly by the French Defense Minister Jacques Chaban-Delmas, who at this moment is reporting on the incident to an emergency cabinet meeting that has been in session all night. It's no secret that other cabinet ministers, notably Foreign Minister Christian Pineau, have not followed Mr. Chaban-Delmas' lead; they have not approved the bombing raid. In fact, as one official put it to me today - "They might just as well have dropped the bomb on the Quai d'Orsay itself for this act can wreck French diplomacy." That's another point on which there's some agreement, that the net effect of this raid is negative. Even those who justify it as self-defense against the rebels admit that it accomplished almost nothing. At most, it destroyed about two machine gun nests, which the rebels can easily replace. At the same time, the indiscriminate bombing of a civilian village killed many innocent people and dishonored the name of France. Many officials and many citizens told me today that this is a disgrace, and pleaded with me to tell fellow-Americans that Frenchmen are also outraged by this brutal act. Three members of Parliament have already put down questions demanding a government explanation. Former Premier Mendes-France is leading the opposition. In an act of political courage, Mr. Mendes-France today went to express his personal regrets to the Tunisian Ambassador as he left Paris and told him he hoped he'd be back soon.

Among the critics of the bombing are such conservative and nationalistic papers as Paris Presse, which usually supports the Army of Algeria. This time, in a front page editorial entitled: "An Accomplished Fact," the paper denounces the bombing and suggests that the government itself had not been consulted. It implies that this has been a deliberate attempt by the military to create an incident to sabotage liberal reforms in North Africa. This kind of opposition suggests that the colonial and military clique, which has so often sabotaged peace in the colonies, is beginning to lose popular support. Perhaps they went too far

this time. The final answer is not in yet. Much depends on tonight's cabinet meeting and the subsequent Parliamentary debate later this week.

Now back to CBS News in New York.

LESUEUR: It's clear that this country and Britain are banking on the hitherto "moderate" policies of Tunisian President Bourguiba and hoping that the friendliness demonostrated by last year's anglo-american arms shipments, will keep Tunisia from bringing the case before the UN Security Council.

But although Bourguiba is one of the most popular and firmly entrenched leaders in the world, Tunisia is a democracy and President Bourguiba faces an aroused public opinion at home.

This is the second day running that the Tunisian president has refrained from asking his UN Ambassador to call for a UN Security Council meeting. But Bourguiba will certainly try to present his own people with some concessions, if he keeps the bombing incident "out of court."

But it seems likely that any concessions demanded from France will fall short of Bourguiba's maximum hopes for French evacuation of the important Naval base at Bizerte.

Thusfar the Tunisians have merely "reserved" the right to bring the subject before the U.N. Security Council. Their caution may be tempered by the fact that Russia heads the Secuirty Council this month. The Russians would obviously welcome any such opportunity that at worst would cause this country and Britain to choose between France and the Arabs, or at least force France into a veto.

Actually there is nothing to prevent the Russian Chairman, Arkady Sobelev from summoning the U.N. Security Council himself with a charge that the bombing incident is a threat to world peace.

But the Russians of course are aware that if Tunisia fails to support this charge, then the Soviet Union would be out on a limb.

However, this bombing incident, biggest in many months of skirmishing along

the Algerian-Tunisian frontier, cannot be swept under the rug. Some action will be demanded short of U.N. intervention.

It could take the form of a private settlement between Secretary General Dag Hammarskjold the French and the Tunisians. That's the best that can be hoped for.

U.N. diplomats agree that the foremost issue at the moment, is to keep the situation from getting worse, and that requires some solution of the problem we once faced in Korea...The issue of "hot pursuit" by French troops after Algerian rebels, who use the Tunisian frontier as a "privileged sanctuary."

In Congress, Democratic Senator Wayne Morse took the Senate floor today and called the French bombing "an unconscionable act of aggression on the part of France." The use of American aircraft, he said, showed a "shocking" misuse of American aid. And he suggested that the United States might do better to send underdeveloped countries more economic aid and cut down on the military assistance program. Senate Republican Leader Knowland voiced a "sense of shock and disappointment" in France. He said: "The friends of France hope this incident will not be repeated."

Tonight, Moscow radio began "cashing in" on the bombing. "The policy of the imperialist countries," it said, "carries persecution and death to the peoples of the East.

In East Germany today, Communist party boss Walter Ulbricht presented the puppet East German parliament with a draft law...placing over-all direction of the country's shaky economy under a powerful state planning commission. The change calls for the eliminiation of eight government ministries and ties in East German production more closely with that of the Soviet Union.

In Peiping, Communist Premier Chou En-lai made his first major foreign policy speech today in nearly a year...and supported Russian proposals for a summit meeting. The Chinese leader told the National Peoples Congress that sentiment for

a summit conference is---in his phrase---"surging up rapidly all over the world." But the United States, he claimed, is trying with "all sorts of excuses" to obstruct East-West negotiations. He accused the United States of maintaining a "rigid and hostile attitude" toward Red China. He again demanded the withdrawal of American forces from Formosa, together with the evacuation of all foreign troops from Korea. And he complimented Russia on being first to launch an earth satellite. The Russians, he said, "definitely have outstripped the United States in many important fields of science and technology." Peiping Radio says the rubber-stamp congress applauded Chou En-lai "many times" as he delivered his 10-thousand-word address.

President Sukarno of Indonesia received an ultimatum tonight from Colonel Hussein, leader of the rebel movement centered on the island of Sumatra. The ultimatum...broadcast by the rebel radio...gives Sukarno five days to dissolve the cabinet of Premier Djuanda, tells Sukarno that if he fails to act, "We will declare ourselves free from any obligation to obey your orders." Rebel leaders say the outer islands of Indonesia are entitled to more self-rule. And they accuse the present cabinet of being too lenient---if, indeed, not in cahoots---with the Communists. Sukarno is hurrying home from Japan to try to cope with the situation.

Congress completed action today on an emergency appropriation of more than 43-million dollars...to be used to pay unemployment compensation to veterans and federal employees. Democratic Senator Douglas of Illinois cited rising unemployment today...when he proposed a series of tax cuts. (One of them would reduce income taxes by about 50 dollars a person.) And, over in the House, Democratic Representative Flood of Pennsylvania introduced legislation to create a public works program.

The House postponed a showdown today on President Eisenhower's request for 750-thousand dollars for the new Civil Rights Commission. Opponents of the commission are in favor of denying the request, on grounds that it was drawn up by

"persons not associated with the commission." They also cite the fact that the commission still does not have a staff director. The postponement voted today is to give the Administration time to "justify" the money request.

The House subcommittee investigating the Federal Communications Commission met all day...debating how to deal with its chief counsel, Bernard Schwartz. Schwartz first came under fire last minth when he "leaked" a staff memorandum... accusing some members of the commission of receiving improper favors from the broadcasting industry. This morning, the House investigating group voted 6 to 5 not to fire him at this time. And the rest of the day was spent questioning him behind closed doors. Schwartz came out of that session...charging that what most members of the subcommittee want is a "whitewash." Then came this afternoon's session - and the firing of Doctor Schwartz just a few minutes ago.

This is Larry LeSueur. I'll be back in a moment with a Footnote to the day's news. Now, a word from Ford.

But thus far, young Farrell devoting himself to furthering his career on earth...he's studying an english grammar, and an accounting text-book...getting ready perhaps for income tax day.

This is Larry LeSueur----good nite.

Lesueur for Murrow Tues., Feb. 11, 1958

Good evening, everyone... Here's what happened today: //

President Eisenhower acted to give THIS country's sagging economy "a shot in the arm"..announcing he will ask Congress to approve a two-billion-dollar program for modernizing the Post Office system. The program would run from three to five years. And it would include the building of new post offices..as well as the remodeling of present buildings and the purchase of new, modern equipment to speed up mail service. //One billion, 500-million dollars of the money would come from private investors. They would build the post offices which, in turn, would be rented by the Federal Government. //The government itself would invest 175-million dollars a year for the duration of the program.

THE PRESIDENTIAL ANNOUNCEMENT CAME within hours after the government reported that unemployment jumped last month by MORE THAN 1-million persons--- to a total of 4-million, 494+thousand unemployed. (I'd like to discuss the economic situation further in a few minutes).

1A

~~Good evening, everyone. Here's what happened today.~~

New steps MAY have been taken toward a possible summit meeting. Secretary of State Dulles told reporters that a conference of foreign ministers does not NECESSARILY have to precede a meeting at the top level. What IS essential, he said, is that there be adequate preparation...and that the preliminary talks give assurance that agreements CAN be reached. Mr. Dulles denied that President Eisenhower ~~had~~ made a foreign ministers conference a pre-condition to any summit meeting. He recalled that the President...in his last letter to Premier Bulganin...had suggested preparations "through diplomatic channels and by our foreign ministers." And THAT, said Mr. Dulles, is quite another thing from saying there HAS to be a formal ministers meeting. ~~In fact, he said, a foreign ministers~~

→

conference...under certain circumstances...might be a mistake. He said Mr. Eisenhower is now composing a new letter to Bulganin, which will suggest procedures for getting preliminary negotiations under way. Before the letter is sent, it will be cleared by our NATO allies.

Secretary Dulles saw reporters just an hour after the new Soviet ambassador, Mikhail Menshikov, called at the White House to present his credentials. But it was not the usual diplomatic gesture. Instead of seeing the President for ten minutes...which is about as long as THE USUAL LENGTH OF THIS FORMALITY formality usually takes...the Russian envoy conferred with Mr. Eisenhower for half an hour. And afterwards the photographers were called in to take pictures of them smiling broadly and shaking hands. (In the beginning, News Secretary Hagerty had said that there would be NO pictures, but later the news photographers were summoned at the President's own request). Mr. Menshikov told reporters that he and Mr. Eisenhower had discussed the question of a summit meeting in general terms...and that both, in his phrase, had expressed hope that such a meeting would be "organized." At the same time, he issued a FORMAL statement...saying that Russia is "firmly convinced" the differences between the United States and

the Soviet Union can be settled through negotiations, "with consideration of our mutual interests and in the spirit of the principles of peaceful coexistence and cooperation." And in a formal statement of his own, President Eisenhower said the United States will try "through patient negotiation to achieve the settlement of pressing world problems, on a basis ~~which would promise~~ WHICH PROMISES a just and enduring peace."

The crisis continues...over the French bombing in Tunisia. Secretary of State Dulles suggested at his news conference that it may be necessary to have U.N. observers patrol the border of Algeria and Tunisia, to prevent further incidents. Dulles confirmed that the Tunisian ambassador has asked the United States to support an appeal to the U.N. Security Council. But he said this country will make no commitment until it is known just what action Tunisia wants the Security Council to take. However, he said, no right of "hot pursuit" can apply to last Saturday's bombing of the Tunisian border village, in which at least 75 persons...men, women and children...were killed.

The FRENCH ambassador...Herve Alphand...said in Washington today that the French government "deplores the consequences of this incident for the

→7

the civilian population." For this, he said, France may pay indemnities. But he went on to say that Algerian rebel forces have, from their sanctuary in Tunisia, made repeated attacks on French troops. He charged that there have been 22 such "aggressions" since September. And the victims, he said, have not always been men in uniform. He said French civilians ALSO have been killed in Algeria by "terrorists" operating from Tunisian soil.

The French National Assembly...in Paris...was plunged into acrimonious debate tonight over the Tunisian incident. And IN Tunisia, the Bourgiba government told France that it may no longer use the big naval base at Bizerte, and most of the French consulates in Tunisia have been ordered closed.

BUT PREMIER GAYAR HAS JUST WON A VOTE OF SUPPORT.

King Faisal of Iraq arrived in Jordan today...reportedly to set up a federation which Saudi Arabia MIGHT join later. Such a federation, of course, would give Arab nationalism a rallying point OUTSIDE the new state created by the union of Syria and Egypt. Syrian and Egyptian leaders have been trying to get the other Arab countries to join THEIR federation, WITH SCANT SUCCESS. The federation of Jordan and Iraq may be announced in a day or two. And it COULD mean the withdrawal of Iraq from

the Baghdad pact, but this is by no means certain.

A surprise development today in Red China...where Chou En-lai stepped down as foreign minister. Chou En-lai keeps his job as premier, and the Peiping announcement says that he resigned as foreign minister voluntarily. No official reason is given as to WHY he gave up the foreign ministry, but the speculation is that he did so to consolidate his power within the government. He is succeeded as foreign minister by his longtime associate, Chen Yee. Chen has been serving as VICE premier.

In Washington, the congressional investigation of the government's regulatory agencies took a new, dramatic turn tonight...when Bernard Schwartz announced he has handed over his "working files" of the investigation to Democratic Senator WAYNE Morse. The investigation is being carried on---NOT by a Senate committee--but by a subcommittee in the House. It was this subcommittee which last night...by a vote of 7 to 4...fired Schwartz as chief counsel, after Schwartz had charged that what some members of the group REALLY wanted was a "white-wash". The chairman of the subcommittee, Representative Moulder, sided with Schwartz and resigned the chairmanship. But he stayed on as a member of the subcommittee. The chairman of the

7

parent "Commerce" committee...Representative Harris...said today that he will now take charge of the investigation and conduct hearings "as publicly as possible." But testimony tending to incriminate persons named by a witness, he said, will be given behind closed doors in accordance with the House rules. Dr. Schwartz was ordered to appear before the subcommittee today with his files. He did show up with a lot of material, but he said tonight that his "personal working papers", including some government documents, had been turned over to Senator Morse. He said, "I did not STRIP the government files." Earlier in the day, he said, [redacted] he "had evidence" of the payment of money to a member of the Federal Communications Commission, in connection with the ~~assignement~~ [redacted] of a television channel. He did not name the commissioner, nor the television station. He also spoke of the "machinations of the White House clique." Tonight, 16 members of the Advisory Council of the Democratic National Committee asked for a brand-new investigation of [redacted] all six regulatory government agencies.

The Republican National Committee announced today that it will not accept any money raised by Texas Republicans last night at an "appreciation dinner" for Republican House Leader Joe Martin. The Republican National Committeeman from Texas--Jack Porter--had written a letter, calling on Texas Republicans to turn out for the affair. (The dinner was 100 dollars a plate). The letter said that Martin would have to "muster at least 65 percent of the [redacted] Republican votes to pass the gas bill this year." That, of course, is the measure which would ease federal controls on gas producers. The Republican National Committee denies...and so does Representative Martin...that they had any prior knowledge of the solicitation.

The american kaleidoscope took a sudden shift today, and the new picture is not at all rosy...As a result, the next few months are likely to see this country thinking more about conditions at home, INSTEAD OF in outer-space..

It's not that the sharp increase in unemployment announced today was totally unexpected...Secretary of Commerce Weeks, last Sunday predicted that joblessness might reach the five million mark this month...He also forecast that these figures would decline soon thereafter. But hard facts always have more impact than predictions...And the January increase in unemployment is the largest monthly increase ever recorded, since the government began its detailed economic records in 1940, the last year before the BIG war..

But the alarming fact is that President Eisenhower's optimistic messages on the state of the union, the budget and Economic report were written, on the basis of information furnished him, almost TWO MONTHS BEFORE the commerce Secretary made his predictions..

Its obvious that at The time the President's advisors were more optimistic...They figured the business slump would be short and shallow..

These impressions will now have to be re-examined.. IT MEANS [redacted], major policy decisions ahead... LIKE THE PRESIDENT'S PUBLIC WORKS ORDER TONITE -

Today's UNEMPLOYMENT REPORT shows that the business slump has hit the automobile, machinery and other hard goods industries, much harder than its hit food, textiles and other soft-goods.. But such are the ramifications of the automobile industry, that all are likely to be affected sooner or later.. For this is not just the kind of "rolling readjustment" we experienced in 1949 and 1953... This time practically every industry is being hit.. With the total number of jobless representing an eight year high..

Most heavily affected by unemployment are adult men... the "bread-winners." Almost two million married men were without jobs in January.. about five per cent of their total number in the ENTIRE american labor force.

The political repercussions have already begun.. Senator Douglas, [redacted] who yesterday advocated immediate tax reductions, today challenges the government's unemployment figures... The Illinois democrat says that if you take-in all those whose working hours and pay-checks have been reduced, you'd get at least another million unemployed...

3.3.3

Senator Kefauver agrees with him, says you can't solve the problem unless the administration RECOGNIZES that it exists..

Other democrats like MacNamara of Michigan have begun to call for a program of tax cuts and public works to strengthen the economy.

Ellender of Louisiana interpreted today's unemployment figures as evidence that President Eisenhower is whistling in the dark," when he says they'll be an upturn in the next two or three months."

Ewan Clague, the commissioner of Labor Statisttics acknowledges that if the unemployment total does not begin to decline by April or May, "We're in trouble."

The five leading economists who gave congressional testimony yesterday, agreed that the economy would NOT return to prosperity levels by November, unless the Administration takes further action.. But they didn't agree on what that action should be..

But at least one thing is NOW CLEAR..President Eisenhower IS TAKING a second look at the nation's business..For the sharpness of this unemployment rise was not forseen, when he prepared his state of the union messages LAST December.

JI

Russia had launched her two sputnicks by then... And our big worry was the rocket lag... The Democrats then, WERE whooping it up about defense, not the state of business... Since then, the army's success at launching a satellite, has blunted THE edge of the outer-space issue..

But from now until the November elections, at least, it looks as though Washington's chief concern will be centered on business...

IF the administration does not act FAST ENOUGH, congress may take the lead... Senator Hubert Humphrey TODAY [illegible] pointed out that "recession is communism's best ally."

TROUBLE IS the present recession is not localized...Its spreading over the Western Hemisphere from Canada to THE TIP OF SOUTH AMERICA... WHERE [illegible] american imports and capital are drying up... SO the big congressional debate may HINGE ON HOW TO CUT TAXES AT HOME WHILE BEING ASKED TO SPEND MORE MONEY ABROAD.

I'll be back in a moment with a footnote to the news...

But first a word from George Bryan..

Tomorrow, of course, is Lincoln's Birthday...

The Great Emancipator was born, one hundred and forty-nine years ago.

The Library of Congress will commemorate the day by announcing ~~the~~ ~~gift~~ of three new Lincoln letters, THE GIFT OF HIS ~~from his~~ great grandson, Lincoln Isham, of Dorset. Vermont.// One letter, addressed to Lincoln's wife, complains of the hard work of election campaigning.//.But it doesn't mention the speech he made in New York ..A speech which the New York Tribune called.."The greatest since Saint Paul.."

This is Larry LeSueur----good nite..

EDWARD R. MURROW WITH THE NEWS
CBS RADIO NETWORK

TUESDAY, FEBRUARY 11, 1958
7:45 - 8:00 PM EST

LARRY LESUEUR REPORTING

Good evening, everyone...Here's what happened today:

President Eisenhower acted to give this country's sagging economy "a shot in the arm"...announcing he will ask Congress to approve a two-billion-dollar program for modernizing the Post Office system. The program would run from three to five years. And it would include the building of new post offices...as well as the remodeling of present buildings and the purchase of new, modern equipment to speed up mail service. One billion, 500-million dollars of the money would come from private investors. They would build the post offices which, in turn, would be rented by the Federal Government. The government itself would invest 175-million dollars a year for the duration of the program.

The presidential announcement came within hours after the government reported that unemployment jumped last month by more than 1-million persons---to a total of 4-million,494-thousand unemployed. (I'd like to discuss the economic situation further in a few minutes.)

New steps may have been taken toward a possible summit meeting. Secretary of State Dulles told reporters that a conference of foreign ministers does not necessarily have to precede a meeting at the top level. What is essential, he said, is that there be adequate preparation...and that the preliminary talks give assurance that agreements can be reached. M.. Dulles denied that President Eisenhower made a foreign ministers conference a pre-condition to any summit meeting. He recalled that the President...in his last letter to Premier Bulganin...had suggested preparations "through diplomatic channels and by our foreign ministers." And that, said Mr. Dulles, is quite another thing from saying there has to be a formal ministers meeting.

Secretary Dulles saw reporters just an hour after the new Soviet ambassador, Mikhail Menshikov, called at the White House to present his credentials. But

it was not the usual diplomatic gesture. Instead of seeing the President for ten minutes...the usual length of this formality...the Russian envoy conferred with Mr. Eisenhower for half an hour. And afterwards photographers were called in to take pictures of them smiling broadly and shaking hands. Mr. Menshikov told reporters that he and Mr. Eisenhower had discussed the question of a summit meeting in general terms...and that both, in his phrase, had expressed hope that such a meeting would be "organized." At the same time, he issued a formal statement...saying that Russia is "firmly convinced" the differences between the United States and the Soviet Union can be settled through negotiations, "with consideration of our mutual interests and in the spirit of the principles of peaceful coexistence and cooperation." And in a formal statement of his own, President Eisenhower said the United States will try "through patient negotiation to achieve the settlement of pressing world problems, on a basis which promises a just and enduring peace."

The crisis continues...over the French bombing in Tunisia. Secretary of State Dulles suggested at his news conference that it may be necessary to have U.N. observers patrol the border of Algeria and Tunisia, to prevent further incidents. Dulles confirmed that the Tunisian ambassador has asked the United States to support an appeal to the U.N. Security Council. But he said this country will make no commitment until it is known just what action Tunisia wants the Security Council to take. However, he said, no right of "hot pursuit" can apply to last Saturday's bombing of the Tunisian border village, in which at least 75 persons...men, women and children...were killed.

The French ambassador...Herve Alphand...said in Washington today that the French government "deplores the consequences of this incident for the civilian population." For this, he said, France may pay indemnities. But he went on to say that Algerian rebel forces have from their sanctuary in Tunisia, made repeated attacks on French troops. He charged that there have been 22 such "aggressions" since September. And the victims, he said, have not always been

men in uniform. He said French civilians also have been killed in Algeria by "terrorists" operating from Tunisian soil.

The French National Assembly...in Paris...was plunged into acrimonious debate tonight over the Tunisian incident. But Premier Gayar has just won a vote of support. And in Tunisia the Bourgiba government told France that it may no longer use the big naval base at Bizerte, and most of the French consulates in Tunisia have been ordered closed.

A surprise development today in Red China...where Chou En-lai stepped down as foreign minister. Chou En-lai keeps his job as premier, and the Peiping announcement says that he resigned as foreign minister voluntarily. No official reason is given as to why he gave up the foreign ministry, but the speculation is that he did so to consolidate his power within the government. He is succeeded as foreign minister by his longtime associate, Chen Yee. Chen has been serving as vice premier.

In Washington, the congressional investigation of the govennment's regulatory agencies took a new, dramatic turn tonight...when Bernard Schwartz announced he has handed over his "working files" of the investigation to Democratic Senator Wayne Morse. The investigation is being carried on---not by a Senate committee but by a subcommittee in the House. It was this subcommittee which last night...by a vote of 7 to 4...fired Schwartz as chief counsel, after Schwartz had charged that what some members of the group really wanted was a "white-wash." The chairman of the subcommittee, Representative Moulder, sided with Schwartz and resigned the chairmanship. But he stayed on as a member of the subcommittee. The chairman of the parent"Commerce" committee Representative Harris...said today that he will now take charge of the investigation and conduct hearings "as publicly as possible." But testimony tending to incriminate persons named by a witness, he said, will be given behind closed doors in accordance with the House rules. Dr. Schwartz was ordered to appear before the subcommittee today with his files. He did show up with a lot of

material, but he said tonight that his "personal working papers," including some government documents, had been turned over to Senator Morse. He said, "I did not strip the government files." Earlier in the day, he said, he "had evidence" of the payment of money to a member of the Federal Communications Commission, in connection with the assignment of a television channel. He did not name the commissioner nor the television station. He also spoke of the "machinations of the White House clique." Tonight 16 members of the Advisory Council of the Democratic National Committee asked for a brand-new investigation of all six regulatory government agencies.

The Republican National Committee announced today that it will not accept any money raised by Texas Republicans last night at an "appreciation dinner" for Republican House Leader Joe Martin. The Republican National Committeeman from Texas---Jack Porter---had written a letter, calling on Texas Republicans to turn out for the affair. (The dinner was 100 dollars a plate.) The letter said that Martin would have to "muster at least 65 percent of the Republican votes to pass the gas bill this year." That of course is the measure which would ease federal controls on gas producers. The Republican National Committee denies...and so does Representative Martin..that they had any prior knowledge of the solicitation.

The trouble is the present recession is not localized. It's spreading over the Western Hemisphere from Canada to the tip of South America where American imports and capital are drying up. So the big congressional debate may hinge on how to cut taxes at home while being asked to spend more money abroad.

I'll be back in a moment with a footnote to the news. But first a word from George Bryan.

GEORGE BRYAN: COMMERCIAL

LESUEUR: Tomorrow, of course, is Lincoln's Birthday. The Great Emancipator was born one hundred and forty-nine years ago. The Library of Congress will commemorate the day by announcing three new Lincoln letters, the gift of his great grandson, Lincoln Isham of Dorset, Vermont. One letter, addressed to Lincoln's wife complains of the hard work of election campaigning. But it doesn't mention the speech he made in New York, a speech which the New York Tribune called, "The greatest since Saint Paul."

This is Larry LeSueur---good nite.

Lesueur for Murrow Wed., Feb. 12, 1958

Good evening, everyone../. Here's what happened today.

President Eisenhower voiced confidence that the economic situation WOULD soon improve. // But some Democrats had doubts. // Senator Mansfield said he would "hope" the President is right. // But there is no gainsaying, he said, that many segments of our economy are in bad shape, with little hope for recovery in the immediate future.

[redacted]

On the other hand, Republican Senator Flanders said "favorable" factors ARE apparent. And he cited continuing high personal income and

—7

a leveling off in business inventories. President Meany of the A.F.L. - C.I.O. took the view that unemployment will reach FIVE and a half million before it levels off. He thought Mr. Eisenhower was being over-optimistic. (Yesterday, the government reported nearly FOUR and a half MILLION persons unemployed). What President Eisenhower did TODAY was issue a special statement...predicting that employment will start picking up next month. And this, he said, "should mark the beginning of the end in the downturn of our economy, PROVIDED we apply ourselves with confidence to the job ahead." Mr. Eisenhower gave two reasons why he is confident. "First," he said, "IT'S my conviction that the underlying forces of growth remain strong and undiminished. As a nation, we must provide the needs of a population growing at the rate of 3-million a year." He gave as his second reason for confidence the "firm policy" of the government to foster recovery "in every "sound" way." He said, "I am making sure that we will go forward on every practical avenue of action." The President included with his statement a summary of what the Administration has done to help the economy. The list of steps taken included; increased expenditures for the national highway program, easing of CREDIT through the action taken by the Federal Reserve Board and "a sharp →

increase" in the rate at which defense contracts are being placed with private industry. He cited...as a further example...the 2-billion-dollar program for modernizing the Post Office system, announced by the White House last night.

Postmaster General Summerfield went before the Senate Post Office Committee today to urge speedy approval of the program, pointing out that it would have the dual purpose of improving postal service and giving the economy a timely stimulus. $2-billion, 500-million dollars of the money would come from private investors. They would build new post offices, which, in turn, would be rented by the Federal Government. The government itself would invest 175-million dollars a year for three to five years. A good part of THIS money would be used for new equipment, and the money would be raised by increasing the cost of a first class letter addressed out of town from three to FIVE cents. Democratic Senator Neuberger observed that, in his opinion, the government's share of spending was "extremely small" -- too little, he thought, to give the economy much of a shot in the arm." And Democratic Senator Kefauver called the whole plan "iffy"...said, "When you read the small print, it

doesn't amount to much."

Here in New York tonight...at a Lincoln Day dinner...Secretary of Commerce Weeks charged that "some" Democrats are "gambling with peace and prosperity solely for greedy partisan advantage." Said Weeks: "We are going to slug back. We're going to nail every reckless charge. We're going to [illegible] their records. We'll hit hard. BUT, we'll fight clean."

Another economic note: The Interstate Commerce Commission has authorized the nation's railroads to raise their freight rates an average of 2 percent on most of the things they carry. The rate INCREASE becomes effective at midnight Friday...and applies only to freight shipped across state lines.

Democratic Senator Harry F. Byrd...who has served as senator from Virginia for a quarter of a century...says he will not be a candidate for re-election in November. Byrd is chairman of the Senate Finance Committee, a vigorous fighter for government economy, and the leading power in Virginia politics. He is not seeking re-election, he says, primarily to keep a promise he made to his wife during the 1952 campaign...when he told her he was running for the Senate for the last time.

The Defense Department reports that one of the two radio transmitters in the first American earth satellite apparently has gone dead. The transmitter HAD been expected to run on its batteries FROM two to three weeks. The other transmitter may be sending back signals for as long as three months. Our satellite, (" the Explorer ") has now been in orbit for 12 days.

Vice President Nixon had a chat today with the new Russian ambassador, Mikhail Menshikov, lasting about 45 minutes. The Soviet ambassador went to see Mr. Nixon at his own suggestion. And he said after their conversation that Russia would welcome a visit by the Vice President.

The United States has offered the French and Tunisian governments its "good offices" to help them settle their dispute over the French bombing...last weekend...of that Tunisian frontier village. A State Department spokesman told reporters, "The United States will do whatever IT CAN

→

it[illegible]n to bring about an amicable and just solution."

President Bourgiba of Tunisia TODAY DEMANDED that France GET ALL ITS troops OUT OF HIS country. France has more than 15-thousand troops in Tunisia under TREATY AGREEMENT. But, declared Bourgiba, only their removal "can re-establish a climate of friendship...cleansed of the remains of colonialism." //

A proclamation...announcing the federation of the kingdoms of Jordan and Iraq...is now expected within 24 hours. Talks in Amman between rulers of the two countries (who are cousins) are reported going well. But the exact terms of the new federation...off-setting the union of Egypt and Syria...are still undecided. //It is not determined, for example, whether the federation would be represented, diplomatically, as a single unit. BUT THE KINGS WOULD EACH KEEP THEIR THRONES.

The new president of Guatemala is to be General Ydigoras...AS determined today by a vote in the Guatemalan congress. Ydigoras, a 62-year-old Conservative, failed to win a majority in last month's presidential election, although he received the most votes. The runner-up was Colonel Cruz Salazar, a self-styled [illegible] middle-roader.

In Washington, the confusion surrounding the House investigation of the federal regulatory agencies continues. The "personal files" on the investigation...THOSE...which THE ousted Chief Counsel Bernard Schwartz turned over to Democratic Senator Morse...were returned by Morse today to the HOUSE investigating committee. Morse said the files showed the Administration---in his words--)-"to be honeycombed with political immorality." But he believed they belonged with the committee.

Late today, the committee chairman---Representative Harris---told reporters that some of the files [redacted] are STILL missing. He did not mean, he said, that Morse had not returned all the papers...but rather "other" files HAVE been removed from the committee office.

Doctor Schwartz accuses the majority of the committee of trying to "white-wash" the inquiry, but Harris said again tonight that he will conduct "the most thorough investigation...insofar as possible...that Capitol Hill has ever seen." // House Speaker Rayburn said today that he, too, is in favor of a thorough investigation. // And Senator Morse came out for a parallel investigation BY the Senate...saying the problem "is sufficiently serious for a two-shotgun approach." [redacted]

[redacted]

AS MATTERS stand now, Schwartz has been subpoenaed to testify before the committee tomorrow. The committee wants to ask him about his charge that a member of the Federal Communications Commission [redacted] once received some money in connection with the award of a TV license.

The first conclusive results are in....on that parliamentary by-election in England. The election was a test of Conservative and Labour Party strength...and the Conservative Party candidate suffered a CRUSHING defeat. He not only lost to the Labour Party candidate, but ran [redacted] a poor third.

well

A national leader is hardly in a position to go around singing the blues... But there are some who think President Eisenhower may have erred on the optimistic side, when he said today that "March should mark the beginning of the end of the business downturn."

The President did list a number of things the government is doing, to encourage an economic recovery... And he was careful to assure the country that if other measures are needed, they would be promptly proposed.

But several well-known New York economists apparently differ with the President's Washington advisors... Most economists do agree that recovery will hinge largely on the general public's desire and ability to buy. But if the average consumer is in a cautious mood, or doesn't want to get any further in debt... A business recovery will be retarded... And retail economist A. W. Zelomek says he thinks the low point in general business will be reached within the next several months.. However, he predicts that the upturn will NOT be as rapid as in 1954. And he thinks this will be especially true regarding employment.

And Doctor Jules Bogen of New York Univsersity also says -

...

[redacted] "our economy has been weakened by a very prolonged boom.... and by great increases in debt.." SAYS [illegible] upturn will not come quickly.

At the commerce department itself, where the February unemployment figures ARE now being counted, some concern is being expressed that the recent bad weather, may push unemployment figures, higher than expected..

Of course, the weather has been unusually bad, but another trouble is that the present recession is not confined to the United States... [redacted] Economic storm signals are FLYING [redacted] in Europe too, and the recession is spreading over the Western Hemisphere from Canada to the tip of South America..

Now Its long been an economists' catch-phrase, that when this country "sneezes" ([redacted]) Europe "gets pneumonia"...Like many economic theories this isn't necessarily true.. It was not so [redacted] in 1953.. TODAY And Europe and South America are still engaged in a [redacted] struggle against [redacted] chronic inflation..

But the trouble is that although Europe was still recovering [redacted] from the war in 1953, the boom there is now levelling off.. And it may not be able to take up the slack [redacted] of The AMERICAN [redacted] recession.

3.

Even West Germany's AMAZING export [redacted]X figures show signs of declining, a hard-working Holland, operating under very tight controls, because OF THE FASTEST GROWING POPULATION IN EUROPE, HAS BEEN HIT BY the unexpected emigration of unemployed from Indonesia..

And Britain is at a point where the government is talking about relaxing some of ITS stringent control on money...after laboring under a bank interest rate OF a record seven per cent..

Europe is frankly waiting for an upturn in the American economy to take the slack out of its own stagnating business..

One of Europe's problems is that the countries to which it normally exports, the raw materials countries, are suffering from some of the lowest commodity prices in ALMOST TEN YEARS.

These countries have in the past been heavy buyers of both american and european goods.. One of our biggest markets is Canada, and there after years of boom, the economy is declining..Unemployment in Canada is now DOUBLE what it was, a year ago... The Canadian Prime Minister's recent call for serious american consideration of our economic relations, HAS NOT BEEN ANSWERED TO THEIR SATISFACTION by Washington..

~~The new Canadian government's economic difficulties have been so great~~

~~That they've decided to risk an election rather than present a budget.~~

Fact is, ~~that~~ Canada can hardly afford to buy as heavily as BEFORE in the United States, unless the inflow of american capital into Canada is resumed..

But the ~~flow~~ flow of capital from THIS COUNTRY into Canada is drying up. Not JUST because of Canadian "stickiness" about americans HAVING too much control of their industry and resources.. but becuz ~~XXX~~ most of the goals of the american strategic stockpile of METALS AND MATERIALS ~~a~~, have either been met, or lowered..

~~Our buying in Canada no longer comes near matching Canada's huge trade deficit in the United States..~~

AND MUCH THE SAME IS TRUE IN ~~A~~ Latin America... Our southern neighbors continued their heavy buying ~~in~~ FROM this country, until last year... But the transition has been very swift... ~~a~~ this country has now restricted its buying in South America. AND THE CONSEQUENT FALL IN ~~And~~ RAW MATERIAL prices is putting Latin-American ~~countries~~ heavily IN DEBT.

in other words, unless there's ~~XXXXXXX~~ a quick business pick-up in this country, the recession may spread EVEN more qucikly throughout the ~~XXXXX~~ world. And a world depression is communism's best ally. This is Larry LeSueur--I'll be back in a moment with a footnote to the news---But first a message from Ford.

America's first space-man, 23-year-old Donald Farrell, has been ON HIS simulated TRIP TO THE MOON for three days now...And in some ways he seems to be doing better inside his capsule, than the scientists on the outside. The Experimenters woke him up today, with a signal that his oxygen had been cut-off. And he slipped on his oxygen mask in jig time. ...Then the TV set on which they're watching him broke down. and they had to press their noses against his LITTLE window..THE YOUNG AIRMAN nodded cordially until they got it fixed.

This is Larry LeSueur. Goodnite.

WEDNESDAY, FEBRUARY 12, 1958
7:45 - 8:00 PM EST

LARRY LESUEUR REPORTING

Good evening everyone...Here's what happened today.

President Eisenhower voiced confidence that the economic situation would soon improve. But some Democrats had doubts. Senator Mansfield said he would "hope" the President is right. But there is no gainsaying, he said, that many segments of our economy are in bad shape, with little hope for recovery in the immediate future. On the other hand, Republican Senator Flanders said "favorable" factors are apparent. And he cited continuing high personal income and a leveling off in business inventories. President Meany of the A.F.L. - C.I.O. took the view that unemployment will reach five and a half million before it levels off. Mr. Eisenhower was being over-optimistic. (Yesterday, the government reported nearly four and a half million persons unemployed.) What President Eisenhower did today was issue a special statement...predicting that employment will start picking up next month. And this, he said, "should mark the beginning of the end in the downturn of our economy provided we apply ourselves with confidence to the job ahead." Mr. Eisenhower gave two reasons why he is confident. "First," he said "it's my conviction that the underlying forces of growth remain strong and undiminished. As a nation, we must provide the needs of a population growing at the rate of 3-million a yaar." He gave as his second reason for confidence the "firm policy" of the government to foster recovery "in every sound way." He said, "I am making sure that we will go forward on every practical avenue of action." The President included with his statement a summary of what the Administration has done to help the economy. The list of steps taken included: increased expenditures for the national highway program, easing of credit through the action taken by the Federal Reserve Board and "a sharp increase" in the rate at which defense contracts are being placed with private industry. He cited...

as a further example...the 2-billion-dollar program for modernizing the Post Office system, announced by the White House last night.

Another economic note: The Interstate Commerce Commission has aurhorized the nation's railroads to raise their freight rates an average of 2 percent on most of the things they carry. The rate increase becomes effective at midnight Friday...and applies only to freight shipped across state lines.

Democratic Senator Harry F. Byrd...who has served as senator from Virginia for a quarter of a century...says he will not be a candidate for re-election in November. Byrd is chairman of the Senate Finance Committee, a vigorous fighter for government economy, and the leading power in Virginia politics. He is not seeking re-election, he says,primarily to keep a promise he made to his wife during the 1952 campaign...when he told her he was running for the Senate for the last time.

The Defense Department reports that one of the two radio transmitters in the first American earth satellite apparently has gone dead. The transmitter had been expected to run on its batteries from two to three weeks. Tee other transmitter may be sending back signals for as long as three months. Our satellite, "the Explorer" has now been in orbit for 12 days.

Vice President Nixon had a chat today with the new Russian ambassador, Mikhail Menshikov, lasting about 45 minutes. The Soviet ambassador went to see Mr. Nixon at his own suggestion. And he said after their conversation that Russia would welcome a visit by the Vice President.

The United States has offered the French and Tunisian governments its "good offices" to help them settle their dispute over the French bombing...last week-end...of that Tunisian frontier village. A State Department spokesman told reporters, "The United States will do whatever it can to bring about an amicable and just solution."

President Bourguiba of Tunisia today demanded that France get all its

troops out of his country. France has more than 15-thousand troops in Tunisia under treaty agreement. But, declared Bourguiba, only their removal "can re-establish a climate of friendship...cleansed of the remains of colonialism."

A proclamation...announcing the federation of the kingdoms of Jordan and Iraq...is now expected within 24 hours. Talks in Amman between rulers of the two countries(who are cousins) are reported going well. But the exact terms of the new federation...off-setting the union of Egypt and Syria...are still undecided. It is not determined, for example, whether the federation would be represented, diplomatically, as a single unit. But the kings would each keep their thrones.

The new president of Guatemala is to be General Ydigoras as determined today by a vote in the Guatemalan congress. Ydigoras, a 62 year old Conservative failed to win a majority in last month's presidential election, although he recieved the most votss. The runner-up was Colonel Cruz Salazar, a self-styled middle-roader.

In Washington, the confusion surrounding the House investigation of the federal regulatory agencies continues. The "personal files" on the investigation.. those which the ousted Chief Counsel Bernard Schwartz turned over to Democratic Senator Morse...were returned by Morse today to the House investigating committee. Morse said the files showed the Administration---in his words---"to be honeycombed with political immorality." But he believed they belonged with the committee. Late today, the committee chairman---Representative Harris---told reporters that some of the files are still missing. He did not mean, he said, that Morse had not returned all the papers..but rather "other" files have been removed from the committee office. Doctor Schwartz accuses the majority of the committee of trying to "white-wash" the inquiry, but Harris said again tonight that he will conduct "the most thorough investigation...insofar as possible...that Capitol Hill has ever seen." House Speaker Rayburn said today that he, too, is in favor of a thorough investigation. And Senator Morse came out for a parallel investigation

by the Senate...saying the problem "is sufficiently serious for a two-shotgun approach."

As matters stand now, Schwartz has been subpoenaed to testify before the committee tomorrow. The committee wants to ask him about his charge that a member of the Federal Communications Commission once received some money in connection with the award of a TV license.

The first conclusive results are in...on that parliamentary by-election in England. The election was a test of Conservative and Labour Party strength and the Conservative Party candidate suffered a crushing defeat. He not only lost to the Labour Party candidate, but ran a poor third.

Well, a national leader is hardly in a position to go round singing the blues...but there are some who think President Eisenhower may have erred on the optimistic side, when he said that "March should mark the beginning of the end of the business downturn."

The President did list a number of things the government is doing to encourage an economic recovery. And he was careful to assure the country that if other measures are needed they would promptly be proposed.

But several well-known New York economists apparently differ with the President's Washington advisors.. Most economists do agree that recovery will hinge largely on the general public's desire and ability to buy. But if the average consumer is in a cautious mood, or doesn't want to get any further in debt...a business recovery will be retarded. And retail economist A.W. Zelomek says he thinks the low point in general business will be reached within the next several months...However, he predicted that the upturn will not be as rapid as in 1954, and thinks this will be especially true regarding employment.

And Doctor Jules Bogen of New York University says "Our economy has been weakened by a very prolonged boom...and by great increases in debt";an upturn will not come quickly, he says.

At the commerce department itself, where the February unemployment figures are now being counted...some concern is being expressed that the recent bad weather may push unemployment figures higher than expected.

Of course, the weather has been unusually bad, but another trouble is that the present recession is not confined to the United States. Economic storm signals are flying in Europe too, and the recession is spreading over the Western Hemisphere from Canada to the tip of South America.

Now, it's long been an economists catch-phrase, that when this country "sneezes" Europe "gets pneumonia". Like many economic theories this isn't necessarily true. It was not so in 1953. Today Europe and South America are still engaged in a struggle against chronic inflation.

But the trouble is that although Europe was still recovering from the war in 1953, the boom there is now leveling off. And it may not be able to take up the slack of the American recession. Even West Germany's amazing export figures show signs of declining, hard working Holland, operating under very tight controls, because of the fastest growing population in Europe has been hit by the unexpected emigration of unemployed from Indonesia. And Britain is at a point where the government is talking about relaxing some of its stringent controls on money...after laboring under a bank interest rate of a record seven percent. Europe is frankly waiting for an upturn in the American economy to take the slack out of its own stagnating business.

One of Europe's problems is that the countries to which it normally exports, the raw materials countries, are suffering from some of the lowest commodity prices in almost ten years.

These countries have in the past been heavy buyers of both american and european goods. One of our biggest markets is Canada and there after years of boom, the economy is declining. Unemployment in Canada is now double what it was a year ago. The Canadian Prime Minister's recent call for serious american

consideration of our economic relations has not been answered to their satisfaction by Washington.

The fact is Canada can hardly afford to buy as heavily as before in the United States, unless the inflow of american capital into Canada is resumed.

But the flow of capital from this country into Canada is drying up. Not just because of Canadian "stickiness" about americans having too much control of their industry and resources...but because most of the goals of the american strategic stockpile of metals and materials have either been met or lowered.

And much the same is true in Latin America. Our southern neighbors continued their heavy buying from this country until last year. But the transition has been very swift. This country has now restricted its buying in South America, and the consequent fall in raw material prices is putting Latin-America heavily in debt.

In other words, unless there's a quick business pick-up in this country, the recession may spread even more quickly throughout the world. And a world of depression is communism's best ally.

This is Larry LeSueur. I'll be back in a moment with a footnote to the news. But first a message from Ford.

This is Larry LeSueur. Goodnite.

Lesueur for Murrow Thurs., Feb. 13, 1958

Good evening, everyone... Here's what happened today:

House investigators heard Dr. Bernard Schwartz testify..under oath..that a member of the Federal Communications Commission received more than 2-thousand dollars from a lawyer interested in a television station in Miami. Dr. Schwartz testified before the same House committee which,.. earlier this week..fired him as chief counsel, after he accussed the majority of the committee of wanting to "whitewash" the F.C.C. Dr. Schwartz made other charges, including so-called "machinations" on the part of certain White House officials..and the alleged pay-off of a member of the F.C.C., in connection with the awarding of a television channel to a Miami station. Schwartz identified the commissioner receiving the money as Richard A. Mack.

→

The lawyer involved in the case, he said, was Thurman Whiteside...whom he described as a Florida attorney with the reputation of being a "fixer". And he identified the station in question as that operated in Miami, on Channel 10, by a subsidiary of National Airlines. Three other companies were competing for the channel. And the F.C.C. voted...4 to 2... in favor of the company owned by the airline, contrary to the recommendation of a field examiner. Mack was one of the four commissioners voting FOR the airline subsidiary. Schwartz introduced, as evidence, six cancelled checks totaling 26-hundred and fifty dollars...written out to Mack, and purportedly signed by Whiteside. According to Schwartz, Mack told him these were loans...which, so far as Mack could "specifically" remember, have never been repaid. REACHED in Miami this afternoon, Whiteside accused Schwartz of "lying in his teeth"...said he NEVER was employed as an attorney in the television case. So far, reporters have been unable to reach Mack for comment. The committee has recessed its hearings until Monday. But, ON instructions from Attorney General William Rogers, the F.B.I. is investigating Schwartz' allegations. And in the Senate, DEMOCRAT Wayne Morse introduced a resolution for a separate,

investigation THERE. Morse's resolution calls for the creation of a special Senate committee to investigate the F.C.C. and the other regulatory agencies. #

The crisis...growing out of the French bombing in Tunisia...provoked debate today on the floor of the Senate. The Senate Democratic whip, Mike Mansfield, said he could not believe the bombing of the village was an act of the French people, OR of France, but "an act of madness perpetrated by a handful of irresponsible men." Senator Mansfield supported the idea of having U.N. observers patrol the border between Algeria and Tunisia. And urged American support of the case of Tunisia against France in the U.N. Democratic Senator Humphrey demanded the return of American aircraft used in the attack...arguing that the bombers had been supplied to France for NATO purposes. And Republican Senator Javits suggested that America send aid to the survivors. All three urged President Eisenhower to seek immediate U.N. intervention in the dispute.

In Tunisia today, President Bourgiba said his country would welcome United States mediation of his demand for the evacuation of all French troops from Tunisia. At the same time, he warned the French

—7

not to try to use the big naval base at Bizerte. "If French ships force their way IN or OUT of Bizerte," he said, "we are ready to fight." And Bourgiba added that...if it became necessary, he would personally lead the Tunisian people in a guerrilla war.

In Paris, Foreign Minister Pineau told the National Assembly tonight that his government has made "specific proposals" for easing the tension between Tunisia and France. "But," he said, "it is not possible to start talks as long as the Tunisian government exercises inadmissable pressure against our troops." Monsieur Pineau said the talks would cover problems of joint defense...they would NOT, he said, deal with the "domestic problem" of Algeria.

Our State Department denounced Russia today for spreading "lies" to the effect that the United States masterminded the French attack. The department was referring to a story in the Communist newspaper Pravda, and it said such "outrageous allegations" throw grave doubt on Russia's frequent assertion that it wants to reduce tension between East and West.

A surprise meeting today in Athens--a conference between the British governor of Cyprus, Sir HUGH Foot, and the exiled leader of the Greek Cypriots, Archbishop Makarios. Nothing concrete is reported FROM the meeting, and the political future of the British island colony remains in doubt. A conference in Athens...between British Foreign Secretary Selwyn Lloyd and the Greek foreign minister...broke up today in deadlock.

Great Britain announced today...in a "White Paper" that ITS developing a ballistic missile, more advanced than any now in the possession of the United States. The missile, it said, is being designed so that it can be launched from underground sites. The announcement went on TO SAY that British aircraft are now being armed with "BRITISH" hydrogen bombs.

No announcement yet on the imminent federation of Jordan and Iraq.

President Eisenhower flew to Georgia today...for 10 days of rest and relaxation on the plantation of former Secretary of the Treasury, George Humphrey. The presidential party found the inch of snow that fell last night mostly melted.

The Democratic governors of 11 states have sent a telegram to the President...recommending a broad program to prevent a depression.

The program calls for welfare and educational expansion, further easing of credit, more public works, and..possibly..a tax cut directed at low-income families.// The governors offered to go to Washington...at the President's convenience..to discuss [redacted] conditions existing in their respective states.//

In New Orleans tonight, the Circuit Court of Appeals...for the second time...upheld a lower court decision [redacted] ordering New Orleans to INTEGRATE its public schools.

And...here in New York..a federal grand jury indicted former President Prio of Cuba..and eight other persons...on charges of plotting a military expedition to overthrow the Batista government.// They are accused of violating the neutrality laws of the United States. And all nine [redacted] have been ordered placed under arrest.

Batista has claimed that [redacted] Prio is behind the Cuban guerrilla leader, Fidel Castro. Tonight, Prio denied the charge...saying, "Batista has tried to hide his weakness by continually blaming me for the fact that the Cuban people are tired of being oppressed." He also denied the charges leveled against him in today's indictment.

Roy W. Johnson showed up in Washington today...to break in as the nation's first "space director." The G.E. vice president told reporters he would need "at least 90 days," before he would know what he is going to do. [redacted] "Why," he said, "I haven't even got a secretary yet!"

(1)

United States policy in the Middle East, or what some people call our lack of one, has nevertheless always been in favor of the Arab states helping themselves.. But the rash of mergers which is now taking place at this cross-roads of the world, has left many vital questions unanswered.. And it appears likely that the merging states, like Egypt and Syria, Iraq and Jordon, don't know ALL THE answers themselves..

There's been a noticeable lack of enthusiasm on the part of the General public in Egypt, and especially in Syria, over the formation of what IS TO BE called the United Arab Republic..

This reporter recently saw the ballots to be distributed for the plebiscite in both countries next week... And it will be nearer to a totalitarian election than nine is to ten.. The ballots festure a large picture of President Nasser, FOR President of the new political unit... The only right the voters have is to agree or not agree... There are no other candidates.. ONLY Nasser..

One of the larger mysteries, is what will happen to the political parties of Syria.. Especially the powerful Ba'ath party of its ruling elements.

~~This party is now without its members in other Arab states, and there'll be some unhappiness, if its dissolved..~~

IN SYRIA, ~~But~~ most of the uncertainty I'M TOLD, CENTERS among the military men, government workers and businessmen ~~of Syria~~..The Syrian businessmen ~~of Syria~~ are among the most successful and conservative in the Middle East../..And if Syria is really to be ~~absorbed~~ absorbed by Egypt, they naturally wonder how they'll fare under the arrangement.

Like the rest of the world, ~~the~~ These Syrian businessmen are aware that Their government ~~Syria~~ and Egypt ~~both~~ recently SIGNED long-term trade pacts with Russia..~~And in the knowledge that both countries are now largely dependent on Moscow,~~ AND they wonder if Nasser would have dared the disapproval of Russia by initiating the merger of the two states HIMSELF./ ~~And~~ like many western ~~Moscow~~ diplomats, ~~both~~ Neither Syrian NOR ~~nor~~ Egyptian businessmen, ~~are not~~ sure whether their merger WAS ~~was~~ not actually ~~encouraged~~ encouraged by Moscow..

~~Publically, the state of Isreal has been remarkably quiet about the formation of the new arab state on its eastern flanks./~~ Publically, the state of Isreal has been remarkably quiet about the formation of ~~the~~ the new arab state on its ~~northern and eastern~~ Flanks./. The Isrealis naturally would welcome the formation of a stable Arab federation around them if they were permitted to play a legitimate role in it-, while

maintaining their sovrenty. But in the absence of a peace treaty, the Isrealis are clearly concerned whether the Nasser-run Arab state has been formed for economic or military reasons. This is Nasser's first big move since the Suez crisis and his defeat by the Israelis in the Sinai campaign. It's a question whether he is thirsting for revenge. A PAN ARAB EMPIRE — OR BOTH! Nasser was disappointed with the failure of the tri-partite military pact with Syria and Jordon at the time of the SUEZ CRISIS. Neither of them came to his aid...

Now the situation will be carefully scrutinized to see if Nasser starts staffing the Syrian army with Egyptian officers..

Many of the Western nations are still in the dark about the new Arab republic... ONE question that arises is whether their embassies in the syrian capital of Damascus will now be reduced to consulates, and all future DIPLOMATIC relations be conducted BY Cairo.. under a single flag.

It seems clear that the soon-to-be proclaimed union of Iraq and Jordon, comes as a counter-move to the federation of Egypt and Syria.. Otherwise, oil-rich Iraq, would never HAVE TAKEN on the FINANCIAL burdens of Jordon, PLUS the hostility of Jordons pro-Nasser population of Palestinian refugees..

Not to mention Jordon's potentially dangerous border with Isreal..

But Iraq's first thought is for the security of THE outlets FOR its tremendous oil DEPOSITS. Syria and Egypt have no oil, but they DO control Iraq's only outlets to the world market--through the Syrian pipe-line, and the Suez Canal. And Egypt's President Nasser now SITS ON both..

ITS FOR this reason that King Saud of Saudi Arabia is playing his cards close to his chest. Its known that King Hussein of Jordon sent him a personal message two weeks ago, asking him to join today's conference with the King of Iraq..

But Saudi Arabia's oil also passes through the Syrian pipeline, and through Suez, SO King Saud is undoubtedly weighing the consquences of any move which might irritate President Nasser..

The question whether Iraq will now withdraw from anti-communist Bagdad pact, is probably less important than the future control of the Middle East oil.. FOR if Russia works Thru Nasser can keep its finger on Europe's major oil supply, then the free world is in trouble..

This is Larry LeSueur...I'll be back in a moment with a footnote to the news--but first george Bryan.

While awaiting the arrival of President and Mrs. Eisenhower at Thomasville, Georgia, today, newsmen got a chance to ask former secretary of the Treasury, George Humphrey, a vital question..

"Is the present business recession, the one he warned about while in office? At that time Humphrey said that if high federal spending kept up...we'd have a depression that "would curl your hair!"

No, said Humphrey today...explained he was referring to several years of high government spending...and only several months have gone by since he said it..//

This is Larry LeSueur----Good Nite.

Now the situation will be carefully scrutinized to see if Nasser starts staffing the Syrian army with Egyptian officers.

Many of the Western nations are still in the dark about the new Arab republic. One question that arises is whether their embassies in the Syrian capital of Damascus will now be reduced to consulates, and all future diplomatic relations be conducted by Cairo under a single flag.

It seems clear that the soon-to-be proclaimed union of Iraq and Jordan comes as a counter-move to the federation of Egypt and Syria. Otherwise,

oil-rich Iraq would never have taken on the financial burdens of Jordan, plus the hostility of Jordan's pro-Nasser population of Palestinian refugees. Not to mention Jordan's potentially dangerous border with Israel.

But Iraq's first thought is for the security of the outlets for its tremendous oil deposits. Syria and Egypt have no oil, but they do control Iraq's only outlets to the world market through the Syrian pipe-line, and the Suez Canal, and Egypt's President Nasser now sits on both.

It's for this reason that King Saud of Saudi Arabia is playing his cards close to his chest. It's known that King Hussein of Jordan sent him a personal message two weeks ago, asking him to join today's conference with the King of Iraq.

But Saudi Arabia's oil also passes through the Syrian pipeline and through Suez. So King Saud is undoubtedly weighing the consequences of any move which might irritate President Nasser.

The question whether Iraq will now withdraw from anti-communist Baghdad Pact, is probably less important than the future control of the Middle East oil for if Russia working through Nasser can keep its finger on West Europe's major oil supply, then the free world is in trouble.

This is Larry LeSueur. I'll be back in a moment with a footnote to the news---but first George Bryan.

GEORGE BRYAN: COMMERCIAL

LESUEUR: While awaiting the arrival of President and Mrs. Eisenhower at Thomasville, Georgia, today, newsmen got a chance to aks a former secretary of the Treasury, George Humphrey, a vital question. "Is the present business recession, the one he warned about while in office? At that time Humphrey said that if high federal spending kept up...we'd have a depression that "would curl your hair!" No said Humphrey today...explained he was referring to several years of high government spending...and only several months have gone by since he said it.

This is Larry Lesueur--Good Nite.

Lesueur for Murrow Fri., Feb. 14, 1958

Good evening, everyone. Here's what happened today:

The Tunisian bombing dispute had repercussions on half a dozen fronts. Tunisia observed a day of mourning for victims of the French attack...as President Bourgiba appealed to his people to remain calm. And a general strike...scheduled to last all day...was limited to four hours. In Paris, the French defense minister said France will not allow its blockaded garrisons in Tunisia to be starved out. But, actually, the Tunisian authorities ARE permitting food to be delivered to the French garrisons. Bourgiba, however, is unyielding in his demand that the 15-thousand FRENCH troops in Tunisia must leave the country. The grave view of the situation...taken by France.../.is ~~demonstrated~~ DEMONSTRATED by the fact that today the French government [redacted] cancelled all

→

military leaves AND all civilian travel permits to and from Algeria, Tunisia's next-door neighbor. And here in this country, a State Department spokesman says that Secretary Dulles may interrupt his SEA-SIDE vacation, ~~in order~~ to deal personally with the crisis as it affects the United States.

Last night, Tunisia filed a complaint with the U.N. Security Council, charging France with aggression in the bombing of Sakiet last Saturday. According to the Tunisian complaint, 79 persons were killed...including 20 children...when French bombers hit the small frontier village. And now France has filed a COUNTER-complaint. IT ~~complained~~ PROTESTS "repeated violations of the Algerian frontier by elements coming from Tunisia"...and accuses the Tunisians of allowing Algerian rebel forces in the village to fire across the border at French aircraft. ~~My colleague, David Schoenbrun, cables me from Paris that the French are not arguing that two wrongs make a right. But, says Schoenbrun, the French will try to demonstrate that the wrong is not all on their side...and thus avoid U.N. condemnation and achieve a settlement by negotiation with the Tunisian government.~~ TRYTO Foreign Minister Pineau said today that neither he NOR Premier Gaillard knew beforehand of the French ~~attack~~. AIR RAID. AFTER the

→

attack, he said, the government had to back up the Army in what it did. The U.N. Security Council has agreed to meet Tuesday afternoon to take up Tunisia's case...with Russia's Arkady Sobolev as chairman under the Council's MONTHLY rotation rule. The complaint filed by France ALSO will come up for debate. It is second on the provisional agenda. //

TODAY'S federation of Jordan and Iraq has been received cautiously in Washington. The State Department said the United States welcomes any move toward closer association between Arab peoples...so long as the move takes place "with due regard to the desires of the peoples directly concerned and the welfare and stability of the area as a whole."

A reporter asked the department spokesman, Lincoln White, if that meant the United States also welcomes the recent MERGER of Egypt and Syria. Mr. White ducked the question...referred the reporter to Mr. Dulles' statement on the same subject at his last news conference which was simply "we sympathize very much with the desire for Arab unity." Mr. White would go no FURTHER than that. // Under the new federation between Jordan and Iraq, the two countries will be joined under a single constitution...with one foreign office and a combined army...but both King Faisal of Iraq and King Hussein of Jordan...who are 22 and cousins...will →

keep their thrones...as rulers of their countries' INTERNAL affairs. Faisal will be Chief of State. Hussein will be his deputy. And the way is left open for Iraq to continue as a member of the Baghdad Pact. The agreement...signed today...provides that treaties and international agreements "previously concluded" by either of the two countries will remain valid.

The Atomic Energy Commission and the Defense Department issued a joint statement today...on the dangers incidental to the crash of an airplane, train or truck carrying a nuclear weapon. The statement conceded that a poisonous dust cloud MIGHT be created by such an accident. But the dust, it said, would NOT be radioactive. The dust would cause injury "only if taken internally, as by breathing." There would be almost NO chance of a nuclear explosion in such an accident. A high Defense Department official has described the odds of that happening as "one in a million."

The Navy announces that it has awarded contracts for the construction of three atomic-powered submarines...designed for firing the Polaris guided missile. Two will be built by the Electric Boat Company at Groton, Connecticut...and the third at the Mare Island naval shipyard in California.

California. | The three ~~subs~~ ABOUT ~~cost~~ ~~billion~~ billion dollars. ~~And the first delivery is expected in 1960,~~ at which time the ~~Polaris~~ 1500 mile rocket Polaris is also expected to be ~~ready for quantity production.~~

Another | unfavorable ECONOMIC ~~report~~ report tonight. | The Federal Reserve Board says that | industrial production | in January dropped to the lowest level in three years.

The member of the Federal Communications Commission. |..accused yesterday of receiving more than 2-thousand dollars | in connection with a television case..|.demanded an opportunity today | to give HIS side of the story. The commissioner...Richard Mack. |.wrote a letter to Chairman Harris, of the House investigating Sub committee | asking for an early opportunity to refute the charges. || Harris said tonight that Mack will be given that opportunity | on Wednesday or Thursday of ~~this~~ next week. ||The charges were leveled ~~against~~ AGAINST him by Dr. Bernard Schwartz, ousted chief counsel of the committee. | And in his letter, | Mack denounces the charges as "distortations. |..without foundation." | He expresses confidence that the committee ~~will~~ WILL find them "unsubstantiated" | once all the facts are presented.

Yesterday, Great Britain issued a "White Paper"...on the subject of defense. | Peace, | it said, is being maintained by a BALANCE of arms. / British aircraft | are carrying H-bombs "Made in Britain", | and Britain is developing a new ballistic missile, | in partnership with the United States. For an analysis of the "White Paper"..AND the thinking behind it...here is CBS News correspondent Charles Collingwood | reporting from London.

(Tape runs 2:55
Ends on cue: "--to CBS News in N.Y."

6/15

Britain is developing its missile program in partnership with the United States... || Another American partner is Italy. || .scene of America's first | operational | guided missile command. CBS News Correspondent Winston Burdett | has just accompanied the men | of that command on maneuvers. / And here...from Rome...is his report.

40

(Tape runs 3:15
Ends on cue: "--to CBS News in N.Y."

Those are two reports...from London and Rome...on the vital subject of Western defense.

This is Larry Lasueur. Ill be back in a moment with a footnote to the News - But first George Bryan

America's first simulated spaceman is now on his way back from his mythical trip to the moon..If he can endure the lonliness, they'll let him out of his capsule in another 48 hours..Young Mr. Farrell did show real fatigue last nite, and slept a long time today.. But apparently [redacted] he's free from any worries about his strange confinement, OR about what's happening on earth.. We're told there's one button he could push if he wanted OUT.. B ut he's not shown any eagerness to get out--NOR did he send ANYONE a Valentine today..

this is Larry LeSueur----Goodnite.

CBS RADIO DIVISION

EDWARD R. MURROW WITH THE NEWS - LARRY LESUEUR

Friday, February 14, 1958
7:45 - 8:00 P.M.

LESUEUR: ... For an analysis of that White Paper and the thinking behind it, here is CBS News correspondent Charles Collingwood reporting from London.

COLLINGWOOD: It was Voltaire, a Frenchman, who observed admiringly that the British people are a people who defend themselves; that's still true. But in the nuclear age, it's becoming more and more difficult. The new British White Paper on defense, like the one before it, is based on the explicit recognition that Britain cannot be defended against nuclear attack. If that is so, what kind of strategy should she pursue? That's the problem to which the White Paper addresses itself. The answer it gives is clear. Britain, it says, must put her faith in the ability of the nuclear deterrent to prevent a war happening at all. To this end, britain will allow American intermediate range ballistic missiles to be stationed on her soil; she will develop and install her own missiles; she will equip her long-range bombers with hydrogen bombs; and she will draw the logical conclusion from all this and cut down on the conventional forces she maintains.

The British defense planners think that this is enough to prevent a war. The world balance of power, they say in the White Paper, is still tilted in favor of the West. The fact that the Soviets put up their Sputniks is irrelevant. It does not mean that they have or are about to have an effective intercontinental missile. That, says the White Paper flatly, is still several years away. And even when it comes, there is every reason to believe the West will have its own means of insuring effective relatiation.

With this balancing fear of mutual annihilation, as it calls it, thus in operation, the British Government sees no military reason why a world conflagrationshould not be prevented for another genera-

tion. Indeed, definitely. But the new White Paper has not met with universal applause in Britain. Indeed, it is being criticised in some very responsible quarters.

Two fundamental doubts are being expressed. The first is the familiar one, that if Britain relies exclusively upon the nuclear threat and scales down her regular forces, how can she cope with the brush fire wars, which sometimes seems likelier to characterize our time than a nuclear conflagration. The second is that since the United States is the proprietor of the real nuclear deterrent, and Britain is under that shield, why should Britain spend her own slender resources upon making her own hydrogen bombs and intermediate range missiles? Really, to carry out the logic of the White Paper, says the Manchester Guardian, among others, Britain should let the United States carry the nuclear ball and really save money by getting out of the hydrogen bomb business altogether. These and other points will be much argued here. But their debate does not in any way alter the fact that it's just as true today as it was in Voltaire's day that the British are a people who defend themselves.

Now, back to CBS News in New York.

LESUEUR: Britain is developing its missile program in partnership with the United States. Another American partner is Italy, the scene of America's first operational guided missile command. CBS News correspondent Winston Burdett has just accompanied the men of that command on maneuvers and here, from Rome, is his report.

BURDETT: Just outside the city of Vicenzie in the Po Valley Plain in northern Italy, is the headquarters base of the U.S. Army's 1st Overseas Missile Command. The base and the troops have been there for some time. But the new command, our first operational guided missile command anywhere, has been in existence for less than two months. It's an atomic

outfit, equipped with a guided missile, the Corporal, and a free rocket, the Honest John, that can carry atomic warheads. Its assignment is to provide atomic support to the Italian Army in defending this country's northern frontier. But more broadly - the job of this unit is to get as much experience as it can in transporting, maintaining, assembling, testing, mobilizing, and launching these huge complex weapons under field conditions, conditions that simulate wartime as closely as possible.

Thus, this command in Italy is serving as a prototype for the other missile commands that some day will be established in Europe and elsewhere overseas. This is a small force. It numbers three thousand men. They spend a quarter of their time in the field on maneuvers. They've been out for most of this week and I visited them at their field positions the other day. As always, the maneuvers had begun with an unannounced alert. Within three hours, the entire force was in the field, that is, at a number of widely scattered field positions some where in northern Italy. Trains, trucks and helicopters had moved up weapons and critical supplies. The assembly and test teams for the Corporal had put the missile through its last electronic checkout at its assigned launching site; the launching section had fuelled it, (one word indistinct) the warhead, and raised the five ton missile unto its launcher and it was ready to fire. Radio relay teams had already been landed by helicopter in the mountains to help maintain communication between the units. And Maj. Gen. Harvey Fischer, commander of our Southern European Task Force, of which this missile unit is a part, was at his field headquarters getting reports.

The problems of teamwork presented by these weapons are enormous. Timing is paramount at every step in the operation. Not only in assembling the weapons in the field and launching them, but in getting away after the big blast has betrayed the firing height of the enemy. The crews of the Honest John here have gotten their getaway time down to seven

minutes, which they think pretty good. A striking fact is that very few of the men responsible for launching and guiding the Corporal have had any higher electronic training. They've learned to become electronic technicians over here on these maneuvers, handling electronic computers and talking in terms of hundredths of a second.

The Corporal is a tactical missile, with a range of about 75-miles, and this of course, is a tactical unit. Its military importance, though, lies in the experience that it is now gaining for the future commands that will have intermediate range missiles. Many of the operational procedures, and many ofthe complex problems of teamwork and organization are essentially the same. And the first field lessons are being learned here.

And now back to CBS News in New York.

FRIDAY, FEBRUARY 14, 1958
7:45 - 8:00 PM EST

LARRY LESUEUR REPORTING

Good evening, everyone. Here's what happened today:

The Tunisian bombing dispute had repercussions on half a dozen fronts. Tunisia observed a day of mourning for victims fo the French attack...as President Bourguiba appealed to his people to remain calm. And a general strike...scheduled to last all day...was limited to four hours. In Paris, the French defense minister said France will not allow its blockaded garrisons in Tunisia to be starved out. But, actually, the Tunisian authorities are permitting food to be delivered to the French garrisons. Bourguiba, however, is unyielding in his demand that the 15-thousand French troops in Tunisia must leave the country. The grave view of the situation...taken by France...is demonstrated by the fact that today the French government cancelled all military leaves and all civilian travel permits to and from Algeria, Tunisia's next-door neighbor. And here in this country, a State Department spokesman says that Secretary Dulles may interrupt his sea-side vacation to deal personally with the crisis as it affects the United States.

Last night, Tunisia filed a complaint with the U.N. Security Council, charging France with aggression in the bombing of Sakiet last Saturday. According to the Tunisian complaint, 79 persons were killed...including 20 children...when French bombers hit the small frontier village. And now France has filed a counter-complaint. It protests "repeated violations of the Algerian frontier by elements coming from Tunisia"...and accuses the Tunisians of allowing Algerian rebel forces in the village to fire across the border at French aircraft. Foreign Minister Pineau said today that neither he nor Premier Gaillard knew beforehand of the French air raid. After the attack, he said, the government had to back up the Army in what it did. The U.N. Security Council has agreed to meet Tuesday afternoon to take up Tunisia's case...with Russia's Arkady Sobolev as chairman under

the Council's monthly rotation rule. The complaint filed by France also will come up for debate. It is second on the provisional agenda.

Today's federation of Jordan and Iraq has been received cautiously in Washington. The State Department said the United States welcomes any move toward closer association between Arab peoples...so long as the move takes place "with due regard to the desires of the peoples directly concerned and the welfare and stability of the area as a whole." A reporter asked the department spokesman, Lincoln White, if that meant the United States also welcomes the recent merger of Egypt and Syria. Mr. White ducked the question...referred the reporter to Mr. Dulles' statement on the same subject at his last news conference which was simply, "We sympathize very much with the desire for Arab unity." Mr. White would go no further than that. Under the new federation between Jordan and Iraq, the two countries will be joined under a single constitution with one foreign office and a combined army...but both King Faisal of Iraq ond King Hussein of Jordan...who are twenty-two and cousins...will keep their thrones...as rulers of their countries' internal affairs. Faisal will be Chief of State. Hussein will be his deputy. And the way is left open for Iraq to continue as a member of the Baghdad Pact. The agreement...signed today...provides that treaties and international agreements "previously concluded" by either of the two countries will remain valid.

The Navy announces that it has awarded contracts for the construction of three atomic-powered submarines...designed for firing the Polaris guided missile. Two will be built by the Electric Boat Company at Groton, Connecticut...and the third at the Mare Island naval shipyard in California.

Another unfavorable economic report tonight. The Federal Reserve Board says that industrial production in January dropped to the lowest level in three years.

The member of the Federal Communications Commission...accused yesterday of receiving more than 2-thousand dollars in connection with a television case...

demanded an opportunity today to give his side of the story. The commissioner... Richard Mack...wrote a letter to Chairman Harris, of the House investigating subcommittee, asking for an early opportunity to refute the charges. Harris said tonight that Mack will be given that opportunity on Wednesday or Thursday of next week. The charges were leveled against him by Dr. Bernard Schwartz, ousted chief counsel of the committee. And in his letter, Mack denounces the charges as "distortions...without foundation." He expresses confidence that the committee will find them "unsubstantiated" once all the facts are presented.

Yesterday, Great Britain issued a "White Paper"...on the subject of defense. Peace, it said, is being maintained by a balance of arms. British aircraft are carrying H-bombs "Made in Britain" and Britain is developing a new ballistic missile, in partnership with the United States. For an analysis of the "White Paper" and the thinking behind it...here is CBS News correspondent Charles Collingwood reporting from London.

COLLINGWOOD: It was Voltaire, a Frenchman, who observed admiringly that the British people are a people who defend themselves; that's still true. But in the nuclear age, it's becoming more and more difficult. The new British White Paper on defense, like the one before it, is based on the explicit recognition that Britain cannot be defended against nuclear attack. If that is so, what kind of strategy should she pursue? That's the problem to which the White Paper addresses itself. The answer it gives is clear. Britain, it says, must put her faith in the ability of the nuclear deterrent to prevent a war happening at all. To this end, Britain will allow American intermediate range ballistic missiles to be stationed on her soil; she will develop and install her own missiles; she will equip her long-range bombers with hydrogen bombs; and shewill draw the logical conclusion from all this and cut down on the conventional forces she maintains.

The British defense planners thank that this is enough to prevent a war. The world balance of power, they say in the White Paper, is still tilted in favor

of the West. The fact that the Soviets put up their Sputniks is irrelevant. It does not mean that they have or are about to have an effective intercontinental missile. That, says the White Paper flatly, is still several years away. And even when it comes, there is every reason to believe the West will have its own means of insuring effective retaliation.

With this balancing fear of mutual annihilation, as it calls it, thus in operation, the British Government sees no military reason why a world conflagration should not be prevented for another generation. Indeedindefinitely. But the new White Paper has not met with universal applause in Britain. Indeed, it is being criticized in some very responsible quarters.

Two fundamental doubts are being expressed. The first is the familiar one, that if Britain relies exclusively upon the nuclear threat and scales down her regular forces, how can she cope with the bursh fire wars, which sometimes seems likelier to characterize our time than a nuclear conflagration. The second is that since the Untted States is the proprietor of the real nuclear deterrent, and Britain is under that shield, why should Britain spend her own slender resources upon making her own hydrogen bombs and intermediate range missiles? Really, to carry out the logic of the White Paper says the Manchester Guardian among others, Britain should let the United States carry the nuclear ball and really save money by getting out of the hydrogen bomb business altogether. These and other points will be much argued here. But their debate does not in any way alter the fact that it's just as true today as it was in Voltaire's day that the British are a people who defend themselves.

Now, back to CBS News in New York.

LESUEUR: Britain is developing its missile program in partnership with the United States. Another American partner is Italy, the scene of America's first operational guided missile command. CBS News correspondent, Winston Burdett has just accompanied the men of that command on maneuvers and here , from Rome, is his report.

BURDETT: Just outside the city of Vicenzie in the Po Valley Plain in northern Italy, is the headquarters base of the U.S. Army's 1st Overseas Missile Command. The base and the troops have been there for some time. But the new command, our first operational guided missile command anywhere, has been in existence for less than two months. It's an atomic outfit, equipped with a guided missile, the Corporal and a free rocket, the Honest John, that can carry atomic warheads. Its assignment is to provide atomic support to the Italian Army in defending this country's northern frontier. But more broadly - the job of this unit is to get as much experience as it can in transporting, maintaining, assembling, testing, mobilizing, and launching these huge complex weapons under field conditions, conditions that simulate wartime as closely as possible.

Thus, this command in Italy is serving as a prototype for the other missile commands that someday will be established in Europe and elsewhere overseas. This is a small force. It numbers three thousand men. They spend a quarter of their time in the field on maneuvers. They've been out for most of this week and I visited them at their field postiions the other day. As always, the maneuvers had begun with an unannounced alert. Within three hours, the entire force was in the field, that is, at a number of widely scattered field positions somewhere in northern Italy. Trains, trucks and helicopters had moved up weapons and critical supplies. The assembly and test teams for the Corporal had put the missile through its last electronic checkout at its asigned launching site; the launching section had fuelled it, (indisticnt) the warhead, and raised the five ton missile onto its launcher and it was ready to fire. Radio relay teams had already been landed by helicppter in the mountains to help maintain communication between the units. And Maj. Gen. Harvey Fischer, commander of our Southern European Task Force, of which this missile unit is a part, was at his field headquarters getting reports.

The problems of teamwork presented by these weapons are enormous. Timing is paramount at every step in the operation. Not only in assembling the weapons

in the field and launching them, but in getting away after the big blast has betrayed the firing height of the enemy. This is Larry LeSueur---Goodnite.

Lesueur for Murrow Mon., Feb. 17, 1958

Good evening, everyone..[. Here's] what happened today:

The President's blunt, six-page letter to Bulganin was delivered in Moscow...and its contents released Later by the White House in Washington. The letter showed Mr. Eisenhower's impatience with Soviet tactics.//.calling Bulganin's message of February 1 OUT nothing more than "a slightly abbreviated and moderated edition of the [redacted] LENGTHY and rather bitter speech" that Khrushchev made last month in the city of Minsk. "I begin to wonder," asked the President, "whether we shall get anywhere by continuing to write speeches to each other?" And then he said that perhaps the impasse...to which we seem to have come..].can be broken by "less formal and less publicized contacts."//He suggested that the question whether a summit meeting

→

might be profitable be determined "through our ambassadors and foreign ministers." And then he added this sentence: "You will understand, of course, that WHATEVER the preparatory procedures, these would...as far as the United States was concerned...require the participation of our Secretary of State." An expression of confidence in Mr. Dulles and a rebuke To Mr. Bulganin who had suggested...in HIS last letter...that a foreign ministers meeting would not succeed because in Bulganin's phrase some of the ministers were "prejudiced". Mr. Eisenhower also took exception to "constantly mounting accusations" made by Russian leaders---such as Khrushchev's charge that the United States...in proposing [redacted] control of outer space for peaceful purposes..."wants to prohibit that which it does not possess." Mr. Eisenhower said the record "completely disproves this uncalled-for statement," He recalled how when the United States alone possessed atomic weapons...and the Soviet Union possessed none...it offered to forego its monopoly in the interest of world peace and security. Mr. Eisenhower warned that the time to deal with the problem of outer space is NOW. It would be "tragic," he said, if Soviet leaders were blind or indifferent toward this menace, "as they apparently were blind or indifferent to the nuclear menace at its inception a decade ago."

told a news conference that "preliminary discussions" are taking place...regarding the basing of American intermediate range missiles in France. An agreement for the basing of American I.R.B.M.'s in BRITAIN is expected shortly.

Members of the NATO alliance have received a new note from Communist Poland...urging the creation of an "atom free" zone in Central Europe. Under this plan...favored by Moscow...nuclear weapons would be prohibited in both East and West Germany, and in Poland and Czechoslovakia. The Polish note published today seeks to answer Western criticism of the plan, By proposing air and ground inspection to provide what it calls "effective enforcement." ~~It also proposes a ban on the use of nuclear weapons against any TARGETS in the "atom free" zone. And the door APPARENTLY is left open for negotiating such a ban without automatically recognizing the Communist government of East Germany.~~

The Iraqi parliament voted unanimous approval today of the agreement merging Iraq and Jordan into a federal Arab state. And in Istanbul, the Iraqi ambassador to Turkey said that reports that Iraq will quit the Baghdad Pact are "completely false." (I should like to examine

→

the merger of Jordan and Iraq (further in a few minutes).

Tunisia and France agreed today to accept the "good offices" of the United States and Britain...in the crisis over the French bombing of that Tunisian frontier village. Tunisia has filed a complaint of aggression against France in the U.N. Security Council...and France has filed a COUNTER-complaint. The Security Council is scheduled to take up the question at a meeting tomorrow afternoon....BUT other countries still hope, through last-minute consultations behind the scenes, to prevent a bitter, show-down debate. Secretary of State Dulles cut short his vacation at Atlantic City...and returned to his desk in Washington today to take personal charge of the American effort toward achieving a peaceful settlement. ~~The latest news from North Africa is NOT reassuring.~~ ~~The Tunisian government tonight withdrew its official recognition of five French consuls in Tunisia.~~ ~~And the French Command Headquarters in Algiers reports a new border incident. It says a band of rebels entered Algeria this morning...from Tunisia...and attacked a French patrol. The French~~ (GIVE) ~~no casualty figures.~~

The Communist radio of North Korea TODAY admitted that a South Korean airliner...with 32 persons ABOARD, including two Americans...was highjacked in mid-air and forced to fly into Red territory. The two Americans are the pilot, Willis Hobbs, and Air Force lieutenant (Howard McClellan, colonel), who was taking a routine proficiency flight as standby co-pilot.

The plane was flying from Pusan, at the tip of the Korean penninsula, to Seoul. The North Korean radio claims there were passengers on the plane who wanted to escape "imperialist oppression." It gave few details. But tonight the U.N. Command will be meeting the Communists face to face at Panmunjom. And it will deliver a formal demand for the return of the AIRCRAFT and those who were on board.

In Europe, that Air Force transport plane...with 16 persons ABOARD... is still missing on a flight from Naples to Athens. Bad weather is hampering the search for the plane, which disappeared Saturday night.

Secretary of Commerce Sinclair Weeks went before Congress today...as the first Administration witness to testify on behalf of a five-year extension of the Reciprocal Trade Act. Mr. Weeks warned the House Ways and

→

Means Committee that..in view of Russia's new emphasis on foreign economic aid..it's either more trade, or more trouble." //The Reciprocal Trade Act, he said, "is not only GOOD for the country...but essential to the national interest."

The House committee investigating the government's regulatory agencies heard more testimony today from its erstwhile chief counsel, Bernard Schwartz. Schwartz testified that President Eisenhower's assistant, Sherman Adams, figured in a case involving American Airlines and the Civil Aeronautics Board. Schwartz said he was NOT accusing Adams of anything illegal. But in 1953, he said,...after Adams conferred with Harman Denny, who was then acting chairman of the Civil Aeronautics Board, the airline won an extra five years of operating life.

Bitter cold weather...and much snow...continued to plague the eastern third of the nation today. Michigan City, Indiana, recorded a snowfall of four feet. And New York City and Washington, D.C. are still digging out after yesterday's heavy snowfall. Thousands of government workers in Washington stayed home. And...in Thomasville, Georgia...where President

→

Eisenhower is vacationing. // .cold weather again knocked out the President's plans for golf. ~~He~~ However, he DID get out, [redacted], for a drive.

The union of Iraq and Jordan is being described as a countermove to (1)
the union of Egypt and Syria. ITS TRUE THAT Nasser has rivals for leadership of the Arab world, and the sudden decision of the Hashemite Kings to merge their realms, looks like a move to head him off. But that is the short view. In the long run, complete Arab federation has been brought nearer by both mergers. For the first time it now appears to be not only possible but probable. Swift changes are taking place in the Middle East and the policies of all the states involved, the local ones and the great powers as well, will have to be readjusted.

ITS [redacted] being persistently reported that Iraq's next big move will be to withdraw from the Baqdad Pact, either soon or before next year's meeting. This might be considered necessary to induce King Saud to bring Saudi Arabia into the Iraq-Jordan merger. As long as Iraq is a member of the Bagdad Pact, that oil-rich state is formally lined up with the West. But That is T[redacted] NO longer acceptable to other Arab countries. The Federation, when complete, will be dedicated to neutralism, in the interest of ARAB independence and the hope of receiving aid from both East and West. Iraq is stated to be ready to withdraw from the Pact as a price for King Saud's adherence. But it also realizes that it would have to do so eventually to further TOTAL federation.

But it is by no means certain that King Saud would join Iraq and

Jordan at once, even if Iraq pulled out of the Bagdad Pact. He might hold off for a while. He wants a big share of power within the Federation, and he wants to be recognized as one of its creators along with Colonel Nasser. SO KING SAUD may stay out for a time to build up his bargaining position.

If Iraq does withdraw from the Bagdad Pact, the consequences will BE far-reaching. It will be recalled that the Pact began as a mutual defense treaty between Iraq and Turkey. The other members, Pakistan, Iran and Britain, simply adhered to it. So if Iraq pulls out, the whole structure comes down, including its very name, and something else must be put in its place. A distinct possibility is that the United States will decide to become an active member of any new security organization. Secretary Dulles inspired the original pact so as to organize collective security for the northern tier of states below the Soviet Union. The State Department has not made up its mind to join a new pact, but it is aware that there may be both logic and necessity in such a move. Iraq's withdrawal from the BAGDAD pact would be a serious setback for the West and the world would so judge it. The West would be losing its only Arab ally. So full United States membership in the northern tier organization may be the only way to preserve our remaining prestige in the area.

The effect of the merger of Jordan and Iraq on Israel is, of course, a

a matter of great concern. Jordan, in a sense, is being removed from the guardianship of the United States. This reduces any restraint the United States has been able to wield. So long as Washington was going to foot the bill for Jordan's army, open hostility against Israel could be ruled out. Now our hand is weakened, if not altogether paralyzed. And it may be a bad sign that "border" incidents are already becoming more numerous.

But there are also mitigating considerations for Israel. One is that the union of Jordan with Iraq may in time solve the problem of the Palestine refugees in Jordan. Iraq is short of manpower and should be able, perhaps with outside financial help, to absorb the half-million refugees in Jordan. That in itself would remove a great deal of the pressure the Arabs now bring to bear on Israel.

Another consideration is that Israel's negotiating position may actually improve if it can deal with the Arabs as a whole, instead of separately. At present the individual Arab states often feel that they must vie with each other in demanding nothing less than the destruction of Israel. They do this as proof of their loyalty to Arab unity as they maneuever for their own interests behind the scenes. But once unity was obtained, there would be no charges of disloyalty to the Arab cause, if

the federation itself decided to negotiate with Israel.//

Thus far President Nasser has been the only Arab leader who has dared to mention the possibility of a future settlement with Israel.//.But his terms, entailing the loss of Israeli sovereignty, would hardly be considered by Israel.//. But of course no Arab Federation could start out by being more generous.// Yet if the military annihilation of Israel is really dropped, as a policy, and OFFERS OF sincere negotiation TAKE its place, that would be a marked turn for the better. //

I should like to make a correction:

In the report on the House testimony today, I erroneously referred to the airline involved in the Civil Aeronautic Board case as American Airlines. I should have said NORTH American Airlines.

~~That is North American Airlines, in the testimony today before the House committee.~~

Some persons may have wondered why an american civilian was piloting the south korean commercial plane which was FORCED TO LAND IN COMMUNIST north korea. Well, ever since a korean airlines pilot took his plane into communist china five years ago, the south korean airline has made a strict rule that all its pilots be americans..

High salaries are paid to keep americans on the job. And (our barnstorming pilots call the korean national airlines -- "the end of the world airline -- that pays "TOP of the World" prices..

This is Larry LeSueur---Goodnite.

MONDAY, FEBRUARY 17, 1958
7:45 - 8:00 PM EST

LARRY LESUEUR REPORTING

Good evening, everyone...Here's what happened today:

The President's blunt, six-page letter to Bulganin was delivered in Moscow... and its contents released later by the White House in Washington. The letter showed Mr. Eisenhower's impatience with Soviet tactics...calling Bulganin's message of February one nothing more than "a slightly abbreviated and moderated edition of the lengthy and rather bitter speech" that Khrushchev made last month in the city of Minsk. "I begin to wonder," asked the President, "whether we shall get anywhere by continuing to write speeches to each other?" And then he said that perhaps the impasse...to which we seem to have come...can be broken by "less formal and less publicized contacts." He suggested that the question whether a summit meeting might be profitable be determined "through our ambassadors and foreign ministers." And then he added this sentence: "You will understand, of course, that whatever the preparatory procedures, these would...as far as the United States was concerned... require the participation of our Secretary of State. An expression of confidence in Mr. Dulles and a rebuke to Bulganin who had suggested...in his last letter... that a foreign ministers meeting would not succeed because in Bulganin's phrase some of the ministers were "prejudiced." Mr. Eisenhower also took exception to "constantly mounting accusations" made by Russian leaders---such as Khrushchev's charge that the United States...in proposing control of outer space for peaceful purposes..."wants to prohibit that which it does not possess." Mr. Eisenhower said the record"completely disproves this uncalled-for statement." He recalled how when the United States alone possessed atomic weapons...and the Soviet Union possessed none...it offered to forego its monopoly in the interests of world peace and security. Mr. Eisenhower warned that the time to deal with the problem of outer space is now. It would be "tragic," he said, if Soviet leaders were blind or

indifferent to the nuclear menace at its inception a decade ago."

Members of the NATO alliance have received a new note from Communist Poland urging the creation of an "atom free" zone in Central Europe. Under this plan... favored by Moscow...nuclear weapons would be prohibited in both East and West Germany and in Poland and Czechoslovakia. The Polish note published today seeks to answer Western criticism of the plan by proposing air and ground inspection to provide what it calls "effective enforcement."

The Iraqi parliament voted unanimous approval today of the agreement merging Iraq and Jordan into a federal Arab state. And in Istanbul, the Iraqi ambassador to Turkey said that reports that Iraq will quit the Baghdad Pact are "completely false." (I should like to examine the merger of Jordan and Iraq further in a few minutes.)

Tunisia and France agreed today to accept the "good offices" of the United States and Britain...in the crisis over the French bombing of that Tunisian frontier village. Tunisia has filed a complaint of aggression against France in the U.N. Security Council...and France has filed a counter-complaint. The Security Council is scheduled to take up the question at a meeting tomorrow afternoon. But other countries still hope through last-minute consultations behind the scenes, to prevent a bitter show-down debate. Secretary of State Dulles cut short his vacation at Atlantic City...and returned to his desk in Washington today to take personal charge of the American effort toward achieving a peaceful settlement.

The Communist radio of North Korea today admitted that a South Korean air-liner...with 32 persons aboard including two Americans was highjacked in mid-air and forced to fly into Red territory. The two Americans are the pilot, Willis Hobbs, and Air Force lieutenant colonel Howard McClellan who was taking a routine proficiency flight as standby co-pilot. The plane was flying from Pusan, at the tip of the Korean penninsula to Seoul. The North Korean radio claims there were

passengers on the plane who wanted to escape "imperialist oppression." It gave few details. But tonight the U.N. Command will be meeting the Communists face to face at Panmunjon. And it will deliver a formal demand for the return of the aircraft and those who were on board.

In Europe, that Air Force transport plane with 16 persons aboard is still missing on a flight from Naples to Athens. Bad weather is hampering the search for the plane which disappeared Saturday night.

Secretary of Commerce Sinclair Weeks went before Congress today..as the first Administration witness to testify on behalf of a five-year extension of the Reciprocal Trade Act. Mr. Weeks warned the House Ways and Means Committee that... in view of Russia's new emphasis on foreign economic aid "it's either more trade, or more trouble." The Reciprocal Trade Act, he said, "is not only good for the country...but essential to the national interest."

The House committee investigating the government's regulatory agencies heard more testimony today from its erstwhile chief counsel, Bernard Schwartz. Schwartz testified that President Eisenhower's assistant Sherman Admas figured in a case involving American Airlines and The Civil Aeronautics Board. Schwartz said he was not accusing Adams of anything illegal. But in 1953, he said, after Adams conferred with Harman Denny, who was then acting chairman of the Civil Aeronautics Board, the airline won an extra five yeaas of operating life.

Bitter cold weather...and much snow..continued to plague the eastern third of the nation today. Michigan City, Indiana, recorded a snowfall of four feet. And New York City and Washington, D. C. are still digging out after yesterday's heavy snowfall. Thousands of government workers in Washington stayed home. And in Thomasville, Georgia...where President Eisenhower is vacationing...cold weather again knocked out the President's plans for golf. However, he did get out for a drive.

The union of Iraq and Jordan is being described as a countermove to the union

of Egypt and Syria. It's true that Nasser has rivals for leadership of the Arab world, and the sudden decision of the Hashemite Kings to merge their realms looks like a move to head him off. But that is the short view. In the long run, complete Arab federation has been brought nearer by both mergers. For the first time it now appears to be not only possible but probable. Swift changes are taking place in the Middle East and the policies of all the states involved, the local ones and the great powers as well will have to be readjusted.

It's being persistently reported that Iraq's next big move will be to withdraw from the Baghdad Pact, either soon or before next year's meeting. This might be considered necessary to induce King Saud to bring Saudi Arabia into the Iraq-Jordan merger. As long as Iraq is a member of the Baghdad Pact, that oil-rich state is formally lined up with the West. But that is no longer acceptable to other Arab countries. The Federation, when complete, will be dedicated to neutralism in the interest of Arab independence and the hope of receiving aid from both East and West. Iraq is stated to be ready to withdraw from the Pact as a price for King Saud's adherence. But it also realizes that it would have to do so eventually to further total federation.

But it is by no means certain that King Saud would join Iraq and Jordan at once, even if Iraq pulled out of the Baghdad Pact. He might hold off for a while. He wants a big share of power within the Federation, and he wants to be recognized as one of its creators along with Colonel Nasser. So King Saud may stay out for a time to build up his bargaining position.

If Iraq does withdraw from the Baghdad Pact, the consequences will be "far reaching." It will be recalled that the Pact began as a mutual defense treaty between Iraq and Turkey. The other members, Pakistan, Iran and Britain, simply adhered to it. So if Iraq pulls out, the whole structure comes down, including its very name, and something else must be put in its place. A distinict possibility is that the United States will decide to become an active member of any new

security organization. Secretary Dulles inspired the original pact so as to organize collective security for the northern tier of states below the Soviet Union. The State Department has not made up its mind to join a new pact, but it is aware that there may be both logic and necessity in such a move. Iraq's withdrawal from the Baghdad Pact would be a serious setback forthe West and the world would so judge it. The West would be losing its only Arab ally. So full United States membership in the northern tier organization may be the only way to preserve our remaining prestige in the area.

The effect of the merger of Jordan and Iraq on Israel is, of course, a matter of great concern. Jordan, in a sense, is being removed from the guardianship of the United States. This reduces any restraint the United States has been able to wield. So long as Washington was going to foot the bill for Jordan's army, open hostility against Israel could beruled out. Now our hand is weakened, if not altogether paralyzed. And it may be a bad sign that "border" incidents are already becoming more numerous.

But there are also mitigating considerations for Israel. One is that the union of Jordan with Iraq may in time solve the problem of the Palestine refugees in Jordan. Iraq is short of manpower and should be able perhaps with outside financial help to absorb the half-million refugees in Jordan. That in itself would remove a great deal of the pressure the Arabs now bring to bear on Israel.

Another consideration is that Israel's negotiating position may actually improve if it can deal with the Arabs as a whole instead of separately. At present the individual Arab states often feel that they must vie with each other in demanding nothing less than the destruction of Israel. They do this as proof of their loyalty to Arab unity as they maneuever for their own interests behind the scenes. But once unity has obtained, there would be no charges of disloyalty to the Arab cause, if the federation itself decided to negotiate with Israel.

Thusfar President Nasser has been the only Arab leader who has dared to mention the possibility of a future settlement with Israel. But his terms, entailing the loss of Israeli sovereignty would hardly be considered by Israel. But of course no Arab Federation could start out by being more generous. Yet if the military annihilation of Israel is really dropped as a policy, and offers of sincere negotiation take its place, that would be a marked turn for the better.

I should like to make a correction: In the report on the House testimony today, I erroneously referred to the airline involved in the Civil Aeronautic Board case as American Airlines. I should have said North American Airlines.

This is Larry LeSueur. I'll be back in a moment with a footnote to the news. But first, here's George Bryan.

GEORGE BRYAN: COMMERCIAL

LESUEUR: Some persons may have wondered why an American civilian was piloting the South Korean commercial plane which was forced to land in Communist North Korea. Well, ever since a Korean airlines pilot took his plane into Communist China five years ago, the South Korean airline has made it a strict rule that all pilots be Americans.

High salaries are paid to keep Americans on the job and I'm told our barnstorming pilots call the Korean national airlines "the end of the world air--line that pays "Top of the World" prices

This is Larry LeSueur---Goodnite.

Good evening, everyone.... Here's what happened today:

The U.N. Security Council suspended debate in the French-Tunisian dispute, to give the United States and Britain time to work out a settlement. Our Ambassador Wadsworth told the council that the fact that Tunisia and France had accepted the good offices of the United States and Britain was "an indication of their sincere desire to reach a solution." In arguing for postponement of debate, both Mr. Wadsworth and Sir Pierson Dixon...speaking for Britain...said they would make "positive suggestions" for a peaceful and equitable SOLUTION. The Tunisian representative, Mongi Slim, said Tunisia "reserves the right" to ask for an urgent meeting of the Security Council to resume the discussion, IF the offer of good offices does not---in his phrase---"seem to be yielding good results." He made it clear that Tunisia wanted the

war in Algeria...as well as the French bombing of the Tunisian frontier village...to be included. French Ambassador Georges-Picot warned that any attempt by the council to broaden the issue to include the Algerian conflict would meet with firm opposition from France. And ~~that~~ the Algerian conflict was NOT PLACED ON the agenda. Russia's Sobolev...who is chairman of the council this month...was unable to prolong the debate. He warned that Russia will keep a "sharp LOOK-OUT" to see what the United States and Britain TRY TO DO. The council voted to recess indefinitely, after meeting for a little more than an hour. The vote was unanimous.

The State Department accused Communist North Korea today of resorting to "international blackmail"... in hijacking that South Korean airliner and forcing it to land in Red territory. There were 34 persons on the airplane, including two Americans. And a U.N. Command spokesman in South Korea declares: "We will pursue every possible means available to secure the release of the passengers, crew and plane." This is the face of the Communist refusal last night at Panmunjom to return the airliner and those aboard...claiming they had all defected to North Korea "voluntarily". A State Department spokesman says the incident →

"demonstrates again the absence of good faith or sincerity which are needed if any progress is to be made in the settlement of the Korean problem."

In Congress today, the House Committee on Legislative Oversight returned to its investigation of the Federal Communications Commission... in particular, to the circumstances surrounding the award of Channel 10, in Miami, to a subsidiary of National Airlines. Bernard Schwartz, former chief counsel for the committee, has charged that a member of the F.C.C., Richard A. Mack, received checks signed by a Florida attorney interested in the case. Schwartz identified the attorney as Thurman Whiteside, and he said the cancelled checks totaled 26-hundred dollars. It is a matter of record that Mack voted to award the channel to the National Airlines subsidiary. Mack has denounced the charges and asked for a hearing. And Whiteside has accused Schwartz of "lying in his teeth." So much for background. Today, two Miami witnesses testified that they did ask Whiteside to use his friendship with the F.C.C. commissioner to help win the channel for National Airlines. One of the witnesses, Paul Scott..., who is an attorney...testified that Whiteside later backed out. The other witness, Robert Anderson, said he knew of

→

Whitesides friendship with Mack...and that he, Anderson, approached Whiteside about the "delicate matter" of contacting Mack. He said he felt That employment of Whiteside in the case "certainly would not be harmful."

Anderson is a former law partner of Scott. He is now a circuit judge.

Republican congressional leaders...and key members of President Eisenhower's cabinet...talked over the state of the national economy today at a breakfast meeting at the White House. Senator Knowland told reporters...afterward...it was agreed that a tax cut to stimulate business would not be "wise" at this time. They also decided, he said, against any new MAJOR public works program. But he emphasized that if business fails to pick up...as anticipated by the middle of the year...these decisions "will, of course, be subject to review."

(President Eisenhower, you recall, has predicted an improvement in the EMPLOYMENT situation as early as NEXT MONTH.)

Mr. Eisenhower's special assistant for public works planning, Major General Bragdon, said today that the Administration has "stockpiled" many public works projects...which could be started "as soon and as fast as conditions and available funds warrant." General Bragdon revealed this in a letter to the Joint Congressional Economic Committee.

Today...in Thomasville, Georgia... Mr. Eisenhower worked on a special message he will send to Congress, urging a STRONG foreign aid program. For the SIXTH straight day, the President decided against hunting, [redacted] or

→

PLAYING GOLF

because of the cold weather. When he got up this morning, the thermometer registered a frigid 17 degrees.

Secretary of Defense McElroy appealed to Congress today for a five-year extension of the Reciprocal Trade Act, warning that Russia PRESENTS what he CALLED "the greatest scientific and industrial challenge of our time." Mr. McElroy testified before the House Ways and Means Committee. He said, "If stable, strong allies are important to us, then international trade is important to us. And international trade," he declared, "MUST be a two-way street."

Congressional testimony...released today...reveals that the Air Force is working on a rocket engine capable of producing a thrust of 1-million, 500-thousand pounds. That would be a thrust EIGHTEEN times greater than that which launched America's first earth satellite...and about FOUR times the thrust American experts BELIEVE The Russians used to put up their second Sputnik. This disclosure was made by Richard Horner, assistant secretary of the Air Force for research and development, in recent TESTIMONY BEFORE the House Armed Services Committee. He DID NOT told when the engine might be fully developed.

The White House announces tonight that President Eisenhower has appointed a staff director for the new Civil Rights Commission. He is Gordon Tiffany, former attorney general for New Hampshire.

Reports from France tonight say that Sir Winston Churchill is ill at his villa on the Riviera. The nature of the illness is not disclosed - but a medical announcement WILL be made tomorrow.

Reports earlier in the day said that the illness was NOT serious.

Sir Winston's personal physican is flying to see him tomorrow from London.

ITS
[redacted]s rather difficult to tell just what IS happening...in that disputed border area between Egypt and the Sudan. Both Egypt and the Sudan have accused each other of moving troops. President Nasser says stories that Egyptian forces have INVADED the Sudan are "lying fabrications", and the Egyptian delegate at the U.N. claims that Egyptian police in the border area are merely carrying out "their customary precautionary duties" in connection with the Friday plebiscite. This is the plebiscite which was called for the purpose of ratifying the recent merger of Egypt and Syria in a single Arab state. The Sudan charges that Egypt is scheming to use the plebiscite as a device for taking over the disputed region, measuring some 6 to 10-thousand square miles. The Sudanese themselves are holding a national election a week from Thursday.

TODAY
The Sudanese cabinet met t[redacted] in emergency session. And the governing party in the Sudan has called for volunteer national guardsmen to stand by.

A Cairo court convicted six Egyptians today of "Communist activities." Their sentences ranged from a fine of 140 dollars to three years in jail, [redacted].

Today, both houses of the Jordanian parliament ratified the agreement merging Jordan and Iraq into a federal Arab state. The Iraqi parliament voted ITS ratification yesterday.

Here in New York, the confessed Russian spy, Jack Soble, is reported recovering, after an operation in which more than a pound of assorted nuts, bolts, screws and rivets were removed from his stomach. Federal authorities described Soble's action as an apparent suicide attempt. He was brought to New York last week-end from the federal penitentiary in Lewisburg, Pennsylvania, for further questioning.

(1)

The sudden easing of the [redacted] French-Tunisian crisis today, by an agreed adjournment of the U.N. Security Council, underscores the fact that no nation, big or small, really wants a war right now.. // but it also makes one wonder about our use of the U.N. the U.N.

Both Tunisia and France were aggreeable today to wait [redacted] FOR anglo-american attempts to mediate a [redacted] the bombing incident, and the Soviet Union merely went through the motions of trying to exploit what could easily have [redacted] BECOME a heated debate, if not worse..

The Soviet Union today made the correct gesture of righteousness in the affair, [redacted] maintaining its pose as champion of the Arab states, by warning that it would keep a "sharp eye" on the anglo-american [redacted] "good offices" efforts.. And the Tunisian ambassador cautioned that his country "reserved the right" to summon the U.N. Council again for an urgent meeting--should the mediation efforts prove "ineffective"... But its clear to most people, that having dropped the bombing incident for the [redacted] Time-Being when PASSIONS RUN HIGH, neither country really WANTS TO BRING IT UP AT THE U.N. Later on. [redacted]

And apparently [redacted] Russia is not looking for trouble, at a time when Moscow's chief objective is [redacted] an East-West summit conference..

A new administration plan to counter rising unemployment reported in the works...Key cabinet members and G.O.P leaders at a White House breakfast this morning, to hear about a modest

Yet altho Russia is EAGER for a conference at the senior level, between two or more of the great powers, its also clear that despite the possession of nuclear weapons, by three of the great powers, they no longer possess the possibility of totally controlling the world, a power they MAY HAVE HAD at the end of world war two, when they had armies in the field..

Their influence, of course, is very great...but they just don't have the power of life and death over smaller countries that they had when they ruled the roost, a little over A DECADE ago..

The fact is, the three great nuclear powers, the United States, Britain and Russia, have one fear in common...that one of the smaller countries may come into possession of nuclear weapons... Diplomats even have a phrase for this...they call it the "fourth nation phobia.."//

A smaller power might come by this means of destruction, through a gift from its big protector, or it might even find a cheap way of producing a nuclear weapon itself.. AND THE BIG POWERS FEAR that some hot-headed ruler could plunge them all into total war by the careless tossing of an atom bomb.

3.3.3

[illegible], even a small, non-atomic affray, could [illegible]y get out of control, and involve the great powers in a war, they hadn't planned on, and didnt want... And considering the reluctance of [illegible] Washington to bring the Tunisian bombing affair up for a U.N. [illegible] Security Council debate, and [illegible] Moscow's previous disapproval of a U.N. debate on Hungary, it's obvious that neither East nor West has complete confidence in U.N.'s ability to keep the lid down on brush-fires..

So its not without interest that we read in the Wall street Journal, that SOME PEOPLE ARE [illegible] thinking about ways of stopping conflicts, by other than diplomatic means. or at least [illegible] the president of the Air Force Association, is thinking about it..

We're told that Mr. Peter J. Schenck complains that this country lacks weapons of subtlety and [illegible]. Persuasion...

[illegible] HE points out that war is not just a [illegible] black or white condition, but really runs the whole spectrum of events..

And referring [illegible] to America's strategic Air command, he says all we really have to punish war-makers, [illegible] is the electric chair--in other words, nuclear bombs..

Even our ground forces today, are equipped with tactical ATOMIC weapons... And There's OBVIOUS danger that if a war started with small [redacted] nuclear bombs, it might end with big ones..

Therefore Mr. Schenck suggest[s] weapons that might have a temporary effect, that didn't actually kill people, or destroy their property... HE SERIOUSLY [redacted] insists that a [redacted] truck load of itching powder, well aimed, [redacted], might strike a powerful military blow, or that a chemical spread on the ground might give barefoot battlers the hot-foot, in backward lands. ~~The world, of course, is already familiar with tear gas,~~ and Mr. Schenck goes on to suggest immensely powerful noise-makers, which could shreik over disputed areas, and MIGHT discourage aggressors. After that, the cool-headed peace-makers could move in.. Conceivably

Just how these peaceful weapons could be used, is not altogther clear, NOR how they WOULD discriminate between friend and foe. But they're obviously worth thinking about, at a time when both East and West Seem hesitant to use [redacted] the United Nations for settling arguments, for fear of making things worse..

This is Larry LeSueur---I'll be back in amo ent with a footnote to the news....Bug first, a word from George Bryan.

The fear of modern war is not confined to countries whose citzens believe they have the most to lose...We're told that terror spread throughout the Republic of Malaya last night, after a radio play described fire balls plunging to earth, and death rays in action, a la Orson Wells...Many listeners fled Malaya's cities for their home villages (to check on the safety of their families..). And the manager of the Penang radio station says even after he assured callers that radio war was entirely fictional, they sounded unconvinced..

This is Larry LeSueur---Good nite.

Today, both houses of the Jordanian parliament ratified the agreement merging Jordan and Iraq into a federal Arab state. The Iraqi parliament voted its ratification yesterday.

Here in New York, the confessed Russian spy...Jack Soble...is reported recovering, after an operation in which more than a pound of assorted nuts, bolts, screws and rivets were removed from his stomach. Federal authorities described Soble's action as an apparent suicide attempt. He was brought to New York last week-end from the federal penitentiary in Lewisburg, Pennsylvania, for further questioning.

The sudden easing of the French-Tunisian crisis today, by an agreed adjournment of the U.N. Security Council, underscores the fact that no nation, big or small really wants a war right now, but it also makes one wonder about our use of the U.N. Both Tunisia and France were aggreeable today to wait for anglo-american attempts to mediate the bombing incident, and the Soviet Union merely went through the motions of trying to exploit what could easily have become a heated debate, if not worse...

The Soviet Union today made the correct gesture of righteousness in the affair, maintaining its pose as champion of the Arab states by warning that it would keep a "sharp eye" on the anglo-american "good offices" efforts. And the

Tunisian ambassador cautioned that his country "reserved the right" to summon the U.N. Council again for an urgent meeting---should the mediation efforts prove "ineffective"...But it's clear to most people that having dropped the bombing incident for the time being when passions run high, neither country really wants to bring it up at the U.N. later on and apparently Russia is not looking for trouble at a time when Moscow's chief objective is an East-West summit conference. Yet although Russia is eager for a conference at the senior level, between two or more of the great powers, it's also clear that despite the possession of nuclear weapons by three of the great powers they no longer possess the possibility of totally controlling the world, a power they may have had at the end of world war two, when they had armies in the field.

Their influence, of course, is very great, but they just don't have the power of life and death over smaller countries that they had when they ruled the roost, a little over a decade ago.

The fact is, the three great nuclear powers, the United States, Britain and Russia, have one fear in common...that one of the smaller countries may come into possession of nuclear weapons. Diplomats even have a phrase for this...they call it the "fourth nation phobia."

A smaller power might come by this means of destruction through a gift from its big protector or it might even find a cheap way of producing nuclear weapons itself, and the big powers fear that some hot-headed ruler could plunge them all into total war by the careless tossing of an atom bomb, even a small, non-atomic affray could get out of control, and involve the great powers in a war they hadn't planned on and didn't want. And considering the reluctance of Washington to bring the Tunisian bombing affair up for a U.N. Security Council debate, Moscow's previous disapproval of a U.N. debate on Hungary, it's obvious that neither East nor West has complete confidence in U.N.'s ability to keep the lid down on brush-fires.

So it's not without interest that we read in the Wall Street Journal, that some people are thinking about ways of stopping conflicts, by other than diplomatic means or at least the president of the Air Force Association is thinking about it.

We're told that Mr. Peter J. Schenck complains that this country lacks weapons of subtlety and persuasion. He points out that war is not just a black or white condition, but really runs the whole spectrum of events.

And referring to America's Strategic Air Command, he says all we really have to punish war-makers, is the electric chair---in other words, nuclear bombs. Even our ground forces today, are equipped with tactical atomic weapons, and there's obvious danger that if a war started with small nuclear bombs, it might end with big ones.

Therefore Mr. Schenck suggests weapons that might have a temporary effect, that didn't actually kill people or destroy their property. He seriously insists that a truck load of itching powder wellaimed, might strike a powerful military blow or that a chemical spread on the ground might give barefoot battlers the hot-foot in backward lands. And Mr. Schenck goes on to suggest immensely powerful noise-makers, which could shriek over disputed areas, and might discourage aggressors. After that, the cool-headed peace-makers could conceivably move in.

Just how these peaceful weapons could be used, is not altogether clear, nor how they would discriminate between friend and foe. But they're obviously worth thinking about at a time when both East and West seem hesitant to use the United Nations for settling arguments for fear of making things worse.

This is Larry LeSueur---I'll be back in a moment with a footnote to the news. But first, a word from George Bryan.

GEORGE BRYAN: COMMERCIAL

LESUEUR: The fear of modern war is not confined to countries whose citizens believe they have the most to lose. Wr're told that terror spread throughout the

Republic of Malaya last night, after a radio play described fire balls plunging to earth and death rays in action a la Orson Wells. Many listeners fled Malaya's cities for their home villages to check on the safety of their families. And the manager of the Penang radio station says even after he assured callers that radio war was entirely fictional, they sounded unconvinced.

This is Larry LeSueur---Goodnite.

Lesueur for Murrow Wed., Feb. 19, 1958

Good evening, everyone... Here's what happened today:

It was officially announced that Sir Winston Churchill has pneumonia. The medical bulletin...issued early this afternoon...said, "Sir Winston Churchill is suffering from pneumonia at the base of the lung. He had a good night and passed a comfortable day." The medical bulletin was signed by Dr. David Roberts, who has been attending the [redacted] former British prime minister at his villa in the south of France, and Lord Moran, Churchill's personal physician who flew there today from London. The venerable 83-year-old statesman has been vacationing on the Riviera since the middle of January. Reporters became anxious yesterday when he did not show up at the airport to meet Lady Churchill. And they were told...at that time...that Churchill had "suffered a chill" and required

→

rest. We are told that early today he enjoyed smoking two of his favorite cigars. Lord Moran is staying at the villa tonight...in constant attendance. The next medical bulletin is expected tomorrow afternoon, New York time.

President Eisenhower asked Congress today for 3-billion, 900-million dollars in foreign aid. And he warned...in a special message...that any sharp reduction in this figure would be fraught with danger for the United States. Russia, he said, is stepping up ITS program of economic aid to foreign countries. The United States must convince those countries...many of them poverty-stricken...."that it is not necessary to sacrifice liberty for bread." Mr. Eisenhower listed the dire consequences he said must follow, if the mutual security program...with all its economic, military and technical ramifications...were discontinued or substantially reduced. We would be faced, he said, with a certain crumbling of our strategic overseas positions.. and a forcing of these positions back toward our own shores; a "massive" ihcrease in our own defense budget, necessitating higher taxes; a heavy increase in DRAFT CALLS, "and ultimately a Beleagured America, her freedoms limited by mounting defense costs...almost alone in A

→

COMMUNIST-DOMINATED WORLD."

[redacted]." Those who would cripple or abandon the program, he said, "must well measure these consequences...for the safety of our families, for the future of our children, and our continued existence as a nation." The amount of money Mr. Eisenhower wants is about the same as he asked for last year, and LAST year Congress cut the figure by more than half a billion dollars. Tonight, congressional leaders are voicing their support of the program, but they admit that it faces rough-going. Some members of Congress...of BOTH parties...want to cut DRASTICALLY [redacted].

The House government operations committee called today for "a hard-headed re-examination" of American ARMS aid. The committee said it was not [redacted] criticizing the basic objectives of the arms aid program. "But the wastage," it said, "is too great to be ignored." And in an apparent reference to France, it said one country in the NATO alliance has diverted major [redacted] quantities of materiel for purposes other than which it was intended. (France, of course, has been using U.S. military equipment [redacted] in Algeria).

On an entirely different subject, the committee charged that cigarette

→

manufacturers have "deceived" the public...through their advertising of filter-tip cigarettes. "Actually," the committee said, "most filter cigarettes produce as much, or more, nicotine and tar as cigarettes WITHOUT filters." The charges are contained in a report prepared by a subcommittee on the basis of hearings held last summer. The report...released today by the parent committee...says the Federal Trade Commission should have cracked down on this advertising. It speaks of reports linking cigarette smoking and lung cancer...but advances no conclusions itself on THAT subject. It deals, rather, with advertising practices. Tonight, the R.J. Reynolds Company challenged the committee's figures on the amount of tar and nicotine found in the smoke from filtered cigarettes...saying that it would "appear" that the committee did not use the latest figures available. The company also said that it had received no DIRECT request to attend the subcommittee hearings.

The name of Vice President Nixon came up today...in the House investigation of the Federal Communications Commission. The chairman of the investigating committee....Representative Oren Harris...produced a letter, which referred to Mr. Nixon. The letter concerned the application of

→

Frank Katzentine, for a license to operate a television station on Channel 10 in Miami. The testimony is highly involved...but there were four parties who wanted the channel. And the F.C.C. finally awarded it to [redacted] a subsidiary of National Airlines, against the recommendation of its own field examiner. The examiner had recommended that the license go to Mr. Katzentine. The letter produced at today's hearing was [redacted] written by a Washington attorney, Downey Rice...who was trying to help Katzentine. And according to this letter, a former member of Mr. Nixon's staff was going to present the matter to the Vice President. It said the Vice President "would know what to do." The testimony did not bring out whether the matter ever really WAS brought to Mr. Nixon's attention. And Mr. Nixon has declined comment. There was also a letter from Mr. Katzentine to Senator Kefauver. Katzentine asked the [redacted] senator from Tennessee to "let it be known that I'm your friend and that I'm not a rascal or scoundrel." Kefauver reportedly said...in reply... that he had talked with several F.C.C. commissioners. Katzentine said he had never asked anyone to use any "influence" for him. All he wanted from the F.C.C., he said, was an honest decision.

The chairman of the F.C.C.... John Doerfer...said in a speech today, that he had to confess that, in the past, he had "made some decisions of seemingly poor judgment." He expressed belief, however, that when the record is fully developed, it [redacted] will show him to be a man of "essential honesty." The House investigating committee has heard testimony that Mr. Doerfer accepted payments for talks he made before various broadcasting [redacted] groups, while...at the same time...[redacted] collecting expense money from the government. //

The Federal Government took new action today to ease credit. The Federal Reserve Board lowered the reserve requirements of member banks by one-half of one percent. And this (theoretically, at least) has created an increase in lending capacity of about 3-billion dollars. The new, lower reserve requirement will be effective for the CENTRAL Reserve and large city banks on Februaty [redacted] 27th.,..and for COUNTRY banks on March first.

In London today, British Prime Minister Macmillan told the House of Commons that "considerable progress" has been made toward a summit meeting. Macmillan made the statement in opening a two-day foreign affairs debate. He even suggested a SERIES of summit conferences. But he insisted...once more...that any summit conference would have to be well prepared in advance.

[redacted] THE UNITED STATES TONIGHT NAMED A VETERAN TROUBLE SHOOTER, ROBERT MURPHY, TO TRY TO SETTLE THE DISPUTE BETWEEN FRANCE AND TUNISIA.

A STATE DEPARTMENT SPOKESMAN SAID MURPHY, A DEPUTY UNDERSECRETARY OF STATE, WOULD LEAVE SHORTLY FOR TALKS IN LONDON, PARIS AND TUNIS.

THE ANNOUNCEMENT [illegible]

Red China's decision to pull its troops out of North Korea, by the end of the year, is not likely to have any immediate effect on the U. N. Command forces still there. The size of these U.N. forces in Korea is classified, but its no military secret that the U.N. command has been reduced by nearly 80 per cent, from its high point in 1953...

It's beleieved the U.N. forces now comprise two united states divisions, one Turkish brigade, and one company from Thailand... All British commonwealth forces were withdrawn by last July, leaving only a small liason detachment of British troops and the same from France, Greece and Ethipia..

Of course No army could possibly remain in a static position as long as the U.N. forces have in Korea, without enemy intelligence sizing them up with accuracy....And its obvious that Red China is more than sure that the United States and the U.N. command have no intention of attacking anyone. In fact the skeleton forces we now have in Korea, are probably not without their value to Red China and since they also act as a restraining element, against The South Koreans dream of unfifying Korea by force..

2.2.2

Altho the Red Chinese have obviously reconstituted and re-armed the North Korean Forces.. It's still clear, that with its larger share of the Korean population, the ROK army of South Korea would be the most powerful in the field, if all foreign troops were withdrawn..

At the moment, most of the american tanks along the 38th parallel in Korea, have their guns pointed south, rather than north...As a visible warning against any hot-headed action by Synghmann Rhee's american-trained army.. Ever since the armistice was signed, the american forces have deliberately rationed the ROK army's gasoline and ammunition, as a further measure of control..

So Red China and North Korea might not exactly welcome the removal of american restraint on South Korea, if the United States army too, packed up and went home..

it looks as tho we're stuck in Korea for at least the immediate future.. And the Chinese Communists would be less than cunning, if they didn't realize that..

Red China's decision to withdraw its troops from Korea may seem paradoxical in the face of the hi-jacking of a South Korean plane this week, and their adamant refusal to return it...But at the same time, this obviously well-planned maneuver by communist intelligence agents, served to underscore Red China's efforts to get the South Koreans into negotiations with the Communist North, before the Chinese make their phased withdrawal [redacted] by the end of the year..

This is in line with Moscow's efforts to get the West German's into negotiations with the [redacted] communist East German regime. and perhaps we should be on guard against similar [redacted] maneuvers by intelligence agents in area of Berlin..

But The possibility CANNOT BE IGNORED THAT [redacted] today's chinese announcement of phased withdrawal from Korea may be part of a long-term communist strategy designed to secure the withdrawal of foreign troops everywhere---particularly from Germany...

However [redacted] the communists rarely make a move unless it has a double purpose. And there's no doubt that Communist China is now feeling the pinch of its efforts to communize and industrialize the world's largest population..

ya)

China is still a land with too many mouths to feed...Its greatest problem is NOT ONLY to raise the standard of living, but to feed its explosively growing population,..And the cost of keeping a large army in North Korea, even on Asian standards, has been high.. Greater, apparently, than the Chinese communists are willing to pay...

The boss of Red China's second five-year economic plan, has already presented HIS ambitious blue-print for expanding almost every phase of the mainland economy... [redacted] before the [redacted]...

And it laid stress on much greater agricultural production than BEFORE [redacted]. But at the same time, the red chinese economic boss revealed that last year's grain production fell far short of the planned goal..indeed, it showed the smallest food increase for any year in the last five....

[redacted]

So whatever the Chinese OVERALL strategy in withdrawing its army from Korea, today the mainland regime obviously needs every hand at home, to help feed its growing Population. [redacted]

this is larry LeSueur--I'll be back in a moment with a footnote to the news.

But first - Greg Bynum -

Bobbie Burns once had something to say about the plans of mice and men, and the Scottish bard might well have illustrated it with a happening of today...The storm-battered, 30-foot ketch "Golden Rule" has radioed for assistance [redacted], 700 miles off the California Coast ... The Coast Guard has dispatched a cutter to its aid. Aboard the Golden Rule"are the four men representing a committee for non-violent action against nuclear weapons..They had planned, to sail into the Enewetok area [redacted] to keep the U.S. [redacted] from carrying out its nuclear tests this Spring..

This is Larry LeSueur---Goodnite.

LARRY LESUEUR REPORTING

Good evening, everyone...Here's what happened today:

It was officially announced that Sir Winston Churchill has pneumonia. The medical bulletin...issued early this afternoon...said, "Sir Winston Churchill is suffering from pneumonia at the base of the lung. He had a good night and passed a comfortable day." The medical bulletin was signed by Dr. David Roberts, who has been attending the former British prime minister at his villa in the south of France, and Lord Moran, Churchill's personal physician who flew there today from London. The venerable 83-year-old statesman has been vacationing on the Riviera since the middle of January. Reporters became anxious yesterday when he did not show up at the airport to meet Lady Churchill. And they were told...at that time...that Churchill had "suffered a chill" and required rest. We are told that early today he enjoyed smoking two of his favorite cigars. Lord Moran is staying at the villa tonight...in constant attendence. The next medical bulletin is expected tomorrow afternoon, New York time.

President Eisenhower asked Congress today for 3-billion, 900-million dollars in foreign aid. And he warned...in a special message...that any sharp reduction in this figure would be fraught with danger for the United States. Russia, he said, is stepping up its program of economic aid to foreign countries. The United States must convince those countries...many of them poverty-stricken... "that it is not necessary to sacrifice liberty for bread." Mr. Eisenhower listed the dire consequences he said must follow if the mutual security program...with all its economic, military, and technical ramifications...were discontinued or substantially reduced. We would be faced, he said, with a certain crumbling of our strategic overseas postiions, and a forcing of these positions back toward our own shores; a "massive" increase in our own defense budget, necessitating

higher taxes; a heavy increase in draft calls "and ultimately a beleagured America, her freedoms limited by mounting defense costs...almost alone in a communist dominated world." Those who would cripple or abandon the program, he said, "must well measure these consequences...for the safety of our families, for the future of our children and our continued existence as a nation." The amount of money Mr. Eisenhower wants is about the same as he asked for last year, and last year Congress cut the figure by more than half a billion dollars. Tonight congressional leaders are voicing their support of the program, but they admit that it faces rough-going. Some members of Congress...of both parities...want to cut it drastically.

The House government operations committee called today for "a hard-headed re-examination" of American arms aid. The committee said it was not criticizing the basic objectives of the arms aid program. "But the wastage," it said, "is too great to be ignored." And in an apparent reference to France, it said one country in the NATO alliance had diverted major quantities of material for purposes other than which it was intended. (France of course, has been using U.S. military equipment in Algeria.)

On an entirely different subject, the committee charged that cigarette manufacturers have "deceived" the public...through their advertising of filter-tip cigarettes. "Actually," the committee said, "most filter cigarettes produce as much or more nicotine and tar as cigarettes without filters." The charges are contained in a report prepared by a subcommittee on the basis of hearings held last summer. The report...released today by the parent committee...says the Federal Trade Commission should have cracked down on this advertising. It speaks of reports linking cigarette smoking and lung cancer...but advances no conclusions itself on that subject. It deals rather, with advertising practices. Tonight, the R.J. Reynolds Company challenged the committee's figures on the amount of tar and nicotine found in the smoke from filtered cigarettes...saying

that it would "appear" that the committee did not use the latest figures available. The company also said that it had received no direct request to attend the subcommittee hearings.

The name of Vice President Nixon came up today...in the House investigation of the Federal Communications Commission. The chairman of the investigating committee...Representative Oren Harris...produced a letter, which referred to Mr. Nixon. The letter concerned the application of Frank Katzentine, for a license to operate a television station on Channel 10 in Miami. The testimony is highly involved...but there were four parties who wanted the channel. And the F.C.C. finally awarded it to a subsidiary of National Airlines, against the recommendation of its own field examiner. The examiner had recommended that the license go to Mr. Katzentine. The letter produced at today's hearing was written by a Washington attorney, Downey Rice...who was trying to help Katzentine. And according to this letter, a former member of Mr. Nixon's staff was going to present the matter of the Vice President. It said the Vice President "would know what to do." The testimony did not bring out whether the matter ever really was brought to Mr. Nixon's attention. And Mr. Nixon has declined comment. There was also a letter from Mr. Katzentine to Senator Kefauver. Katzentine asked the senator from Tennessee to "let it be known that I'm your friend and that I'm not a rascal or scoundrel." Kefauver reportedly said...in reply...that he had talked with several F.C.C. commissioners. Katzentine said he had never asked anyone to use any "influence" for him. All he wanted from the F.C.C., he said, was an honest decision.

The chairman of the F.C.C....John Doerfer...said in a speech today that he had to confess that, in the past, he had "made some decisions of seemingly poor judgment." He expressed belief, however, that when the record is fully developed, it will show him to be a man of "essential honesty." The House investigating committee has heard testimony that Mr. Doerfer accepted payments

for talks he made before various broadcasting groups while...at the same time... collecting expense money from the government.

The Federal Government took action today to ease credit. The Federal Reserve Board lowered the reserve requirements of member banks by one-half of one percent. And this (theoretically, at least) has created an increase in lending capacity of about 3-billion dollars. The new lower reserve requirement will be effective for the Central Reserve and large city banks on February 27th and for the country banks on March 1st.

In London today, British Prime Minister Macmillan told the House of Commons that "considerable progress" has been made toward a summit meeting. Macmillan made the statement in opening a two-day foreign affairs debate. He even suggested a series of summit conferences. But he insisted...once more... that any summit conference would have to be well prepared in advance.

The United States tonight named a veteran trouble shooter, Robert Murphy to try to settle the dispute between France and Tunisia.

A State Department spokesman said Murphy, a deputy undersecretary of state would leave shortly for talks in London, Paris and Tunis.

Red China's decision to pull its troops out of North Korea, by the end of the year is not likely to have any immediate effect on the U.N. command forces still there. The size of these U.N. forces in Korea is classified, but it's no military secret that the U.N. command has been reduced by nearly 80 per cent from its high point in 1953.

It's believed the U.N. forces now comprise two United States divisions, one Turkish brigade and one company from Thailand. All British commonwealth forces were withdrawn by last July leaving only a small liaison detachmant of British troops and the same from France, Greece and Ethiopia.

Of course, no army could possibly remain in a static position as long as the UN forces have in Korea without enemy intelligence sizing them up with

accuracy...And it's obvious that Red China is more than sure that the United States and the U.N. command have no intention of attacking anyone. In fact the skeleton forces we now have in Korea are probably not without their value to Red China since they also act as a restraining element, against the South Korean dream of unifying Korea by force. Although the Red Chinese have obviously re-constituted and re-armed the North Korean Forces, it's still clear that with its larger share of the Korean population, the ROK army of South Korea would be the most powerful left in the field, if all foreign troops were withdrawn.

At the moment, most of the american tanks along the 38th parallel in Korea, have their guns pointed south rather than north...as a visible warning against any hot-headed action by Synghmann Rhee's american-trained army. Ever since the armistice was signed, the american forces have deliberately rationed the ROK army's gasoline and ammunition as a further measure of control.

So Red China and North Korea might not exactly welcome the removal of american restraint on South Korea, if the United States army too, packed up and went home.

It looks as though we're stuck in Korea for at least the immediate future, and the Chinese Communists would be less than cunning if they didn't realize that. Red China's decision to withdraw its troops from Korea may seem paradoxical in the face of the hi-jacking of a South Korean plane this week, and their adament refusal to return it. But at the same time, this obviously well-planned maneuver by communist intelligence agents, served to underscore Red China's efforts to get the South Koreans into negotiations with the Communist North, before theChinese make their phased withdrawal by the end of the year.

This is in line with Moscow's efforts to get the West Germans into negotiations with the communist East Germany regime. And perhaps we should be on guard against similar maneuvers by intelligence agents in area of Berlin.

But the possibility cannot be ignored that today's chinese announcement

of phased withdrawal from Korea, may be part of a long-term communist strategy... designed to secure the withdrawal of foreign troops everywhere---particularly from Germany.

However, the communists rarely make a move unless it has a double purpose...and there's no doubt that Communist China is now feeling the pinch of its efforts to communize and industrialize the world's largest population. China is still a land with too many mouths to feed. Its greatest problem is not only to raise the standard of living, but to feed its explosively growing population. And the cost of keeping a large army in North Korea, even on Asian standards, has been high, greater apparently than the Chinese communists are willing to pay.

The boss of Red China's second five-year economic plan has already presented his ambitious blue-print for expanding almost every phase of the mainland economy. And it laid stress on much greater agricultural production than before. But at the same time, the red chinese economic boss revealed that last year's grain production fell far short of the planned goal. Indeed, it showed the smallest food increase for any year in the last five.

So, whatever the Chinese overall strategy in withdrawing its army from Korea, today the mainland regime obviously needs every hand at home to help feed its growing population.

This is Larry LeSueur---I'll be back in a moment with a footnoteto the news. But first, George Bryan.

GEORGE BRYAN: COMMERCIAL

LESUEUR: Bobbie Burns once had something to say about the plans of mice and men, and the Scottish bard might well have illustrated it with a happening of today... The storm-battered, 30 foot ketch "Gdden Rule" has radioed for assistance, 700 miles off the California coast. The Coast Guard has dispatched a cutter to its aid. Aboard the Gdden Rule are the four men representing a committee for non-violent action against nuclear weapons. They had planned to sail into the Enewetok area to keep the U.S. from carrying on its nuclear tests this Spring.

This is Larry LeSueur---Goodnite.

Good evening, everyone... Here's what happened today:

The once powerful president of the International Teamsters Union, Dave Beck, was sentenced to serve up to 15 years in prison on charges of stealing 19-hundred dollars in union funds. Superior Court Judge George Revelle (EE)...who pronounced sentence in Seattle...AND the state prosecutor said they would recommend a minimum of three years. The ACTUAL time is set by the Washington State Board of Prison Terms and Paroles. //

We're Told
Beck turned "beet red" on hearing the sentence...and said his conscience was "100 percent good." Dave Beck, JUNIOR was fined 2-thousand dollars. HE had been convicted of selling two Cadillacs owned by the union and pocketing the proceeds. Young Beck was ordered to re-pay the money...roughly 46-hundred dollars. And to give him a chance to do this, Judge Revelle ordered him placed on probation for three years. It was time, the

→

judge said, for Dave Beck, Jr. "to stand on his own feet." The elder Beck also remained free on 3-thousand dollars' bail. BOTH are planning to appeal.

Another chapter was written today in one of the most notorious criminal cases in American history. The Illinois Parole Board granted a parole to Nathan Leopold, who was convicted 33 years ago...with Richard Loeb...in the "thrill murder" of 14-year-old Bobby Franks. They were both sentenced to life imprisonment. Loeb was killed in 1936 by a fellow convict. How soon Leopold walks out of the Statesville Prison in Joliet depends on how soon the Division of Parole Supervision approves his future plans. Leopold HAS evidenced interest in working [redacted] as a laboratory technician in a rural hospital in Puerto Rico. On hearing the news today of his parole, he said: "Thousands of prisoners...especially long-term prisoners...look to me to vindicate the rehabilitation theory of [redacted] imprisonment. I will do my best not to fail that trust." Best guess is that the prison gates will open for Leopold in three or four weeks.

The Senate Finance Committee has approved the House bill...lifting the national debt ceiling...temporarily...by 5-billion dollars. The measure now goes to the Senate floor, where passage is expected sometime next week.

And today the House Appropriations Committee approved almost 3-billion dollars in additional money for running the government the rest of this fiscal year. MOST of the supplemental appropriation will be used to reimburse the Commodity Credit Corporation...for money spent on agriculture, including the price support program. The committee criticized the Administration planning that made such an appropriation necessary. And it suggested...as an economy note...that some of the MISSIIES WORK being done by the National Advisory Committee on Aeronautics may merely be duplicating military projects.

The Air Force...incidentally...fired another Atlas missile today. [redacted] It traveled perfectly for a little more than two minutes...then exploded high over the Atlantic in a tremendous ball of fire. The Air Force said, "The cause of the malfunction is not available."

Secretary of Defense McElroy testified before [redacted] a House armed services subcommittee today. ..and said a general pay increase for men in uniform is "inescapable" because of [redacted] higher living costs.

The Senate Post Office Committee approved a bill that would raise the cost of mailing a letter out-of-town from 3 cents to FIVE cents. Also an 8-cent rate for air mail.

And the Commerce Department reports tonight that national personal income...after skidding for four consecutive months...leveled off in January. Heavy dividend payments, it says, off-set the lower average income of factory workers.

President Eisenhower said tonight that "nothing but a loss of tough-minded confidence in the future" can plunge this country into a deep and long economic decline. Mr. Eisenhower made the statement in a telegram to Democratic Governor Harriman of New York. IT WAS IN [redacted] answer to another telegram [redacted] sent to the President last week by Mr. Harriman and 10 other governors...expressing their concern over the economic situation.

Today, the State Department turned down a Communist proposal for unification of North and South Korea through elections held under "neutral" supervision. A department spokesman [redacted] said the United States

→

5

is sticking to its policy of unification through elections supervised by the U.N. // Red China has announced that it is withdrawing its so-called "volunteer" forces from North Korea. // And today Russia urged the United States to pull its forces out of SOUTH Korea. The withdrawal of American troops, it claimed, would facilitate "a rapprochement" between North and South Korea. // .and insure peace in the Far East. The State Department said today that Allied forces might "conceivably" leave South Korea, AFTER [redacted] free elections are held under the supervision of the U.N.

In London tonight, the House of Commons...by a vote of 308 to 242... ENDORSED the policy of Prime Minister Macmillan with regard to a possible summit meeting. // Macmillan...like President Eisenhower...favors a summit meeting but only after careful preparation.

There has been no official word on the condition of Sir Winston Churchill...since the medical bulletin issued more than eight hours ago. The bulletin [redacted] said that Churchill's condition was "not greatly

→

changed since yesterday"...but that his fever is "a little lower." // He is comfortable, it said, /and his strength is maintained. //The next medical bulletin /on the condition of the 83-year-old statesman../who has pneumonia AND pleurisy../.will be issued tomorrow.

The Sudan tonight demanded an IMMEDIATE meeting of the U.N. Security Council.//.to consider Egypt's claim /to part of what the Sudanese/ insist is THEIR territory. The Sudan says/ a "huge infiltration" of Egyptian troops /has occurred/ in the disputed border area, AND CHARGES EGYPT WITH AGGRESSION.

A new [redacted] LEGAL development tonight in the Little Rock school integration case.// The Little Rock School Board /asked the U.S. District Court for a stay.//.holding up compliance WITH the integration order. The petition says/integration at Central High School /should be postponed "until such time/ as the concept of 'all deliberate speed'/ can be/clearly defined/and effective/legal procedures/can be obtained." Otherwise, it indicates,/ the "quality of education"/might be impaired.

The weather was a bit warmer today...here in the East...and down at the Georgia plantation where Mr. Eisenhower has been vacationing the President DID finally get out with his gun to hunt quail. ~~But how he made out we're not told.~~ We're told he got Three.

(1

Robert E. Matteson, who is director of the White House disarmament staff, made an unusual speech in Minneapolis this week...describing two opposing policies within the Eisenhower Administration toward the Soviet Union. They could be stated as one for relaxation of tensions and one for increased pressure. The same rival policies, he said, exist in all the Free World capitals. Mr. Matteson has been Harold Stassen's right-hand man for several years...and sat with him during the disarmament talks in London last year. So what he says, though kept meticulously free of names and name-calling, takes to the public the case of Harold Stassen, who has resigned as President Eisenhower's disarmament adviser, after some differences with Secretary Dulles over disarmament.

Mr. Matteson's speech, as reported in the Washington Post and Times Herald, describes the policy for relaxed tensions, obviously the Stassen policy, as one which "would recognize the strength of the Soviet Bloc, would do more to encourage the liberalizing tendencies within that Bloc, would accept the Soviet as an equal power, and would encourage the gradual evolution of the Soviet system toward freedom." The opposing policy, he says, "would emphasize more the weakness of the

Soviet Bloc, would look toward pressuring the Soviet leadership into agreements which represent a concession by the Soviet ~~of their own interest~~, and would look toward pressuring the Soviet system into collapse without war."

The Stassen policy would advocate the maintenance of relatively great military and economic strength, but at the same time would pursue a policy of gradually relaxing tensions, of increased contacts with the Communists, of increased trade, of gradual, reciprocal and safeguarded arms limitation, and of the willingness to carry out negotiations with the Communists based on a true mutuality of interests. This approach, Mr. Matteson said, would spring from a belief that the free world has the capability of competing successfully with the Communist world, despite certain advantages the Communists enjoy. The other policy assumes that successful competition would be difficult because the Soviet system, being authoritarian, can make quick decisions, concentrate its resources on chosen programs and areas, and resort to immoral methods, short of war, to subvert free Governments. The policy of pressures, Mr. Matteson said, would be one to bottle-up Communism within the Iron Curtain area, and seek by pressures and internal subversion so to disrupt and weaken the Communist Regime that it would FALL

from within. He said frankly that he thought any policy to force a Soviet surrender would BE likely TO result in violent Soviet reactions, which would make war itself more likely.

Mr. Matteson gave it as his personal impression that the Soviet Union has an inferiority feeling WHICH accounts for its desire to be accepted as an equal power and TO insist UPON the West recognizing the status quo. He said he was sure the Soviet system would not collapse, despite any shift in leadership, and said "there is "increasing evidence that the Soviet under the right circumstances would gradually evolve toward greater freedom, both in its domestic relations and its relations with the outside world. "To an increasing extent" he said, "The Soviet mind, twisted and frozen into an iron mould, is beginning to thaw. It is the scientists who are leading the way. Where science and communist doctrine are in conflict, the present Soviet leaders have allowed science to win."

The revelation that there are opposing policies within this Administration is, by itself, not at all unusual. Opposing policies exist within all governments. But Mr. Stassen is known to believe that President Eisenhower himself prefers a policy of relaxation to one of pressure. So now Mr. Matteson's speech, coming from a member of the

White House staff, would seem to confirm that view. But really, nothing is clear. For it is a fact the President regards Mr. Dulles as one of our greatest secretaries of state. Mr. Dulles has not resigned. Mr. Stassen has.

This is Larry Heinemann. I'll be back in a moment with a footnote to the news — But first George Bryan.

Poet Carl Sandburg today hailed the parole of Nathan Leopold. Two weeks ago the 80-year old poet journeyed to the prison at Statesville, Illinois, to make an eloquent plea for Leopold's parole... Today, the Chicago Bard said he agreed with Lieutenant Governor Chapman, that Leopold is the most completely rehabilitated prisoner in Illinois. // Said he was pleased for the sake of Leopold personally, but still more pleased that the theory of endless punishment, no longer has good status..

This Larry LeSueur---Goodnite.

EDWARD R. MURROW WITH THE NEWS
CBS RADIO NETWORK

THURSDAY, FEBRUARY 20, 1958
7:45 - 8:00 PM EST

This is the news:

Good evening everyone...Here's what happened today:

The once powerful president of the International Teamsters Union, Dave Beck, was sentenced to serve up to 15 years in prison on charges of stealing 19-hundred dollars in union funds. Superior Court Judge George Revelle...who pronounced sentence in Seattle...and the state prosecutor said they would recommend a minimum of three years. The actual time is set by the Washington State Board of Prison Terms and Paroles. We're told Beck turned "beet red" on hearing the sentence...and said his conscience was "100-percent good." Dave Beck, Jr. was fined 2-thousand dollars. He had been convicted of selling two Cadillacs owned by the union and pocketing the proceeds. Young Beck was ordered to repay the money...roughly 46-hundred dollars. And to give him a chance to do this, Judge Revelle ordered him placed on probation for three years. It was time, the Judge said, for Dave Beck, Jr. "to stand on his own feet." The elder Beck also remained free on on 3-thousand dollars bail. Both are planning to appeal.

Another chapter was written today on one of the most notorious criminal cases in American history. The Illinois Parole Board granted a parole to Nathan Leopold, who was convicted 33 years ago...with Richard Loeb...in the "thrill murder" of 14-year-old Bobby Franks. They were both sentenced to life imprisonment. Loeb was killed in 1936 by a fellow convict. How soon Leopold walks out of the Statesville Prison in Joiliet depends on how seen the Division of Parole Supervision approves his future plans. Leopold has evidenced interest in working as a laboratory technician in a rural hospital in Puerto Rico. On hearing the news today of his parole, he said: "Thousands of prisoners...especially long-term prisoners...look to me to vindicate the rehabilitation theory of imprisonment. I will do my best not to fail that trust." Best guess is that the prison gates

will open for Leopold in three or four weeks.

The Senate Finance Committee has approved the House bill...lifting the national debt ceiling...temporarily...by 5-billion dollars. The measure now goes to the Senate floor, where passage is expected sometime next week.

And today the House Appropriations Committee approved almost 3-billion dollars in additional money for running the government the rest of this fiscal year. Most of the supplemental appropriation will be used to reimburse the Commodity Credit Corporation...for money spent on agriculture, including the price support program. The committee criticized the Administration planning that made such an appropriation necessary. And it suggested...as an economy note...that some of the missiles work being done by the National Advisory Committee on Aeronautics may merely be duplicating military projects.

The Air Force...incidentally...fired another Atlas missile today. It traveled perfectly for a little more than two minutes...then exploded high over the Atlantic in a tremendous ball of fire. The Air Force said, "The cause of the malfunction is not available."

Secretary of Defense McElroy testified before a House armed services subcommittee today...and said a general pay increase for men in uniform is "inescapable" because of higher living costs.

The Senate Post Office Committee approved a bill that would raise the cost of mailing a letter out of town from 3 cents to 5 cents. Also an 8 cent rate for air mail.

And the Commerce Department reports tonight that national personal income...after skidding for four consecutive months...leveled off in January. Heavy dividend payments, it says, off-set the lower average income of factory workers.

President Eisenhower said tonight that "nothing but a loss of tough-minded confidence in the future" can plunge this country into a deep and long economic decline. Mr. Eisenhower made the statement in a telegram to Democratic

Governor Harriman of New York. It was in answer to another tleegram sent to the President last week by Mr. Harriman and 10 other governors...expressing their concern over the economic situation.

Today, the State Department turned down a Communist proposal for unification of North and South Korea through elections held under "neutral" supervision. A department spokesman said the United States is sticking to its policy of unification through elections supervised by the U.N. Red China has announced that it is withdrawing its so-called "volunteer" forces from North Korea. And today Russia urged the United States to pull its forces out of South Korea. The withdrawal of American troops, it claimed would facilitate "a rapprochement" between North and South Korea..and insure peace in the Far East. The State Department said today that Allied forces might "conceivably" leave South Korea after free elections are held under the supervision of the U.N.

In London tonight, the House of Commons...by a vote of 308 to 242... endorsed the policy of Prime Minister Macmillan with regard to a possible summit meeting. Macmillan...like President Eisenhower favors a summit meeting but only after careful preparation.

There has been no official word on the condition of Sir Winston Churchill since the medical bulletin issued more than eight hours ago. The bulletin said that Churchill's condition was "not greatly changed since yesterday"...but that his fever is "a little lower." He is comfortable, it said, and his strength is maintained. The next medical bulletin on the condition of the 83-year-old statesman...who has pneumonia and pleurisy will be issued tomorrow.

The Sudan tonight demanded an immediate meeting of the U.N. Security Council...to consider Egypt's claim to part of what the Sudanese insist is their territory. The Sudan says a "huge infiltration" of Egyptian troops has occurred in the disputed border area and charges Egypt with aggression.

A new legal development tonight in the Little Rock school integration

case. The little Rock School Board asked the U.S. District Court for a stay... holding up compliance with the integration order. The petition says integration at Central High School should be postponed "until such time as the concept of 'all deliberate speed' can be clearly defined and effective legal procedures can be obtained." Otherwise it indicates, the "quality of education" might be impaired.

The weather was a bit warmer today...here in the East...and down at the Georgia plantation where Mr. Eisenhower has been vacationing the President did finally get out with his gun to hunt quail; we're told he got three.

Robert E. Matteson, who is director of the White House disarmament staff, made an unusual speech in Minneapolls this week...describing two opposing policies within the Eisenhower Administration toward the Soviet Union. They Could be stated as one for relaxation of tensions and one for increased pressure. The same rival policies, he said, exist in all the Free World capitals. Mr. Matteson has been Harold Stassen's right-hand man for several years...and sat with him during the disarmament talks in London last year. So what he says, though kept meticulously free of names and name-calling, takes to the public the case of Harold Stassen, who has resigned as President Eisenhower's disarmament adviser after some differences with Secretary Dulles over disarmament. Mr. Matteson's speech as reported in the Washington Post and Time Herald, describes the policy for relaxed tensions, obviously the Stassen policy, as one which "would recognize the strength of the Soviet bloc, would do more to encourage the liberalizing tendenceies within that Bloc, would accept the Soviet as an equal power, and would encourage the gradual evolution of the Soviet system toward freedom." The opposing policy, he says, "would emphasize more the weakness of the Soviet Bloc, would look toward pressuring the Soviet leadership into agreements which represent Soviet concessions and would look toward pressuring the Soviet system into collapse without war."

The Stassen policy would advocate the maintenance of relatively great military and economic strength, but at the same time would pursue a policy of gradually relaxing tensions, of increased contacts with the Communists, of increased trade, of gradual, reciprocal and safeguarded arms limitation, and of willingness to carry out negotiations with the Communists based on a true mutuality of interests. This approach, Mr. Matteson said, would spring from a belief that the free world has the capability of competing successfully with the Communist world, despite certain advantages the Communists enjoy. The other policy assumes that successful competition would be difficult because the Soviet System, being authoritarian, can make quick decisions, concentrate its resources on chosen programs and areas, and resort to immoral methods, short of war, to subvert free governments. The policy of pressures, Mr. Matteson said, would be one to bottle up Communism with the Iron Curtain area and seek by pressures and internal subversion so to disrupt and weaken the Communist Regime that it would fall from within. He said frankly that he thought any policy to force a Soviet surrender would be likely to result in violent Soviet reactions which would make war itself more likely.

Mr. Matteson gave it as his personal impression that the Soviet Union has an inferiority feeling which accounts for its desire to be accepted as an equal power and to insist upon the West recognizing the status quo. He said he was sure the Soviet system would not collapse despite any shift in leadership, and said there is inncreasing evidence that the Soviet under the right circumstances would gradually evolve toward greater freedom, both in its domestic relations and its relations with the outside world. "To an increasing extent" he said, "the Soviet mind, twisted and frozen into an iron mold, is beginning to thaw. It is the scientists who are leading the way. Where science and communist doctrine are in conflict, the present Soviet leaders have allowed science to win."

The revelation that there are opposing policies within this Administration is, by itself, not at all unusual. Opposing policies exist within all governments. But Mr. Stassen is known to believe that President Eisenhower himself prefers a policy of relaxation to one of pressure. So now Mr. Matteson's speech, coming from a member of the White House staff, would seem to confirm that view. But really nothing is clear. For it is a fact the President regards Mr. Dulles as one of our greatest secretaries of state. Mr. Dulles has not resigned. Mr. Stassen has.

This is Larry LeSueur. I'llbe back in a moment with a footnote to the news. But first, George Bryan.

GEORGE BRYAN: COMMERCIAL

LESUEUR: Poet Carl Sandburg today hailed the parole of Nathan Leopold. Two weeks ago the 80-year old poet journeyed to the prison at Statesville, Illinois to make an eloquent plea for Leopold's parole...Today, the Chicago Bard said he agreed with Lieutenant Governor Chapman, that Leopold is the most completely rehabilitated prisoner in Illinois. Said he was pleased for the sake of Leopold personally, but still more pleased that the theory of endless punishment no longer has good status.

This is Larry LeSueur---Goodnite.

Good evening, everyone.. Here's what happened today:

The U.N. Security Council heard arguments in the FRONTIE DISPUTE BETWEEN EGYPT AND THE SUDAN— ...then called on both sides to settle the issue peacefully among themselves. A few hours before the Council took up the question, at the request of the Sudan, Egypt announced it would not press the issue until after the Sudanese elections on February 27.

Egypt and Syria held a plebiscite today to ratify the merger of the two countries into a single Arab state. The voting was heavy, with approval a foregone conclusion. The plebiscite, we're told, did NOT include the frontier area claimed by both Egypt and the Sudan.

A report tonight of the first military action in Indonesia since the proclamation last week of a revolutionary government. The rebel radio →

in Sumatra says that two Indonesian ~~aircraft~~ government bombed and strafed a bridge, 47 miles south of Padang. According to ONE report, several persons were killed. This is not confirmed, and the Associated Press quotes a rebel army spokesman...who visited the scene...as saying there were NO casualties. The revolutionary government, however, HAS accused President Sukarno of giving the order for the raid.

→

The Deputy under-secretary of State, Robert Murphy, takes off tonight on a flying mission to London, Paris and Tunis, with instructions from Secretary Dulles to seek an early solution of the French-Tunisian crisis...

Mr. Murphy, who played a key-role in settling the Italian - Yugoslav dispute over Trieste, several years ago, conferred with U.N. Secretary General Dag Hammarshuld late this afternoon on the Tunisian situation..

Mr. Murphy is reported to be taking along a tentative four-point plan to isolate the French dispute with Tunisia, from the Algerian struggle.

It reportedly includes substantial compensation for the victims of the Sakiet bombing, and the reconstruction of a modern village, — the partial withdrawal of french troops from Tunisia, and the complete withdrawal of France from the naval base at Bizerte, leaving it under ~~the~~ international supervision of five or more countries possibly including Brazil, Pakistan and Japan, PLUS the creation of a U.N. observation commission to patrol the frontier between Algeria and Tunis... This last point may not be acceptable to tunisia...becuz of their close relations with the Algerian nationalists.

A political revolt in Washington...with Secretary Benson being told bluntly today that, right or wrong, he has become a symbol of low farm prices...that his farm policy HAS to be changed, if the Republicans are to make a good showing in the congressional elections next fall. This warning was given to Mr. Benson personally by two G.O.P. congressmen---Judd of Minnesota and Miller of Nebraska--who spoke on behalf of some 25 or 30 Republican House members representing farm states. Miller told reporters afterward, "We did not ASK for his resignation. We left that up to him after weighing all the pros and cons." —Judd SAID he acted AS AN EMISSARY ALTHO HE PERSONNALY BELIEVES Benson is right!

BENSON issued a formal statement saying that he would...in his words..."continue to pursue a course which I believe is best for our farmers and fair to all our people." He said that is his responsibility. Miller retorted by calling Benson "the best weapon the Democrats have"...predicted that if he REMAINS in office, it will mean the loss in Congress of "20 to 25 Republican seats." Tonight, there are strong indications that the Republican congressmen will take their case to the President.

Democratic party leaders gathered in Washington today to organize their campaign. The meeting is being held behind closed doors...and will be

5 4

~~[illegible] declared~~ the matter closed as far as the committee is ~~concerned.~~

The House committee investigating government regulatory agencies heard more testimony today in its exploration of how the Federal Communications Commission came to award Channel 10, in Miami, to a subsidiary of National Airlines. (The F.C.C. examiner HAD recommended that the channel be awarded to Frank Katzentine, a Miami businessman). One of today's witnesses was Ben Fuqua, a vice president of the Florida Power and Light Company. Fuqua said he tried to help Katzentine get the channel, although he had no PERSONAL interest in the outcome. one way or another. He came to Washington on behalf of Katzentine, he said, at the request of the chairman of the utility company, McGregor Smith. According to Fuqua, Senator Kefauver was supporting the application of Mr. Katzentine. and Mr. Smith owed the senator a favor. Fuqua went to Washington, he said, and talked to F.C.C. Commissioner Richard Mack...because they were old friends. He said he told the commissioner that Kefauver wanted Katzentine's application "to receive every fair consideration on its merits." As it turned out, Mack voted AGAINST Katzentine. Another witness today was Jerry Carter, a member of the Florida Utilities Commission. Mr. Carter SAID,

→

~~said~~ he knew all parties in the case. "Every one," he said, "is an honorable man. /.compared with the standards of honor that we live up to in this day and time."

An Army court martial in Washington has convicted Master Sergeant Roy Rhodes of conspiring to commit espionage. || Rhodes served as head of the U.S. Embassy motor pool in Moscow from 1951 to 1953. He was ~~[redacted]~~ sentenced to five years at hard labor, ~~maximum term of life imprisonment.~~

The latest medical bulletin on the condition of Sir Winston Churchill ~~reports "a very definite improvement."~~ Said "There are signs," it ~~[redacted]~~ says, "that the pneumonia is resolving. His progress so far is satisfactory."

~~[redacted]~~

CBS News Correspondent Lou Cioffi is in the south of France...covering, Churchill's illness. || For a direct report on that story, we switch now to to Lou Cioffi in Monaco. || TAPE ENDS ON CUE "--TO CBS NEWS IN NEW YORK."

That was my colleague Leo Cioffi reporting from Monaco —

President Eisenhower sent a personal message to Churchill today... expressing pleasure over reports of his steady progress. The text of the message was not released. But Mr. Churchill was reported pleased

This is Larry Lesueur. I'll be back in a moment with a Footnote to the Day's News. First, George Bryan.

President Eisenhower got in ANOTHER day of Quail shooting [redacted] in Thomasville Georgia. But when a President goes shooting its more like an army-on the-move, than a hunting party. The President's expedition included, two mule-drawn wagons, one with SHORT WAVE [redacted] radio. The other WAGON [redacted] piled high with medical equipment, PLUS [redacted] two carbines and a submachine gun for the secret service. One secret serviceman on horseback, three others in the second wagon, Doctor Snyder on horseback, AND UP FRONT [redacted], two dog handlers, four dogs and the President with a 20 gauge SHOTGUN [redacted] From the Quail. ~~#~~ NO COMMENT

This is Larry LeSueur. Ed Murrow will be back on MONDAY — GOODNITE.

CBS RADIO DIVISION

EDWARD R. MURROW WITH THE NEWS - LARRY LESUEUR

Friday, February 21, 1953
7:45 - 8:00 P.M.

LESUEUR: ... CBS News correspondent Lou Cioffi is in the south of France, covering the Churchill illness. The latest medical bulletin on the condition of Sir Winston Churchill reports a very definite improvement. But for a direct report on that story, we switch now to Lou Cioffi in Monaco.

CIOFFI: If you should ask a taxi driver in Monte Carlo to take you to the Villa La Pausa in (indistinct) ... he will probably ask for more exact details as to its whereabouts. To avoid confusion, it's much simpler to ask for "Churchill's villa," for that's what's it become known as since Sir Winston began using it as a vacation home. The Villa La Pausa belongs to Mr. Emery Reves, a Hungarian by birth but now a British citizen. He's the publisher of Sir Winston's books for all editions other than English. The house was built back in the 1930's for Gabriel Chanel. She's better known as Coco Chanel, the famous Paris dress designer. It's a typical Riviera home, square shaped, two stories high, painted a kind of off-white, with lavender shutters on the windows and the colorful red tile roof so common on the Riviera. It sits on top of a high cliff with a magnificent view. From his bedroom window, Sir Winston can see the beautiful harbor of Monaco off to the right and to the left, Italy, with the blue Mediterranean spread out before him.

The Villa is about six miles from Monte Carlo, a good twenty minute car ride over a winding mountain road. The entrance is on a private road, which was not constructed for modern automobile traffic. At some places there's room for only one car. The area is especially suited to someone who wants to get away and it guarantees almost complete privacy. Sir Winston's privacy during his illness has not been disturbed. First of all - the gate to the house is under constant guard by two French policemen.

Other policemen roam the grounds to see that no one tries to sneak in. A high wall surrounds the entire property and it's impossible to see the house itself from the road. But reporters and photographers, after a little investigation, found a spot along a foot path behind the villa where the wall is low enough to allow a view of the building. Throughout the daylight hours reporters and photographers manned this post hoping to see something. This morning they were rewarded with the sight of Lady Churchill and her daughter Sarah taking a walk in the garden. One reporter shouted over the wall "How is Sir Winston?" Lady Churchill smiled and said "He's very well, thank you." For detail-hungry reporters this was a gold mine. Since the beginning of Sir Winston's illness, word on his condition, his activities and so on have been very short and to the point. Once source intimates that this is at the express wish of Sir Winston himself, that although he realizes there is worldwide concern for his welfare, he is a private citizen and considers this a personal matter. The only official contact with the outside world is handled by Sir Winston's secretary, Anthony Montague Browne. He was originally an official in the Foreign Office. Each day at precisely 3:45 P.M., Mr. Montague Browne walks into the lobby of the Hotel De Paris in Monte Carlo, waits until the reporters have their pads and pencils ready and begins to read the daily communique. Today's was typical. It read: "Sir Winston Churchill this morning dealt with a considerable volume of correspondence and is in excellent spirits. The Queen has made inquiries about the health of Sir Winston and messages have been received from all over the world. It is unnecessary to add that reports of an oxygen tent being necessary are untrue." Mr. Montague Browne invariably ends this statement by saying "Sorry, gentlemen, that's all I can say." He broke his rule somewhat today when he answered a question and admitted that "Sir Winston is still in bed." But that's all. There is one and only one official communique each day, which the medical part

of is prepared by Sir Winston's two doctors. Dr. Charles Moran is Sir Winston's personal physician, who flew here from London when his patient became ill. Dr. Moran is Lord Moran. He's also one of the Queen's physicians and a hero of the last war where he won the Military Cross for valor. The local physician is Dr. David Roberts, an Englishman, who lives and works on the Riviera. He came here following the war after being badly wounded while serving in the RAF. Dr. Roberts makes a daily visit to Sir Winston. Dr. Moran lives at the villa. Their daily medical reports, though cautiously worded, seem to indicate that Sir Winston is getting better. Both have made it clear that there is no cause for alarm at this time.

In the meanwhile - there reporters and photographers will continue their vigil at the gate of Churchill's villa and at that spot where the wall is low, hoping that soon they will have a good picture to send to their home offices, a picture of Sir Winston Churchill strolling through the garden smoking a great big cigar.

Now, back to CBS News in New York.

LESUEUR: That was my colleague, Lou Cioffi, reporting from Monaco.

Mi. trans. - P. O.

EDWARD R. MURROW WITH THE NEWS
CBS RADIO NETWORK

FRIDAY, FEBRUARY 21, 1958
7:45 - 8:00 PM EST

LARRY LESUEUR REPORTING

Good evening everyone...Here's what happened today:

The U.N. Security Council heard arguments in the frontier dispute between Egypt and the Sudan - then called on both sides to settle the issue peacefully among themselves. A few hours before the Council took up the question at the request of the Sudan, Egypt announced it would not press the issue until after the Sudanese elections on February 27th.

Egypt and Syria held their plebiscite today...to ratify the merger of the two countries into a single Arab state. The voting was heavy, with approval a foregone conclusion. The plebiscite, we're told, did not include the frontier area claimed by both Egypt and the Sudan.

A report tonight of the first military action in Indonesia...since the proclamation last week of a revolutionary government. The rebel radio in Sumatra says that two Indonesian government aircraft bombed and strafed a bridge, 47 miles south of Padang. According to one report, several persons were killed. This is not confirmed, the Associated Press quotes a rebel army spokesman...who visited the scene...as saying there were no casualties. The revolutionary government, however, has accused President Sukarno of giving the order for the raid.

The Deputy under-secretary of State, Robert Murphy, takes off tonight on a flying mission to London, Paris and Tunis, with instructions from Secretary Dulles to seek an early solution of the French-Tunisian crisis. Mr. Murphy, who played a key role in settling the Italian-Yugoslav dispute over Trieste, several years ago, conferred with U.N. Secretary General Dag Hammarsjould late this afternoon on the Tunisian situation. Mr. Murphy is reported to be taking along a tentative four-point plan to isolate the French dispute with Tunisia, from the Algerian struggle.

It reportedly includes substantial compensation for the victims of the Sakiet

bombing, and the reconstruction of a modern village, the partial withdrawal of French troops from Tunisia and the complete withdrawal of France from the naval base at Bizerte, leaving it under the international supervision of five or more countries possibly including Brazil, Pakistan and Japan, plus the creation of a U.N. observation commission to patrol the frontier between Algeria and Tunis. This last point may not be acceptable to Tunisia because of their close relations with the Algerian nationalists.

A political revolt in Washington...with Secretary Benson being told bluntly today that, right or wrong, he has become a symbol of low farm prices...that his farm policy has to be changed, if the Republicans are to make a good showing in the congressional elections next fall. The warning was given to Mr. Benson personally by two G.O.P. congressmen---Judd of Minnesota and Miller of Nebraska, who spoke on behalf of some 25 or 30 Republican House members representing farm states. Miller told reporters afterward, "We did not ask for his resignation. We left that up to him after weighing all the pros and cons." Judd said he acted as an emissary although he personally believes Benson is right. Benson issued a formal statement saying that he would..in his words..."continue to pursue a course which I believe is best for our farmers and fair to all our people." He said that is his responsibility. Miller retorted by calling Benson "the best weapon the Democrats have"...predicted that if he remains in office, it will mean the loss in Congress of "20 to 25 Republican seats." Tonight, there are strong indications that the Republican congressmen will take their case to the President.

The House committee investigating government regulatory agencies heard more testimony today,..in its exploration of how the Federal Communications Commission came to award Channel 10 in Miami to a subsidiary of National Airlines. (The F.C.C. examiner had recommended that the channel be awarded to Frank Katzentine, a Miami businessman.) One of today's witnesses was Ben Fuqua, a vice president of the Florida Power and Light Company. Fuqua said he tried to help Katzentine

get the channel although he had no personal interest in the outcome...one way or another. He came to Washington on behalf of Katzentine, he said, at the request of the chairman of the utility company, McGregor Smith. According to Fuqua, Senator Kefauver was supporting the application of Mr. Katzentine...and Mr. Smith owed the senator a favor. Fuqua went to Washington he said, and talked to F.C.C. Commissioner Richard Mack...because they were old friends. He said he told the commissioner that Kefauver wanted Katzentine's application "to receive every fair consideration on its merits." As it turned out, Mack voted against Katzentine. Another witness today was Jerry Carter, a member of the Florida Utilities Commission. Mr. Carter said, he knew all parties in the case. "Every one," he said, "is an honorable man...compared with the standards of honor that we live up to in this day and time."

An Army court martial in Washington has convicted Master Sergeant Roy Rhodes of conspiring to commit espionage. Rhodes served as head of the U.S. Embassy motor pool in Moscow from 1951 to 1953. He was sentenced to five years at hard labor.

The latest medical bulletin on the condition of Sir Winston Churchill said "There are signs that the pneumonia is resolving. His progress so far is satisfactory," CBS News Correspondent Lou Cioffi is in the south of France...covering Churchill's illness. For a direct report on that story, we switch now to Lou Cioffi in Monaco.

CIOFFI: If you should ask a taxi driver in Monte Carlo to take you to the Villa La Pausa in (indistinct)...he will probably ask for more exact details as to its whereabouts. To avoid confusion, it's much simpler to ask for "Churchill's villa," for that's what its become known as since Sir Winston began using it as a vacation home. The Villa La Pausa belongs to Mr. Emery Reves, a Hungarian by birth, but now a British citizen. He's the publisher of Sir Winston's books for all editions other than English. The house was built back in the 1930's for Gabriel Chanel. She's better known as Coco Chanel, the famous Paris dress

designer. It's a typical Riviera home, square shaped, two stories high, painted a kind of off-white with lavender shutters on the windows and the colorful red tile roof so common on the Riviera. It sits on top of a high cliff with a magnificent view. From his bedroom window, Sir Winston can see the beautiful harbor of Monaco off on the right and to the left, Italy, with the blue Mediterranean spread out before him.

The villa is about six miles from Monte Carlo, a good twenty minute car ride over a winding mountain road. The entrance is on a private road, which was not constructed for modern automobile traffic. At some places there's room for only one car. The area is especially suited to someone who wants to get away and it guarantees almost complete privacy. Sir Winston's privacy during his illness has not been disturbed. First of all - the gate to the house is under constant guard by two French policemen. Other policement roam the grounds to see that no one tries to sneak in. A high wall surrounds the entire property and it's impossible to see the house itself from the road. But reporters and photographers after a little investigation, found a spot along a foot path behind the villa where the wall is low enough to allow a view of the building. One source intimates that this is at the express wish of Sir Winston himself, that although he realizes there is worldwide concern for his welfare, he is a private citizen and considers this a personal matter. The only official contact with the outside world is handled by Sir Winston's secretary, Anthony Montague Browne. He was orignially an official in the Foreign Office. Each day at precisely 3:45 P.M., Mr. Montague Browne walks into the lobby

of the Hotel De Paris in Monte Carlo, waits until the reporters have their pads and pencils ready and begins to read the daily communique. Today's was typical. It read: "Sir Winston Churchill this morning dealt with a considerable volume of correspondence and is in excellent spirits. The Queen has made inquiries about the health of Sir Winston and messages have been received from all over the world. It is unnecessary to add that reports of an oxygen tent being necessary are untrue." Mr. Montague Browne invariably ends this statement by saying, "Sorry, gentlemen, that's all I can say." He broke his rule somewhat today when he answered a question and admitted that "Sir Winston is still in bed." But that's all. There is one and only one official communique each day, which the medical part of is prepared by Sir Winston's two doctors. Dr. Charles Moran is Sir Winston's personal physician, who flew here from London when his patient became ill. Dr. Moran is Lord Moran. He's also one of the Queen's physicians and a hero of the last war where he won the Military Cross for valor. The local physician is Dr. David Roberts, an Englishman, who lives and works on the Riviera. He came here following the war after being badly wounded while serving in the RAF. Dr. Roberts makes a daily visit to Sir Winston. Dr. Moran lives at the villa. Their daily medical reports, though cautiously worded, seem to indicate that Sir Winston is getting better. Both have made it clear that there is no cause for alarm at this time.

In the meanwhile - there reporters and photographs will continue their vigil at the gate of Churchill's villa and at that spot where the wall is low, hoping that soon they will have a good picture to send to their home offices, a picture of Sir Winston Churchill strolling through the garden smoking a great big cigar.

Now back to CBS News in New York.

LESUEUR: That was my colleague Lou Cioffi reporting from Monaca.

President Eisenhower sent a personal message to Mr. Churchill today...

expressing pleasure over reports of his steady progress. The text of the message was not released, but Sir Winston was reported pleased.

This is Larry LeSueur. I'll be back in a moment with a Footnote to the Day's News. First, George Bryan.

GEORGE BRYAN: COMMERCIAL

LESUEUR: President Eisenhower got in another day of quail shooting in Thomasville, Georgia. But when a President goes shooting it's more like an army on the move than a hunting party. The President's expedition included, two mule drawn wagons, one with short wave radio. The other wagon piled high with medical equipment plus two carbines and a submachine gun for the secret service. One secret serviceman on horseback, three others in the second wagon, Doctor Snyder on horseback, and up front two dog handlers, four dogs, and the President with a 20 guage shotgun. From the quail - no comment.

This is Larry LeSueur. Ed Murrow will be back on Monday. Goodnite.

Edward R. Murrow Mon., Feb. 24, 1958

This is the news:

An agreement for basing intermediate-range missiles in Britain was announced today in Washington and London. / The agreement is the first of its kind to be worked out between the United States and its NATO allies, and climaxes 11 months of talks. / The missile provided will be the Thor, developed by the Air Force. / The United States also will provide nuclear warheads, but...under terms of the agreement...these cannot be launched except by "joint decision of the two governments." / It is also specified that "all nuclear warheads so provided shall remain in full U.S. ownership, custody and control, in accordance with American law."

The cost of ~~construction~~ buildings the four bases will be borne by the British government. / And the bases will be (manned) ~~operated~~ by British crews, trained in

→

the United States. British Defense Minister Duncan Sandys made the announcement for Britain in the House of Commons. He assured the Labour opposition that the nuclear warheads will be kept in "an unarmed condition", making an accidental explosion impossible...and he stressed the point that the missiles can be launched only by "a joint, positive decision of the two governments."

Secretary of State Dulles said today that Russia's "political-economic" offensive constitutes a greater danger than open, armed attack. Mr. Dulles made the statement while testifying for three hours...before the House Ways and Means Committee...in favor of a five-year extension of the Reciprocal Trade Act. He said that failure to renew the act...and strengthen it..."would set back the clock and endanger our Republic." (This is true, he said, because the economies of other free countries "depend, in large part, on the flow of trade to and from the United States." ~~Mr. Dulles also said...in the course of the questioning...that he does not want to assume at this stage~~ that ~~there will~~ be a summit conference.

~~In the House today, Democratic Representative Bailey of West Virginia introduced a bill which would extend the Reciprocal Trade Act for only one year, instead of five. It would also restrict...rather than relax...~~

~~President Eisenhower's authority to cut tariffs.~~

Mr. Eisenhower told a national food conference in Washington today that American is strong economically. "This," he said, "is not time to listen to people who are men of little faith." The President spoke off-the-cuff. The formal speech was made in his place by Vice President Nixon. The substitution was made...according to News Secretary Hagerty...because it was uncertain just when Mr. Eisenhower would get back to Washington from his ~~flying~~ brief visit yesterday in Phoenix. (As it turned out, the President's airplane landed at National Airport at 6:56 A.M., Washington time.

Mr. Nixon told the conference that food "may well prove to be a more decisive weapon that satellites." ~~"We have in our power," he said, "the ability to wage a winning war against poverty and hunger throughout the world."~~

The Miami attorney...Thurman Whiteside...told a House investigating committee today that the charges leveled against him in connection with the awarding of a television channel are "untrue". He referred to earlier testimony given by Bernard Schwartz, former chief counsel for the committee. Schwartz charged that Whiteside had written out checks to Richard Mack, a member of the Federal Communications Commission, in the amount of 26-hundred dollars...and that Whiteside had the reputation of being "a fixer". He also said that Whiteside represented a subsidiary of National Airlines, which was awarded the channel over three competitors. (Mack voted for the airline). Whiteside told the committee today that Schwartz is "an unmitigated liar." Whiteside said he and Mack are old friends...and that what Schwartz had neglected to say was that he (Whiteside) had been loaning money to Mack long before Mack joined the F.C.C. in July, 1955. Whiteside said this money totaled 7-thousand, 630 dollars. Schwartz...in his testimony...quoted Mack as saying that the 26-hundred dollars he received after becoming a member of the commission had been loans but that he could not remember "specifically" remember paying back any of these loans, although some of them were "forgiven." Whiteside said today that all but 250 dollars of this money has been repaid.

He denied representing National Airlines. In fact, he said, he turned down a 10-thousand-dollar fee to represent the airline because it might become "a source of embarrassment." Whiteside said he asked Mack...as a friend... to give consideration to the airline "all other things being equal." But that later he telephoned Mack and told him that he no longer had any interest in the case. Whiteside said he did this under pressure "tantamount to blackmail" from Frank Katzentine, a Miami businessman who also wanted the T.V. channel. He did not detail this charge, but Katzentine has spoken of alleged "irregularities" on the part of Whiteside in handling a trust fund. Whiteside said that both he and Mack have a financial interest in the insurance company holding the account of the firm awarded Channel 10.

The Senate tonight passed and sent to the White House a bill raising the national debt limit...temporarily...by 5-billion dollars.

In Argentina, almost complete returns in yesterday's presidential election show the winner to be the left-wing candidate, Arturo Frondizi... (FRON-DEE-SEE) who also had the support of ousted dictator, Juan Peron. It was the first free presidential election in Argentina in 30 years. The State Department says it is "naturally a matter of gratification that Argentina has successfully completed this important process in the return to constitutional democracy."

In Cuba, the Grand Prix auto race ended in tragedy today...when a racing car skidded out of control and plowed into a crowd of spectators. At least five persons are reported killed and 50 injured. Government authorities blame the accident on Rebel Leader Fidel Castro; they say oil was poured on the curves. The whereabouts of the world's champion auto racer...Juan Manuel Fangio...remains a mystery. Fangio was kidnaped last night from his hotel in downtown Havana...reportedly by revolutionary agents. There was a report early this afternoon that he had been reaieased. But later this was found to be incorrect.

Sir Winston Churchill continues to improve from his illness. Today he enjoyed another cigar.

The American diplomat...Robert Murphy...conferred in Paris today with French leaders in his role as peacemaker between Tunisia and France. For a direct report on that, we switch to my colleague David Schoenbrun in Paris.

(Tape runs 5 minutes
Ends on cue: "--to Edward R. Murrow in N.Y."

This is Ed Murrow. I'll be back in a moment with the Word for Today. First, here is George Bryan.

Word for Today

~~There is a definite unwillingness on~~ both sides in the Franco-Tunisian dispute ~~to give ground. They seem, in Schoenbrun's phrase, to be holding~~ seem to be holding "rigidly" to their bargaining positions. Yet for the sake of peace, there must be compromise. It is even desirable from the point of view of world opinion. For as Ralph Waldo Emerson said, "A foolish consistency is the hobgoblin of little minds."

Goodnight and good luck!

CBS RADIO DIVISION

EDWARD R. MURROW WITH THE NEWS

Monday, February 24, 1958

7:45 - 8:00 P.M.

MURROW: ... Sir Winston Churchill continues to improve from his illness. Today, he enjoyed another cigar.

The American diplomat, Robert Murphy, conferred in Paris today with French leaders, in his role as peacemaker between Tunisia and France. For a direct report on that, we switch to my colleague David Schoenbrun in Paris.

SCHOENBRUN: "Speak softly and say little," - that's the advice that America's good officer, Robert Murphy, gave the French today as he came here to Paris on the first leg of his good will tour. Early tomorrow morning, he'll fly to Tunis to offer the same advice to President Habib Bourguiba, who has never been noted for the moderation or limitation of his public utterances.

Mr. Murphy's soft spoken counsel comes at a particularly loud phase of the French-Tunisian crisis. The last few days have featured mutual recriminations and increasingly rigid positions on both sides. Some French officials have been making an effort to do some conciliation, such as Foreign Minister Christian Pineau's speech yesterday, in which he denounced trouble-makers who are saying that France is planning the reconquest of Tunisia. The Foreign Minister denied this vogerously. However, other would-be peacemakers had a hard time. Former premieres Guy Mollet and Edgar Faure were targets for smoke bombs and rotten vegetables and were chased off the platform by rioting mobs during Sunday's speeches. And in the movies of France, people are applauding newsreels of the smoking ruins of Sakiet village. In Tunisia- even official sources are provoking crowds and making warlike declarations. The paper, Accion, official journal of President Bourguiba's own party, the Neo-Destour, threatens that Tunisian

volunteers would enter the war at the side of their Algerian brothers. And for the first time - the Tunisians openly admit it, that they were giving aid to Algerian rebel troops on their territory, an admission of a co-belligerent role in the rebellion which the French are pointing to now as justification for Sakiet.

Thus, Mr. Murphy's plea for a cure of silence comes at the right time. 'If you have anything to say, please say it to me,' is Mr. Murphy's good will policy. Mr. Murphy spent an hour and a half today listening to the French Premier and Foreign Minister argue the case for France. The French propose three areas of exploration for Mr. Murphy's good offices. First, there's the question of security for French troops and civilians in Tunisia. France is willing to regroup its forces, that is - to pull back its troops from the interior of the country to the naval base at Biserte, but only on condition that Mr. Bourguiba will lift his blockade and permit the troops to fall back in order and with honor. This, the French told Mr, Murphy, is an urgent and fitting subject for a good officer to patrol. Secondly, France wants to seal off the Algerian-Tunisian border for that is their powder keg of North Africa. Finally, Mr. Murphy was told he can wind up his mission successfully by persuading Bourguiba to end the rupture of relations, to renew diplomatic negotiations with France in accordance with existing treaties, to settle all outstanding issues between the two countries alone. As for any discussion of the Algerian rebellion, that, the French say grimly, is nobody's business but theirs.

Mr. Murphy listened to this French argument patiently and politely. He knows and the French know that he'll be listening to the direct opposite tomorrow. The Tunisian President says he no longer trusts France and will not deal with them except through a third party. He will allow them to fall back but not to Biserte. They can go back to France. As for policing the frontier, Bourguiba has charged that

this is a French device to cut off aid to Algerian rebels and to slaughter them.

Good officer Murphy obviously has his work cut out for him. It is just as obvious however, that both the French and the Tunisians are putting forward their maximum bargaining positions at the start of the mission to impress Mr. Murphy and to allow themselves some room for maneuver and for compromise. Not that there's much room or much give to their basic positions. Mr. Murphy's immediate task will be to probe these rigid lines looking for soft spots, meanwhile counselling both sides to be as discreet, as silent as possible.

That's the situation as seen here tonight in Paris, as we enter a new turning point in North African affairs from which there will be no turning back.

America is now committed, and I believe irrevocably, to a direct role of enormous consequences for the Atlantic alliance. A hasty step, a careless move can cost us the friendship of either Bourguiba or the French - and either loss could be a disaster.

Now, back to Edward R, Murrow in New York.

MURROW: That was David Schoenbrun reporting on the Tunisian situation, from Paris. This is Ed Murrow. I'll be back in a moment with the word for today.

First, there's the question of security for French troops and civilians in Tunisia. France is willing to regroup its forces, that is - to pull back its troops from the interior of the country to the naval base at Bizerts, but only on condition that Mr. Bourguiba will lift his blockade and permit the troops to fall back in order and with honor. This, the French told Mr. Murphy is an urgent and fitting subject for a good officer to patrol. Secondly, France wants to seal off the Algerian-Tunisian border for that is their powder keg of North Africa. Finally, Mr. Murphy was told he can wind up his mission successfully by persuading Bourguiba to end the rupture of relations, to renew diplomatic negotiations with France in accordance with existing treaties, to settle all outstanding issues between the two countries alone. As for any discussion of the Algerian rebellion, that, the French say grimly, is nobody's business but theirs.

Mr. Murphy listened to this French argument patiently and politely. He knows and the French know that he'll be listening to the direct opposite

tomorrow. The Tunisian President says he no longer trusts France and will not deal with them except through a third party. He will allow them to fall back but not to Bizerte. They can go back to France. As for policing the frontier. Bourguiba has charged that this is a French device to cut off aid to Algerian rebels and to slaughter them.

Good officer Murphy obviously has his work cut out for him. It is just as obvious however, that both the French and the Tunisians are putting forward their maximum bargaining positions at the start of the mission to impress Mr. Murphy and to allow themselves some room for maneuver and for compromise. Not that there's much room or much give to their basic positions. Mr. Murphy's immediate task will be to probe these rigid lines looking for soft spots, meanwhile counselling both sides to be as silent as possible.

That's the situation as seen here tonight in Paris, as we enter a new turning point in North African affairs from which there will be no turning back.

America is now committed, and I believe irrevocably to a direct role of enormous consequences for the Atlantic alliance. A hasty step, a careless move can cost us the friendship of either Bourguiba or the French - and either loss could be a disaster.

Now back to Edward R. Murrow in New York.

This is Ed Murrow. I'll be back in a moment with the word for today. First, here is George Bryan.

GEORGE BRYAN: COMMERCIAL

MURROW: Both sides in the Franco-Tunisian dispute seem to be holding "rigidly" to their bargaining positions. Yet for the sake of peace there must be compromise. It is even desirable from the point of view of world opinion. For as Ralph Waldo Emerson said, "A foolish consistency is the hobgoblin of little minds."

Goodnight and good luck!

Edward R. Murrow Tues., Feb. 25, 1958

This is the news:

President Eisenhower will tell the American people tonight...in a nationwide broadcast...that a strong program of foreign military and economic aid is as necessary to survival as any ballistic missiles program. He will say that the programs for mutual security and reciprocal trade leave "no margin for error."... that they are "iron imperatives of security and the building of true peace." Opposition to the aid program, he will say, is based on "prejudices, penny-wise economy and...above all...on an outright refusal to look at the world of 1958 as it really is." Mr. Eisenhower's speech...climaxing an all-day conference sponsored by the Administration in support of its aid program...will be broadcast over most of these stations at 9:30 p.m., Eastern Standard Time. Speaking before the same conference earlier today, former President Truman said [redacted]

he had been told that the foreign aid program "is in grave danger of being emasculated by Congress." If that is true, he said, "then I must tell you frankly that I think the country is in a very bad fix." Mr. Truman called on Democrats in Congress to support the program. At the same time, he challenged the Administration "to come forward with some new ideas" for combating Russia's new economic offensive. Adlai Stevenson also addressed the conference...and urged that an international conference be held to correlate and enlarge the efforts for building up backward areas. He said, "We could invite Mr. Khrushchev to coordinate his efforts with ours, if he is really interested in the economic development and political independence of these less fortunate countries." If he is not interested, he said, the motives behind Russia's assistance program would at least be unmasked.

The government reports that the cost of living in January went up six-tenths of one percent...to reach a new all-time high. This is the biggest increase recorded in a single month since July, 1956. And the consumer price index has now risen 15 times in the last 17 months. Last month's rise is attributed mainly to freezing weather in Florida, which cut down on fruit production, and to reduced livestock marketing, which spelled higher prices for meat. ~~Abnormal rainy weather in Texas also contributed to higher vegetable prices. A government spokesman says no immediate relief from high prices is expected...but that prices ultimately will come down, "if unemployment lasts long enough."~~

The House Post Office Committee today approved an average 15 percent pay increase for half a million postal employes. It also voted approval of a bill to raise the pay of nearly a million Civil Service workers by an average of 11 percent. Similar legislation before the Senate calls for a base increase of seven and a half percent.

~~The House committee acted as the Senate began debating President Eisenhower's request for higher postal rates.~~

Senate Republican Leader Knowland said today that the Administration may set up a land reclamation program to help spur the economy. Knowland

→

made it clear that this is being considered only as a possibility. ~~But he told reporters that Secretary of the Interior Seaton opened today's meeting of Republican congressional leaders at the White House, and that the entire question was reviewed.~~

~~Congress was warned today by the Joint Chiefs of Staff that if~~ a system of merit raises is not provided for trained members of the armed forces, the national security will be endangered. The joint chiefs said...in separate testimony...that such a system must be adopted without delay, "if we are to attract and retain the trained personnel we need."

Democratic Senator Byrd today reversed himself...announcing he will run for re-election in November. Two weeks ago, Byrd said he would keep a promise to his wife and not seek a fifth term. Since then, he has been under pressure to reconsider, and today he notified the Virginia general assembly that he would be a candidate "with Mrs. Byrd's blessing." Byrd is chairman of the Senate Finance Committee and a strong advocate of economy in government.

The Miami lawyer...Thurman Whiteside...today continued his testimony before the special House committee investigating the federal regulatory agencies.

And again the testimony concerned the relationship of Whiteside with Richard Mack, a member of the Federal Communications Commission. /Whiteside told the committee that...over a four-year period...Mack received almost 10-thousand dollars from an insurance company in which they both had an interest. /This same company insured the television station, to which the F.C.C. awarded Channel 10 in Miami./ Mack and three other commissioners voted for the station. /Committee Chairman Harris said, at the conclusion of today's hearing, that Mack appeared to him to have violated the law. The Federal Communications Act, he said, bars commission members from owning stock in any company serving a petitioner before the F.C.C. /~~He noted that penalties were provided up to one year in prison.~~

A Navajo guided missile...test-fired at Cape Canaveral today...fell into the ocean and exploded, after less than one minute of flight. The contract for production of the Navajo was cancelled by the Air Force last year, but it has been tested since then on several occasions. Today's launching marked the conclusion of these tests.

The United States today formally recognized the United Arab Republic, created by the merger of Egypt and Syria. ~~Our present ambassador to Egypt, Raymond Hare, will be nominated by President Eisenhower to be envoy to the new Arab state. The ambassador to Syria, Charles Yost, will remain in Damascus for "a brief period" and then return to Washington for reassignment.~~ The United States said it is extending recognition, after noting the assurances of the ~~United Arab Republic~~ new Arab state that it "intends to respect and observe its international obligations," existing at the time it was formed.

The special American envoy, Robert Murphy, conferred today with Tunisian President Bourguiba in his role of mediator in the French-Tunisian dispute. Bourguiba said Algeria was the "center" of their discussion, and Murphy told reporters "all problems" were discussed. ~~He said, "We have made a step forward."~~ France has insisted that Algeria is her own domestic affair...and not a matter for negotiation with the Tunisian government.

~~The foreign minister of the rebel government in Indonesia said today that the central government in Jakarta is buying arms in Czechoslovakia and paying for them with money from Red China. Rebel leaders in Padang~~

→

Edward R. Murrow: February 25, 1958. 7.45 p.m.

It may have come as something of a shock to this country that the first genuinely free election in Argentina in thirty years has produced a regime that is expected to be neutralist and mildly anti-American. Arturo Frondizi, who won a landslide victory, does not admit that he is anti-American and says he hopes to improve relations with Washington. But a large number of his followers are fascists or communists, and he told Joseph Newman of the New York Herald Tribune that the recognition of Red China, while not decided, will be taken under consideration. And during the election campaign he promised that the lives of Argentinians would not be compromised by any regional pact - meaning an agreement with the United States.

Argentina is a special case, and the result of an election there is not typical of all Latin America. But the result is startling, and it raises a legitimate question whether Washington's somewhat studied indifference to democratic liberalism in Latin America has not been carried dangerously far. The basic conditions that determine political results are changing in Latin America, and it may be that truly free elections will produce more governments that shy away from the leadership of the United

States. The good neighbor policy, which brought Latin American countries into close accord, no longer appears as paramount. The near unanimity of all the Americas in great international issues no longer exists.

One reason for this is the United States preoccupation with the needs of European, Middle Eastern and ASIAN countries, which has led to a rising disinterest in the welfare of Latin America. Our influence has been waning for another reason, which is the too rigid insistence of Washington on keeping hands off domestic affairs below the border. We do not cultivate and encourage the personalities who hope to be the heirs of the reactionary or dictatorial regimes. This is a sound political principle if not carried too far. But we can have correct and even close relations with dictatorships, without throwing away our mass appeal as the great sponsor of political freedom and democracy. We should be making Latin Americans acutely aware that every step to extend democracy is sure of the sympathy of the United States. We have to be polite to the dictators, but we do not have to ignore their opponents.

It can be argued that Latin America is not ripe for real working democracy, that the middle class is not large enough. It also is important not to rock the boat, as people keep saying, so that order is maintained,

and the production of raw materials can go on. ~~It can be said with some truth that the role of American capital has visibly improved from a social standpoint.~~ / ~~So quite a good apology can be offered for the cold opportunism with which Washington goes about its dealings with the reactionaries of Latin America.~~ / ~~But if the trend there is toward more radical policies - as it seems to be - Washington either will have to be their inspiration, or the inspiration will come from forces hostile to the United States.~~ / ~~That is~~ But, if we get absorbed in conducting the cold war on the other side of the globe, we may find the cold war is being brought to our own back yard, and that we are strangely incapable of dealing with it.

Arturo Frondizi owes his great victory to a crazy-quilt coalition. Probably his largest single block of votes came from the followers of Peron. Then he had the backing of communists, near-communists, splinter fascist factions, right-wing nationalists, leftist democrats and some socialists. He campaigned pretty much as a nationalist demagogue, making glowing promises of labor benefits, offereing a combination of socialism and ultra-nationalism and the penalization of the rich. / Now that he is in, he says he is committed to nobody and will govern for the good of all. / But however moderate his personal inclinations, he is under binding obligations to those

who elected him. And to satisfy many of his followers he must be friendly with the Soviet world simply to prove that he is not a tool of the United States.

He is pledged to make the Peron party legal. Whether he will allow Peron himself to return remains to be seen. Quite possibly not, for the army is pledged to prevent it at any cost. If Peron were in the least addicted to democracy, this veto by the army would be distinctly anti-democratic. But now the army is a shield behind which a democracy of a sort will have a trial. Frondizi promises to be constitutional and establish a rule of law. If he succeeds without losing his anti-democratic supporters it will be quite a feat. And to do so it seems that he will have to be more anti- than pro-American. So for the present, at least, we do not stand to gain much.

Word for Today

Our policy in Latin American has not been...~~consciously~~ actively -

to inspire the spread of democracy. This does not quite jibe with

Herman Melville's observation on ~~this~~ the subject of America and democracy.

"We Americans," he said, "are peculiar chosen people...the Israel of

our times. We bear the ark of the liberties of the world."

Good night and good luck!

It may have come as something of a shock to this country that the first genuinely free election in Argentina in thirty years has produced a regime that is expected to be neutralist andmildly anti-American. Arturo Frondizi, who won a landslide victory, does not admit that he is anti-American and says he hopes to improve relations with Washington. But a large number of his followers are fascists or communists, and he told Joseph Newman of the New York Herald Tribune that the recognition of Red China, while not decided, will be taken under consideration. And during the election campaign he promised that the lives of Argentinians would not be compromised by any regional pact - meaning an agreement with the United States.

Argentina is a special case, and the result of an election there is not typical of all Latin America. But the result is startling, and it raises a legitimate question whether Washington's somewhat studied indifference to democratic liberalism in Latin America has not been carried dangerously far. The basic conditions that determine political results are changing in Latin America, and it may be that truly free elections will produce more governments that shy away from the leadership of the United

States. The good neighbor policy, which brought Latin American countries into close accord, no longer appears a paramount. The near unanimity of all the Americas in great international issues no longer exists.

One reason for this is the United States preoccupation with the needs of European, Middle Eastern and Asiatic countries, which has led to a rising disinterest in the welfare of Latin America. Our influence has been waning for another reason, which is the too rigid insistence of Washington on keeping hands off domestic affairs below the border. We do not cultivate and encourage the personalities who hope to be the heirs of the reactionary or dictatorial regimes. This is a sound political principle if not carried too far. But we can have correct and even close relations with dictatorships, without throwing away our mass appeal as the great sponsor of political freedom and democracy. We should be making Latin Americans acutely aware that every step to extend democracy is sure of the sympathy of the United States. We have to be polite to the dictators, but we do not have to ignore their opponents.

It can be argued that Latin America is not ripe for real working democracy, that the middle class is not large enough. It also is important not to rock the boat, as people keep saying, so that order is maintained

and the production of raw materials can go on. It can be said with some truth that the role of American capital has visibly improved from a social standpoint. So quite a good apology can be offered for the cold opportunism with which Washington goes about its dealings with the reactionaries of Latin America. But if the trend there is toward more radical policies - as it seems to be - Washington either will have to be their inspiration, or the inspiration will come from forces hostile to the United States. That is, if we get absorbed in conducting the cold war on the other side of the globe, we may find the cold war is being brought to our own back yard, and that we are strangely incapable of dealing with it.

Arturo Frondisi owes his great victory to a crazy-quilt coalition. Probably his largest single block of votes came from the followers of Peron. Then he had the backing of communists, near-communists, splinter fascist factions, right-wing nationalists, leftist democrats and some socialists. He campaigned pretty much as a nationalist demagogue, making glowing promises of labor benefits, offereing a combination of socialism and ultra-nationalism and the penalization of the rich. Now that he is in, he says he is committed to nobody and will govern for the good of all. But however moderate his personal inclinations, he is under binding obligations to those

who elected him. And to satisfy many of his followers he must be friendly with the Soviet world simply to prove that he is not a tool of the United States.

He is pledged to make the Peron party legal. Whether he will allow Peron himself to return remains to be seen. Quite possibly not, for the army is pledged to prevent it at any cost. If Peron were in the least addicted to democracy, this veto by the army would be distinctly anti-democratic. But now the army is a shield behind which a democracy of a sort will have a trial. Frondizi promises to be constitutional and establish a rule of law. If he succeeds without losing his anti-democratic supporters it will be quite a feat. And to do so it seems that he will have to be more anti- than pro-American. So for the present, at least, we do not stand to gain much.

EDWARD R. MURROW WITH THE NEWS
CBS RADIO NETWORK

TUESDAY, FEBRUARY 25, 1958
7:45 - 8:00 PM EST

This is the news:

President Eisenhower will tell the American people tonight...in a nationwide broadcast...that a strong program of foreign military and economic aid is as necessary to survival as any ballistic missiles program. He will say that the programs for mutual security and reciprocal trade leave "no margin for error"... that they are "iron imperatives of security and the building of true peace." Opposition to the aid program, he will say, is based on "prejudices, penny-wise economy and...above all...on an outright refusal to look at the world of 1958 as it really is." Mr. Eisenhower's speech...climaxing an all-day conference sponsored by the Administration in support of its aid program...will be broadcast over most of these stations at 9:30 P.M., Eastern Standard Time. Speaking before the same conference earlier today, former President Truman said he had been told that the foreign aid program "is in grave danger of being emasculated by Congress." If that is true, he said, "then I must tell you frankly that I think the country is in a very bad fix." Mr. Truman called on Democrats in Congress to support the program. At the same time, he challenged the Administration "to come forward with some new ideas" for combating Russia's new economic offensive. Adlai Stevenson also addressed the conference...and urged that an international conference be held to correlate and enlarge the efforts for building up backward areas. He said, "We could invite Mr. Khrushchev to coordinate his efforts with ours, if he is really interested in the economic development and political independence of these less fortunate countries." If he is not interested, he said, the motives behind Russia's assistance program would at least be unmasked.

The government reports that the cost of living in January went up six-tenths of one percent...to reach a new all-time high. This is the biggest increase recorded in a single month since July, 1956. And the consumer price index has now risen 15 times in the last 17 months. Last month's rise is attributed mainly

to freezing weather in Florida, which cut down on fruit production, and to reduced livestock marketing which spelled higher prices for meat.

The House Post Office Committee today approved an average 15 percent pay increase for half a million postal employees. It also voted approval of a bill to raise the pay of nearly a million Civil Service workers by an average of 11 percent. Similar legislation before the Senate calls for a base increase of seven and a half percent.

Senate Republican Leader Knowland said today that the Administration may set up a land reclamation program to help spur the economy. Knowland made it clear that this is being considered only as a possibility.

Democratic Senator Byrd today reversed himself...announcing he will run for re-election in November. Two weeks ago, Byrd said he would keep a promise to his wife and not seek a fifth term. Since then he has been under pressure to reconsider and today he notified the Virginia general assembly that he would be a candidate "with Mrs. Byrd's blessing." Byrd is chairman of the Senate Finance Committee and a strong advocate of economy in government.

The Miami lawyer...Thurman Whiteside...today continued his testimony before the special House committee investigating the federal regulatory agencies. And again the testimony concerned the relationship of Whiteside with Richard Mack, a member of the Federal Communications Commission. Whiteside told the committee that...over a four-year period...Mack received almost 10-thousand dollars from an insurance company in which they both had an interest. This same company insured the television station to which the F.C.C. awarded Channel 10 in Miami. Mack and three other commissioners voted for the station. Committee Chairman Harris said at the conclusion of today's hearing that Mack appeared to him to have violated the law. the Federal Communications Act, he said, bars commission members from owning stock in any company serving a petitioner before the F.C.C.

A Navajo guided missile...test-fired at Cape Canaveral today...fell into the ocean and exploded after less than one minute of flight. The contract for

production of the Navajo was cancelled by the Air Force last year, but it has been tested since then on several occasions. Today's launching marked the conclusion of these tests.

The United States today formally recognized the United Arab Republic created by the merger of Egypt and Syria. The United States said it is extending recognition after noting the assurances of the new Arab state that it "intends to respect and observe its international obligations," existing at the time it was formed.

The special American envoy, Robert Murphy, conferred today with Tunisian President Bourguiba in his role of mediator in the French-Tunisian dispute. Bourguiba said Algeria was the "center" of their discussion, and Murphy told reporters "all problems" were discussed. France has insisted that Algeria is her own domestic affair...and not a matter for negotiation with the Tunisian government.

It may have come as something of a shock to this country, that the first genuinely free election in Argentina in thirty years has produced a regime that is expected to be neutralist and mildly anti-American. Arturo Frondizi, who won a lands lide victory, does not admit that he is anti-American and says he hopes to improve relations with Washington. But a large number of his followers are facists or communists and he told Joseph Newman of the New York Herald Tribune that the recognition of Red China, while not decided will be taken under consideration. And during the election campaign he promised that the lives of Argentinians would not be compromised by any regional pact - meaning an agreement with the United States.

Argentina is a special case, and the result of an election there is not typical of all Latin America. But the result is startling, and it raises a legitimate question whether Washington's somewhat studied indifference to democratic liberalism in Latin America has not been carried dangerously far. The basic conditions that determine political results are changing in Latin America, and it may be that truly free elections will produce more governments that shy away

from the leadership of the United States. The good neighbor policy, which brought Latin American countries into close accord, no longer appears as paramount. The near unanimity of all the Americas in great international issues no longer exists.

One reason for this is the United States preoccupation with the needs of European, Middle Eastern and Asian countries, which has led to a rising disinterest in the welfare of Latin America. Our influence has been waning for another reason, which is the too rigid insistence of Washington on keeping hands off domestic affairs below the border. We do not cultivate and encourage the personalities who hope to be the heirs of the reactionary or dictatorial regimes. This is a sound political principle if not carried too far. But we can have correct and even close relations with dictatorships, wtthout throwing away our mass appeal as the great sponsor of political freedom and democracy. We should be making Latin Americans acutely aware that every step to extend democracy is sure of the sympathy of the United States. We have to be polite to the dictators but we do not have to ignore their opponents.

It can be argued that Latin America is not ripe for real working democracy, that the middle class is not large enough. It also is important not to rock the boat, as people keep saying, so that order is maintained and the production of raw materials can go on. But, if we get absorbed in conducting the cold war on the other side of the globe, we may find the cold war is being brought to our own back yard, and that we are strangely incapable of dealing with it.

Arturo Frondizi owes his great victory to a crazy-quilt coalition. Probably his largest single block of votes came from the followers of Peron. Then he had the backing of communists, near-communists, splinter fascist factions, right-wing nationalists, leftist democrats and some socialists. He campaigned pretty much as a nationalist demagogue, making glowing promises of labor benefits, offering a combination of socialism and ultra-nationalism and the penalization of the rich. Now that he is in, he says he is committed to nobody and will govern

for the good of all. But however moderate his personal inclinations, he is under binding obligations to those who elected him. And to satisfy many of his followers he must be friendly with the Soviet world simply to prove that he is not a tool of the United States.

He is pledged to make the Peron party legal. Whether he will allow Peron himself to return remains to be seen. Quite possibly not, for the army is pledged to prevent it at any cost. If Peron were in the least addicted to democracy, this veto by the army would be distinctly anti-democratic. But now the army is a shield behind which a democracy of a sort will have a trial. Frondizi promises to be constitutional and establish a rule of law. If he succeeds without losing hss anti-democratic supporters it will be quite a feat. And to do so, it seems that he will have to be more anti than pro-American. So for the present, at least, we do not stand to gain much.

This is Ed Murrow. I'll be back in a moment with the word for today. Now, here is George Bryan.

GEORGE BRYAN: COMMERCIAL

MURROW: Our policy in Latin America has not been actively to inspire the spread the democracy. This does not quite jibe with Herman Melville's observation on the subject of America and democracy. "We Americans," he said, "are peculiar chosen people...the Israel of our times. We bear the ark of the liberties of the world."

Goodnight and good luck!

Edward R. Murrow Wed., Feb. 26, 1958

This is the news:

President Eisenhower said todsy that he and Vice President Nixon have a definite understanding as to what course of action to take if he---the President---should become unable to discharge the powers and duties of his office. / Mr. Eisenhower told his news conference that...in his own case... Mr. Nixon "knows exactly what he should do in the event of a presidential disability." A reporter then wanted to know whether this arrangement had been placed in writing, and Mr. Eisenhower said:

#1 Tape runs 40 seconds, ends on cue:
"---that any misunderstanding could occur."

The name of another high official of the Administration...Secretary of Agriculture Benson...also came up. A reporter noted that some Republican

congressmen have decided that Mr. Benson is a political liability...and have said that they intend to ask President Eisenhower to do something about obtaining his resignation. / "Do you," the reporter asked, "have any intention of doing that before the November election?" Mr. Eisenhower made this vigorous reply.

#2 Tape runs 1:40
Emdson cue: "-- recommending this kind of thing are badly mistaken."

Mr. Eisenhower told his news conference that he still expects the economic situation to improve "by mid-year." / As to the possibility of a tax cut this year, he had this to say:

#3 Tape runs 2:00
Ends on cue: "---along the line much better."

White House correspondents were surprised to hear the President refer to the present economic situation as a "depression". They asked News Secretary Hagerty later if Mr. Eisenhower had meant to use such a strong term. Hagerty said, "I think he meant recession."

Mr. Eisenhower was asked whether, in his last letter to Bulganin, he had meant to be inviting both Krushchev and Bulganin to visit the United States. He denied that he had any such intention, for such a visit would be a kind of summit meeting. All that he had been proposing was the visit of "leaders of thought," and NOT persons with governmental authority.

The President was asked if he was in agreement with a proposal made today by Harold Stassen for a two-year trial agreement on disarmament that would include a suspension of nuclear tests. He said he did not wish to discuss the Stassen program in detail, but pointed out that there would be "one great difficulty" in reaching a flat agreement of that kind. This is that some of the nations in NATO, to which we belong, are at the stage in developing their own nuclear weapons which requires further testing. There would, he said, "be difficulty under the present law to reach an agreement that would be binding on all. This is the first official suggestion in Washington that it is our NATO allies, rather than our own policy, that stands in the way of a suspension of the tests.

On a domestic question, Mr. Eisenhower said he has "no judgment at this time"...regarding charges of impropriety against Richard Mack, a member of the Federal Communications Commission. Mack has been accused of improper acceptance of money from a Miami lawyer interested in a television license case. And the President noted that not all the evidence is in. The case is being investigated by a special House committee on legislative oversight. A member of the committee....Republican Representative Bennett of Michigan...said today that Mack should either resign or be removed. Mack is scheduled to appear at a hearing tomorrow and give his side of the case. At his news conference, Mr. Eisenhower was asked about testimony that his assistant, Sherman Adams, had written to the head of the Civil Aeronautics Board on behalf of an airline. The President said he had not heard of the matter...but that there are "certain cases" that come up before the board on which the White House must act.

The Senate Rackets Committee began hearings today on the Kohler Company strike, which is now in its fourth year. Both the United Auto Workers Union and management have accused the other of fomenting violence in connection with the walkout. U.A.W. President Walter Reuther wanted

→

to appear today as the first witness, but the committee decided otherwise. Reuther accussed a member of the committee...Republican Senator Goldwater of Arizona...of being responsible./ Reuther called Goldwater "a political hypocryte mmm and a moral coward." Goldwater called this a "typical Reuther lie."

Britain and Russia today signed an agreement...setting up direct airline service between the two countries. In commenting on the agreement, Soviet Leader Khrushchev said, "It is better to carry passengers to London than bombs."

The foreign ministers of Jordan and Iraq flew to Saudi Arabia today to invite it to join their new federation. / King Saud of Saudi Arabia is said to be sympathetic to the federation but reluctant to join on the theory that he would like to serve as a balance between it and the so-called United Arab Republic, made up of Egypt and Syria.

In a speech today, President Nasser called the union of Jordan and Iraq "a false federation." And he predicted it would disappear, "just as ashes are blown away by the wind."

Prime Minister Ben Gurion said today that Israel "cannot help" viewing the unity moves of its Arab neighbors with some concern. He told a news conference, "Both Syria and Egypt declare their aims to destroy Israel. And Iraq has even refused to conclude a disarmament agreement." Ben Gurion said he favors a general arms embargo in the area---not an embargo, he said, which as at present applies only to Israel. / He also offered to enter into peace negotiations with neighboring Arab states.

The American "good offices" ~~envoy~~ official ...Robert Murphy...is still in Tunis...where he is trying to conciliate the dispute between Tunisia and France. He said tonight that his conversations with Tunisian officials had "just started."

Back in a moment

George Bryan

The central government of Indonesia said today that it has dispatched a commando force to the Northern Celebes...and that the commandos have "re-occupied" a town formerly held by supporters of the rebel cause. No actual fighting is reported. The Indonesian consulate in Singapore said it has stopped issuing visas to foreign correspondents for trips to Sumatra, center of the rebellion.

In Havana today, gunmen raided the offices of the National Bank of Cuba in the heart of the city, set fire to thousands of checks, and escaped. A spokesman for the Batista government said tonight that there is "no truth" to stories that the rebel leader..Fidel Castro...has offered to end the civil war. As conditions, Castro reportedly demanded the withdrawal of all government military forces from Oriente Province (where he has his mountain headquarters) and the scheduling of a general election...to be supervised by the Organization of American States. The Castro proposal was reported by Homer Bigart of the New York Times.

Doctors announced today that medical bulletins on the condition of Sir Winston Churchill are being discontinued, due to his steady recovery from pneumonia and pleurisy. The final bulletin this morning said

Word for Today

President Eisenhower is standing by his prediction that there will be more "job opportunities" in March, and that we shall start seeing the beginning of the end of the recession soon thereafter. Prophecies are always dangerous. Mark Twain said, "There is no prophecy in our day but history. History alone," he said, "is a trustworthy prophet."

Goodnight and good luck!

CBS RADIO DIVISION

EDWARD R. MURROW WITH THE NEWS

Wednesday, February 26, 1958
7:45 - 8:00 P. M.

E. R. MURROW: President Eisenhower said today that he and Vice President Nixon have a definite understanding as to what course of action to take if he - the President should become unable to discharge the powers and duties of his office. Mr. Eisenhower told his news conference that in his own case, Mr. Nixon knows exactly what he should do in the event of a Presidential disability. A reporter then wanted to know, whether this arrangement had been placed in writing. And, Mr. Eisenhower said:

PRES. EISENHOWER: I don't think that is really quite the answer that I ought to ... an answer that I should give, particularly if I have. Then, probably you'd want the letter ... then you'd want to see whether *my* grammar is correct and all the rest of it. And, I say this, there is such a clear understanding between Mr. Nixon and *myself* ... an understanding to which others around *me* are completely privy. That is, inconceivable that is, between him and *me* that any misunderstanding could occur.

E. R. MURROW: The name of another high official in the Administration - Secretary of Agriculture Benson also came up. A reporter noted, that some Republican Congressmen have decided that Mr. Benson is a political liability and have said they intend to ask President Eisenhower to do something about obtaining his resignation. "Do you," the reporter asked, "have any intention of doing this before the November election?" Mr. Eisenhower made this vigorous reply:

PRES. EISENHOWER: So far as *my* immediate official family is concerned, it's *my* responsibility to appoint them so that I am the only relationship that Congress has to that process, - is that the Senate must give its advice and its consent to the appointment. Therefore, for any group of Congressmen either informally or formally to ... to raise a question

concerning my appointments to the Cabinet would not seem to be in order. On top of that, I feel that Mr. Benson is a man of acknowledged courage and honesty. By honesty I don't mean the way his personal habits and practices ... are a personal matter. I believe this, I believe he is honest in his great effort to find proper, reasonable, sensible programs that can be recommended by the Congress. I think this, when we find a man of this dedication - this kind of courage - this kind of intellectual and personal honesty, we should say to ourselves, we just don't believe that America has come to the point where it wants to dispense with the services of that kind of a person. Therefore, I think, that people that are advising and recommending this kind of thing are badly mistaken.

E. R. MURROW: Mr. Eisenhower told his news conference, that he still expects the economic situation to improve by mid-year. As to the possibility of a tax cut this year, he had this to say:

PRES. EISENHOWER: Well, a tax cut is of course a possibility if as any deepening of the depression that requires it. On the contrary ... on the other side, let us not forget, that we are asking for enlarged sums in every single thing that we're doing. We're asking for the greatest sums in our history and for all public works. You take the agriculture, the Bureau of Reclamation, the Corps of Engineers, their total is the highest of history. Our peace time budget for defense is greater. Now, if you're going to just have this kind of expenses, you've got to try to get some money in your purse to pay for the bills. And, certainly you don't want to go into a tax cut until that is necessary to bring the ... to bring about the up-turn. Now, as I pointed out, there certainly are some indications, that there will be more job opportunities in March than some increased job opportunities probably not great - but, some. And, if that occurs, we believe it can mark the beginning of the end of this recession. I've never said as some papers have noted that March is going to be a critical state in which there

will be a quick up-turn or even a gradual up-turn in the economy. It will take some time to stop the recession - even though you finally began to note certain phases as beginning to end. So, I would say, that (indistinct) our situation, we certainly hopefully ... we hope that by mid-year it's going to be along the line much better.

E. R. MURROW: White House correspondents were somewhat surprised to hear the President refer to the present economic situation as a "depression." They asked News Secretary Hagerty later, if Mr. Eisenhower had meant to use such a strong term. Hagerty said, "I think he meant - recession." Mr. Eisenhower was asked whether in his last letter to Bulganin he had meant to be inviting both Khrushchev and Bulganin to visit the United States. He denied that he had any such intention, for such a visit would be a kind of summit meeting. All that he had been proposing was the visit of leaders of thought and not persons with governmental authority.

EDWARD R. MURROW WITH THE NEWS
CBS RADIO NETWORK

WEDNESDAY, FEBRUARY 26, 1958
7:45 - 8:00 PM EST

This is the news:

President Eisenhower said today that he and Vice President Nixon have a definite understanding as to what course of action to take if he---the President should become unable to discharge the powers and duties of his office. Mr. Eisenhower told his news conference that...in his own case...Mr. Nixon "knows exactly what he should do in the event of a presidential disability." A reporter then wanted to know whether this arrangement had been placed in writing, and Mr. Eisenhower said:

PRESIDENT EISENHOWER: I don't think that is really quite the answer that---an answer that I should give, for this particular reason: If I have, then probably you would want the letter, then you would want to see whether my grammar is correct, and all the rest of it (Laughter), and I say this: There is such a clear understanding between Mr. Nixon and myself, and understanding to which others around me are completely privy, that it is inconceivable, that is, between him and me, that any misunderstanding could occur.

MURROW: The name of another high official of the Administration...Secretary of Agriculture Benson...also came up. A reporter noted that some Republican congressmen have decided that Mr. Benson is a political liability...and have said that they intend to ask President Eisenhower to do something about obtaining his resignation. "Do you," the reporter asked, "have any intention of doing that before the November election?" Mr. Eisenhower made this vigorous reply.

PRES. EISENHOWER: Let me get this whole subject in perspective. Now, in the first place, so far as my immediate official family is concerned, it is my responsibility to appoint them, select them, and the only relationship the Congress has to that process is that the Senate must give its advice and its

consent to the appointment. Therefore, for any group of Congressmen, either informally or formally to raise a question concerning my appointments to the Cabinet would not seem to be in order. On top of that I feel that Mr. Benson is a man of acknowledged courage and honesty. By "honesty" I don't mean only his personal habits and practices, a personal matter, I believe this: I believe he is honest in his great effort to find proper, reasonable, sensible programs that can be recommended by the Congress.

He has organized advisory committees that have---after all, some of them legislatively authorized---but from people from both political parties, from all parts of the Government and generally speaking the programs that he has established have had the full approval of these outside committees. Now, I think this, when we find a man of this dedication, this kind of courage, this kind of intellectual and personal honesty, we should say to ourselves "We just don't believe that America has come to the point where it wants to dispense with the services of that kind of a person."

Therefore, I think the people that are advising and recommending this kind of thing are badly mistaken.

MURROW: Mr. Eisenhower told his news conference that he still expects the economic situation to improve "by mid-year." As to the possibility of a tax cut this year, he had this to say:

PRES. EISENHOWER: Well, a tax cut is, of course, a possibility if there is any deepening of the depression that requires it. On the contrary, on the other side, let us not forget that we are asking for enlarged sums in every single thing that we are doing. We are asking for the greatest sums in our history for all public works. You take the agriculture, the Bureau of Reclamation, the Corps of Engineers, their total is the highest of our history. Our peacetime budget for defense is greater. Now, if you are going to just have this kind of expenses, you have got to try to get some money in your purse to pay for the bills. And certainly you don't want to go into a tax cut until that is necessary

to bring about the upturn.

Now, as I pointed out, there are some indications that there will be more job opportunities in March than---some increased job opportunities, probably not great, but some; and if that occurs, we believe it can mark the beginning of the end of this recession. I have never said, as some papers have noted, that March is going to be a critical state in which there will be quick upturn or even a gradual upturn in the economy. It will take some time to stop the recession even though you finally begin to note certain phases as beginning to wane, so I would say that our situation, certainly hopefully,, we hope that by midyear is going to be along the line much better.

MURROW: White House correspondents were surprised to hear the President refer to the present economic situation as a "depression." They asked News Secretary Hagerty later if Mr. Eisenhower had meant to use such a strong term. Hagerty said, "I think he meant recession."

Mr. Eisenhower was asked whether, in his last letter to Bulganin, he had meant to be inviting both Khrushchev and Bulganin to visit the United States. He denied that he had any such intention, for such a visit would be a kind of summit meeting. All that he had been proposing was the visit of "leaders of thought," and not persons with governmental authority.

The President wasasked if he was in agreement with a proposal made today by Harold Stassen for a two-year trial agreement on disarmament that would include a suspension of nuclear tests. He said he did not wish to discuss the Stassen program in detail, but pointed out that there would be "one great difficulty" in reaching a flat agreement of that kind. This is that some of the nations in NATO, to which we belong are at the stage in developing their own nuclear weapons which requires further testing. There would, he said "be difficulty under the present law to reach an agreement that would be binding on all. This is the first official suggestion in Washington, that it is our NATO allies, rather than our own policy, that stands in the way of a suspension of the tests.

On a domestic question, Mr. Eisenhower said he has "no judgment at this time" regarding charges of impropriety against Richard Mack, a member of the Federal Communications Commission. Mack has been accused of improper acceptance of money from a Miami lawyer interested in a television license case. And the President noted that not all the evidence is in. The case is being investigated by a special House committee on legislative oversight. A member of the committee Republican Representative Bennett of Michigan...said today that Mack should either resign or be removed. Mack is scheduled to appear at a hearing tomorrow and give his side of the case. At his news conference, Mr. Eisenhower was asked about testimony that his assistant, Sherman Adams, had written to the head of the Civil Aeronautics Board on behalf of an airline. The President said he had not heard of the matter...but that there are "certain cases" that come up before the board on which the White House must act.

The Senate Rackets Committee began hearings today on the Kohler Company strike, which is now in its fourth year. Both the United Auto Workers Union and management have accused the other of fomenting violence in connection with the walkout. U.A.W. President Walter Reuther wanted to appear today as the first witness, but the committee decided otherwise. Reuther accused a member of the committee...Republican Senator Goldwater of Arizona...of being responsible. Reuther called Goldwater "a political hypocryte and a moral coward." Goldwater called this a "typical Reuther lie."

Britain and Russia today signed an agreement...setting up direct airline service between the two countries.. In commenting on the agreement, Soviet Leader Khrushchev said, "It is better to carry passengers to London than bombs."

The foreign ministers of Jordan and Iraq flew to Saudi Arabia today to invite it to join their new federation. King Saud of Saudi Arabia is said to be sympathic to the federation but reluctant to join on the theory that he would like to serve as a balance between it and the so-called United Arab Republic made up of Egypt and Syria.

In a speech today, President Nasser called the union of Jordan and Iraq "a false federation." And he predicted it would disappear, "just as ashes are blown away by the wind."

Prime Minister Ben Gurion said today that Israel "cannot help" viewing the unity moves of its Arab neighbors with some concern. He told a news conference, "Both Syria and Egypt declare their aims to destroy Israel. And Iraq has even refused to conclude a disarmament agreement." Ben Gurion said he favors a general arms embargo in the area---not an embargo, he said, which as at present applies only to Israel. He also offered to enter into peace negotiations with neighboring Arab states.

The American "good offices" official Robert Murphy... is still in Tunis... where he is trying to conciliate the dispute between Tunisia and France. He said tonight that his conversations with Tunisian officials had "just started."

In Havana today, gunmen raided the offices of the National Bank of Cuba in the heart of the city, set fire to thousands of checks and escaped. A spokesman for the Batista government said tonight that there is "no truth" to stories that the rebel leader...Fidel Castro...has offered to end the civil war. As conditions, Castro reportedly demanded the withdrawal of all government military forces from Oriente Province (where he has his mountain headquarters) and the scheduling of a general election...to be supervised by the Organization of American States. The Castro proposal was reported by Homer Bigart of the New York Times.

This is Ed Murrow. I'll be back in a moment with the word for today. Now here is George Bryan.

GEORGE BRYAN: COMMERCIAL

MURROW: President Eisenhower is standing by his prediction that there will be more "job opportunities" in March, and that we shall start seeing "the beginning of the end" of the recession soon thereafter. Prophecies are always dangerous. Mark Twain said, "There is no prophecy in our day but history. History alone" he said, "is a trustworthy prophet." Goodnight and good luck!

Edward R. Murrow Thurs., Feb. 27, 1958

This is the news:

Russia today conducted two nuclear weapons tests. / The Atomic Energy Commission...in Washington...describes both explosions as being in "the megaton range," indicating the tests were of thermo-nuclear, or hydrogen, proportion. / This is the first time that the commission has reported two nuclear explosions by the Russians in a single day. / And the commission notes that this "brings to three, the number of Soviet "large-yield" nuclear explosions in the past five days." The third test was reported on Sunday.

Secretary of State Dulles today named Ambassador James J. Wadsworth to be the chief American negotiator on disarmament. / Wadsworth succeeds Harold Stassen...who resigned last week to seek the Republican nomination for governor of Pennsylvania. / Unlike Stassen, Wadsworth will not have the title of disarmament adviser to the President. / He will report directly to Secretary Dulles. / Wadsworth is currently the deputy American representative at the United Nations. In announcing his new assignment, the State Department deplored Russia's refusal to work through the United Nations Disarmament Commission as presently constituted. ~~The commission~~ Twenty-five countries are represented on the commission, and Russia insists this is not enough...that the membership is "stacked" in favor of the West.

Today...at Cape Canaveral...the Army test-fired its Redstone ~~missile~~ missile. The ~~Redstone is a ballistic missile~~ of about 200 miles range. And the test today is described as routine.

In London tonight, the British House of Commons voted down a Labourite motion...criticizing the government's defense policy. The Labor Party accused the Conservative government of "relying predominately on the

→

threat of thermo-nuclear warfare" as a means of preserving peace. The Labourites also wanted the installation of American missile bases in Britain held up until after a summit conference. The Conservative government refused to make such a promise, and it was upheld tonight by a vote of 318 to 263.

The North Atlantic Council...in Paris...disclosed today that "important problems connected with preparation for a possible summit conference are being studied by NATO." We are told that proposals for such a meeting have been assigned to special "working groups"...made up of experts from the 15 countries belonging to NATO.

President Eisenhower today signed into law the bill raising the national debt limit...temporarily...by five billion dollars.

In the Senate today, Democratic Senator Sparkman introduced an emergency housing bill to help combat the recession. The measure would set up a 3-billion-dollar housing program.

There was bi-partisan feeling in Congress today that President Eisenhower should make public his understanding with Vice President Nixon on what is to be done if the President becomes disabled. Mr. Eisenhower disclosed

-7

at his news conference yesterday that such an understanding exists. Senator Knowland says that when Republican congressional leaders meet at the White House next week, they will certainly want to discuss the matter. House Democratic Leader McCormack says the President should, in his phrase, "take the American people into his confidence." And Speaker Rayburn questions whether Mr. Eisenhower...under the Constitution...could legally "get back in" once he turned over his powers to the Vice President.

Richard Mack today denied...under oath...that as a member of the Federal Communications Commission he was ever "swayed or influenced" improperly by anyone. Mack told a special House investigating committee that during the last eight years he did borrow 49-hundred dollars from Thurman Whiteside, a Miami attorney. He said that all but 250 dollars of this has been repaid...and that "never in his life" had Whiteside tried to influence him "through any financial obligation." Mack acknowledged that Whiteside had spoken to him on behalf of a subsidiary of National Airlines...which wanted to operate a television station on Channel 10 in Miami. A majority of commissioners, including Mack, voted for the subsidiary. Mack said he did not know until last Monday

→

that Whiteside had given him part interest in an insurance company that insured the station operating on Channel 10./ He immediately wrote to Whiteside, he said, instructing him "to take all necessary steps to terminate my interest in this company." (The chairman of the investigating committee...Representative Harris...has suggested that Mack, through his financial interest in the company, had broken the law).

Today, Harris introduced a letter from Senator Kefauver...replying to testimony that he had intervened in the Miami case on behalf of Frank Katzentine, who also wanted to operate on Channel 10. Kefauver said he had been concerned over reports that the F.C.C. was going to deny the channel to Katzentine for political reasons. (An F.C.C. examiner had recommended that the channel be awarded to Katzentine). Mack said today that he voted for the National Airlines subsidiary because its "over-all showing"...in his opinion...was best. And he told reporters as he went into today's hearing that "of course" he is not going to resign. Yesterday, Republican Representative Bennett (who is a member of the committee) said that if Mack does not resign, he should be removed.

France is in a crisis...involving not only Tunisia and Algeria... but the entire free world. For a late, first-hand report on what is happening, we switch to my colleague, David Schoenbrun, in Paris.

Tape runs 5:45
Ends on cue: "--to Edw. R. Murrow in New York."

That was my colleague, David Schoenbrun, reporting from Paris on a story which, I would suggest, has not received the attention in this country which it deserves. Concerns us as well as France —

This is Ed Murrow. I'll be back in a moment with the Word for Today. First, here is George Bryan.

Word for Today

There are powerful elements of anger---what ~~Schoenbrun called~~ "~~mass emotions of patriotism~~"---involved on both sides of the French-Tunisian dispute. But it is still true...as Aristotle observed many centuries ago... "Anyone can become angry. That is easy. But to be angry to the right degree, at the right time, for the right purpose and in the right way---this is not easy."

Goodnight and good luck!

CBS RADIO DIVISION

EDWARD R. MURROW WITH THE NEWS

Thursday, February 27, 1958
7:45 - 8:00 P.M.

MURROW: ... France is in a crisis, involving not only Tunisia and Algeria, but the entire free world. For late first-hand report on what is happening, we switch to my colleague David Schoenbrun in Paris.

SCHOENBRUN: The chiefs of government of France and Tunisia have both made nationwide reports to their people by radio and by television in the last 24-hours. But it is quite evident that neither the Tunisian President nor the French Premier were in fact talking to their own people. They were talking for the benefit of the United States, and particularly, they were addressing themselves to Mr. Robert Murphy, trouble-shooting diplomat who is in Tunis tonight, completing the fact-finding phase of his good offices mission. To judge by the speeches he's heard both in Tunis and here in Paris, the facts he has found reveal an irreconcilable deadlock in an atmosphere of mounting tensions, which threaten to spread the conflict to the breaking point, not only for France and Tunisia, but for the greater communities of Africa and the Atlantic.

The positions taken by President Bourguiba and Premier Gaillard, in their electronic debate, are diametrically opposed. In his television appearance, here in Paris last night, Monsieur Gaillard re-stated emphatically that the good offices mission of Mr. Murphy must be limited to bringing together France and Tunisia for direct two-party talks; as for Algeria, it is outside the scope of Mr. Murphy's mission. It's a purely internal French affair, they say. Tunisia is involved to the extent of letting its territory be used as a base of operations for rebel forces and gun-running convoys. The arms aid to the rebels must stop and the frontier must be sealed off, said Premier Gaillard; and in this respect only can Mr. Murphy be of service. That's the presently rigid French

position. This French thesis was refuted this morning by President Bourguiba, who insists that Algeria is the source of infection of all North Africa, therefore the principal issue to be discussed by Mr. Murphy. As for sealing off the border and creating a no-man's-land, this, the Tunisian President said, "cannot be accepted," for it implies a military solution of force to end the Algerian war and France, he said, must realize that there can be no military solution to the Algerian question. They must realize too, that American arms given to the French, were supplied to help France meet the danger of Communist aggression; they were not destined for killing the Algerian people.

Bourguiba reasserted his personal loyalty to the West and said he still held high hopes for a free association of the African and European peoples but "only in freedom and independence." That's the situation tonight; both sides as far apart as ever and Mr. Murphy and America in the middle of a desperate tug-o'-war. If he lets go of either side, or if the tension snaps the links, then North Africa might well be pulled into the camp of Nasser and as for France, it could go whirling out of control wrecking NATO in the process. The strains here in Paris are already very near the breaking point. In fifteen years of reporting French affairs on-the-spot, I have rarely seen such angry, indeed ugly, tempers. Two former prime ministers were physically assaulted on the public speaking platform this week. In move halls here people are applauding newsreels of the ruins of Sakiet. One of the leaders of the Senate accused the government virtually of treason and charged that France is living on the eve of a new Munich. And today the paper Paris Presse headlined a report that General DeGaulle is planning a reentry into politics and Paris tonight is alive with rumors of a seizure of power and Army revolt. Meanwhile, the bloodiest battle of the Algerian war is being fought as the rebels launch a new offensive. Some 50 French soldiers have been killed, 40 wounded in the

fight which is still going on. There've been more casualties in the past five days than all last winter. And at this moment of greatest tension, a Washington report accuses France of misusing American arms in Algeria. And one of France's best friends, Mr. Douglas Dillon, announces that measures are going to be taken to put a stop to this. Washington criticism is largely justified. But you have to live here in Paris, among the French, to get the true impact of such a charge at a moment when black headlines are announcing the deaths of French boys at the hands of rebels who aided by a country which itself is the recipient of American arms. Reason, logic, legal interpretations of defense contracts become meaningless in this super-charged tension. The French government is in an almost impossible position. It is being attacked by super-patriots on the right; pressured by the Army for more men and more guns; criticized by its allies. As for the liberals and the Left, who deplore their own country's Algerian policy, they are paralyzed by mass emotions of patriotism while a combat is raging in the hills.

The Tunisians are skillfully exploiting France's dilemma while trying - and successfully - to involve America in North African affairs; for it's an involvement we have accepted when we agreed to a good offices mission. This involvement may well find us in the middle of a crisis of relations with France. I believe we're living through a most dangerous phase of Western policy, with a real threat of a breakup of NATO is Mr. Murphy's good offices mission fails or gets out of control, We have our hands on the wheel of a speeding car, with the accelerator jammed, the brakes broken and sharp curves ahead.

Now, back to Edward R. Murrow in New York.

MURROW: That was my colleague, David Schoenbrun, reporting from Paris, on a story which concerns us as well as the French. This is Ed Murrow. I'll be back in a moment with the word for today. Now, here is

George Bryan.

The Tunisians are skillfully exploiting France's dilemma while trying - and successfully - to involve America in North African affairs; for it's an involvement we have accepted when we agreed to a good offices mission. This involvement may well find us in the middle of a crisis of relations with France. I believe we're living through a most dangerous phase of Western policy, with

a real threat of a breakup of NATO if Mr. Murphy's good offices mission fails or gets out of control. We have our hands on the wheel of a speeding car, with the accelerator jammed, the brakes broken and sharp curves ahead.

Now, back to Edward R. Murrow in New York.

MURROW: That was my colleague, David Schoenbrun, reporting from Paris on a story which concerns us as well as the French. This is Ed Murrow. I'll be back in a moment with the Word for Today. First, here is George Bryan.

GEORGE BRYAN: COMMERCIAL

MURROW: There are powerful elements of anger---involved on both sides of the French-Tunisian dispute. But is is still true...as Aristotle observed many centuries ago..."Anyone can become angry. That is easy. But to be angry to the right degree, at the right time, for the right purpose and in the right way---this is not easy."

Goodnight and good luck!

Edward R. Murrow Fri., Feb. 28, 1958

This is the news:

Harold Stassen today defended his proposal for a two-year suspension of nuclear weapons tests. According to his proposal, the United States and Russia would agree to suspend the tests unconditionally on a trial basis. The agreement would be supervised by the United Nations, and there would be inspection. The United States would not insist...as it does now...that nuclear weapons production as well as testing be prohibited. Stassen told a Senate disarmament committee today that he does not agree with President Eisenhower that some of our allies would balk at such an agreement. Mr. Eisenhower told his news conference this week that the United States

would have "a difficult time" making the agreement...because some NATO countries "are in different states of producing weapons that require testing." Stassen told the committee, "I am still quite certain that the NATO countries would support this first step." / He said that...in his opinion...it is not essential for all the NATO partners to agree to stop testing at this time. / "If we try to make too big a step at first," he said, "we make no step at all." / Stassen has long differed with Secretary of State Dulles on how to approach the disarmament problem. And recently he resigned as disarmament adviser to the President to seek the Republican nomination for governor in Pennsylvania.

Mr. Stassen's successor...Ambassador James J. Wadsworth...said today that he has "a couple of promising ideas" for breaking the arms deadlock. He did not elaborate on these "ideas"...but said that negotiations to end the stalemate already have begun. Ambassador Wadsworth does not have the title of adviser to the President but reports directly to Secretary Dulles.

France agreed today with the United States and Britain that a preliminary foreign ministers meeting will not be necessary---if a summit conference can be prepared adequately by other means. / [redacted]

Russia today proposed new procedures for going about holding a summit conference in a memorandum delivered to our ambassador in Moscow.

Details of the Soviet proposal were not announced

Today...at Cape Canaveral...the Air Force test-fired its Thor missile for the 12th time since January, 1957. The Thor is a ballistic missile of intermediate range. And it is the type missile which will be based in England under the recent agreement between Britain and the United States. Today's launching appeared successful, but the only official word is that the nose cone on the rocket "differed from those previously used."

President Eisenhower entered Walter Reed Hospital today for a routine physical check-up. The examination...by neurologists...will be made tomorrow morning. The President had a tooth pulled today, and News Secretary Hagerty says Mr. Eisenhower's "reaction to and recovery from the extraction is normal in every respect."

The Senate tonight passed a bill to raise postal rates by more than 700-million dollars. Under the measure...which was approved by a voice vote...the cost of mailing an out-of-town letter would be increased from 3 cents to 5 cents. Local first class letters would cost 4 cents. And the cost of an Air Mail stamp would go up to 8 cents. Other increases are provided for Second and Third Class mail.

The legislation now goes to a conference with the House, which passed a measure last year calling for higher postal rates---but not on such a large scale. [Under the House bill, for example, out-of-town letters would go up to only 4 cents. House Speaker Sam Rayburn said yesterday that he "wouldn't be surprised" if the 4-cent figure ~~carries~~ PREVAILS.]

The Senate also passed a bill tonight to raise the salaries of one and a half million Government workers. About a third of these workers are postal employes.

The Labor Department reports a spurt in applications for unemployment compensation in the week ending February 15th. And the trend, it says, continued last week.

Richard Mack told House investigators today that he will "most seriously consider" resigning from the Federal Communications Commission. /The investigating committee chairman, Representative Harris, said he believed that Mack had been a "tool" in "a deliberate conspiracy" involving Miami attorney Thurman Whiteside and the awarding of Channel 10 in Miami to a subsidiary of National Airlines. Mack...who has admitted being under financial obligation to Whiteside...~~[illegible]~~ has denied that his vote for the airline was due to any improper pressure. In addition to Harris, six members of the →

11-man committee have demanded Mack's resignation. And the commissioner... visibly shaken...asked to be excused from further testimony until next week. ~~His request was granted.~~

Twenty-three children are believed to have drowned when their school bus plunged into a river today near Prestonsburg, Kentucky. State police say the driver of the bus is also missing and presumed dead. Sixteen children on the bus were saved. ~~The National Safety Council describes the tragedy as the worst highway accident involving children in the nation's history.~~

Edward R. Murrow: February 28, 1958. 7.45 p.m.

A great many things are being said about President Eisenhower's agreement with Vice President Nixon on what should be done if the President is disabled. But nobody is saying that the terms of the agreement are none of the public's business. / The President in his news conference appeared to assume that all that mattered was that a clear understanding exists between him and Mr. Nixon. / That, to be sure, is what matters first of all. But the President brushed off the question whether the terms have been put in writing, with a joke that the news men would want to see them and check on his grammar.

The President apparently reached the understanding only a short time ago. Senator Knowland said he had known of it for ten days. That would date the agreement as having been reached, not after the President's thrombosis or ilyitis, but after the recent slight stroke. / The agreement was then made known to some of the President's close advisors, for Mr. Eisenhower said that "others around me" are "completely privy to it", and that "it is inconceivable that any misunderstanding should occur."

It would, of course, be both inaccurate and unfair to speak of secrecy in the matter, for if the President had wished it to be secret he would not

have disclosed it in a news conference. But now that he has told this much, it is almost inevitable that the public will expect to be told everything. For the office of the presidency belongs to them. Mr. Eisenhower only occupies it.

People will want to know what powers would be passing to the Vice President, just how long he would exercise them, under what conditions they would pass, and when and how they could be returned. Since the validity of every act of an acting President might be challenged, the public will be interested in the constitutionality of the procedure. The challenge would be carried to the courts, which would rule on the basis of the Constitution, not on the terms of a personal agreement.

Already the constitutional issue has been raised by Speaker Rayburn, who said that in event of the President's disability, the Vice President would have to take the presidential oath of office, and once having taken it, could not be removed at all. He argued that no arrangement of the President with the Vice President could put a time limit on the tenure of the acting President.

Mr. Rayburn assumed that a presidential oath would have to be taken.

Some constitutional authorities think it would not. They hold that the Vice President could exercise the presidential powers under his oath as Vice President. The Constitution states that in event of a disability, the powers and duties would pass to the President's successor "until the President's disability be removed or a President shall be elected."

Answers to certain questions now are awaited, particularly those that bear on the constitutionality of what is being done. Attorney General Rogers believes that legislative enactment by itself cannot clarify the disability issue and a constitutional amendment will be needed. The President agrees. The amendment recommended by Mr. Rogers authorizes the Cabinet to decide when the Vice President should intervene. That gives the Cabinet a status not now recognized in the Constitution. It would be interesting to know whether action by the Cabinet is part of the procedure Mr. Eisenhower and Mr. Nixon have now agreed to. If so, it would be interesting to know whether action by the Cabinet would affect the constitutionality of the exercise of power. Maybe it wouldn't if the Cabinet vote was only advisory.

Mr. Rogers also recommends that the constitutional amendment should leave it to Congress to decide any dispute over the return to the President

of his powers. Action by Congress could not be part of the agreement the President has now reached. / So one wonders what provision is made for the return of power, and if the Cabinet is to have a vote in the matter, and if so, how constitutional that would be.

Republican Representative Keating said today that the President's agreement with Mr. Nixon "presumably" would let Nixon and the Cabinet decide when Mr. Eisenhower is unable to carry on his duties. / Keating, who often speaks for the Administration on legal matters, claimed that there is "no question" but that the understanding is in conformity with the Constitution. / Charles Rhyne, president of the American Bar Association, said today that, in his view, a constitutional amendment is the "only way" to end the uncertainty about the transfer of presidential powers.

Since this Congress - and indeed all Congresses since Tyler - have been singularly uninterested in clearing up this whole matter, it is hardly appropriate for Congressmen to shy bricks at the President for tackling the problems himself for the rest of his term. / A constitutional amendment can't be passed in time, and it is gratifying that the President has gone as far as he could by personal agreement within the Executive branch. But

it is not enough simply to know that the President has done so. Since the presidency belongs to the people, they would like to know what Mr. Eisenhower and Mr. Nixon are proposing to do.

Back in a moment—

George Bryan

Word for Today

In making his arrangement with Vice President Nixon, Mr. Eisenhower was recognizing [redacted] what he himself once said---that "humans are frail and they are mortal." "Never pin your flag," he said, "so tightly to one mast that if a ship sinks, you cannot rip it off and nail it to another. It is sometimes good," he said, "to remember that."

Goodnight and good luck!

EDWARD R. MURROW WITH THE NEWS
CBS RADIO NETWORK

FRIDAY, FEBRUARY 28, 1958
7:45 - 8:00 PM EST

This is the news:

Harold Stassen today defended his proposal for a two-year suspension of nuclear weapons tests. According to his proposal, the United States and Russia would agree to suspend the tests unconditionally on a trial basis. The agreement would be supervised by the United Nations, and there would be inspection. The United States would not insist...as it does now...that nuclear weapons production as well as testing be prohibited. Stassen told a Senate disarmament committee today that he does not agree with President Eisenhower that some of our allies would balk at such an agreement. Mr. Eisenhower told his news conference this week that the United States would have "a difficult time" making the agreement...because some NATO countries "are in different states of producing weapons that require testing." Stassen told the committee, "I am still quite certain that the NATO countries would support this first step." He said that... in his opinion...it is not essential for all the NATO partners to agree to stop testing at this time. "If we try to make too big a step at first," he said, "we make no step at all." Stassen has long differed with Secretary of State Dulles on how to approach the disarmament problem. And recently, he resigned as disarmament adviser to the President to seek the Republican nomination for governor in Pennsylvania.

France agreed today with the United States and Britain that a preliminary foreign ministers meeting will not be necessary---if a summit conference can be prepared adequately by other means.

Russia today proposed new procedures for going about holding a summit conference in a memorandum delivered to our ambassador in Moscow. Details of the Soviet proposal were not announced.

Today...at Cape Canaveral...the Air Force test-fired its Thor missile for the

12th time since January, 1957. The Thor is a ballistic missile of intermediate range. And it is the type missile which will be based in England under the recent agreement between Britain and the United States. Today's launching appeared successful, but the only official word is that the nose cone on the rocket "differed from those previously used."

President Eisenhower entered Walter Reed Hospital today for a routine physical check-up. The examiniation....by neurologists...will be made tomorrow morning. The President had a tooth pulled today, and News Secretary Hagerty says Mr. Eisenhower's "reaction to and recovery from the extraction is normal in every respect."

The Senate tonight passed a bill to raise postal rates by more than 700million dollars. Under the measure...which was approved by a voice vote...the cost of mailing an out-of-town letter would be increased from 3 cents to 5 cents. Local first class letters would cost 4 cents. And the cost of an Air Mail stamp would go up to 8 cents. Other increases are provided for Second and Third Class mail. The legislation now goes to a conference with the House which passed a measure last year calling for higher postal rates---but not on such a large scale.

The Senate also passed a bill tonight to raise the salaries of one and a half million Government workers. About a third of these workers are postal employees.

The Labor Department reports a spurt in applications for unemployment compensation in the week ending February 15th. And the trend, it says, continued last week.

Richard Mack told House investigators today that he will "most seriously consider" resigning from the Federal Communications Commission. The investigating committee chairman, Representative Harris, said he believed that Mack had been a "tool" in "a deliberate conspiracy" involving Miami attorney Thurman Whiteside and the awarding of Channel 10 in Miami to a subsidiary of National Airlines.

Mack, who has admitted being under financial obligation to Whiteside...has denied that his vote for the airline was due to any improper pressure. In addition to Harris, six members of the 11-man committee have demanded Mack's resignation. And the commissioner...visibly shaken...asked to be excused from further testimony until next week.

Twenty-three children are believed to have drowned when their school bus plunged into a river today near Prestonsburg, Kentucky. State police say the driver of the bus is also missing and presumed dead. Sixteen children on the bus were saved.

A great many things are being said about President Eisenhower's agreement with Vice President Nixon on what should be done if the President is disabled. But nobody is saying that the terms of the agreement are none of the public's business. The President in his news conference appeared to assume that all that mattered was that a clear understanding exists between him and Mr. Nixon. That, to be sure, is what matters first of all. But the President brushed off the question whether the terms have been put in writing, with a joke that the news men would want to see them and check on his grammar.

The President apparently reached the understanding only a short time ago. Senator Knowland said he had known of it for ten days. That would date the agreement as having been reached, not after the President's thrombosis or ilyitis, but after the recent slight stroke. The agreement was then made known to some of the President's close advisors, for Mr. Eisenhower said that "others around me" are "completely privy to it," and that "it is inconceivable that any misunderstanding should occur."

It would, of course, be both inaccurate and unfair to speak of secrecy in the matter, for if the President had wished it to be secret he would not have disclosed it in a news conference. But now that he has told this much, it is almost inevitable that the public will expect to be told everything. For the office of the presidency belongs to them. Mr. Eisenhower only occupies it.

People will want to know what powers would be passing to the Vice President, just how long he would exercise them, under what conditions they would pass, and when and how they could be returned. Since the validity of every act of an acting President might be challenged, the public will be interested in the constitutionality of the procedure. The challenge would be carried to the courts, which would rule on the basis of the Constitution, not on the terms of a personal agreement.

Already the constitutional issue has been raised by Speaker Rayburn, who said that in event of the President's disability, the Vice President would have to take the presidential oath of office, and once having taken it, could not be removed at all. He argued that no arrangement of the President with the Vice President could put a time limit on the tenure of the acting President.

Mr. Rayburn assumed that a presidential oath would have to be taken. Some constitutional authorities think it would not. They hold that the Vice President could exercise the presidential powers under his oath as Vice President. The Constitution states that in event of a disability, the powers and duties would pass to the President's scucessor "until the President's disability be removed or a President shall be elected."

Answers to certain questions now are awaited, particularly those that bear on the constitutionality of what is being done. Attorney General Rogers believes that legislative enactment by itself cannot clarify the disability issue and a constitutional amendment will be needed. The President agrees. The amendment recommended by Mr. Rogers authorizes the Cabinet to decide when the Vice President should intervene. That gives the Cabinet a status not now recognized in the Constitution. It would be interesting to know whether action by the Cabinet is part of the prooedure Mr. Eisenhower and Mr. Nizon have now agreed to. If so, it would be interesting to know whether action by the Cabinet would affect the constitutionality of the exercise of power. Maybe it wouldn't if the Cabinet vote was only advisory.

Mr. Rogers also recommends that the constitutional amendment should leave it to Congress to decide any dispute over the return to the President of his powers. Action by Congress could not be part of the agreement the President has now reached. So one wonders what provision is made for the return of power, and if the Cabinet is to have a vote in the matter, and if so, how constitutional that would be.

Republican Representative Keating said today that Phe Peesident's agreement with Mr. Nixon "presumably" would let Nixon and the Cabinet decide when Mr. Eisenhower is unable to carry on his duties. Keating, who often speaks for the Administration on legal matters, claimed that there is "no question" but that the understanding is in conformity with the Constitution.

Since this Congress - and indeed all Congresses since Tyler - have been singularly uninterested in clearing up this whole matter, it is hardly appropriate for Congressmen to shy bricks at the President for tackling the problems himself for the rest of his term. A constitutional amendment can't be passed in time, and it is gratifying that the President has gone as far as he could by personal agreement within the Executive branch. But it is not enough simply to know that the President has done so. Since the presidency belongs to the people, they would like to know what Mr. Eisenhower and Mr. Nixon are proposing to do.

This is Ed Murrow. I'll be back in a moment with the word for today. Now, here is George Bryan.

GEORGE BRYAN: COMMERCIAL

MURROW: In making his arrangement with Vice President Nixon, Mr. Eisenhower was recognizing what he himself once said---that "humans are frail and they are mortal." "Never pin you flag," he said, "so tightly to one mast that if a ship sinks, you cannot rip it off and nail it to another. It is sometimes good," he said, "to remember that."

Goodnight and good luck!

Edward R. Murrow Mon., March 3, 1958

This is the news:

Russia has proposed a meeting of foreign ministers in April...to pave the way for a summit conference in June. / The proposal was made by Foreign Minister Gromyko, in a letter to French Foreign Minister Pineau... and published today by the Soviet News Agency Tass. / Similar...if not identical...proposals are believed to have mmm been made in a Soviet memorandum delivered in the United States. / The Gromyko letter lays down conditions. / It says the foreign ministers conference would have the "limited task" of preparing an agenda. / It also says that "firm agreement" should be reached on a date for the summit talks before the foreign ministers meet. // In Washington today, President Eisenhower met for 30 minutes

with the Soviet ambassador. (In a few minutes, we will switch to Washington for a direct report).

The White House today announced details of the "clear understanding" which Mr. Eisenhower has with Vice President Nixon on what shall be done in case of presidential disability. The President revealed the existence of the understanding at his news conference last week. Since then, the White House has been under considerable pressure...from congressional leaders of both parties...to make public the procedures which would be followed. The statement...issued by the White House this afternoon...says that in the event of inability, "the Vice President would serve as acting president, exercising the powers and duties of the office until the inability had ended." If possible, the President himself would inform the Vice President of his incapacity. If the President were unable so to advise the Vice President, the determination of disability would be up to Mr. Nixon "after such consultation as seems to him appropriate under the circumstances." In either event, Mr. Eisenhower would determine when the inability had ended..."and at that time, would resume the full exercise of the powers and duties of the office." The White House statement emphasized that

→

these procedures are meant to apply only to Mr. Eisenhower and Mr. Nixon, and are...in their opinion... "in no sense outside or contrary to the Constitution." News Secretary Hagerty said the wording of the statement was worked up at the White House this morning by the President and Vice President in company with Attorney General Rogers. The understanding between the President and Vice President, he said, "does not imply that they do not still want a constitutional amendment or some congressional action dealing with presidential disability. Hagerty said the agreement was "gone over" with Republican congressional leaders this afternoon. And it was not clear whether the President's understanding with Mr. Nixon existed in writing before today. When a reporter asked whether Nixon would have to take an oath as acting president, Hagerty said he would have to check that with the attorney general. House Speaker Rayburn has argued that under such circumstances Mr. Nixon would have to take the presidential oath. Rayburn has also questioned whether Mr. Eisenhower...under such an arrangement...could resume his presidential duties once he has given them up.

President Eisenhower tonight accepted the resignation of Richard Mack as a member of the Federal Communications Commission. Mack has been →

under fire from House investigators...for his financial dealings with Thurman Whiteside, a lawyer friend interested in a Miami television case. Mack said in his letter of resignation that "perhaps I should have been more careful in the handling of my personal affairs" but that he had not violated his oath of office. Whiteside had approached Mack in the television case on behalf of a subsidiary of National Airlines. Mack was one of four F.C.C. members voting to award Channel 10 in Miami to the airline. George Baker, president of National Airlines, testified today that Mack was being "crucified" for refusing to yield to the political pressure exerted by some senators. And he named Sentors Kefauver, Holland and Smathers. Chairman Harris told Baker that he did not understand the difference between members of Congress expressing their views on policy matters and improper attempts to influence.

A new federal housing program will be introduced in Congress tomorrow and the housing administrator Albert Cole says it should provide "an important stimulus to an upturn in the economy." The program will include slum clearance, add to existing college housing projects and increase the maximum mortgage insurance provided by thw F.H.A.

The Supreme Court ruled today that the kind of discharge a soldier gets from the Army cannot be based on his activities prior to induction. The court said...in an 8-to-1 decision...that the type of discharge issued "is to be determined solely by the soldier's military record." It ruled in the case of two ex-soldiers who were discharged as security risks because of alleged Communist associations before induction. Justice Clark dissented.

The Supreme Court today refused to review a lower court decision calling for de-segregation of the public schools in Prince Edward County, Virginia. The State of Virginia had said...in appealing the decision... that all public schools in the area would be closed if it were carried out. Under the decision, the U.S. District Court in Richmond is directed to fix a deadline for compliance with the Supreme Court ruling of 1954... declaring the unconstitutionality of racial segregation in the public schools.

The American "good offices" official...Robert Murphy...conferred in Paris today with Premier Gaillard on the French-Tunisian dispute and then flew on to London. All Murphy would say after talking with Gaillard for two hours was that things were "going smoothly".

The rebel premier...in Indonesia...said today that he will ask the United States for arms, if the central government succeeds in getting arms from the Soviet bloc. /The revolutionary leader spoke to newsmen at his mountain retreat in Sumatra.

Today...at Panmunjom...the North Korean Communists refused to release the passengers and crew of the South Korean airliner held by them since February 16. Among the 34 on board were two American pilots. The Communists indicated on Saturday that they would free the two Americans and any others wishing to return to South Korea. But today they said...again...that talks with the Communist government of North Korea must come first. U.S. Navy Captain George Kehl...speaking for the United Nations Command...told the North Koreans that his government has "no intention of arranging a political meeting between government representatives." The United States does not recognize the Communist regime, and Captain Kehl accused the Reds of holding the passengers and crew as political hostages.

A man who knows Communist behavior---at first-hand---is my colleague Dan Schorr, who is back in this country after more than two years in Moscow. For a report on the disarmament question as seen from both vantage points...Russia and the United States...we switch to Dan Schorr in Washington.

Schorr runs 4 minutes

Returns on cue: "--to Ed Murrow in N.Y."

This is Ed Murrow. I'll be back in a moment with the Word for Today. First, here is George Bryan.

Word for Today

In our dealings with Russia, we dare not despair. / We have to keep trying. / And by way of encouragement, Walter Millis wrote in his recent book, "One cannot doubt, that a resolution of some kind will be found, for it is too difficult to accept a millennial view of history---a Twilight of the Gods, a prognosis of universal catastrophe and extinction."

Goodnight and good luck!

CBS RADIO DIVISION

EDWARD R. MURROW WITH THE NEWS

Monday, March 3, 1958
7:45 - 8:00 P.M.

MURROW: ... A man who knows Communist behavior at first hand is my colleague Dan Schorr, who's back in this country after more than two years in Moscow. For a report on the disarmament question as seen from both vantage points, Russia and the United States, we switch to Dan Schorr in Washington.

SCHORR: Ambassador Menshikov's genial generalities at the White House today, did not advance the situation any nor change the Administration's assessment of the new Soviet proposals. I understand that Secretary Dulles personally takes a very dim view of the Russian plan, regards it as a hardening rather than a softening of the Kremlin's position, sees the proposal for a preliminary foreign ministers conference on summit procedure in effect as emphasizing Soviet refusal to negotiate on matters of substance. But out of regard for the sensitivities of our allies, and especially the delicate situations in Britain and France, our reply will restate our desire for negotiations with Russia even though Dulles really does not believe the Kremlin means serious business. Yet, the Kremlin does seem most anxious for a summit conference. A strange theme of urgency about a conference runs through the latest Soviet memorandum, a theme that Menshikov struck again today. If the Soviets don't intend to make any real settlements, why are they working so desperately for a meeting? Administration leaders have an easy explanation: The Kremlin hopes that a summit conference, even without concrete results, will lead our allies to sit back and take it easy, will slow up plans for missile bases in Western Europe.

American leaders give less heed to another possible explanation, that Soviet party chief Khrushchev <u>needs</u> such a conference

for domestic reasons; perhaps because he's being called upon by other Soviet leaders to prove that his co-existence policy is workable. For if it is not, the Soviets cannot reduce their arms burden and meet the rising demands of their consumers nor still the restless voices still heard in the satellite states.

Last year a factor in the purge of Molotov and Malenkov and company was the rebels' attack on this co-existence policy. Today, even though the collective leadership is much less collective, Khrushchev does not rule unhampered and unhindered. He's subject to pressures from the party orthodox, unconvinced that his bold policies can be made to work. Last week, for example, Khrushchev had to fend off criticism of his move to decentralize the control of tractors, to let the collective farms own their equipment, a move that Stalin once barred as a step back from communism.

In Poland, Gomulka beat off an attack from those who wanted to tie Warsaw more closely to Moscow. The Communist empire is not as monolithic as it would like to appear; nor is Khrushchev having clear sailing. Several countries, notably India, have been urging on the United States the thought that Khrushchev must be aided in his search for relaxation of international tension if he's to be able to liberalize at home. The U.S. Administration has not been particularly impressed with this argument. Today the question arises in concrete form: whether we should be influenced by Khrushchev's apparent need for a summit conference even if we can't expect any important concessions at that conference. Secretary Dulles, I understand, doesn't think so. He regards Khrushchev in some respects as more dangerous than Stalin, more impulsive, less cautious, more trigger happy. And if Khrushchev should get into trouble at home, it would be no great loss. Basically, we must decide whether to deal with

Russia by keeping the pressure up on her, letting events take their course, or in a sense to put our money on Khrushchev, working for a gradual mellowing and relaxation of Soviet communism, hoping the pressure of increasingly educated people and growing boredom with revolution will make Russia in the end easier to live with. This choice, which lies in the background of the pre-summit maneuvering, has never been squarely faced. But whatever the choice, we will not fully understand Soviet diplomatic offensives if we consider only what they are trying to do to us and fail to consider what is happening to them.

Now, back to Edward R. Murrow in New York.

MURROW: That was Dan Schorr reporting from Washington. This is Ed Murrow. I'll be back in a moment with the word for today.

EDWARD R. MURROW WITH THE NEWS
CBS RADIO NETWORK

MONDAY, MARCH 3, 1958
7:45 - 8:00 PM EST

This is the news:

Russia has proposed a meeting of foreign ministers in April...to pave the way for a summit conference in June. The proposal was made by Foreign Minister Gromyko in a letter to French Foreign Minister Pineau...and published today by the Soviet News Agency Tass. Similar...if not identical...proposals are believed to have been made in a Soviet memorandum delivered in the United States. The Gromyko letter lays down conditions. It says the foreign ministers conference would have the "limited task" of preparing an agenda. It also says that "firm agreement" should be reached on a date for the summit talks before the foreign ministers meet. In Washington today, President Eisenhower met for thirty minutes with the Soviet ambassador. (In a few minutes, we will switch to Washington for a direct report.)

The White House today announced details of the "clear understanding" which Mr. Eisenhower has with Vice President Nixon on what shall be done in case of presidential disability. The President revealed the existence of the understanding at his news conference last week. Since then, the White House has been under considerable pressure...from congressional leaders of both parties...to make public the procedures which would be followed. The statement...issued by the White House this afternoon...says that in the event of inability, "the Vice President would serve as acting president, exercising the powers and duties of the office until the inability had ended." If possible, the President himself would inform the Vice President of his incapacity. If the President were unable so to advise the Vice President, the determiniation of disability would be up to Mr. Nixon "after such consultation as seems to him appropriate under the circumstances." In either event, Mr. Eisenhower would determine when the inability had ended... "and at that time would resume the full exercise of the powers and duties of the office." The White House statement emphasized that

these procedures are meant to apply only to Mr. Eisenhower and Mr. Nixon and are...in their opinion..."in no sense outside or contrary to the Constitution." News Secretary Hagerty said the wording of the statement was worked up at the White House this morning by the President and Vice President in company with Attorney General Rogers. The understanding between the President and Vice President, he said, "does not imply that they do not still want a constitutional amendment or some congressional action dealing with presidential disability. Hagerty said the agreement was "gone over" with Republican congressional leaders this afternoon. And it was not clear whether the President's understanding with Mr. Nixon existed in writing before today. When a reporter asked whether Nixon would have to take an oath as acting president, Hagerty said he would have to check that with the attorney general. House Speaker Rayburn has argued that under such circumstances Mr. Nixon would have to take the presidentid oath. Rayburn has also questioned whether Mr. Eisenhower...under such an arrangement...could resume his presidential duties once he has given them up.

President Eisenhower tonight accepted the resignation of Richard Mack as a member of the Federal Communications Commission. Mack has been under fire from House investigators...for his financial dealings with Thurman Whiteside, a lawyer friend interested in a Miami television case. Mack said in his letter of resignation that "perhaps I should have been more careful in the handling of my personal affairs" but that he had not violated his oath of office.

The Communist empire is not as monolithic as it would like to appear; nor is Khrushchev having clear sailing. Several countries, notably India, have been urging on the United States the thought that Khrushchev must be aided in his search for relaxation of international tension if he's to be able to liberalize at home. The U.S. Administration has not been particularly impressed with this argument. Today the question arises in concrete form; whether we should be influenced by Khrushchev's apparent need for a summit conference even if we can't expect any important concessions at that conference. Secretary Dulles, I understand, doesn't think so. He regards Khrushchev in some respects as more dangerous than Stalin, more impulsive, less cautious, more trigger happy. And if Khrushchev should get into trouble at home, it would be no great loss. Basically, we must decide whether to deal with Russia by keeping the pressure up on her, letting events take their course, or in a sense to put our money on Khrushchev, working for a gradual mellowing and relaxation of Soviet communism, hoping the pressure of increasingly educated people and growing boredom with revolution will make Russia in the end easier to live with. This choice which lies in the background of the pre-summit maneuvering, has never been squarely faced. But whatever the choice, we will not fullyunderstand Soviet diplomatic offensives if we consider only what they are trying to do to us and fail to consider what is happening to them.

Now, back to Edward R. Murrow in New York.

That was Dan Schorr reporting from Washington. This is Ed Murrow. I'll be back in a moment with the Word for Today. First, here is George Bryan.

GEORGE BRYAN: COMMERCIAL

MURROW: In our dealings with Russia, we dare not despair. We have to keep trying. And by way of encouragement, Walter Millis wrote in his recent book, "One cannot doubt that a resolution of some kind will be found for it is too difficult to accept a millennial view of history---a Twilight of the Gods, a prognosis of universal catastrophe and extinction."

Goodnight and good luck.

Edward R. Murrow Tues., March 4, 1958

This is the news:

Secretary of State Dulles said today that Russia's concept of a foreign ministers meeting...preparatory to a summit conference... is unacceptable. Russia wants a date for summit talks to be fixed before the foreign ministers meet and the foreign ministers to be limited to preparing an agenda and to determining what countries are to attend. Russia, in effect, also demands the right to veto the discussion of any subject it does not want taken up at the summit...such as reunification of Germany. And it wants an equal number of Communist and non-Communist governments represented. Mr. Dulles told his news conference that "presently known positions" do not hold out a reasonable likelihood of

agreement. He said, "We want a meeting that will really accomplish something. We do not want to be a party to what would be a fraud," something that would be "merely a spectacle." Nor, he said, do we want to expose differences in such a way as to increase tension. Dulles warned that the Russians...in this matter...are making propaganda, trying to substitute for reality the fiction that the Cold War has ended. But the United States, he said, is not closing the door on these negotiations. It will answer the Soviet proposal by expressing "a willingness to proceed through any workable channel to arrive at what would be meaningful decisions."

In Paris today, the permanent council of the North Atlantic Treaty Organization also rejected Russia's latest terms for a summit meeting.

Mr. Dulles and the new United States disarmament negotiator, James Wadsworth, conferred with President Eisenhower today on the disarmament problem. # According to diplomatic sources in London, the Russians have offered to consider banning the use of outer space for war purposes, if the United States will give up its bases overseas. So far, no confirmation of this report in Washington.

A constitutional amendment...to establish a permanent procedure for dealing with presidential disability...was introduced in the Senate today with bipartisan support. / The proposed amendment would supplant the stop-gap arrangement that now exists between the President and Vice President Nixon. / It would have the Vice President and the cabinet decide when a President is disabled, and Senate Republican Knowland says this is "generally acceptable" to the Administration. / The chief sponsors of the amendment are Democratic Senator Kefauver and Republican Senator Dirksen. | House Speaker Rayburn again criticized the arrangement...whereby Mr. Nixon would become acting president should Mr. Eisenhower become incapacitated. "I don't see," he said, "how you are going to create an office of acting president. I don't know how you can have a President that exercises the powers and duties of President that isn't sworn in as President." Rayburn argued that the only oath a President can take is the one in the Constitution...and that when he takes that oath, he is President for the rest of his term. Rayburn said he thought Congress could meet the requirements by passing a law without amending the Constitution. | Former President Truman says that...in his opinion...the agreement between

→

Mr. Eisenhower and Mr. Nixon is not legal as it now stands. He feels there either has to be a law or a constitutional amendment.

The Senate today confirmed all six members of the new Civil Rights Commission. There was no debate, and confirmation came on a voice vote.

The Senate Banking Committee has tentatively approved the major provisions of a 2-billion-dollar emergency housing program, sponsored by Democratic Senator Sparkman. The committee acted as the Administration's emergency housing bill...calling for expenditure of a billion, 350-million dollars...was introduced in the Senate by Republican Senator Capehart of Indiana. Both measures are designed to help the economy as well as provide better housing.

The possibility of stepping up the federal highway program...as an anti-recession move...was discussed today when Republican congressional leaders talked with the President.

The House Rules Committee agreed today to take up a bill to grant statehood to Alaska. But no date was set for hearings on the measure.

~~At hearings today before the Federal Communications Commission, Dr. Frank Stanton, president of C.B.S., testified [illegible] to the~~

-7

The Senate Rackets Committee heard more testimony today relating to alleged violence in the Kohler strike, now in its fourth year. A striker at the Kohler plant told of an incident in which his car was sprayed with acid. And another witness said his car was dynamited when he refused to join the walkout.

A strike of more than 100-thousand garment workers in seven eastern states in still set for 10 a.m. tomorrow, Eastern Standard Time. The International Ladies Garment Workers Union is asking for a 15 percent wage increase; the employers have offered an increase of 5 percent.

In Cincinnati tonight, James G. Cross was re-elected president of the Bakery and Confectionary Workers Union. The AFL-CIO had opposed his election because of charges that he had misused union funds.

Edward R. Murrow: March 4, 1958. 7.45 p.m.

With all the talk, and all the difficulty, about engineering a successful summit meeting, one can get a breath of refreshment from the co-operation of many nations at the bottom of the world -- in the Antarctic. It may be only a chilling breath, but it is exhilarating. The heroic crossing of Antarctica by Dr. Vivian Fuchs and his associates is, to be sure, primarily a British achievement. But it also is the fruit of international co-operation. It is one of the accomplishments of the International Geophysical Year, and eleven nations ~~at present~~ have fifteen expeditions in the Antarctic. Not many of these were of any help to Dr. Fuchs. But the London News Chronicle notes that the success of Dr. Fuchs was due, not only to the help of Sir Edmund Hillary, the New Zealander, but also to the Americans, who already were established in lonely outposts in Antarctica.

What Dr. Fuchs has learned is probably one of the two greatest contributions that will come this year from the international effort. The other is from the earth satellites. And there is a kind of majestic logic in the fact that the crossing of Antarctica was the last great exploration left to be done on this globe, and it was done at the very time that men were first tackling seriously the problems of exploring outer space.

Most geography books don't say so, but Antarctica is the fifth largest continent of the world. It probably has six million square miles, which makes it not much smaller than South America, and larger in area than the United States plus Europe west of the Soviet Union. When Dr. Fuchs crossed it he was not making a spectacular dash, like the great Polar explorers. He was traversing an unknown and uninhabited continent. Men had flown over it many times. But they could not know what Dr. Fuchs has learned.

He had two main objectives. One was to explore the land between the South Pole and the Weddell Sea, which had never been traveled before. The Polar pioneers, Scott, Shackleton and Amundsen, and this year Hillary, all reached the South Pole from the other side, the Ross Sea side. Now the Weddell Sea route has been surveyed. Dr. Fuchs has still to make his scientific report, but we know that he found new mountains projecting through the ice cap, and one group contains rich coal deposits. Probably Antarctica is a treasure trove of mineral resources.

The other objective was to measure the depth of the ice cap and make soundings that told something about the rocky lands underneath. Every evening, after finishing the day's exhausting advance, the Fuchs party made

drillings into the ice, and detonated explosive charges under the surface. In this way they registered for future study the resulting waves reflected from the underlying rock, and the volume of the ice that lies on the surface of the vast continent. / In places the ice is ten thousand feet deep. / In size, the cap is six times as large as that in the Arctic. The study also will reveal whether Antarctica is a single continent, or as appears possible, two continents, divided along the narrow waist linking the Weddell and the Ross Seas. It may even prove to be an archipelago, now unified by the ice cap.

Ice caps and other glacial formations are among the chief studies of all the antarctic expeditions. There is special interest, because the glaciers of the world are showing signs of receding. That is, they are melting a little more quickly than they used to do. Travelers have noted it from the Arctic to the Andes, and the possibility is being discussed of our being in the tail-end of the ice age, with a new climate in the making, though it may sound fantastic to say so this particular winter. The fact is that the sea-level is rising. L.P. Kirwan, a British scientist, says it is doing so at the rate of four inches a century, or an eighth of an inch every three years.

Le

So all the Antarctic scientists are gathering data. One of the chief studies is of weather. Greater knowledge of currents and ice in Antarctica should make weather predictions for the rest of the world more accurate. Another study is of magnetic forces. Antarctica also has a magnetic pole, and its effect on radio transmission has never been studied. A similar study is of solar activity. The high energy particles from the sun are attracted to both the magnetic poles.

All the expeditions are spending months in the worst desolation to be found on earth. Fuchs and his party pushed through 2,100 miles of it with their tractors. That is only four hundred miles less than the air distance between New York and San Francisco. Queen Elizabeth at once conferred a knighthood on him. But that, of course, does not match the honor Dr. Fuchs has conferred on British science and daring.

Back in a moment -

George Bryan

Word for Today

The crossing of the Antarctic continent by Dr. Fuchs and his party may well be the last great journey of exploration made on the face of the globe. To other explorers are left the far reaches of outer space and the unknown depths of the sea. Civilization needs adventurers. As Alfred North Whitehead observed, civilization without adventure is in full decay.

Goodnight and good luck!

EDWARD R. MURROW WITH THE NEWS
CBS RADIO NETWORK

TUESDAY, MARCH 4, 1958
7:45 - 8:00 PM EST

This is the news:

Secretary of State Dulles said today that Russia's concept of a foreign ministers meeting...preparatory to a summit conference...is unacceptable. Russia wants a date for summit talks to be fixed before the foreign ministers meet and the foreign ministers to be limited to preparing an agenda and to determining what countries are to attend. Russia, in effect, also demands the right to veto the discussion of any subject it does not want taken up at the summit...such as reunification of Germany. And it wants an equal number of Communist and non-Communist governments represented. Mr. Dulles told his news conference that "presently known positions" do not hold out a reasonable likelihood of agreement. He said, "We want a meeting that will really accomplish something. We do not want to be a party to what would be a fraud," something that would be "merely a spectacle." Nor, he said, do we want to expose differences in such a way as to increase tension. Dulles warned that the Russians...in this matter...are making propaganda, trying to substitute for reality to fiction that the Cold War has ended. But the United States, he said, is not closing the door on these negotiations. It will answer the Soviet proposal by expressing "a willingness to proceed through any workable channel to arrive at what would be meaningful decisions."

In Paris today, the permanent council of the North Atlantic Treaty Organization also rejected Russia's latest terms for a summit meeting.

Mr. Dulles and the new United States disarmament negotiator, James Wadsworth, conferred with President Eisenhower today on the disarmament problem. According to diplomatic sources in London, the Russians have offered to consider banning the use of outer space for war purposes, if the United States will give up its bases overseas. So far, no confirmation of this report in Washington.

A constitutional amendment...to establish a permanent procedure for dealing with presidential disability...was introduced in the Senate today with bipartisan support. The proposed amendment would supplant the stop-gap arrangement that now exists between the President and Vice President Nixon. It would have the Vice President and the cabinet decide when a President is disabled, and Senate Republican Knowland says this is "generally acceptable" to the Administration. The chief sponsors of the amendment are Democratic Senator Kefauver and Republican Senator Dirksen. House Speaker Rayburn again criticized the arrangement...whereby Mr. Nixon would become acting president should Mr. Eisenhower become incapacitated. "I don't see," he said, "how you are going to create an office of acting president. I don't know how you can have a President that exercises the powers and duties of President that isn't sworn in as President." Rayburn argued that the only oath a President can take is the one in the Constitution...and that when he takes that oath, he is President for the rest of his term. Rayburn said he thought Congress could meet the requirements by passing a law without amending the Constitution. Former President Truman says that...in his opinion...the agreement between Mr. Eisenhower and Mr. Nixon is not legal as it now stands. He feels there either has to be a law or a constitutional amendment.

The Senate today confirmed all six members of the new Civil Rights Commission. There was no debate, and confirmation came on a voice vote.

The Senate Banking Committee has tentatively approved the major provisions of a 2-billion-dollar emergency housing program, sponsored by Democratic Senator Sparkman. The committee acted as the Administration's emergency housing bill... calling for expenditure of a billion, 350-million dollars...was introduced in the Senate by Republican Senator Capehart of Indiana. Both measures are designed to help the economy as well as provide better housing.

The possibility of stepping up the federal highway program...as an anti-recession move...was discussed today when Republican congressional leaders talked

with the President.

The House Rules Committee agreed today to take up a bill to grant statehood to Alaska. But no date was set for hearings on the measure.

The Senate Rackets Committee heard more testimony today relating to alleged violence in the Kohler strike now in its fourth year. A striker at the Kohler plant told of an incident in which his car was sprayed with acid. And another witness said his car was dynamited when he refused to join the walkout.

A strike of more than 100-thousand garment workers in seven eastern states is still set for 10 A.M. tomorrow, Eastern Standard Time. The International Ladies Garment Workers Union is asking for a 15 percent wage increase; the employees have offered an increase of 5 percent.

In Cincinnati tonight, James G. Cross was re-elected president of the Bakery and Confectionary Workers Union. The AFL-CIO had opposed his election because of charges that he had misused union funds.

With all the talk, and all the difficulty, about engineering a successful summit meeting, one can get a breath of refreshment from the co-operation of many nations at the bottom of the world - in the Antarctic. It may be only a chilling breath, but it is exhilarating. The heroic crossing of Antarctica by Dr. Vivian Fuchs and his associates is, to be sure, primarily a British achievement. But it also is the fruit of international co-operation. It is one of the accomplishments of the International Geophysical Year, and eleven nations have fifteen expeditions in the Antarctic. Not many of these were of any help to Dr. Fuchs. But the London News Chronicle notes that the success of Dr. Fuchs was due, not only to the help of Sir Edmund Hillary, the New Zealander, but also to the Americans, who already were established in lonely outposts in Antartica.

What Dr. Fuchs has learned is probably one of the two greatest contributions that will come this year from the international effort. The other is from the earth satellites. And there is a kind of majestic logic in the fact that the crossing of Antarctica was the last great exploration left to be done on this

globe, and it was done at the very time that men were first tackling seriously the problems of exploring outer space.

Most geography books don't say so, but Antarctica is the fifth largest continent of the world. It probably has six million square miles, which makes it not much smaller than South America, and larger in area than the United States plus Europe west of the Soviet Union. When Dr. Fuchs crossed it he was not making a spectacular dash, like the great Polar explorers. He was traversing an unknown and uninhabited continent. Men had flown over it many times. But they could not know what Dr. Fuchs has learned.

He had two main objectives. One was to explore the land between the South Pole and the Weddell Sea, which had never been traveled before. The Polar pioneers, Scott, Shackleton and Amundsen, and this year Hillary, all reached the South Pole from the other side, the Ross Sea side. Now the Weddell Sea route has been surveyed. Dr. Fuchs has still to make his scientific report, but we know that he found new mountains projecting thoough the ice cap, and one group contains rich coal deposits. Probably Antarctica is a treasure trove of mineral resources.

The other objective was to measure the depth of the ice cap and make soundings that told something about the rocky lands underneath. Every evening, after finishing the day's exhausting advance, the Fuchs party made drillings into the ice, and detonated explosive charges under the surface. In this way they registered for future study the resulting waves reflected from the underlying rock, and the volume of the ice that lies on the surface of the vast continent. In places the ice is ten thousand feet deep. In size, the cap is six times as large as that in the Arctic. The study also will reveal whether Antarctica is a single continent, or as appears possible, two continents, divided along the narrow waist linking the Weddell and the Ross Seas. It may even prove to ba an archipelago, now unified by the ice cap.

Ice caps and other glacial formations are among the chief studies of all the

antarctic expeditions. There is special interest, because the glaciers of the world are showing signs of receding. That is, they are melting a little more quickly than they used to do. Travelers have noted it from the Arctic to the Andes, and the possibility is being discussed of our being in the tail-end of the ice age, with a new climate in the making, though it may sound fantastic to say so this particular winter. The fact is that the sea-level is rising. L.P. Kirwan, a British scientist, says it is doing so at the rate of four inches a century, or an eighth of an inch every three years.

So all the Antarctic scientists are gathering data. One of the chief studies is of weather. Greater knowledge of currents and ice in Antarctica should make weather predicaions for the rest of the world more accurate. Another study is of magnetic forces.

All the expeditions are spending months in the worst desolation to be found on earth. Fuchs and his party pushed through2,100 miles of it with their tractors. That is only four hundred miles less than the air distance between New York and San Francisco. Queen Elizabeth at once conferred a knighthood on him. But that, of course, does not match the honor Dr. Fuchs has conferred on British science and daring.

This is Ed Murrow. I'll be back in a moment with the word for today. Now, here is George Bryan.

As Alfred North Whitehead observed, "Civilization without adventure is in full decay."

Goodnight and good luck!

Edward R. Murrow: March 5, 1958. 7.45 p.m.

This is the news -

At Cape Canaveral, Florida, another effort was made today to put a second Explorer satellite into orbit. The vehicle was the Army's Jupiter C. The blast off occurred at 1.28 p.m. Eastern Standard Time - thirty-three days after the launching of our first satellite. ~~Today the~~ Jupiter C. appeared to be functioning normally as it ~~disappeared into~~ the overcast at five thousand feet. Since then there has been silence. ~~A news conference with Army scientists was cancelled without explanation.~~

The jet propulsion laboratory at Pasadena, California, announces that ~~XXXXXXXXXXXXXXXX~~ there is every indication that the Explorer II did not function properly, and there is a probability that it is not in orbit.

In the absence of any official announcement it is possible that Explorer II is up there, but that it is silent because one of its transmitters has gone dead. Here is Charles Von Fremd in Florida with ~~George Herman from Washington to~~ a description of the launching. ~~discuss some of the technical possibilities.~~

(Tape runs 1:52
returns to "Edw R. M.
in N.Y."

In Congress today, the House created a special 13-man committee to deal with legislation related to outer space. / Democratic Leader McCormack was appointed chairman, with Republican Leader Martin as senior minority member. A similar committee...headed by Senator Lyndon Johnson...was created recently in the Senate.

The Navy confirms that the new U.S. atomic submarine "Skate" has set a speed record...in crossing the Atlantic from West to East in 203 hours. ~~The Skate left Groton, Connecticut on February 24 and arrived this morning in Portland, England. It made the voyage totally submerged.~~

The record for an East-West crossing is held by the Nautilus. / The Skate left Groton, Connecticut on February 24...and arrived this morning in Portland, England. It made the voyage totally submerged.

At his news conference today, President Eisenhower endorsed Secretary Dulles' statement...rejecting Russia's terms for a foreign ministers conference looking toward a meeting at the summit. A reporter said it seemed to him that Mr. Dulles had used "strong language"...and he wondered if this were an attempt to close the door on future negotiations. Mr. Eisenhower told the reporter:

(Tape runs 30 seconds,
ends on cue: "--no matter what
the difficulty is."

Another reporter then asked for an estimate of the importance of the Soviet proposal for a foreign ministers conference, and Mr. Eisenhower said:

(Tape runs 50 seconds
ends on cue: "--that would appeal to
reasonable men."

Mr. Eisenhower disclosed in the course of his news conference that Soviet leaders had expressed a willingness to come to Washington for a meeting of heads of government. Mr. Eisenhower said that would be agreeable to him...especially if the meeting were to be of considerable duration. The Constitution, he said, makes it difficult for

→

him to be out of the country for any long period of time.

On the subject of recession, Mr. Eisenhower said it is "undeniable" that the government should take steps to bolster the economy. Among such steps he listed the encouragement of home building and the easing of credit. And if necessary, he said, public works projects already approved could be accelerated. But he warned against a predominate government role in these words:

(Tape runs 1:10
ends on cue: "--the most important factor
in the American economy."

Mr. Eisenhower said that in his understanding with Vice President Nixon regarding presidential disability he was "not trying to rewrite the Constitution." He said: "We are trying to carry out what normal human beings of good faith...having some confidence in each other...would do in accordance with the language of the Constitution." A reporter pointed out that some people, including House Speaker Rayburn, believe it would be illegal for Nixon to become acting president in the event that the President becomes disabled. Rayburn has suggested that in that eventuality,

→

Mr. Nixon would have to take a new oath...and that the President might have difficulty resuming his office. / Mr. Eisenhower said he sees no need for Mr. Nixon to take a new oath...that ~~him~~ he has already taken an oath, and that the Constitution authorizes the Vice President "under certain conditions" to perform the duties of President. / However, Mr. Eisenhower made it clear that he endorses the constitutional amendment...introduced in the Senate yesterday...spelling out the procedures to be followed in case of presidential disability. Attorney General Rogers said today that, in his opinion an acting [redacted] president would have the power to sign or veto legislation. Rogers said he would have no doubt of the outcome, should the legality of the action be challenged in court.

→

5-A

Regarding statehood for Hawaii and Alaska, President Eisenhower said there appeared to be more congressional activity than normal on this subject. (Just yesterday, the House Rules Committee agreed to take up a bill that would grant statehood to Alaska). Mr. Eisenhower said the question "would seem something that shouldn't be quite as controversial as it appears to be"...since statehood for the two territories is favored in both the Democratic and Republican platforms.

As to the House investigation of the Federal regulatory agencies... and the resignation of Richard Mack as a member of the Federal Communications Commission...Mr. Eisenhower said, "There must be a certainty that these

→

so-called independent commissions are really independent...that they make their judgments without outside influence, other than the submission of proper evidence." / The House investigating committee hired a new chief counsel today...Robert Lishman...a Washington attorney, who replaces Dr. Bernard Schwartz, whom the committee discharged three weeks ago. It was Dr. Schwartz who published made public a memorandum, charging improper activity on the part of various F.C.C. members. / A Republican member of the committee...Representative Wolverton of New Jersey...said today that he will press for the questioning of Democratic senators whose names have come up in the Miami T.V. case. Committee Chairman Harris has taken the position that the House cannot request members of the Senate to testify. Most---if not all---of the senators mentioned have expressed willingness to appear. George Moore, a brother-in-law of Mrs. Eisenhower, sent Chairman Harris a letter today...denying flatly that he had any part in obtaining the Miami T.V. outlet for a subsidiary of National Air lines. He said the "insinuations" have no basis in fact, and that he is willing to repeat his denial under oath.

The International Ladies Garment Workers Union went on strike today, as scheduled, in nine Eastern states. / More than 100-thousand workers →

walked out in the first general strike conducted by their union in 25 years. At issue...besides pay...is the question of contract enforcement throughout the industry.

Best wishes
George Reasoner

Word for Today

The chances are that...ultimately...a summit meeting will be held. But on this subject of probabilities, Josh Billings once said, "The probabilities iz that the probabilities will assimilate themselfs tew the principal probabilities in the case. If they don't, du notiss will be giv. In the mean time, be kalm...be dignified...and don't be skeered."

Goodnight and good luck!

CBS RADIO DIVISION

EDWARD R. MURROW WITH THE NEWS

Wednesday, March 5, 1958
7:45 - 8:00 P.M.

MURROW: ... In the absence of any official announcement, it is possible that Explorer II is up there, but that it is silent because one of its transmitters has gone dead. Here is Charles von Fremd in Florida, with a description of the launching.

FREMD: Ed, today's Jupiter-C launching was a carbon copy of the Army's shoot of last January 31st, when our first earth satellite was hurled into orbit. The big bird roared straight up from its path, exhilarating much more rapidly than do the other monsters fired at Cape Canaveral. This afternoon, the Jupiter-C climbed 5000-ft. in just 27-seconds before vanishing in a cloud. Reporters followed the bird's progress over a squawk ...? which droned off the missile's flight every ten seconds. When it passed the six minute mark, we knew the Jupe had gone high enough to obtain orbit. The big question remained whether the final stage, carrying the satellite, had been triggered while in a position horizontal with the earth. Only tracking stations about the earth could supply that information, as the baby moon soared overhead. Wehrner von Braun, the German scientist whose efforts led to the creation of the Jupiter-C, observed the countdown and shoot from a nearby block house; and crashing his crash helmet aside, he motored with colleagues to Patrick Air Force Base. He talked with Dr. William Pickering, at California's Jet Propulsion Lab, received tracking reports. At first, the news seemed excellent. Some down-range stations reported the satellite passed overhead. Reporters gathered at Patrick, assumed Explorer II was solidly in orbit. But as time passed, it was apparent something was wrong. The Explorer's radio signals were silent; so was the miniature tape recorder, which was supposed to send back cosmic ray counts and other data.

Test center director Maj. Gen. Donald Yates was overheard to remark "This is fantastic." As the mystery of the satellite's whereabouts deepened, the scheduled news conference was cancelled; all questions referred to Washington.

Puzzled bird watchers could only return to their motels and like everyone else await future developments.

Now, back to Edward R. Murrow in New York.

MURROW: ... At his news conference today, President Eisenhower endorsed Secretary Dulles's statement rejecting Russia's terms for a foreign ministers conference looking toward a meeting at the summit. A reporter said it seemed to him that Mr. Dulles had used strong language and he wondered if this were an attempt to close the door on future negotiations. Mr. Eisenhower told the reporter:

PRES. EISENHOWER: We'll never close the door. I've assured you people time and time again that if there's any possible avenue - no matter how crooked and no matter how narrow - if I can discern it - and it will take us toward some easing of tensions in the world, one step toward peace, I'm perfectly ready to start no matter what the difficulty is.

MURROW: Another reporter than asked for an estimate of the importance ofthe Soviet proposal for a foreign ministers conference and Mr. Eisenhower said:

PRES. EISENHOWER: It is absolutely futile and in my opinion, damaging to attempt to hold a ... summit meeting unless the agenda and the subjects included on are so well prepared as to give a genuine belief that real progress if not fixed opi... fixed agreements ... but a real progress toward the easing of tensions can be accomplished. And, therefore, the yardstick by which you measure the ... or the United States measures the possibility of a summit meeting is, have we had really dec... decent preparation that would

appeal to reasonable (indistinct) ...

MURROW: ... But he warned against a predominant Government role in these words:

PRES. EISENHOWER: I believe, of course, that the upturn in our economy will be the result of millions of citizens making their purchases - having greater confidence - - in other words, the private economy has a way of steering its own course. I do not believe that just ... just spending Federal money is entirely the answer. We've spent an awful lot of money of Federal Government ... of Federal Government money - and that is, when we're doing that, it seems just of putting a few more dollars ... because they are a few dollars, relatively, compared to a seventy-two dollar ... seventy-two billion dollar budget. That doesn't seem to be the whole answer. I believe it's ... it's watching the situation, getting the best advice, seeing what's happening and doing everything you can - but do not to ma... make Government ... ever attempt to make the Government the most important factor in the American economy.

MURROW: ...

Edward R. Murrow Thurs., March 6, 1958

This is the news:

The United States today formally rejected Russia's terms for a foreign ministers conference looking toward a meeting at the summit. The American note...delivered to Soviet Ambassador Menshikov..."takes satisfaction" from the fact that Russia now favors a foreign ministers conference. But Russia's concept of such a conference, it says, falls short of what the United States feels is required in the way of preparation for a summit meeting. Moscow has proposed that the foreign ministers meet in April...and that their work be "strictly limited" to drafting an agenda and to deciding the time and place for a meeting of heads of government. The American reply accuses Russia of trying to

→

claim a veto power over what subjects will come up at the summit. / And it says there "must be a resonable give-and-take in the selection of items for discussion." / There must be "substantive" preparatory work, the note argues, if a summit meeting is to actually reduce international tensions...if it is to result in " meaningful decisions." / The note declares: "The United States reaffirms its desire that a meeting of heads of government will be held...not as a spectacle, not to reaffirm generalities...but to take serious decisions / which will lead to an international atmosphere of cooperation and good will."

Premier Bulganin sent a new message today to President Eisenhower. We are not told yet what it contained, but Soviet Ambassador Menshikov made a speech this noon at the National Press Club. Menshikov said that...in the Russian view...a summit conference is the "most important step, the most effective instrument / for lessening international tension." "If we settle only some problems," he said, "not all problems at once, it will make the task of deciding other questions easier." / Menshikov denied that Russia wants to ease international tension so the West will be lulled into lowering its guard. "We speak," he said, "in the interests of peoples the world over."

The Army says it is now "certain" that the satellite launched yesterday by the Jupiter-C rocket was not placed in orbit. This, the Army says, was due to the failure of the last-stage of the four-stage rocket to ignite. The announcement goes on to say that...lacking velocity...the satellite "behaved like an ordinary surface-to-surface missile" and that it probably burned up upon re-entering the atmosphere "at a range of approximately 19-hundred miles."

The Administration has made a further reversal of its "tight money" policy. The Federal Reserve Board today authorized its banks in New York, Philadelphia and Chicago to cut their interest rates on loans to member banks to two and ~~one~~ quarter percent. The present so-called "discount rate" is two and three-quarters percent. The cut is effective tomorrow, and the Federal Reserve Board says the action is being taken "to make credit conditions still more favorable to recovery."

In Congress today, Democratic Leader Lyndon Johnson urged the Senate to speed action on public works measures...including a proposed public works administration, "if a large program becomes necessary."

The Senate Agriculture Committee today approved a bill that would prevent Secretary Benson from cutting price supports below last year's level on any of the basic ~~munys~~ crops.

Here in the East, the garment workers strike has gone through its second day. / Mayor Wagner of New York City is returning from his Bahamas vacation to try to help reach a settlement.

/

In Paris, Premier Gaillard today asked the National Assembly for a vote of confidence on his new military budget. The budget is revised, to enable France to send an additional 28-thousand troops to Algeria. The vote is scheduled for tomorrow, and indications are that Gaillard will win the test.

U.S. Ambassador Robert Murphy is still in Paris...in his role of "good offices" conciliator in the French-Tunisian dispute. The Gaillard government may put off making any hard-and-fast decision in the dispute for several weeks.

King Mohammed of Morocco today proposed the union of Morocco, Tunisia and Algeria in a North African federation.

President Bourguiba of Tunisia said today...in his weekly broadcast... that the only solution to the war in Algeria is to give the Algerian people independence. He also threatened to break off diplomatic relations with Egypt, unless Egypt gives "a convincing explanation" of its role in an alleged plot for his assassination. Bourguiba said he had intercepted letters...urging his death...written by a Tunisian extremist leader, who has been living in Cairo. He also noted that the courier...carrying the

→

letters...had an Egyptian passport, including an exit permit.

Saudi Arabia today officially denied charges...originating in Egypt and Syria...that it had plotted to assassinate President Nasser. But Syrian newspapers continue to play up the story, and the Saudi embassy in Damascus has been placed under heavy police guard. /Beirut, the capital of Lebanon, was the scene this morning of a pro-Nasser student demonstration.

In Cairo today, President Nasser appointed a joint cabinet for the new United Arab Republic of Egypt and Syria. Most of the key ministries are headed by Egyptians.

In Korea, the United Nations Command is investigating a new incident in which a U.S. Air Force Sabrejet was shot down by North Korean anti-aircraft fire. The pilot was seen parachuting into Communist territory. An Air Force spokesman says the jet was flying a routine training mission and strayed inadvertently over the demarcation line.

The incident occurred as Communist authorities at Panmunjom were releasing 26 ~~24~~ persons...including two Americans...who were aboard that South Korean airliner forced to land in North Korea on February 16. Passengers confirmed reports that the aircraft was commandeered by armed Communist agents on a flight from Pusan to Seoul. ~~The two Americans~~ are Willis Hobbs of Vallejo, California, the civilian pilot, and Lieutenant Colonel Howard McClellan of the Air Force. A West German businessman and his wife also ~~were released.~~

Edward R. Murrow: March 6, 1958. 7.45 p.m.

President Eisenhower's handling of the problems of the summit meeting at his news conference yesterday was forthright and vigorous, but it was strictly defensive. He supported Secretary Dulles's flat rejection of the Soviet concept of a Foreign Ministers' conference, and spoke eloquently of his own willingness to go to any lengths to serve the cause of peace. This was parrying, not fencing back. He did not say anything that would put the Soviet Union in the need of justifying itself before world opinion.

The battle for the summit might be called the latest battle of the cold war. It is a Soviet campaign. The Soviet Union, by repeatedly asking for a summit meeting, has put the West on the defensive. If the meeting comes off, that fact alone will be a Soviet victory. If the meeting doesn't come off, that will be a Western defeat, for it will appear that the West was not willing to negotiate. If it comes off and fails, it will be hard for the West to prove that its own ~~obstinacy~~ inflexibility was not to blame. If it comes off and succeeds - that is, if the unexpected happens and a true willingness to compromise develops on some basic issue - it still will have been a Soviet initiative that brought the boon to the world.

So the Soviet leaders are playing a game of heads-I-win-tails-you-lose.

They know that the West is reluctant to come to a summit meeting without a prospect of real results. But they also know it is better propaganda to keep pressing for a summit meeting than it is to keep saying - as the West has to do - that the preparation isn't adequate. Preparation, in the Western sense, means finding an important subject or subjects on which an agreement is likely. So far there are no such subjects. The proposed Russian agenda is made up of the demands they have put forward and the West already has rejected. Ours is not much different. The clash of the agendas is the cold war in a nutshell.

In this kind of campaign, the art of the offensive is to make what, to the casual headline reader, appears to be concessions. This is what the Russians did in saying "yes" to a Foreign Ministers' conference to which they had been saying no. The headline reader doesn't notice that the Foreign Ministers are not to negotiate, but are to deal only with time, place and choice of subjects. So long as the Russians don't object. But the headline reader knows that President Eisenhower and Secretary Dulles said no.

Another concession is in today's news. Moscow now says it is prepared to have a German peace treaty on the agenda. This seems to be a huge concession. But what the Kremlin proposes is that the issue of German

re-unification be omitted altogether, and the peace treaty be negotiated between the governments of East and West Germany. That is, in fact, asking an outright triumph by the communist bloc before negotiations even begin.

Another concession that is good propaganda is the Soviet offer to hold the summit meeting in the United States. This is a gracious acknowledgment of the difficulty of an American president staying long out of the country. But it has nothing to do with the kind of summit meeting. All it does is to make it harder for Washington to hold out for adequate preparation.

Other possible concessions are being discussed by both sides. There is the proposal to set up a nuclear-free zone in Central Europe. There is talk of reviving the Eden plan for partial withdrawal of troops from Central Europe. Washington is hinting it might ultimately accept a three-year suspension of nuclear tests with no other condition than inspection. But all this talk is noncommital. Behind most offers is a hope by one side for an advantage over the other side. There is no sign whatever that the Soviet Union is ready to relieve tensions by giving up something important in return for the West giving up something important. That is not saying it will

always be like this. But if the Kremlin really wants an armistice in the cold war, and does honestly offer to pay for it, it undoubtedly will be done in the utmost secrecy of diplomatic contacts, not in public places, not in letters to and from Bulganin.

Until that happens -- if it ever does - it is well to identify the battle of the "summit meeting" for what it is. /Despite what Ambassador Menshikov said today, we know from the Russians themselves, that they are out to break up the Western alliance. So far they have not succeeded./ But the alliance is clearly on the defensive, and the battle is not over.

Back in a moment -

George Reedy

Word for Today

Public negotiation...in messages to and fro...would appear to have contributed little thus far to agreement on a summit conference. On this subject of negotiation, William Penn said, "It is endless to dispute upon everything that is disputable." And one recalls an observation by Robert Frost. "The best way out," he said, "is through."

Goodnight and good luck!

Until that happens - if it ever does - it is well to identify the battle of the "summit meeting" for what it is. Despite what Ambassador Menshikov said today, we know from the Russians themselves, that they are out to break up the Western alliance. So far they have not succeeded. But the alliance is clearly on the defensive, and the battle is not over.

This is Ed Murrow. I'll be back in a moment with the word for today. Now, here is George Bryan.

GEORGE BRYAN: COMMERCIAL

MURROW: Public negotiation...in messages to and fro...would appear to have contributed little thus far to agreement on a summit conference. On this subject of negotiation, William Penn said, "It is endless to dispute upon everything that is disputable." And one recalls an observation by Robert Frost. "The best way out," he said, "is through."

Goodnight and good luck!

Edward R. Murrow Fri., March 7, 1958

This is the news:

The text of Premier Bulganin's new 16-page letter to President Eisenhower has been released. / What Bulganin had to say is mostly a re-hash of his earlier messages. / Russia still refuses to discuss German reunification, or the fate of the eastern satellite states at a summit meeting. It still wants any prior foreign ministers conference to restrict itself to routine arrangements for a meeting at the summit. No exploration at the lower level of matters of substance. / The new Bulganin letter does not say...as Soviet Foreign Minister Gromkyo said last week in a memorandum to the foreign minister of France...that there has to be a firm date for a summit conference before the foreign ministers meet. / Bulganin accuses the United States of "procrastination" in negotiating a meeting. And he

→

chides Mr. Eisenhower for what he calls the "sharpness of tone" occurring in some passages of the President's last letter. Russia, he says, will consider Mr. Eisenhower's proposal to limit the use of outer space to peaceful purposes---but only on condition that the United States give up its bases overseas. He appears to accept the Eisenhower suggestion that Russia and the United States engage in "an exchange of leaders of thought." Official Washington sources say that Bulganin apparently still is more interested in propaganda than in serious negotiation.

The Army announces that the 11th Airborne Division will be deactivated in Germany on July first. Two battle groups of the 11th Airborne will be merged with the 24th Infantry Division...which is being revived after being taken off the active list last year. The Army says deactivation of the 11th Airborne Division is necessary to retain a balanced divisional structure within the limits of manpower.

A Senate committee heard more testimony today on behalf of the Administration program for keeping skilled officers and enlisted men in the armed forces by giving them more pay. Assistant Defense Secretary William Francis said that...during the past two years...an average of one out of six bombers of the Strategic Air Command have been grounded due to a shortage of trained personnel.

The Navy today postponed its next attempt to launch a satellite with the Vanguard rocket. A brief announcement says the launching...scheduled for

Left

Secretary of State Dulles Washington today,,,by air...to attend the annual meeting of the Southeast Asia Treaty Organization in Manila. While in Manila, he will confer privately with the French and British foreign ministers.

Secretary of State Dulles left Washington today...by air...to attend the annual meeting of the Southeast Asia Treaty Organization in Manila. While in Manila, he will confer privately with the French and B ritish foreign ministers.

The Associated Press says the government is about to report an additional 600-thousand persons unemployed in February...bringing the total number of unemployed to more than 5-million, 100-thousand. This is the highest unemployment figure in 16 years. Last month, the government reported an increase of a million, 100-thousand unemployed in January. President Eisenhower has predicted an increase in job opportunities in March, and Administration officials reportedly are holding to this view.

Senate Democratic Leader Johnson said today that the Defense Department has agreed to advance the completion dates for military construction projects "in areas where there is substantial unemployment." Johnson told reporters he had suggested this in a letter to Secretary of Defense McElroy on February 19. He said the spending of some 450-million dollars is involved. Johnson promised to push for Senate action on "major" public works measures. The creation of 200 to 500-thousand jobs, he said, "should have a good psychological effect."

In Paris today, Premier Gaillard won a vote of confidence on his military budget. The budget is revised to enable France to send an additional 28-thousand troops to Algeria. Gaillard assured the National Assembly...before the vote...that he would "not hesitate" tp send further reinforcements, should that be required. And he said he would soon make "concrete proposals" for a new regional pact that would take in countries bordering the Western Mediterranean. Such an arrangement, Gaillard said, would be "a natural and necessary complement of the North Atlantic Treaty Organization." ~~The vote supporting Gaillard was 286 to 147.~~

Today, Egyptian newspapers played up the Syrian charge that King Saud of Saudi Arabia had plotted to assassinate President Nasser. And in Damascus, the capital of Syria, a former member of the Syrian parliament gave details of an alleged plot to wreck the United Arab Republic of Egypt and Syria. He charged that King Saud had given him checks for more than 5-million dollars to hatch the plot...that he was supposed to enlist Syria's strong man, Colonel Serraj, as a co-conspirator...and that Saud had told him that the whole thing had the support of the United States. Saud has denied the existence of any such conspiracy.

In Washington, the Federal Grand Jury investigating the conduct of Richard A. Mack as a member of the Federal Communications Commission has been ordered by the Justice Department to broaden its inquiry. Witnesses not associated with the Mack case have been subpoenaed to appear before the grand jury next week.

The United Auto Workers today offered to submit the issues in their strike against the Kohler Company to federal arbitration. The union made its offer at the hearings...looking into the four-year-old walkout... being conducted by the Senate Rackets Committee. The company replied that while it is willing to listen to the advice of mediators, it cannot allow outsiders to write the terms of its labor contracts. Chairman McClellan said it was "not the function of this committee to settle strikes."

~~Here in New York today, Mayor Wagner talked with both sides in the garment workers strike. He appointed two special mediators and predicted a settlement by Monday or Tuesday of next week.~~

Edward R. Murrow: March 7, 1958. 7.45 p.m.

Franz Josef Strauss, West Germany's Defense Minister, is now paying an official visit to Washington. / He is forty-two, energetic, ambitious, with a capacity for independent action and direct speech. / There is acute rivalry between Strauss and Von Brentano, the Foreign Minister, and it is at least possible that Strauss may succeed the venerable Chancellor Adenauer. Strauss has made it clear that Germany will accept nuclear weapons as / recently recommended by NATO commander General Norstad. According to Strauss / Germany's conditions for acceptance would be simple. The NATO Council must recommend the supply of American weapons - they must be American-made / and be kept under American custody. When these conditions have been met, a final decision will be made by the West German Government.

Mr. Strauss is here at the invitation of Defense Secretary McElroy, but he is not confining himself to defense matters. / Yesterday he talked about the proposal for an atom-free zone in Central Europe. Strauss had been reported as being at least mildly in favor of this plan. But yesterday he said the proposal in its present form / is unacceptable. / It would leave West Germany militarily paralyzed. He thought the plan should be extended geographically, and then the entire region - Germany, Poland,

Czechoslovakia - must have an inspection system to prevent the concealment of weapons. There also would have to be a balance between East and West in conventional forces. Moreover, there would have to be a guarantee, not only that nuclear weapons could not be fired inside the zone, but into it. Strauss recognized that this could not be assured technically. Technical security is impossible in the atomic age, he said, and could only come through political means. He thought this atom-free plan might be considered as a possible first step at a summit conference, but said it must be part of a world-wide disarmament system. In short, this proposal would have to be part of a political settlement of the issue of German re-unification.

On unification Mr. Strauss and his colleagues in the Adenauer government are under pressure from the Social Democrats, who tell their followers that Russia will agree to free elections in Germany on the single condition that a re-united Germany stay outside NATO. He admitted that terms for a settlement could be worked out. He doubted whether the West would insist on Germany's remaining in NATO, since the Western peace treaty with Germany gives a united Germany a free choice about continuing as a member of NATO. But Mr. Strauss pointed out that the Russians have not

in fact made any such offer. He said that some Germans had gone to Moscow hoping that such an offer would be made, but it hadn't happened. / The Soviets , according to Strauss, can settle the question of German re-unification any time they are ready to ~~jump~~ JUNK the East German Government. The Russians show no signs at all of doing that.

It can be said with complete certainty that there will be no real tranquility, no final political or military settlements in Europe, until the question of German re-unification is resolved.

Today the West German economy is booming. They are less troubled by inflation than other European countries. Their export drive during the past five years has been phenomenal. But according to the recent figures it is slackening. Their unemployment figures are about sixteen percent higher than last year. / But still West Germany's economic outlook is considerably more bullish than that of her other partners in NATO. / No one can predict with certainty the effects of a severe depression in Germany. No one can be sure how attached the West Germans are to democracy - whether a severe depression might cause them to again go adventuring under the leadership of reckless nationalistic men, hungry for power. They are without question the hardest working, most industrious, inventive people

in Europe. Thanks to bombing and post-war dismantling their industrial plant is modern and efficient; their workers more docile than in most of Europe. It is part of their political tradition to play off the East against the West. They will trade where they can. For example, Ernest Leiser cables me from Bonn that the top news in the economic journals in Germany is the likely conclusion of an economic pact between West Germany and Russia, by April .

Anyone who could predict the course that Germany will follow in the next few years could come pretty close to telling what will happen to the rest of Europe. That's why the views of Mr. Strauss are important. He is Defense Minister today, but he may be Chancellor tomorrow.

Back in a moment. —

George Bryan —

Word for Today

There would appear to be...for these difficult times...two very good pieces of advice from two persons who lived more than 22 centuries apart. The Chinese sage, Mencius, said in the fourth century B.C., "There is a time to fish, and a time to dry nets." And Mark Twain counseled, "Don't tell fish stories where the people know you. But, particularly, don't tell them where they know the fish."

Goodnight and good luck!

EDWARD R. MURROW WITH THE NEWS
CBS RADIO NETWORK

FRIDAY, MARCH 7, 1958
7:45 - 8:00 PM EST

This is the news:

The text of Premier Bulganin's new 16-page letter to President Eisenhower has been released. What Bulganin had to say is mostly a re-hash of his earlier messages. Russia still refuses to discuss German reunification or the fate of the eastern satellite states at a summit meeting. It still wants any prior foreign ministers conference to restrict itself to routine arrangements for a meeting at the summit. No exploration at the lower level of matters of substance. The new Bulganin letter does not say...as Soviet Foreign Minister Gromyko said last week in a memorandum to the foreign minister of France...that there has to be a firm date for a summit conference before the foreign ministers meet. Bulganin accuses the United States of "procrastination" in negotiating a meeting. And he chides Mr. Eisenhower for what he calls the "sharpness of tone" occurring in some passages of the President's last letter. Russia, he says, will consider Mr. Eisenhower's proposal to limit the use of outer space to peaceful purposes--- but only on condition that the United States give up its bases overseas. He appears to accept the Eisenhower suggestion that Russia and the United States engage in "an exchange of leaders of thought." Official Washington sources say that Bulganin apparently still is more interested in propaganda than in serious negotiation.

A Senate committee heard more testimony today on behalf of the Administration program for keeping skilled officers and enlisted men in the armed forces by giving them more pay. Assistant Defense Secretary William Francis said that... during the pasttwo years...an average of one out of six bombers of the Strategic Air Command have been grounded due to a shortage of trained personnel.

The Navy today postponed its next attempt to launch a satellite with the Vanguard rocket. A brief announcement says the launching...scheduled for today... was delayed by "minor technical difficulties."

Secretary of State Dulles left Washington today...by air...to attend the annual meeting of the Southeast Asia Treaty Organization in Manila. While in Manila, he will confer privately with the French and British foreign ministers.

The Associated Press says the government is about to report an additional 600-thousand persons unemployed in February...bringing the total number of unemployed to more than 5-million, 100 thousand. This is the highest unemployment figure in 16 years.

Senate Democratic Leader Johnson said today that the Defense Department has agreed to advance the completion dates for military construction projects "in areas where there is substantial unemployment." Johnson told reporters he had suggested this in a letter to Secretary of Defense McElroy on February 19th. He said the spending of some 450-million dollars is involved.

According to Strauss, Germany's conditions for acceptance would be simple. The NATO Council must recommend the supply of American weapons - they must be American-made and be kept under American custody. When these conditions have been met, a final decision will be made by the West German Government.

Mr. Strauss is here at the invitation of Defense Secretary McElroy, but he is not confining himself to defense matters. Yesterday he talked about the proposal for an atom-free zone in Central Europe. Strauss had been reported as being at least mildly in favor of this plan. But yesterday he said the proposal in its present form is unacceptable. It would leave West Germany militarily paralyzed. He thought the plan should be extended geographically, and then the entire region - Germany, Poland, Czechoslavakia - must have an inspection system to prevent the concealment of weapons. There also would have to be a balance

between East and West in conventional forces. Moreover, there would have to be a guarantee not only that nuclear weapons could not be fired inside the zone, but into it. Strauss recognized that this could not be assured technically. Technical security is impossible in the atomic age, he said, and could only come through political means. He thought this atom-free plan might be considered as a possible first step at a summit conference, but said it must be part of a world-wide disarmament system. In short, this proposal would have to be part of a political settlement of the issue of German re-unification.

On unification Mr. Strauss and his colleagues in the Adenauer government are under pressure from the Social Democrats, who tell their followers that Russia will agree to free elections in Germany on the single condition that a re-united Germany stay outside NATO. He admitted that terms for a settlement could be worked out. He doubted whether the West would insist on Germany's remaining in NATO, since the Western peace treaty with Germany gives a united Germany a free choice about continuing as a member of NATO. But Mr. Strauss pointed out that the Russians have not in fact made any such offer. He said that some Germans had gone to Moscow hoping that such an offer would be made, but it hadn't happened. The Soviets, according to Strauss, can settle the question of German re-unification anytime they are ready to junk the East German Government. The Russians show no signs at all of doing that.

It can be said with complete certainty that there will be no real tranquility, no final political or military settlements in Europe, until the question of German re-unification is resolved.

Today the West German economy is booming. They are less troubled by inflation than other European countries. Their export drive during the past five years has been phenomenal. But according to the recent figures it is slackening. Their unemployment figures are about sixteen percent higher than last year. But still West Germany's economic outlook is considerably more bullish than that of her other partners in NATO. No one can predict with certainty the effects of

a severe depression in Germany. No one can be sure how attached the West Germans are to democracy - whether a severe depression might cause them to again go adventuring under the leadership of reckless nationalistic men, hungry for power. They are without question the hardest working, most industrious, inventive people in Europe. Thanks to bombing and post-war dismantling their industrial plant is modern and efficient; their workers more docile than in most of Europe. It is part of their political tradition to play off the East against the West. They will trade where they can. For example, Ernest Leiser cables me from Bonn that the top news in the economic journals in Germany is the likely conclusion of an economic pact between West Germany and Russia by April.

Anyone who could predict the course that Germany will folllw in the next few years could come pretty close to telling what will happen to the rest of Europe. That's why the views of Mr. Strauss are important. He is Defense Minister today, but he may be Chancellor tomorrow.

This is Ed Murrow. I'll be back in a moment with the word for today. Now, here is George Bryan.

GEORGE BRYAN: COMMERCIAL

MURROW: There would appear to be...for these difficult times...two very good pieces of advice from two persons who lived more that twenty-two centuries apart. The Chinese sage, Mencius said in the fourth century B.C., "There is a time to fish and a time to dry nets." And Mark Twain counseled, "Dont' tell fish stories where the people know you. But, particularly, don't tell them where they know the fish."

Goodnight and good luck!

Edward R. Murrow Mon., March 10, 1958

This is the news:

Vice President Nixon said tonight that he favors a "substantial" tax cut, if there is not a definite improvement in the economy in the next few weeks. Mr. Nixon told reporters that what the economy needs is "primarily more spending by individuals and business, rather than more spending by government." And so, he said, if conditions fail to improve, with the program the President announced over the week-end, there should be tax cuts "across-the-board---reduced taxes for business, as well as for individuals. Nixon said that, in his view, such a program would be more effective "than the P.W.A.'s and the W.P.A.'s...which," he said, "have been tried in past periods, and have proved inadequate." In saying that he is opposed to any "massive" public works program, the Vice President

appeared to have in mind the public works measures being sponsored by Democratic members of Congress. The emphasis in Mr. Eisenhower's program was on a faster rate of spending---not necessarily more spending. The President did suggest an extension of unemployment compensation payments for a "brief period". But a Republican senator---Case of New Jersey---is preparing a bill that would give unemployed persons federal compensation through next December.

The assistant budget director...Robert Merriam...told the Senate public works committee today that, as it is, the government will spend between 300 and 400-million dollars more this fiscal year than President Eisenhower estimated in January. He blamed the increase on changed economic conditions.

President Eisenhower today nominated John S. Cross, an Arkansas Democrat, to succeed Richard Mack as a member of the Federal Communications Commission. Mack resigned last week in connection with the House investigation of federal regulatory agencies. Cross is serving at present as assistant chief of the State Department tele-communications division. Mack's lawyer friend, Thurman Whiteside, failed to show up today for further questioning before the House committee. And Chairman Harris said the committee either will set another date for Whiteside's appearance...or send its records on Whiteside to the Justice Department for possible prosecution.

Harris said he may introduce legislation depriving the President of authority to appoint chairmen of the F.C.C. He is considering a proposal, under which the F.C.C. chairmanship would rotate each year...according to procedure now followed by the Interstate Commence Commission.

Secretary of State Dulles arrived in Manila today for the annual meeting of the Southeast Asia Treaty Organization. Almost immediately he conferred with British Foreign Secretary Selwyn Lloyd, who is also in Manila for the SEATO talks. And tomorrow he is scheduled to confer privately with French Foreign Minister Christian Pineau. There is speculation that the question of a possible summit meeting with Russia is being discussed. When Mr. Dulles was asked about this today on his arrival, he said, "I have come to discuss SEATO, and I expect it will occupy us fully." Both Lloyd and Pineau, however, have indicated otherwise.

The Chinese Communist radio claimed tonight that the United States is trying...at the SEATO meeting..."to muster more countries to further interfere in the internal affairs of Indonesia." The United States, it said, must stop this "interference" or bear full responsibility for "all consequences."

Indonesian warships today shelled rebel installations on the west coast of Sumatra. The shelling...by a destroyer and two smaller vessels... is described as "light". Small-scale air action against the rebel forces on Sumatra also is reported. A Dutch correspondent in Jakarta is quoted as saying that 8-thousand troops loyal to the central government have landed on the Sumatra west coast, but this is not confirmed. Nor is there confirmation for the report...from a revolutionary source in Singapore... that other loyalist troops have landed on an island off the east coast of Sumatra. Cal-Tex, an American oil company, has closed down its operations in Central Sumatra, and 24 women and children---dependents of persons employed in the oil field---today arrived by tanker in Singapore. This evacuation of dependents is expected to continue. In Washington, the State Department says there is "no reason to believe that the personal safety of individual Americans, or their property, is endangered by the present activities."

The Communist government of North Korea has agreed to return the U.S. Air Force pilot shot down last Thursday over the demilitarized zone. Communist authorities say the pilot... Captain Leon Pfeiffer of

→

KE-NO-SHA

Kenosha, Wisconsin...is in good health but give no ~~hope for the future~~.

They admit that he was brought down by Communist anti-aircraft fire.

In Cuba, the sixth anniversary of President Batista's seizure of power passed so far as it known without violence. The rebel leader, Fidel Castro, did not call a general strike. And Batista made a speech, promising that the presidential election on June first would be free and above board. He promised that his government would "respect" the results.

The French cabinet tonight approved Premier Gaillard's plan for a regional defense pact that would take in countries bordering the Western Mediterranean. Gaillard has argued that such an arrangement would be "a natural complement" of the North Atlantic Treaty Organization. The cabinet also approved a cooperative program for exploiting the natural mineral wealth of the Sahara. Tunisia and Morocco... as well as Algeria... would be included in both these programs. But Algeria would remain part of France. After the cabinet meeting, Gaillard conferred with Robert Murphy, the American "good offices" representative in the French-Tunisian dispute. Tomorrow, Murphy flies back to Tunis. And this is interpreted as a sign that progress is being made toward a settlement.

The returns in the first parliamentary election ever held in the Sudan show the pro-Western Umma Party far in the lead. With about half the vote counted, the Umma Party is leading the National Unionist Party almost 2 to 1. The National Unionists are in favor of closer ties with Egypt.

Edward R. Murrow: March 10, 1958. 7.45 p.m.

Current events in the Middle East are feverishly writing a scenario that Hollywood could hardly match for fantastic melodrama. / The central figure is forty-year-old President Nasser of the United Arab Republic. Perhaps one should call him the hero. / But only time can tell about that. It is conceivable that he will end by uniting the Arab world under his unchallenged leadership, and become the greatest Arab since Saladin. / That is what he wants. And that is what he now has dangerously committed himself to achieve.

This past week, sitting in Damascus, where he was hand-picking the men to form the local government of former Syria, he pored over his papers and Biographies, and then would leap up to make speech after speech to the Syrians clamoring for his appearance from the palace balcony. / He always spoke off-the-cuff in a sustained flow of hot language. / Never before has he so clearly revealed his purpose. / He was singularly unrestrained. Everyone not for him he branded as against him, not only the foreigners of the West, not only Israel, but all the Arab leaders who have not submitted to him. One by one he denounced them as "tools of imperialists" and "enemies of Arab unity".

The climax came in the publication of what purports to be perhaps the biggest plot of bribery and assassination of modern times. King Saud, of Saudi Arabia, the Egyptians alleged, sent one of his own fathers-in-law to Colonel Seraj, Nasser's right-hand supporter in Syria, offering him millions of pounds in checks to scuttle the union with Egypt and kill Nasser. The Egyptians say they succeeded in cashing the checks and are spending the money on public works.

Plots of bribery and murder are not novelties in the supercharged rivalries of the Arab world. King Hussein in Jordan says he broke up such a plot by Nasser to kill him. And at this moment President Bourguiba of Tunisia is threatening to break relations with Nasser because of a similar plot to assassinate him.

Those following Arab affairs are not so much puzzled over the charges against Saud as over Nasser's strategy. He seems to have made ultimate reconciliation with Saud impossible. One explanation is that Nasser had to build up Colonel Seraj. He was making the former Syrian officer king-pin in the administration of the Syrian part of the Republic. Seraj has many Syrian enemies, who rightly counted him as more Egyptian than Syrian. But he comes out well in the tale of the Saud offer. He is said to have

tape-recorded his talks with Saud's envoy and turned the checks over to Nasser. Another explanation is that Nasser thinks he now can overwhelm Saud with the pressure for unity by Arabs throughout the Middle Eas. Saud is rich, but he is feudal, and times are changing. Nasser obviously thinks that time is on his side. Saud may be custodian of the holy places in Mecca, but in Damascus Nasser is custodian of the sepulchre of Saladin. It also may be a propitious symbol.

Nasser knows how to move swiftly. He was sharp and decisive in overthrowing King Farouk. He was quick in his seizure of Suez after the rebuff of Secretary Dulles over the Assuan Dam. He upset all timetables when he suddenly put through union with Syria. He also is lucky. He was saved by no merit of his own when Britain, France and Israel moved against him. Now he is backing his luck.

The balance of power within the Arab world is not easy to measure. The oil kingdom rolls in money, and Nasser is relatively poor. He does not fear the West any more, as he knows he can bank on the Soviet Union preventing another Western attack. Militarily he inferior to the combined forces of Saudi Arabia, Iraq and Jordan, or to Iraq and Jordan alone. But he controls both Suez and the Syrian pipelines, and thus controls the

westward flow of oil. And he counts on the awakened patriotism among the Arabs, not the kingly and rich Arabs, but the rank and file. In the long run they might count for more than armies.

Nasser's assets are considerable — but outsiders have thought the struggle for unity would take long to resolve. Not so Nasser. He now has plunged. Since last week he has staked everything on complete victory, and on his luck.

Nasser is able and ambitious. He is surrounded by a small group of young, able, dedicated men. The rest is poverty and illiteracy. / He denies that he is the tool or the chosen instrument of Russia, but he is nevertheless greatly beholden to the Soviet Union. / He will discuss most subjects with apparent reason, except the subject of Israel; and on that he sounds like a record of the vicious attacks that pour out daily from his radio transmitters. / Colonel Nasser is a dictator, and the dynamics of dictatorship demand that it must maintain momentum, must keep moving. Nasser can move next against his Arab neighbors, or he can try to move against Israel. The one thing he can't do for long is to stand still. He is engaged in a colossal gamble. If he wins, he is a man of destiny. If he loses, he was just another ambitious upstart. Back in a moment — George Burson —

Word for Today

President Nasser would appear to be bent on becoming the greatest Arab leader since Saladin in the Twelfth Century. He is not likely to stop now... of his own volition...until he either completely succeeds in his ambitious undertaking or completely fails. Henry W. Shaw warned, "Ambition is like hunger. It obeys no law but its appetite."

Goodnight and good luck!

It obeys no low but its appetite."

Good night and good luck!

Edward R. Murrow Tues., March 11, 1958

This is the news:

House Democratic leaders stole a march on the Administration today, and introduced a bill that would increase unemployment compensation benefits. The measure would also extend the maximum period in which benefits could be received by 16 weeks. President Eisenhower will send a special message to Congress on this same subject later this week.

~~Secretary of Labor Mitchell told~~

~~[illegible] an AFL-CIO economic conference, [illegible] unemployment had risen in February to 5[illegible], 000 thousand a 16-year high. He was speaking in round figures.~~ A formal government report issued today says that unemployment in February reached 5-million, 173-thousand, or an increase of 679-thousand for the month. This is just about what reports from Washington last week were saying the increase would be. In announcing the official figure, the government says a "major part" of the increase was caused by "continued lay-offs in durable goods manufacturing and unusually bad weather, which affected construction and other outdoor activities."

Secretary of Labor Mitchell told an AFL-CIO meeting today [illegible] that if the recession continues, a tax cut will be the "next big step." The Administration, he said, has a plan for cutting taxes "ready for immediate use," should that become necessary. Later, reporters asked White House News Secretary Hagerty about the Mitchell statement that such a plan is ready for immediate use, if needed. Hagerty said the statement was not correct, that he had talked to Mitchell and that Mitchell had said he did not mean it [illegible] "quite that way." Hagerty said there has been no final decision on when to cut taxes...should that be required...or on how they should be cut.

→

Representative Joe Martin said this morning...after a meeting of Republican congressional leaders at the White House...that the concensus was to wait at least a month, to decide whether a tax cut is in order. / Hagerty said the President will not hold a news conference tomorrow...so he can meet with his economic experts. / And next Tuesday, Mr. Eisenhower will again confer with Republican congressional leaders, on whether to cut taxes as an anti-recession move.

Last night, Vice President Nixon went on record as preferring a tax cut to a "massive" public works program, should further government action be proved necessary. But today...after the meeting at the White House... Republican Senator Case of South Dakota said he thought more jobs could be provided through public works than through cutting taxes. And Republican Senator Martin of Pennsylvania said he is "not for a tax cut at all." On the Democratic side, Senator Lyndon Johnson said, "I am not ready as of today to embrace a tax cut." / And House Speaker Sam Rayburn said it seemed to him that "other avenues" would put more people to work.

The Internal Revenue Service made an announcement tonight on the subject of expense accounts. It said...in a new reversal of policy...that persons filling out income tax returns will not have to report their

→

expense accounts to the government---if they have already given a detailed accounting to their employer. Only an employe who does not account to his employer for his expense money has to make a report of it on his income tax return.

The White House said today that President Eisenhower may soon make two major speeches---one on foreign policy and the other in support of his reciprocal trade program, which is meeting strong opposition in Congress. News Secretary Hagerty said he could give no details, either as to time or place.

The International Ladies Garment Workers Union today ratified an agreement...ending its 7-day strike. The union approved a new three-year contract, providing for an 11 percent "package" increase and stricter enforcement in the industry of contract terms. Union President Dubinsky says the walkout against 200 shops in Pennsylvania will continue, since they are not covered by the agreement.

Today...at the SEATO meeting in Manila...Pakistan asked for more economic aid. The Pakistani minister of commerce noted the aid which has gone to "neutral" Asian countries---an apparent reference to India---and warned that offers of economic assistance have been received from the Soviet bloc. Secretary Dulles said, in answer, that the United States has sent more than half a billion dollars in non-military aid to Pakistan, Thailand and the Philippines in the past four years. The foreign minister of the Philippines suggested a possible meeting of the finance ministers of the SEATO countries in the interests of greater economic collaboration.

Tomorrow, Mr. Dulles is expected to join the foreign ministers of Britain and France...who are also in Manila...for a discussion of Russia's proposals for a summit conference. / (Nikita Khrushchev said at a reception in Moscow tonight that he would be willing to go to Washington for a summit meeting. / Western correspondents observed an unusual reluctance on the part of Khrushchev to talk).

In London today, Prime Minister Macmillan told the House of Commons that "considerable progress" has been made toward a summit meeting. But he said that much in the way of preparation remains to be done. / And under Labpurite questioning, ~~[illegible]~~ the prime minister conceded that "differences in emphasis" exist in the attitudes of Britain and the United States. He did not spell out these "differences".

The American "good offices" ~~representative, Robert Murphy, arrived~~ in Tuhis today from Paris for a further round of talks in his effort to mediate the French-Tunisian dispute. / ~~Murphy...with his British~~ counterpart, ~~Harold Beeley~~...will give Tunisian President Bourguiba the ~~[illegible]~~ latest French view.

Edward R. Murrow: March 11, 1958. 7.45 p.m.

Civil war has now begun in Indonesia. / The start is small-scale. A few battalions of the Indonesian army landed on the east coast of Sumatra, the rebel forces put up a token resistance, then withdrew into the interior. There they will fight as guerillas.

The rebel capital is at Padang on the opposite coast. It suffered a light air attack and a brief bombardment from Indonesia's largest naval vessel, a destroyer. A landing here is anticipated, and the central government expects to occupy the chief cities of Sumatra before the end of the month. / But the rebel leaders, who admit they appear to be taking a beating, are sure they can keep up the fighting in the interior until the central government is forced to reorganize.

The nature of war has changed to the advantage of guerillas, and the great disadvantage of central governments. / The Sumatra rebels know it. So does the central regime, which is now making every effort to lay in arms and buy planes. / British sources in nearby Singapore say that the Jakarta government is now shopping behind the Iron Curtain with success. / The regime is poor, but it recently ratified a hundred million dollar credit with the Soviet Union to be spent "for whatever Indonesia may require", according to

Singapore's version of the terms.

The Singapore Standard reports that Indonesian pilots have been sent to Egypt to be trained in the use of Soviet jets, and the arrival of Soviet planes is therefore awaited. Considerable numbers of Soviet technicians are stated to be arriving in Jakarta.

The tie-in with Egypt is not far-fetched. President Nasser was one of the stars of the Bandung conference. Soekarno visited him earlier this year on his swing around Asia and Africa. The Soekarno regime counts on Nasser for fraternal interest and material support. The rebels on Sumatra may be better Moslems than the men in the Jakarta government, but they are outspokenly anti-communist, and Nasser is not for them.

It is no coincidence that the landing in Sumatra was close to the oil terminal of the California-Texas Oil Company, and that a larger landing is expected at its second terminal. Caltex has suspended operations and wants it understood that it is caught in the middle and is not playing politics. Control of Sumatra's oil is an obvious objective of the civil war. Caltex revenues provide sixty percent of the dollar earnings of Indonesia, and oil properties pay ten percent of the nation's total tax bill. Caltex's oilfield at Pakabaru is rated the fourth richest in the world. Another

American company, Standard-Vacuum, also has properties. It is these installations in the interior that the rebels are confident they can defend. Neither the Japanese in the world war, nor the Dutch in the rebellion, ever managed to get up the muddy rivers to capture the oilfields. If the rebels can keep them, the central government might be brought to terms.

Communism is one of the two big issues behind the civil war, the other being the desire of the lesser islands to break the stranglehold of Java, which is almost like an empire exploiting them as colonies. Though there is a Moslem antipathy to communism, the communists are now well entrenched in Java and made heavy gains in the last election. By their capture of the labor movement they have centers of power throughout the republic. So far the communists have not openly identified themselves either with Moscow or Peiping.

It would be inaccurate to say that either Russian or Chinese communists have moulded the policies of Soekarno or are guiding him. But if Russia arms him and he wins, the days of democratic influence in Indonesia will be over.

What is happening in Indonesia is not communist aggression, it is not even communist infiltration along classic lines. The pattern is one for

which no popular name has been invented. But whatever it is called, a shift in power is going on which promises to strengthen communism enormously and correspondingly weaken all non-communists in the Pacific.

This is happening at the precise moment of the SEATO meeting in Manila. The South East Treaty Organization exists to resist communist aggression and communist infiltration, objectives that are being stated with emphasis and eloquence in Manila. But here, in SEATO's part of the world, the Indonesian nation of eighty million people is visibly slipping into control of communism. And SEATO seems to be as incapable of dealing with it as if it were a society for defense against the dinosaur.

Back in a moment —

George Bryan

Here's

~~Instead of the usual "word"...I have~~ a bulletin, which says that an Air Force B-47 bomber has accidentally jettisoned "an unarmed nuclear weapon." The Strategic Air Command says the aircraft was based at Hunter Air Force Base in Georgia. Tonight, a bomb was dropped accidentally on a house near Florence, South Carolina, injuring five persons. The aircraft carrying this bomb was also based at Hunter. But we do not know definitely at this hour whether this is the "unarmed nuclear weapon" to which the SAC announcement refers. (In any case, there was no nuclear blast.)

7:45 - 8:00 PM EST

This is the news:

House Democratic leaders stole a march on the Administration today and introduced a bill that would increase unemployment compensation benefits. The measure would also extend the maximum period in which benefits could be received by 16 weeks. President Eisenhower will send a special message to Congress on this same subject later this week.

A formal government report issued today says that unemployment in February reached 5-million, 173-thousand, or an increase of 679-thousand for the month. This is just about what reports from Washington last week were saying the increase would be. In announcing the official figure, the government says a "major part" of the increase was caused by "continued lay-offs in durable goods manufacturing and unusually bad weather which affected construction and other outdoor activities."

Secretary of Labor Mitchell told an AFL-CIO meeting today that if the recession continues, a tax cut will be the "next big step." The Administration, he said, has a plan for cutting taxes "ready for immediate use," should that become necessary. Later, reporters asked White House News Secretary Hagerty about the Mitchell statement that such a plan is ready for immediate use, if needed. Hagerty said the statement was not correct, that he had talked to Mitchell, and that Mitchell had said he did not mean it "quite that way." Hagerty said there has been no final decision on when to cut taxes...should that be required...or on how they should be cut. Representative Joe Martin said this morning...after a meeting of Republican congressional leaders at the White House...that the concensus was to wait at least a month to decide whether a tax cut is in order. Hagerty said the President will not hold a news conference tomorrow...so he can meet with his economic experts. And next Tuesday, Mr. Eisenhower will again confer with Republican congressional leaders on whether

to cut taxes as an anti-recession move.

Last night, Vice President Nixon went on record as preferring a tax cut to a "massive" public works program, should further govennment action be proved necessary. But today...after the meeting at the White House...Republican Senator Case of South Dakota said he thought more jobs could be provided through public works than through cutting taxes. And Republican Senator Martin of Pennsylvania said he is "not for a tax cut at all." On the Democratic side, Senator Lyndon Johnson said, "I am not ready as of today to embrace a tax cut." And House Speaker Sam Rayburn said it seemed to him that "other avenues" would put more people to work.

The Internal Revenue Service made an announcement tonight on the subject of expense accounts. It said...in a new reversal of policy...that persons filling out income tax returns will not have to report their expense accounts to the government---if they have already given a detailed accounting to their employer. Only an employee who does not account to his employer for his expense money has to make a report of it on his income tax return.

The White House said today that President Eisenhower may soon make two major speeches---one on foreign policy and the other in support of his reciprocal trade program, which is meeting strong opposition in Congress. News Secretary Hagerty said he could give no details, either as to time or place.

The International Ladies Garment Workers Union today ratified an agreement ending its 7-day strike. The union approved a new three-year contract, providing for an 11 percent "package" increase and stricter enforcement in the industry of contract terms. Union President Dubinsky says the walkout against 200 shops in Pennsylvania will continue, since they are not covered by the agreement.

Today...at the SEATO meeting in Manila...Pakistan asked for more economic aid. The Pakistani minister of commerce noted the aid which has gone to "neutral" Asian countries---an apparent reference to India---and warned that offers of economic assistance have been received from the Soviet bloc. Secretary Dulles

said, in answer, that the United States has sent more than half a billion dollars in non-military aid to Pakistan, Thailand, and the Philippines in the past four years. The foreign minister of the Philippines suggested a possible meeting of the finance ministers of the SEATO countries in the interests of greater economic collaboration.

Tomorrow, Mr. Dulles is expected to join the foreign ministers of Britain and France...who are also in Manila...for a discussion of Russia's proposals for a summit conference. (Nikita Khrushchev said at a reception in Moscow tonight that he would be willing go go to Washington for a summit meeting. Western correspondents observed an unusual reluctance on the part of Khrushchev to talk.)

In London today, Prime Minister Macmillan told the House of Commons that "considerable progress" has been made toward a summit meeting. But he said that much in the way of preparation remains to be done. And under Labourite questioning, the prime minister conceded that "differences in emphasis" exist in the attitudes of Britain and the United States. He did not spell out these "differences."

Civil war has now begun in Indonesia. The start is small-scale. A few battalions of the Indonesian army landed on the east coast of Sumatra, the rebel forces put up a token resistence, then withdrew into the interior. There they will fight as guerillas.

The rebel capital is at Padang on the opposite coast. It suffered a light air attack and a brief bombardment from Indonesia's largest naval vessel, a destroyer. A landing here is anticipated, and the central government expects to occupy the chief cities of Sumatra before the end of the month. But the rebel leaders, who admit they appear to be taking a beating, are sure they can keep up the fighting in the interior until the central government is forced to reorganize.

British surcess in nearby Singapore say that the Jakarta government is now shopping behind the Iron Curtain with success. The regime is poor, but it recently ratified a hundred million dollar credit with the Soviet Union to be spent "for whatever Indonesia may require," according to Singapore's version of

the terms.

The Singapore Standard reports that Indonesian pilots have been sent to Egypt to be trained in the use of Soviet jets, and the arrival of Soviet planes is therefore awaited. Considerable numbers of Soivet technicians are stated to be arriving in Jakarta.

The tie-in with Egypt is not far-fetched. President Nasser was one of the stars of the Bandung conference. Soekarno visited him earlier this year on his swing around Asia and Africa. The Soekarno regime counts on Nasser for fraternal interest and material support. The rebels on Sumatra may be better Moslems than the men in the Jakarta government, but they are outspokenly anti-communist, and Nasser is not for them.

It is no coincidence that the landing in Sumatra was close to the oil terminal of the California-Texas Oil Company, and that a larger landing is expected at its second terminal. Caltex has suspended operations and wants it understood that it is caught in the middle and is not playing politics. Control of Sumatra's oil is an obvious objective of the civil war. Caltex revenues provide sixty percent of the dollar earnings of Indonesia, and oil properties pay ten percent of the nation's total tax bill. Caltex's oilfield at Pakabaru is rated the fourth richest in the world. Another American company, Standard-Vacuum, also has properties. It is these installations in the interior that the rebels are confident they can defend. Neither the Japanese in the world war, nor the Dutch in the rebellion, ever managed to get up the muddy rivers to capture the oilfields. If the rebels can keep them, the central government might be brought to terms.

Communism is one of the two big issues behind the civil war, the other being the desire of the lesser islands to break the stranglehold of Java, which is almost like an empire exploiting them as colonies. Though there is a Moslem antipathy to communism, the communists are now well entrenched in Java and made heavy gains in the last election. By their capture of the labor movement, they have centers of power throughout the republic. So far the communists have not

openly identified themselves either with Moscow or Peiping.

It would be inaccurate to say that either Russian or Chinese communists have moulded the policies of Soekarno or are guiding him. But if Russia arms him and he wins, the days of democratic influence in Indonesia will be over.

What is happening in Indonesia is not communist aggression; it is not even communist infiltration along classic lines. The pattern is one for which no popular name has been invented. But whatever it is called, a shift in power is going on which promises to strengthen communism enormously and correspondingly weaken all non-communists in the Pacific.

This is happening at the precise moment of the SEATO meeting in Manila. The SouthEast Treaty Organization exists to resist communist aggression and communist infiltration, objectives that are being stated with emphasis and eloquence in Manila. But here, in SEATO's part of the world, the Indonesian nation of eighty million people is visibly slipping into control of communism. And SEATO seems to be as incapable of dealing with it as if it were a society for defense against the dinosaur.

This is Ed Murrow. I'll be back in a moment with the word for today. Now, here is George Bryan.

GEORGE BRYAN: COMMERCIAL

MURROW: Here's a bulletin, which says that an Air Force B-47 bomber has accidentally jettisoned "an unarmed nuclear weapon." The Strategic Air Command says the aircraft was based at Hunter Air Force Base in Georgia. Tonight, a bomb was dropped accidentally on a house near Florence, South Carolina, injuring five persons. The aircraft carrying this bomb was also based at Hunter. But we do not know definitely at this hour whether this is the "unarmed nuclear weapon" to which the SAC announcement refers. In any case there was no nuclear blast.

Good night and good luck!

Edward R. Murrow Wed., March 12, 1958

This is the news:

The central government of Indonesia says it has captured the key town of Pakan-Bahru, in Central Sumatra. / The rebel radio said earlier that government paratroopers had landed at an airfield near Pakan-Bahru. The town is about 90 miles inland from the east coast of Sumatra, where other government forces made a series of amphibious landings last week. It is also an operations center for the California-Texas Oil Company, which closed down its oil fields on Monday at the request of the central government. / Some American families have been evacuated to Singapore, and both sides have assured American personnel remaining in the area that

/ →

they will be safe. The rebel radio said that prior to the paratroop drop the airfield at Pekan Bahru was bombed and strafed. The broadcast said (and this was several hours ago) that the paratroopers had been prevented, so far, from reaching the town. It described the fighting as "intense".

The SEATO conference in Manila was overshadowed today by a private discussion among the foreign ministers of the United States, Britain and France. The foreign ministers exchanged views on a possible summit meeting with Russia. And an American spokesman says (without giving details) that they reached broad agreement on the preparatory steps required for such a meeting. Secretary of State Dulles told the SEATO conference before their private huddle that the United States cannot accept a "mere spectacle". The three foreign ministers also discussed France's new proposal for a Western Mediterranean defense community. French Foreign Minister Pineau is reported to have listed Britain, Italy, Spain, Morocco, Tunisia and France as prospective members of this community...with the United States as another possibility because of its naval and air strength in the Mediterranean. According to French sources,

Mr. Dulles and British Foreign Secretary Selwyn Lloyd listened attentively but made no commitments.

My colleague, David Schoenbrun, reports from Tunis that the Anglo-American "good offices" mission has run into "very bad trouble." President Bourguiba of Tunisia has received a French note which has put him in no mood to compromise. The note, Schoenbrun says, reminds Bourguiba that he signed a convention with France in 1955---the year before Tunisia gained its independence---and that the convention has never been abbrogated. The convention said Tunisia did not have the right to set up its own foreign representation or defense, that this would be left to the French. President Bourguiba denies this. He says the convention was abbrogated by the Treaty of Independence a year later and that for France to bring the matter up now is like trying to take back the independence already granted. Schoenbrun reports that mediation talks will continue, but that Bourguiba at this moment is highly incensed.

~~The premier of Lebanon resigned today along with his cabinet. The premier...Sami el Solh...has followed a pro-Western policy.~~ According to reliable sources, (he is still) ~~the odds-on favorite to head any~~ new cabinet

→

~~which may be formed.~~

In Cuba today, the Batista government suspended constitutional guarantees, including freedom of the press. The Cuban cabinet...which approved the decree...resigned, and President Batista promptly named a new cabinet, made up of many of the same personalities, to take over. / The former premier, however, is out. The cabinet that resigned was appointed only last week with the avowed purpose of ending the civil war through conciliation. ~~But conciliation, for the present, appears out of the question. And today the manpower strength of the Cuban Army was ordered increased by one-third.~~

At Cape Canaveral today, the Navy called off another attempt to launch a satellite with its Vanguard rocket. A Defense Department announcement blamed "technical difficulties". ~~The test will be re-scheduled, it said, "in the near future."~~

Secretary of Defense McElroy today expressed "deep regret" for the accident which caused six persons to be injured when an "unarmed" nuclear bomb fell yesterday near Florence, South Carolina. / McElroy said the Air Force is investigating the cause of the "mechanical malfunction" which accidentally jettisoned the bomb from the aircraft. / The incident, he said, "demonstrates the accuracy of the recent statement that there would be no nuclear explosion involved in the detonation of an unarmed bomb." What exploded was the

→

T.N.T. component of the nuclear device.

Moscow radio commented today that if a nuclear bomb should explode accidentally in the United States, "some irresponsible senior official in the Pentagon" might order an atomic counter-blow.

The Senate tonight approved a 1-billion, 800-million-dollar emergency housing bill, designed to create more than half a million new jobs. A Democratic move to hold down the interest rate on G.I. home loans was defeated on a tie vote with Vice President Nixon casting the deciding vote on the side of the Administration.

President Eisenhower today asked Congress for an additional 85-million dollars for speeding up various reclamation projects. The money already has been authorized by Congress, but not appropriated. And Secretary of the Treasury Anderson said today, after a meeting of experts at the White House, that the Administration will not make a decision on whether to cut taxes "until the future course of the economy has been clarified." The Administration wants a chance to judge the effect of measures already being taken.

General Motors and Chrysler today joined Ford and American Motors in saying that they would pass on to consumers any savings achieved by →

the removal of the manufacturers excise tax on cars. So far, Congress has taken no action on this proposal.

The House Committee on Legislative Oversight heard more testimony today from Richard Mack, who recently resigned under fire from the Federal Communications Commission. Mack said he was "bothered" but "not pressured" by persons interested in the hotly contested Miami television case. "It's pretty hard," he said, "to slam the door on an old friend." Thurman Whiteside, an old lawyer friend of Mack's, also testified today. Whiteside has acknowledged doing financial favors for Mack. But most of the key records, he said, are now in the hands of a federal grand jury.

Edward R. Murrow: March 12, 1958. 7.45 p.m.

The Soviet Union has announced that it will issue a postage stamp carrying the face of Henry Wadsworth Longfellow. / This is odd news. / It is news of a gesture, a nod of friendliness, coming in the chill of the cold war. / It is odd that a postage stamp should become an instrument of conciliation in a cold war. / It is a use that Americans would not have thought of making. / One could not imagine Postmaster General Summerfield making an international bow with a commemorative stamp of Pushkin.

It also is odd, that the Russians should pick Longfellow to bear a message of good will. Maybe they think he is America's best-loved or most-quoted poet, which he isn't. / He still is read here by those devoted to the favorites of the past, and do not feel at home with the poets of the present. He still is taught in school. / Hiawatha, Evangeline, the Courtship of Miles Standish, and many of his shorter works, like Paul Revere's Ride, are known to the very young - and to the very old. But Longfellow is no longer one of the American literary hierarchy, in the way Whitman and Emily Dickinson are.

It is noteworthy that many Russians read Longfellow, and they are neither very young or very old. Maybe they think that in reading

Longfellow they are drawing close to the mysterious minds of present-day Americans, and if so, Longfellow will let them down as interpreter. Neither his art nor his sentiment are contemporary.

The thought occurs to me that Longfellow may have been selected for a postage stamp because of the preparations the Kremlin is making for a summit meeting. Perhaps someone in the secretariat of the Communist Party, or the Foreign Office, was moved by reading, in Longfellow's Endymion:

"No one is so accursed by fate,
No one is so utterly desolate,
But some heart, though unknown
Responds to his own.
Responds - as if with unseen wings
An angel touched its quivering strings
And whispers in its song:
'Where hast thou stayed so long?'"

Certainly Longfellow was not chosen for ideological reasons. He was not a crusader, and not a prefessionally patriotic poet, but he has been known to generations of Americans for writing:

"Thou, too, sail on, O ship of state!

Sail on, O union strong and great.

Humanity with all its fear,

With all its hopes of future years

Is hanging breathless on they fate!"

Even a Russian knows the "union" Longfellow referred to was not the Union of Soviet ~~and~~ Socialist Republics. For sociologically, Longfellow's concept of society was anything but Marxian. His ideal laboring man was the village blacksmith,

"Who goes to church on Sunday

And sits among his boys"

and:

"Whose brow is wet with honest sweat,

He earns whate'er he can,

And looks the whole world in the face,

For he owes not any man."

And Russian readers of Longfellow must know his clarion lines;

"In the world's broad field of battle,

In the bivouac of life,

Be not like dumb, driven cattle,

Be a hero in the strife!"

And if they know this, they may recall the stanza that follows:

"Let us then be up and doing

With a heart for any fate,

Still achieving, still pursuing;

Learn to labor and to wait."

This is very poor Marxianism, and it certainly is not revolutionary. But it also is not submissive. Longfellow was a New England individualist, and he wrote:

"Not in the clamor of the crowded street,

Not in the shouts or plaudits of the throng,

But in ourselves, are triumph and defeat."

I imagine that if Longfellow were living today he would be somewhat puzzled by the honor the Soviet Union is paying him at this juncture in the cold war. I think he would be gratified - what poet could be otherwise? - but he was true enough in his good New England soul to believe that in the

scheme of realities a man must be responsible for himself. "In this world" he wrote, "a man must be either anvil or hammer." And in saying this he was a long way from the symbols of the hammer and sickle.

I imagine that if Longfellow were living, he might have parodied himself, with a genial smile, and said of Khrushchev, as he had of the little girl with a curl in the middle of her forehead, that:

"When he was good he was very, very good
But when he was bad he was horrid."

Back in a moment —
George Bryan

WORD FOR THE DAY:

The thought of using postage stamps for political messages of inspiration may not be an idle one. Suppose the United States did issue a Pushkin stamp, we might hope it conveyed this message written by the Russian poet to exiles in Siberia:

"The heavy-hanging chains will fall
The walls will crumble at a word;
And freedom greet you in the light,
And brothers give you back your sword!"

God might & good luck x

EDWARD R. MURROW WITH THE NEWS
CBS RADIO NETWORK

WEDNESDAY, MARCH 12, 1958
7:45 - 8:00 PM EST

This is the news:

The central government of Indonesia says it has captured the key town of Pakan-Bahru, in Central Sumatra. The Soviet Union has announced that it will issue a postage stamp carrying the face of Henry Wadsworth Longfellow. This is odd news. It is news of a gesture, a nod of friendliness, coming in the chill of the cold war. It is odd that a postage stamp should become an instrument of conciliation in a cold war. It is a use that Americans would not have thought of making. One could not imagine Postmaster General Summerfield making an international bow with a commemorative stamp of Pushkin.

It also is odd that the Russians should pick Longfellow to bear a message of good will. Maybe they think he is America's best-loved or most-quoted poet,

which he isn't. He still is read here by those devoted to the favorites of the past, and do not feel at home with the poets of the present. He still is taught in school. Hiawatha, Evangeline, the Courtship of Miles Standish, and many of his shorter works, like Paul Revere's Ride are known to the very young - and the very old. But Longfellow is no longer one of the American literary hierarchy in the way Whitman and Emily Dickinson are.

It is noteworthy that many Russians read Longfellow, and they are neither very young or very old. Maybe they think that in reading Longfellow they are drawing close to the mysterious minds of present-day Americans, and if so, Longfellow will let them down as interpretor. Neither his art nor his sentiment are contemporary.

The thought occurs to me that Longfellow may have been selected for a postage stamp because of the preparations the Kremlin is making for a summit meeting. Perhaps someone in the secretariat of the Communist Party, or the Foreign Office, was moved by reading, in Longfellow's Endymion:

"No one is so accursed by fate,
No one is so utterly desolate,
    But some heart, though unknown
    Responds to his own.
Responds - as if with unseen wings
An angel touched its quivering strings
    And whispers in its song:
    'Where hast though stayed so long?'"

Certainly Longfellow was not chosen for ideological reasons. He was not a crusader, and not a professionally patriotic poet, but he has been known to generations of Americans for writing:

"Thou, too, sail on, O ship of state!
Sail on, O union strong and great.
Humanity with all its fear,

With all its hopes of future years

Is hanging breathless on thy fate!"

Even a Russian knows the "union" Longfellow referred to was not the Union of Soviet Socialist Republics. For sociologically, Longfellow's concept of society was anything but Marxian. His ideal laboring man was the village blacksmith,

"Who goes to church on Sunday

And sits among his boys"

and:

'Whose brow is wet with honest sweat,

He earns whate'er he can,

And looks the whole world in the face,

For he owes not any man."

And Russian readers of Longfellow must know his clarion lines;

"In the world's broad field of battle,

In the bivouac of life,

Be not like dumb, driven cattle,

Be a hero in the strife!"

And if they know this, they may recall the stanza that follows:

"Let us then be up and doing

With a heart for any fate,

Still achieving, still pursuing;

Learn to labor and to wait!"

This is a very poor Marxianism, and it certainly is not revolutionary. But it also is not submissive. Longfellow was a new England individualist, and he wrote:

"Not in the clamor of the crowded street,

Not in the shouts or plaudits of the throng,

But in ourselves, are triumph and defeat."

I imagine that if Longfellow were living today he would be somewhat puzzled by the honor the Soviet Union is paying him at this juncture in the cold war. I think he would be gratified - what poet could be otherwise? - but he was true enough in his good New England soul to believe that in the scheme of realities a man must be responsible for himself. "In this world" he wrote, "a man must be either anvil or hammer." And in saying this he was a long way from the symbols of the hammer and sickle.

I imagine that if Longfellow were living, he might have parodied himself, with a genial smile, and said of Khrushchev, as he had of the little girl with a curl in the middle of her forehead, that:

"When he was good he was very, very good
But when he was bad he was horrid."

This is Ed Murrow. I'll be back in a moment with the word for today. Now, here is George Bryan.

GEORGE BRYAN: COMMERCIAL

MURROW: The thought of using postage stamps for political messages of inspiration may not be an idle one. Suppose the United Stated did issue a Pushkin stamp, we might hope that it conveyed this message written by the Russian poet to exiles in Siberia:

"The heavy-hanging chains will fall
The walls will crumble at a word;
And freedom greet you in the light,
And brothers give you back your sword!"

Good night and good luck!

Edward R. Murrow Thurs., March 13, 1958

This is the news:

The White House announces that British Prime Minister Macmillan will come to Washington on June ninth for a "general discussion" of world affairs. The prime minister will confer with President Eisenhower and Secretary of State Dulles. News Secretary Hagerty says that prospects for a summit meeting with Russia presumably will be covered by the talks. On June eighth---the day before he goes to Washington---Mr. Macmillan is scheduled to give the commencement address at DePauw University, in Greencastle, Indiana. The White House announcement said: "The President has taken advantage of the occasion of the prime minister's visit to this country to invite him to stop briefly in Washington for

~~a general discussion with the President and the Secretary of State."~~

The fourth annual meeting of the Southeast Asia Treaty Organization ended in Manila today...with a communique warning that the "most substantial" menace now is Communist subversion. "Collective security measures," it said, "have resulted in the diversion of the emphasis of Communist activities from the military to the non-military field." The communique said that, henceforth, there will be more liaison between the SEATO countries and the members of NATO and the Baghdad Pact. No large-scale aid was called for; nor was there any direct reference to the Indonesian civil war. (I should like to discuss the SEATO meeting further in a few minutes).

The Indonesian government announces that rebel forces have been driven from the oil fields near Pakan-baru (PÁ-KAN-BÁ-ROO)...on the island of Sumatra..and that the California-Texas Oil Company may now resume operations "if it so desires." The company suspended work four days ago on the advice of the Indonesian government. Reports that troops of the central government have landed near Padang, a rebel center on the west coast of Sumatra, are not confirmed. ~~A rebel broadcast did say Padang has been shelled again by two warships of the Indonesian Navy.~~ An Indonesian Army spokesman charged that ~~"foreign aircraft" dropped arms and ammunition to rebel forces in~~

→

~~Central Sumatra yesterday. And President Sukarno made a speech accusing so-called "foreign elements" of trying to exploit the situation for their own advantage. Sukarno did not identify these "foreign elements", but, presumably, he referred to the United States. Moscow and Peiping have both accused the United States of "interference" in Indonesia.~~

Nikita Khrushchev said today that the question of controling outer space "must" be tied in with the liquidation of American bases overseas. Khrushchev argued that prohibiting the use of outer space for military purposes really means prohibiting intercontinental ballistic missiles. Since Russia, he said, has the I.C.B.M., and the United States does not, the outer space question cannot be examined apart from the general disarmament problem. Khrushchev made this statement in an open letter to the New Statesman, a British periodical. ~~It was in answer to a letter to the same paper from Secretary of State Dulles, replying to an earlier letter from Khrushchev.~~

The Communist Party of Yugoslavia today published a major policy statement...reaffirming Yugoslavia's "independent road to socialism." The statement does not directly criticize Moscow but says Communist countries can work together only on the basis of complete equality.

In Paris today, thousands of policemen demonstrated for more bonus pay because of the increased danger they say they face at the hands of Algerian terrorists operating in the French capital. The immediate result was one of the worst traffic jams Paris has ever seen. And the National Assembly was forced to adjourn when Communist deputies...demanding the resignation of the minister of the interior...ignored appeals for order and kept shouting and slamming the lids of their desks.

The French-Tunisian dispute has taken a turn for the worse. Reacting to a French note (which Tunisia regards as an affront to its national sovereignty) President Bourguiba announces that Tunisia's independance day, March 20th, will not be observed. Bourguiba warned in a national broadcast that Tunisia may again have to fight France for its independence. He called on the Anglo-American "good offices" mission in Tunis---the United States and Britain---to assume their responsibilities in the crisis. Bourguiba

→

expressed hope that...by March 20th..."misunderstandings" will be dissapated. He called March 20th the "fatal date". And he indicated that if real progress toward a settlement is not made by that time, Tunisia will turn for support to the Communist bloc.

In Washington today, President Eisenhower had another meeting with his economic advisers. Secretary of Defense McElroy sent the President a letter, saying that military procurement contracts placed in the first six months of this year will total around 10-billion dollars. That's an increase of about 4-billion dollars over the last six months of 1957.

The AFL-CIO executive committee...led by George Meany...called at the White House and urged the President to take action now to cut taxes, improve and extend unemployment compensation benefits, and step up public works spending.

The Senate...by a vote of 50 to 43...today passed a bill that would freeze the price supports on most major farm products at not less than last year's level. The measure would block Secretary Benson's plan to cut these price supports, and it now goes to the House.

A Commerce Department survey...released tonight...shows business planning

→

to spend 5-billion dollars less on plant improvement and equipment this year than last year. And another survey by the University of Michigan says that consumers are planning to cut down on their purchases of home appliances, houses, furniture, and new cars.

President Eisenhower today accepted the resignation of Percival Brundage as director of the budget. Brundage said he was resigning to give the Administration an opportunity to bring in someone "with a fresh viewpoint" and to "attend to some personal matters which have been neglected." Mr. Eisenhower accepted the resignation "with great regret and reluctance"... and appointed Maurice Stans, the present deupty, to succeed Brundage as director.

The Federal Communications Commission today filed a motion in the U.S. Court of Appeals...saying that it wished to reconsider the grant of Channel 10 in Miami to the subsidiary of National Airlines.

And the House Judiciary Committee reported itself deadlocked on the issue of legislation applying to presidential disability. Chairman Celler said there is "very little likelihood" that Congress will pass any measure dealing with presidential disability this year. The deadlock arises

→

over disagreement as to whether there should be a constitional amendment, or whether the problem can be solved simply by legislation passed by Congress.

Edward R. Murrow: March 13, 1958. 7.45 p.m.

The meeting of the SEATO Council, which ended in Manila today, might be called the right conference, at the right place, at the right time, but with the wrong powers. For it did nothing, and could do nothing, about Indonesia. / The communique was almost boastful in attributing new communist techniques of subversion to the collective security measures of the Southeast Asia Treaty Organization. / Secretary Dulles ~~joyfully~~ stated that the Manila meeting had been the most useful the council had ever held, and the British and French Foreign Ministers voiced similar satisfaction. ~~But what stands out clearest about the conference was that it took no official step in regard to Indonesia, and offered no collective policy on that vital subject. / Indonesia was discussed, along with other countries, but Mr. Dulles said that it was without special emphasis.~~

Mr. Dulles ~~did say~~ said - outside the conference - that legal advisers in the State Department, as a precautionary measure, are examining the question of recognizing the Sumatra rebels. / He also said that by the time he reached Washington he hoped to have an answer to the question of granting them belligerent status. / He said that international law sets certain standards in defining blockade. / And the rebel movement has to gain sufficient momentum and stability to be granted recognition.

When Mr. Dulles gets home, he will face a request from the Senate Foreign Relations subcommittee on disarmament for a detailed report of Indonesian loans, grants and applications for aid. / Sukarno is reported to have twenty-two million dollars left of a hundred million loan made him in 1951 by the Export-Import Bank. / Planes now being used against the Sumatra rebels were bought from these funds. / An application for an additional forty million dollars is now being sought by Sukarno from the same bank, the money to be used for airplanes and a fertilizer plant. / The State Department's own agency, the International Co-operation Administration, recently offered the Indonesian government fifteen million dollars, but the money has not yet been released. / The offer was made before Mr. Dulles told the Foreign Affairs Committee that he was afraid that Sukarno's nice-sounding "guided-democracy" would end up as communist despotism. / "The United States would be happy" he testified, "to see non-communist elements in Indonesia, who really are the majority there, exert greater influence than has been the case so far."

The usefulness of this year's SEATO meeting would be hard to prove from the communique. The most interesting item was the authorization of the Secretary General to get into contact with his opposite numbers in

NATO and the Bagdad Pact. But there is no suggestion as to what would come of such contacts. It is no secret that Mr. Dulles wants to knit all the West's collective security set-ups into some kind of whole. But they differ so much in organization and function that this tie-up is hard to formalize. The very mention of closer relations draws a barrage of denunciation and warnings from the batteries of Soviet propaganda, and this abuse has set in again, now that the Manila meeting is over.

Actually, the forecasts of the SEATO meeting suggested that the most important problem would be to placate Pakistan over the aid that the State Department proposes to give India. Both Pakistan and the Philippines registered their appetite for increased aid. Pakistan did so with lurid hints of tempting offers now coming from the Soviet Union. But Mr. Dulles did not stack up any blue chips on the Manila table. He did announce that two million dollars are being made available to the Philippines, Thailand and Pakistan for vocational and on-the-job training. Australia also put up something more than a million dollars "for purposes relating to SEATO defense", while Britain, France and Australia offered to train Asians for skilled labor.

These expenditures are not on a scale to upset even a hard-boiled

congressional opponent of foreign aid. / Nor can they be expected to impress South East Asians, those within SEATO, and those on the sidelines. And they would seem to have made any Soviet counter-move relatively inexpensive.

In the meantime, the very future of SEATO may depend on what happens in Indonesia, which in turn depends on the wisdom and determination the West can produce for that crisis. If the West has these qualities, it did not advertise them in Manila.

Back in a moment—

George Bryan—

The civil war in Indonesia does not constitute Communist aggression. Nor is it Communist infiltration in the ordinary, accepted sense. The Southeast Asia Treaty Organization was not designed to cope with this kind of danger. But as Disraeli once said, "What we anticipate seldom occurs. What we least expect generally happens."

Goodnight and good luck!

EDWARD R. MURROW WITH THE NEWS
CBS RADIO NETWORK
THURS
~~TUESDAY~~, MARCH 13, 1958
7:45 - 8:00 PM EST

This is the news:

The White House announces that British Prime Minister Macmillan will come to Washington on June 9th for a "general discussion" of world affairs. The prime minister will confer with President Eisenhower and Secretary of State Dulles. News Secretary Hagerty says that prospects for a summit meeting with Russia presumably will be covered by the talks. On June 8th, the day before he goes to Washington---Mr. Macmillam is scheduled to give the commencement address at DePauw Univdrsity, in Greencastle, Indiana.

The fourth annual meeting of the Southeast Asia Treaty Organization ended in Manila today...with a communique warning that the "most substantial" menace now is Communist subversion. "Collective security measures," it said, "have resulted in the diversion of the emphasis of Communist activities from the military to the non-military field." The communique said that, henceforth, there will be more liaison between the SEATO countries and the members of NATO and the Baghdad Pact. No large-scale aid was called for; nor was there any direct reference to the Indonesian civil war. (I should like to discuss the SEATO meeting further in a few minutes.)

The Indonesian government announces that rebel forces have been driven from the oil fields near Pakan-baru...on the island of Sumatra...and that the California-Texas Oil Company may now resume operations "if it so desires." The company suspended work four days ago on the advice of the Indonesian government. Reports that troops of the central government have landed near Padang, a rebel center on the west coast of Sumatra, are not confirmed.

Nikita Khrushchev said today that the question of controling outer sapce "must" be tied in with the liquidation of American bases overseas. Khrushchev argued that prohibiting the use of outer space for military purposes really means prohibiting intercontinental ballistic missiles. Since Russia, he said,

has the I.C.B.M. and the United States does not, the outer space question cannot be examined apart from the general disarmament problem. Khrushchev made this statement in an open letter to the New Statesman, a British periodical.

The Communist Party of Yugoslavia today published a major policy statement reaffirming Yugoslavia's "independent road to socialism." The statement does not directly criticize Moscow,but says Communist countries can work together only on the basis of complete equality.

In Paris today, thousands of policemen demonstrated for more bonus pay because of the increased danger they say they face at the hands of Algerian terrorists operating in the French capital. The immediate result was one of the worst traffic jams Paris has ever seen. And the National Assembly was forced to adjourn when Communist deputies...demanding the resignation of the minister of the interior...ignored appeals for order and kept shouting and slamming the lids of their desks.

The French-Tunisian dispute has taken a turn for the worse. Reacting to a French note (which Tunisia regards as an affront to its national sovereinty) President Bourguiba announces that Tunisia's independence day, March 20th, will not be observed. Bourguiba warned in a national broadcast that Tunisia may again have to fight France for its independence. He called on the Anglo-American "good offices" mission in Tunis---the United States and Britain---to assume their responsibilities in the crisis. Bourguiba expressed hope that...by March 20th... "misunderstandings" will be dissipated. He called March 20th the "fatal date." And he indicated that if real progress toward a settlement is not made by that time, Tunisia will turn for support to the Communist bloc.

In Washington today, President Eisenhower had another meeting with his economic advisers. Secretary of Defense McElroy sent the President a letter, saying that military procurement contracts placed in the first six months of this year will total around 10-billion dollars. That's an increaseof about 4-billion dollars over the last six months of 1957.

The AFL-CIO executive committee..led by George Meany...called at the White House and urged the President to take action now to cut taxes, improve and extend unemployment compensation benefits, and step up public works spending.

The Senate...by a vote of 50 to 43...today paased a bill that would freeze the price supports on most major farm products at not less than last year's level. The measure would block Secretary Benson's plan to cut these price supports, and it now goes to the House.

A Commerce Department survey...released tonight...shows business planning to spend 5-billion dollars less on plant improvement and equipment this year than last year. And another survey by the University of Michigan says that consumers are planning to cut down on their purchases of home appliances, houses, furniture, and new cars.

President Eisenhower today accepted the resignation of Percival Brundage as director of the budget. Brundage said he was resigning to give the Administration an opportunity of bringing in someone "with a fresh viewpoint" and to "attend to some personal matters which have been neglected." Mr. Eisenhower accepted the resignation "with great regret and reluctance"...and appointed Maurice Stans, the present deputy, to succeed Brundage as director.

The Federal Communications Commission today filed a motion in the U.S. Court of Appeals...saying that it wished to reconsider the grant of Channel 10 in Miami to the subsidiary of National Airlines.

And the House Judiciary Committee reported itself deadlocked on the issue of legislation applying to presidential disability. Chairman Celler said there is "very little likelihood" that Congress will pass any measure dealing with presidential disability this year. The deadlock arises over disagreement as to whether there should be a constitutional amendment, or whether the problem can be solved simply by legislation passed by Congress.

The meeting of the SEATO Council, which ended in Manila today, might be called the right conference, at the right place, at the right time, but with the

wrong powers. For it did nothing, and could do nothing, about Indonesia. The communique was almost boastful in attributing new communist techniques of subversion to the collective security measures of the Southeast Asia Treaty Organization. Secretary Dulles stated that the Manila meeting had been the most useful the council had ever held, and the British and French Foreign Ministers voiced similar satisfaction.

Mr. Dulles said - outside the conference - that legal advisers in the State Department, as a precautionary measure, are examining the question of recognizing the Sumatra rebels. He also said that by the time he reached Washington he hoped to have an answer to the question of granting them belligerent status. He said that international law sets certain standards in defining blockade. And the rebel movement has to gain sufficient momentum and stability to be granted recognition.

When Mr. Dulles gets home, he will face a request from the Senate Foreign Relations subcommittee on disarmament for a detailed report of Indonesian loans, grants and applications for aid. Sukarno is reported to have twenty-two million dollars left of a hundred million loan made him in 1951 by the Export-Import Bank. Planes now being used against the Sumatra rebels were bought from these funds. An application for an additional forty million dollars is now being sought by Sukarno from the same bank, the money to be used for airplanes and a fertilizer plant. The State Department's own agency, the International Co-operation Administration, recently offered the Indonesian government fifteen million dollars, but the money has not yet been released. The offer was made before Mr. Dulles told the Foreign Affairs Committee that he was afraid that Sukarno's nice-sounding "guided democracy" would end up as communist despotism. "The United States would be happy" he testified, "to see non-communist elements in Indonesia, who really are the majority there, exert greater influence than has been the case so far."

The usefulness of this year's SEATO meeting would be hard to prove from

the communique. The most interesting item was the authorization of the Secretary General to get into contact with his opposite numbers in NATO and the Baghdad Pact. But there is no suggestion as to what would come of such contacts.

Actually, the forecasts of the SEATO meeting suggested that the most important problem would be to placate Pakistan over the aid that the State Department proposes to give India. Both Pakistan and the Philippines registered their appetite for increased aid. Pakistan did so with lurid hints of tempting offers now coming from the Soviet Union. But Mr. Dulles did not stack up any blue chips on the Manila table. He did announce that two million dollars are being made available to the Philippines, Thailand and Pakistan for vocational and on-the-job training. Australia also put up something more than a million dollars "for purposes relating to SEATO defense," while Britain, France and Australia offered to train Asians for skilled labor.

These expenditures are not on a scale to upset even a hard-boiled congressional opponents of foreign aid. Nor can they be expected to impress South East Asians, those within SEATO, and those on the sidelines. And they would seem to have made any Soviet counter-move relatively inexpensive.

In the meantime, the very future of SEATO may depend on what happens in Indonesia, which in turn depends on the wisdom and determination the West can produce for that crisis. If the West has these qualities, it did not advertise them in Manila.

This is Ed Murrow. I'll be back in a moment with the word for today. Now, here is George Bryan.

GEORGE BRYAN: COMMERCIAL

MURROW: The civil war in Indonesia does not constitute Communist aggression. Nor is it Communist infiltration in the ordinary, accepted sense. The Southeast Asia Treaty Organization was not designed to cope with this kind of danger. But as Disraeli once said, "What we anticipate seldom occurs. What we least expect generally happens."

Goodnight and good luck!

Edward R. Murrow Fri., March 14, 1958

This is the news:

Both President Eisenhower and Congress took steps today toward bolstering the national economy. / Mr. Eisenhower sent the House Appropriations Committee a letter...asking for an emergency allotment of 125-million dollars to step up work on flood control and river and harbor improvement. The President also requested an additional 46-million dollars for hospital construction.

Mr. Eisenhower also met with his cabinet. / The meeting lasted two and a half hours---longer than usual---and News Secretary Hagerty said "various aspects" of the economic situation were discussed. / But not all the subjects that came up had to do with the economy.

Over in Congress, the Senate Public Works Committee unanimously approved a bill to speed up the federal highway program. / The measure would give states one and a half billion dollars for road building this year. / And its sponsors say that, directly or indirectly, it can put more than 80-thousand persons to work. / Included in the bill is a bonus for states that regulate the erection of billboards along the federal highway system, ~~although the bonus is not as large as that originally proposed.~~

All thirteen Republican members of the House Banking Committee joined today in urging "prompt action" on an emergency housing bill already passed by the Senate. This measure has a price tag of 1-billion, 800-million dollars...and is designed to create more than half a million new jobs.

But again today the Senate rejected a move...by Democratic Senator Douglas of Illinois...to cut federal excise taxes by 2-billion, 300-million dollars.

The AFL-CIO today made public a memorandum on the economic situation which it delivered to President Eisenhower yesterday. ~~mmmmmmm~~ The memorandum predicts that the industrial production index...to be issued by the Federal Reserve Board on Monday...will show another drop for February. ~~The memorandum also states that on the basis of applications for unemployment compensation,~~

→

unemployment since February has not declined. And it urges the President to take further remedial steps now -- without waiting until April when the next government report on unemployment is due.

The Commerce Department reports that personal income last month dropped 1-billion, 800-million dollars. The figure, based on annual rate of income, showed that workers in the metal, auto, and machinery industries were hardest hit.

The Army missile expert, Dr. Wernher von Braun, told a House committee today that...in his opinion...Russia is still five years ahead of the United States in the missile-satellite field. And, he said, "we had better brace ourselves for a few more surprises." Von Braun said he thought American education should pay more attention to "gifted" students that 30 to 40 percent of our missile experts are idle because of the way defense contracts are handled and that it is "tragic" the country is not using the services of Dr. Robert Oppenheimer, the atomic physicist. Four years ago, a special panel of the Atomic Energy Commission found Dr. Oppenheimer loyal...but nevertheless a security risk because of associations he had in the past.

Russia served notice today that it will boycott the meeting of the United Nations Disarmament Commission proposed for March 26th. Russia also objected to having the question of disarmament come up in the Security Council...claiming this was a maneuver "aimed at distracting attention from moves being made to call a summit conference." The British Foreign Office said tonight it was "unfortunate" that Russia had chosen to issue "so distorted a statement"...that the Russians know the United Nations effort is in no way designed to hamper discussion of the disarmament problem at a meeting of heads of governments. So far, no formal comment from Washington.

On Sumatra, the rebel radio says revolutionary forces counter-attacked today in the vicinity of Pakan-Bahru (BA'-ROO), and that they inflicted "heavy casualties." Yesterday, the Indonesian Army announced the capture of Pakan-Bahru, which is an operations center for the California-Texas Oil Company. A left-wing newspaper in Jakarta, the capital of Indonesia, claims that the aircraft...which allegedly dropped arms and ammunition to rebel forces day before yesterday...bore markings of the Australian Air Force. The Australian ambassador in Jakarta calls the report totally false."

Secretary of State Dulles stopped off in Formosa today on his way home from the SEATO conference, and talked with Generalissimo Chiang Kai-shek. Dulles said the United States "continues steadfast in its support of the Republic of China." He also opened a four-day meeting of American diplomatic representatives stationed in the Far East.

There are reports tonight that President Eisenhower has sent a letter to President Bourguiba of Tunisia in the interests of settling the French-Tunisian dispute. This, so far, is not confirmed...but for a direct report on what is happening in [redacted] that highly dangerous situation, we switch to my colleague David Schoenbrun in Tunis.

Tape runs 6:15
Returns on cue: "--to Edw. R. Murrow in N.Y."

That was David Schoenbrun, reporting from Tunis on the "good offices" mission designed to help bring about a settlement of the French-Tunisian dispute. This is Ed Murrow. I'll be back in a moment with the Word for Today. First, here is George Bryan.

Word for Today

There are two observati ons...made by others...which come to mind in connection with the current deadlock in the French-Tunisian dispute. The Chinese philosopher, Lao-tse, noted, "He who rides a tiger, is afraid to dismount." (France is riding a tiger). And Theodore Parker, the great Unitarian clergyman of the 19th Century, said, "No steps backward is the rule of human history."

Goodnight and good luck!

CBS RADIO DIVISION

EDWARD R. MURROW WITH THE NEWS

Friday, March 14, 1958
7:45 - 8:00 P.M.

MURROW: ... There are reports tonight that President Eisenhower has sent a letter to President Bourguiba, of Tunisia, in the interests of trying to settle the French-Tunisian dispute. This, so far, is not confirmed. But for a direct report, on what is happening in that highly dangerous situation, we switch to my colleague David Schoenbrun in Tunis.

SCHOENBRUN: There is an Arab proverb which says: "One hand alone cannot applaud." You hear this frequently here in Tunis these days. Twice this week, American diplomat Robert Murphy has talked about his optimism and the good progress he is making. But it looks very much as though Mr. Murphy is alone in being pleased with himself. He is in the position of the lonely hand trying to applaud. This may possibly be unfair to Mr. Murphy. As this reporter has suggested in previous reports to this program, Murphy knows more than we do about his mission, and he may have private reasons for good cheer which have not yet been revealed to an anxious world. The quiet American - as Murphy is now called - has insisted upon complete secrecy as essential to the success of his mission. But if it takes two hands to applaud, it also takes several closed mouths to maintain secrecy in international talks. And so far the only silent partner has been Mr. Murphy. The French and the Tunisians have both been generously loquacious. The result has been that the American public is being informed by the Tunisians and the French, not by its own diplomats. It's (indistinct) ... our diplomats are involving our country in what may well prove to be the historic commitment of the United States to North African affairs. American citizens (indistinct) Murphy luck and hope that his quiet diplomacy will succeed. But the day is coming very soon when he will have to make a public accounting of his activities. For what is happening here is of far greater

import than the immediate narrow conflict between France and Tunisia. We are witnessing, in the words of Tunisian President Habib Bourguiba, the decisive internationalization of the North African crisis - and he warns it may mean the twilight of Western influence in this part of the world. Mr. Murphy's responsibility is thus enormous. It is also disquieting for two reasons: Once before Robert Murphy guessed wrong and injured American prestige in his last North African mission, in 1942, when he supported Vichy and German collaborators against De Gaulle's Free French. Thus, his judgment of French and North African affairs on the record is not demonstrably encouraging; secondly and far more disturbing is the unprofessional and equivocal matter in which this good offices mission was conceived. The very term good offices was never clearly defined nor were its limits of exploration. On the contrary, both sides, France and Tunisia, put completely different interpretations upon it. The French said that a good officer was merely a friend who went back and forth trying to persuade both parties to get together again. But, said the French, Mr. Murphy could not himself mediate the issues. Above all, he must not under any conditions discuss the Algerian war. The Tunisians said the very opposite. According to them, Murphy must mediate; he must impose solutions on the French; he must force them to negotiate peace in Algeria.

As President Bourguiba told this correspondent in an interview, "I have lost confidence in any direct talks with the French. I'm counting on American intervention." And Mr. Bourguiba warned "if America does not support Tunisia," this country might be forced to look to the East for help. America, he said, must choose between freedom and colonialism if the phrase "free world" is to have any meaning. That was the situation at the outset and nothing was done to clarify the contradiction of this good offices mission. Perhaps it was the only way to operate. Had Murphy tried to lay down more clear and logical definitions, his mission might

never have been accepted. Maybe that would have been wiser. However, by accepting it America has committed its prestige and influence - and if Murphy fails it will not merely look as though (indistinct) Tunisia has been intransigent, but as though America were unwilling or unable to use its great power for peace. President Bourguiba has already said this. The issues of these negotiations have been known for some time. They revolve around the question of French evacuation of troops, the negotiation of a new status for the Bizerte naval base, the assignment of neutral observers to airports and the frontier with Algeria. Several times the parties have been close to agreement on most of these points. The details are unimportant in themselves. What is more important is the manner in which Mr. Murphy conducts these talks. This is possibly even more important than his success or his failure. If he succeeds it can at best only be a limited and a temporary success to avert the immediate threat of a clash between France and Tunisia, but the central question, Algeria, still lies ahead. If Murphy fails, there are other men who can try, Dag Hammarsjold for example. But what is critical is the role of the United States. If the Tunisians think that Murphy has favored the colonial side, it will damage perhaps irreparably America's chances to keep this country out of Nasser's camp. If the French think that Murphy favored Tunisia, it will be a severe blow for NATO. Thus the waters through Murphy is piloting are alive with magnetic mines, and he must somehow avoid being drawn in by the magnets of either side. His dilemma foreshadows the crisis that's going to be faced by all of us this year, the need for a North African policy. So far, the State Department in this region has followed the policy of an ostrich; it didn't want to face the danger so it pretended it wasn't there. That phase has come to an end here in Tunis. We are now entering the new phase and within the next few days, by March 20th, in fact, according to President Bourguiba, the hour of decision will have struck.

Now, back to Edward R. Murrow in New York.

MURROW: That was my colleague David Schoenbrun reporting from Tunis on the good offices mission designed to help bring about a settlement of the French-Tunisian dispute.

If he succeeds it can at best only be a limited and a temporary success to avert the immediate threat of a clash between France and Tunisia, but the central question, Algeria, still lies ahead. If Murphy fails, there are other men who can try, Dag Hammarsjold for example. But what is critical is the role of the United States. If the Tunisians think that Murphy has favored the colonial side, it will damage perhaps irreparably America's chances to keep this country out of Nasser's camp. If the French think that Murphy favored Tunisia, it will be a severe blow for NATO. Thus the waters through which Murphy is piloting are alive with magnetic mines, and he must somehow avoid being drawn in by the magnets of either side. His dilemma foreshadows the crisis that's going to be faced by all of us this year, the need for a North African policy. So far, the State Department in this region has followed the policy of an ostrich; it didn't want to face the danger so it pretended it wasn't there. That phase has come to an end here in Tunis. We are now entering the new phase and within the next few days, by March 20th, in fact, according to President Bourguiba, the hour of decision will have struck.

Now Back to Edward R. Murrow in New York.

MURROW: That was David Schoenbrun reporting from Tunis on the "good offices" mission designed to help bring about a settlement of the French-Tunisian dispute. This is Ed Murrow. I'll be back in a moment with the Word for Today. First, hree is George Bryan.

GEORGE BRYAN: COMMERCIAL

MURROW: There are two observations...made by others...which come to mind in connection with the current deadlock in the French-Tunisian dispute. The Chinese philosopher, Lao-tse, noted, "He who rides a tiger is afraid to dismount." (France is riding a tiger.) And Theodere Parker, the great Unitarian clergyman of the 19th century, said, "No steps backward is the rule of human history."

Good night and good luck!

Edward R. Murrow Mon., March 17, 1958

This is the news:

The Navy today launched and placed in orbit the second American earth satellite---a tiny moon weighing three and one-quarter pounds. Twice before, the Navy fired a complete, three-stage Vanguard rocket and failed. This morning, at Cape Canaveral, all components operated smoothly. And Dr. John Hagen, director of the Vanguard Project, will now proceed to the task of orbiting a fully instrumented satellite weighing about 21 pounds. The satellite launched today has been named Vanguard I. It is accompanied in outer space by the Army satellite launched late in January and by the second Sputnik launched by Russia in November. Sputnik II weighs

1-thousand, 120 pounds. Dr. Hagen told a news conference that Vanguard I is circling the earth once every ~~dumm~~ two hours and fifteen minutes, that it is traveling at the rate of 18 to 19-thousand miles an hour, and that it "certainly" will stay in orbit for 5 to 10 years. Dr. Hagen emphasized that the third stage of the rocket...as well as the tiny satellite...is orbiting in space. And the third stage, he pointed out, weighs about 50 pounds. /Both objects are swinging in a huge are---ranging from 400 miles from the surface of the earth to 25-hundred miles. Thus, Vanguard I is easily the highest orbiting satellite launched so far by either Russia or the United States. /It has two ~~radio~~ transmitters---one of them powered by solar batteries---and their steady stream of signals already has been received. The first visual sighting of the satellite and last-stage rocket may be made tonight in Southern Australia. But it is doubtful that the satellite, because of its minuteness, ever will be seen with the naked eye. (Right now, the rocket and satellite are about a mile apart). ~~Dr. Hagen~~ In talking to reporters, Dr. Hagen spoke of "more spectacular things ~~dumm~~ to come." He said, "We have a vehicle now that could be used as part of a satellite to do more advanced jobs---for

→

example, to place a satellite in orbit as far out as the moon. Whether this is done in a year or so, he said, depends on how badly we want to make the effort. Dr. Hagen was obviously in good spirits. And in honor of St. Patrick's Day, he wore a bright green tie.

The first formal announcement of the successful launching of the Vanguard satellite was made by President Eisenhower...who told Dr. Alan Waterman, director of the National Science Foundation, he was "delighted". Members of Congress called the successful launching "good news". Senate Democratic Leader Johnson said the achievement "paves the way for attaining even more important objectives in our exploration of outer space." Republican Senator Bridges said his contention that "properly directed inter-service rivalry in the rockets and missiles can be made to pay off" has now been "proved". And Democratic Senator Russell, chairman of the Senate Armed Services Committee, said he hoped the launching would be "productive of information that will assist us in our quest for control of space." (I should like to discuss this question---control of space---further in a few minutes).

President Eisenhower tonight invited the governors of nine states to confer with him at the White House on [redacted] Wednesday...regarding a plan for "a temporary extension of unemployment benefits." The nine governors invited to Washington constitute the executive committee of the Goverhors' Conference.

The Federal Reserve Board reported officially today that, during February, "industrial production and retail sales again declined." Industrial production fell three points to 130 percent of the 1947-49 average. Which is to say to the lowest level in three years. Autp production early this month was further curtailed, and steel production "remained near the low February rate." Retail sales were off three percent in February, compared to January. But department stores the first of this month showed what the report calls a "sizeable recovery." ~~Total bank loans rose "appreciably" in February, although loans to business continued to decline.~~

In the Senate today, a bill was introduced to provide local governments with up to 2-billion dollars in low-interest loans. The measure is sponsored by Democratic Senator Fulbright. Under its terms, local governments would borrow money from the Community Facilities Administration for public works projects such as the construction of schools, hospitals and libraries.

The House committee investigating the government's regulatory agencies today heard Colonel George Moore testify voluntarily...under oath...that he in "no way" influenced the F.C.C. award of Channel 10 in Miami to a subsidiary of National Airlines. Frank Katzentine, an unsuccessful applicant for the channel, has said he heard that Moore "engineered" the award for National Airlines. Moore is a brother-in-law of Mrs. Eisenhower. He said today he was a friend of George Baker, president of the airline, but that he never discussed the case with Baker. His relations with the White House, he said, had always been "strictly social".

~~The Supreme Court has agreed to review a lower court decision ordering the dissolution of the International Boxing Clubs of New York and Illinois. Last summer, U.S. District Judge Sylvester Ryan of New York found the clubs guilty of monopoly in the promotion of championship fights.~~

In Italy today, President Gronchi dissolved parliament in preparation for a new general election. ~~The action was requested by the Christian Democratic government. The five-year term~~ to which members of the Chamber of Deputies were elected is about to expire. ~~Normally, the Senate would run another year...but the cost of holding two general elections would be~~

eliminated by electing members to both chambers this spring. / The probable election date is May 25th.

Reports from Cuba say the rebel leader, Fidel Castro, has issued an ultimatum for President Batista to resign by April fifth. / The ultimatum was issued by rebel sources in Havana. It warns Cubans to pay no taxes after the first of April. / Government leaders holding office after that date, it says, will eventually be tried for treason. And it says that if Batista has not resigned by the fifth of April, the rebel forces will wage "implacable war".

In Indonesia tonight, both sides in that civil war are claiming control of Medan, a key city on Sumatra's northeast coast.

The Anglo-American "good offices" mission arrived in Paris tonight from Tunis with Tunisia's terms for settling its dispute with France. / American conciliator Robert Murphy told reporters, "The tendency in Tunis was conciliatory." He gave no details.

Russia's Premier Bulganin sent a new letter today to British Prime Minister Macmillan. / But, so far, the text of the letter has not been released.

Edward R. Murrow: March 17, 1958. 7.45 p.m.

However it is spelled out, the Soviet proposal to give the United Nations control of outer space, while military bases on foreign soil are eliminated, is a diplomatic triumph for the Soviet Union. It has linked the Soviet inter-continental missile, with American bases, as of equal value for bargaining purposes. Much of world opinion, even opinion in NATO countries, is likely to accept the price-tags without closer examination.

What is essentially a cold-war maneuver is given the appearance of a valid offer to end the arms race. To call it a cold-war maneuver, is not to say that the offer is without any merit. On the contrary, it is of ~~great~~ considerable significance that the Soviet Union has nominated the United Nations to be the planner and policeman of outer space. This reverses the current Soviet policy of refusing to discuss disarmament under United Nations sponsorship. It also offers the unusual picture of the Soviet Union proposing to expand the power of the United Nations in international affairs. Heretofore it has been the United States that has steadfastly upheld the United Nations, while the Soviet Union has denounced it as being dominated by us and our friends. Further, the offer implies adequate inspection to insure observance of both Russian demands.

The proposal to make the United Nations planner and policeman for outer space, is one that would more naturally have come from President Eisenhower. / The New York Times learns that some State Department advisers actually advocated his doing so after our first earth satellite was launched. They wanted him to announce that we would introduce in the next U.N. General Assembly, a resolution proposing a United Nations program for the use of outer space for peaceful purposes. / For undisclosed reasons the President did not make the announcement. The Russians did. They scooped him.

The President, in his last letter to Premier Bulganin, invited precisely what the Russians now seem to have done: he said that if the Soviet leaders really wanted to do more than talk about the menace of new weapons, they should wholly eliminate the newest types from outer space.

They did so. But they did not stop there. They went on to tie the offer in with military bases. / In doing this they used the normal cold-war technique of misquoting and misrepresenting. / They said/that President Eisenhower had spoken only of the inter-continental missile, and therefore was asking the Russians to give up the long-range weapons, with which they can reach the United States, while we kept ~~our~~ OUR intermediate weapons which could reach the Soviet Union, and the foreign bases to fire them from.

But the President had not done this. He spoke of keeping all missiles from outer space, which would include our own intermediate missiles. The Russians then went on to say that our bases, because they could be used by our bombers to attack the Soviet Union, must be eliminated for that reason too.

It is normal cold-war strategy to make demands which, if adopted, would leave the opponent relatively weaker. Both sides do this as a regular thing. And the Soviet offer, if translated into terms of relative power, would leave the Soviet Union far ahead of the West. Nuclear weapons would be banned, nuclear tests discontinued, and we would give up our overseas bases, not only as launching sites for our intermediate weapons, but as ~~take-offs~~ bases for our bombers. The Soviet Union, thanks to its geographical position, its greater land forces and the superior strength of its air force, would dominate Europe. We would have lost all effective reliance on nuclear deterrence, and would have sunk to second place.

What is so neat about this offer is that it does this while sounding like an enlightened effort to create the conditions of true peace. But the idea of making the United Nations the planner and policeman of outer space might be a big step forward, no matter how unacceptable the other

implications in the program are. It unexpectedly opens doors to possible compromises. / However, a warning is in order: We no longer can afford to underestimate the consummate skill of the Russians as negotiators and propagandists. It is impossible any longer to regard Khrushchev as a drunken son of a blacksmith, somehow managing to reel from one diplomatic triumph to another. / As a craftsman in the art of "getting the mostest and offering the leastest" he has compiled quite a course record.

Back in a moment. —

George Bryan —

Word fpr Today

The successful launching of the Vanguard satellite, after repeated failures, brings to mind an old, familiar saying, "If at first you don't succeed—try, try again." Incidentally, this good advice did not originate with Sir Robert Bruce or Benjamin Franklin, but with a little known English editor named William Hickson...born, we are told, in 1803 and who departed this life in 1870.

Goodnight and good luck!

It is impossible any longer to regard Khrushchev as a drunken son of a blacksmith, somehow managing to reel from one diplomatic triumph to another. As a craftsman in the art of "getting the mostest and offering the leastest" he has compiled quite a course record.

This is Ed Murrow. I'll be back in a moment with the word for today. Now, here is George Bryan.

GEORGE BRYAN: COMMERCIAL

MURROW: The successful launching of the Vanguard satellite after repeated failures brings to mind an old, familiar saying, "If at first you don't succeed try, try again." Incidentally, this good advice did not originate with Sir Robert Bruce or Benjamin Franklin, but with a little known English editor named William Hickson...born, we are told, in 1803 and who departed this life in 1870.

Goodnight and good luck!

This is the news:

President Eisenhower said today that the Administration is doing---and will do---"everything it can constructively do to bring about a resurgence of employment and production." / Mr. Eisenhower spoke at the annual meeting of Republican women in Washington. He reviewed measures taken by the Administration so far, and promised it will undertake any measure---including tax reduction---"if, after consultation with congressional leaders, such action should prove desirable and necessary." But the Administration, Mr. Eisenhower said, is not going to be "panicked by alarmists" into adopting wrong measures. / He denounced what he called the "make work" approach, "with its vast, slow-moving public works projects."

→

Such an approach, he said, "tends to supplant...rather than supplement... private activity." And he said again that the "real mainspring" of the American economy is not government, but the "built-in thrust and vigor of private enterprise." Mr. Eisenhower indicated he would veto the bill to freeze farm price supports, if it reaches his desk. He called this measure, which the Senate passed last week, "a 180-degree turn in the wrong direction." The President defended his reciprocal trade program, saying that four and a half million Americans owe their jobs to foreign trade. He said not just jobs but peace is at stake. The raising of trade barriers, he warned, is bound to cause resentment "among the peoples whose good will and help is essential to our collective security." — That if we do not trade with these peoples, the Russians will.

Republican congressional leaders had their usual Tuesday morning meeting with the President, and various alternatives for cutting taxes should that be deemed necessary were discussed in general terms. Senator Knowland "guessed" it would be "a couple of months" before a hard decision whether to cut taxes is made. ~~And then, he said, the Administration will undertake no tax program without first consulting Democratic leaders of the Senate and House.~~

A Democratic member of the House (who declined to be identified) said today that a "package proposal" is being drafted to give income tax relief to both private individuals and business. With this measure, he said, would be a companion bill reducing excise taxes---principally for the benefit of the auto and transportation industries. However, House Speaker Rayburn told reporters today there is no agreement "at all" on this package approach. He said, "There are all kinds of schemes going around and in the air."

The Federal Reserve Board took further action today "to create credit conditions more favorable to recovery." It authorized a new cut of one-half of one percentage point in the reserves which member banks are obliged to maintain against their demand deposits. (The board took similar action last month.) The new lower reserve requirements become effective for member banks in the larger cities on Thursday. And for country banks, the new order becomes effective on April first. It's estimated that an additional 3-billion dollars is thus released for lending purposes.

~~Roosevelt to confer with House armed services subcommittee today~~

Secretary of State Dulles returned to Washington today from the SEATO conference, and reporters immediately asked him about Russia's proposal for United Nations supervision of outer space, in return for the liquidation of American bases overseas./ Dulles noted that the United States has been pressing for an agreement to limit the use of outer space to peaceful purposes, for months./ But, he said, the Russians are "mixing up two things, that are quite unrelated." He said the Russian proposal is "not in a very acceptable form."/ Mr. Dulles was back in Washington for only about an hour before Soviet Ambassador Menshikov requested an appointment./ Menshikov saw Dulles for just 10 minutes. The ambassador told reporters it was on a routine matter, unrelated to any possible summit meeting.

The Navy's Vanguard satellite...as of noon today, New York time... had traveled around the earth 13 times. It has not been sighted so far by any moonwatch team, but the Navy says all is going well.

In Cuba, President Batista has shown no sign of yielding to the ultimatum of the rebel leader, Fidel Castro, to resign. Dispatches from Havana describe the streets of the city, and the stores, as being almost deserted...as the population awaits the next move.

American consular officials in Indonesia confirm that central government troops have recaptured Medan, the capital of North Sumatra. The fighting reportedly was light. No Americans in the area were hurt, but the evacuation of 250 American nationals to Singapore by ship is proceeding according to plan. The evacuees include American missionaries and personnel of the U.S. Rubber Company and Goodyear. / The rebel radio claims that revolutionary forces have again seized control of Pakan-bahru (BÁ-ROO), the big oil center in Central Sumatra. This is not confirmed, and the military situation in both North and Central Sumatra is confused.

In Paris today, French Premier Gaillard won a vote of confidence on his program for constitutional reform. / The vote in the National Assembly...upholding Gaillard...was 282 to 196. But his program, designed to increase the stability of French governments, faces further parliamentary tests. It was approved today only in part.

Special details of riot police...including reinforcements flown in from Algeria...guarded the National Assembly and other key points in the capital as the vote was taken. Communist and rightist groups held rallies tonight, but so far no violence is reported. / The Anglo-American

→

French

"good offices" team today conferred with Foreign Minister Pineau, in the French-Tunisian dispute. The American conciliator, Robert Murphy, told reporters afterward that he is still optimistic, regarding a settlement. Tomorrow, he and his British counter-part are scheduled to see Premier Gaillard.

The French report 120 Algerian rebels killed today, in a five-hour battle, 60 miles south of Algiers. French casualties are not reported.

Edward R. Murrow: March 18, 1958. 7.45 p.m.

Premier Gaillard won his vote of confidence in Paris today, but in Paris it is being said that even the starlings know that he will fall. All that is uncertain is when it will happen. It might be this week or next. And if not then, at latest in May. The Assembly goes into a month's recess in April on account of the local elections.

What everyone in Paris twitters about, presumably too the starlings [illegible], is Gaillard's successor. Most of them are saying it will be General De Gaulle, who if he is not the next premier, will be premier after the next premier. So General De Gaulle is on the verge of becoming an inevitability.

This is promotion for De Gaulle. Until recently he has been a man in the background being used as a threat. Politicians treated him as a kind of shotgun to point at other politicians to force them to do what they didn't want to do. Thus the Independent Party which, though conservative, doesn't want De Gaulle, threatens to pull out of the government if Gaillard makes concessions to Tunis in the Algerian crisis. That would bring De Gaulle in.

The Socialists are tired of the self-denial it takes for them to belong to the government and want the fun of being in the opposition. But their leaders warn them that if they pull out, De Gaulle will come in.

The shotgun is also pointed at outsiders, like the United States and

Britain. Both governments are trying to promote a settlement between France and the Algerian nationalists. That would be a retreat for France, and in the eyes of ultra-patriots, a defeat. So France's allies are told that if they don't back up France in Algeria they will get De Gaulle. And to the United States in particular that is meant to sound dreadful. Experience has taught Americans that De Gaulle has the amiability of a cactus. And his views are likewise forbidding. He was against European union. He is capable of taking France out of NATO. He does not believe the men in the Kremlin are dangerously expansionist or merit the cold war treatment they are getting from Washington. He might even revive the Franco-Russian alliance.

As a threat, De Gaulle is a formidable weapon all by himself. But there are two barrels to the shotgun. The other is the communists. It is being said that if De Gaulle comes into power he is sure to be followed by the communists. He stands for only a limited kind of democracy in France. He would insist on an enormous amount of power for himself if he headed the government. He is commonly called a fascist. The communists, if not ordered otherwise by Moscow, would resist a fascist taking over in Paris. And if in time he were to be turned out, theirs probably would

be the violence that accomplished it. And this prediction is also taking on the aspects of inevitability.

The French at this moment are trying to disentangle the strands of the De Gaulle myth. They want to know how much in him is threat, how much reality; how much is deadly, how much salutory. Unfortunately De Gaulle isn't talking. / All there is to go by is in the theories spread by his friends.

Perhaps the chief reason De Gaulle has come to be regarded as inevitable is because he alone seems to have the detachment and authority to solve the Algerian crisis. / A formula being circulated in his name calls for the establishment of a commonwealth embracing France, its possessions in "dark" Africa, and also Morocco, Tunis and Algeria. Algeria would be the equal of the others, but might have to wait for several years to achieve full equality. / This solution might be accepted by the ultra-patriotic right-wing as being the only alternative to something worse, an international solution for Algeria. / The moderates might accept it because it would permit direct negotiations with the Algerian National Liberation Front. And the Liberation Front might accept it because they

might regard De Gaulle as the only Frenchman whose word they could trust.

But even if De Gaulle could get France out of the Algerian frying-pan, it might end up in the fire over NATO. He never liked NATO, which he regards as obsolete. / His friends say he would not break up the alliance, but would insist on a re-assessment of its functions. / And he would have the final say about stationing NATO missile bases on French soil.

What is remarkable about De Gaulle is that simply by standing silently in the wings of the French stage for a few years, events are now pushing him toward the stage. [Maybe he is like the recession in America, nothing has made it so inevitable as just the talk that it is inevitable.]

Back in a moment.—

Tom Brokaw

Word for Today

A French writer once said, "France is a country where miracles have become a tradition. / Proof lies in the fact that we're still here. | For a miracle to happen," he continued, "things must be really bad. / Our ministers are taking care of that. / You can tell they are preparing the ground for a really fine miracle."

Goodnight and good luck!

EDWARD R. MURROW WITH THE NEWS
CBS RADIO NETWORK

TUESDAY, MARCH 18, 1958
7:45 - 8:00 PM EST

This is the news:

President Eisenhower said today that the Administration is doing---and will do---"everything it can constructively do to bring about a resurgence of employment and production." Mr. Eisenhower spoke at the annual meeting of Republican women in Washington. He reviewed measures taken by the Administration so far, and promised it will undertake any measure---including tax reduction--- "if, after consultation with congressional leaders, such action should prove desirable and necessary." But the Administration, Mr. Eisenhower said, is not going to be "panicked by alarmists" into adopting wrong measures. He denounced what he called the "make work" approach, "with its vast, slow-moving public works projects." Such an approach, he said, "tends to supplant...rather than supplement private activity." And he said again that the "real mainspring" of the American economy is not government but the "built-in thrust and vigor of private enterprise." Mr. Eisenhower indicated he would veto the bill to freeze farm price supports, if it reaches his desk. He called this measure, which the Senate passed last week, "a 180-degree turn in the wrong direction." The President defended his reciprocal trade program, saying that four and a half million Americans owe their jobs to foreign trade. He said not just jobs but peace is at stake. The raising of trade barriers, he warned, is bound to cause resentment "among the peoples whose good will and help is essential to our collective security." That if we do not trade with these peoples, the Russians will.

Republican congressional leaders had their usual Tuesday morning meeting with the President, and various alternatives for cutting taxes should that be deemed necessary were discussed in general terms. Senator Knowland "guessed" it would be "a couple of months" before a hard decision whether to cut taxes is made.

A Democratic member of the House (who declined to be identified) said

today that a "package proposal" is being drafted to give income tax relief to both private individuals and business. With this measure, he said, would be a companion bill reducing excise taxes---principally for the benefit of the auto and transportation industries. However, House Speaker Rayburn told reporters today there is not agreement "at all" on this package approach. He said, "There are all kinds of schemes going around and in the air."

The Federal Reserve Board took further action today "to create credit conditions more favorable to recovery." It authorized a new cut of one-half of one percentage point in the reserves which member banks are obliged to maintain against their demand deposits. The board took similar action last month.

Secretary of State Dulles returned to Washington today from the SEATO conference, and reporters immediately asked him about Russia's proposal for United Nations supervision of outer space in return for liquidation of American bases overseas. Dulles noted that the United States has been pressing for an agreement to limit the use of outer space to peaceful purposes for months. But, he said, the Russians are "mixing up two things that are quite unrelated." He said the Russian proposal is "not in a very acceptable form." Mr. Dulles was back in Washington for only about an hour before Soviet Ambassador Menshikov requested an appointment. Menshikov saw Dulles for just 10 minutes. The ambassador told reporters it was on a routine matter unrelated to nny possible summit meeting.

The Navy's Vanguard satellite...as of noon today, New York time...had traveled around the earth 13 times. It has not been sighted so far by any moonwatch team, but the Navy says all is going well.

In Cuba, President Batista has shown no sign of yielding to the ultimatum of the rebel leader, Fidel Castro, to resign. Dispatches from Havana describe the streets of the city and the stores as being almost deserted...as the population awaits the next move.

American consular officials in Indonesia confirm that central government

troops have recaptured Medan, the capital of North Sumatra. The fighting reportedly was light. No Americans in the area were hurt, but the evacuation of 250 American nationals to Singapore by ship is proceeding according to plan. The evacuees include American missionaries and personnel of the U.S. Rubber Company and Goodyear. The rebel radio claims that revolutionary forces have again seized control of Pakan-bahru, the big oil center in Central Sumatra. This is not confirmed, and the military situation in both North and Central Sumatra is confused.

The Anglo-American "good offices" team today conferred with French Foreign Minister Pineau in the French-Tunisian dispute. The American conciliator, Robert Murphy, told reporters afterward that he is still optimistic regarding a settlement. Tommorrow, he and his British counterpart are scheduled to see Premier Gaillard.

The French report 120 Algerian rebels killed today in a five-hour battle 60 miles south of Algiers. French casualities are not reported.

Premier Gaillard won his vote of confidence in Paris today, but in Paris it is being said that even the starlings ~~show~~ KNOW that he will fall. All that is uncertain is when it will happen. It might be this week or next. And if not then, at latest in May. The Assembly goes into a month's recess in April on account of the local elections.

What everyone in Paris twitters about, presumably too, the starlings, is Gaillard's successor. Most of them are saying it will be General de Gaulle, who if he is not the next premier, will be premier after the next premier. So General De Gaulle is on the verge of becoming an inevitability.

This is promotion for De Gaulle. Unitl recently he has been a man in the background being used as a threat. Politicians treated him as a kind of shotgun to point at other politicians to force them to do what they didn't want to do. Thus the Independent Party which, though conservative, doesn't want De Gaulle, threatens to pull out of the government if Gaillard makes concessions

to Tunis in the Algerian crisis. That would bring De Gaulle in.

The Socialists are tired of the self-denial it takes for them to belong to the government and want the fun of being in the opposition. But their leaders warn them that if they pull out, De Gaulle will come in.

The shotgun is also pointed at outsiders, like the United States and Britain. Both governments are trying to promote a settlement between France and the Algerian nationalists. That would be a retreat for France, and in the eyes of ultra-patriots, a defeat. So France's allies are told that if they don't back up France in Algeria they will get De Gaulle. And to the United States in particular that is meant to sound dreadful. Experience has taught Americans that De Gaulle has the amiability of a cactus. And his views are likewise forbidding. He was against European union. He is capable of taking France out of NATO. He does not believe the men in the Kremlin are dangerously expansionist or merit the cold war treatment they are getting from Washington. He might even revive the France-Russian alliance.

As a threat, De Gaulle is a formidable weapon all by himself. But there are two barrels to the shotgun. The other is the communists. It is being said that if De Gaulle comes into power he is sure to be followed by the communists. He stands for only a limited kind of democracy in France. He would insist on an enormous amount of power for himself, if he headed the government. He is commonly called a fascist. The communists, if not ordered otherwise by Moscow, would resist a fascist taking over in Paris. And if in time he were to be turned out, theirs probably would be the violence that accomplished it. And this prediction is also taking on the aspects of inevitability.

The French at this moment are trying to disentangle the strands of the De Gaulle myth. They want to know how much in him is threat, how much reality; how much is deadly, how much salutory. Unfortunately De Gaulle isn't talking. All there is to go by is in the theories spread by his friends.

Perhaps the chief reason De Gaulle has come to be regarded as inevitable is because he alone seems to have the detachment and authority to solve the Algerian crisis. A formula being circulated in his name calls for the establishment of a commonwealth embracing France, its possessions in "dark" Africa, and also Morocco, Tunis, and Algeria. Algeria would be the equal of the others, but might have to wait for several years to acheive full equality. This solution might be accepted by the ultrapatriotic right-wing as being the only alternative to something worse, an iternational solution for Algeria. The moderates might accept it because it would permit direct negotiations with the Algerian National Liberation Front. And the Liberation Front might accept it because they might regard De Gaulle as the only Frenchman whose word they could trust.

But even if De Gaulle could get France out of the Algerian frying-pan, it might end up in the fire over NATO. He never liked NATO, which he regards as obsolete. His friends say he would not break up the alliance but would insist on a re-assessment of its functions. And he would have the final say about stationing NATO missile bases on French soil.

What is remarkable about De Gaulle is that simply by standing silently in the wings of the French stage for a few years, events are now pushing him toward the stage. Maybe he is like the recession in America, nothing has made it so inevitable as just the talk that it is inevitable.

This is Ed Murrow. I'll be back in a moment with the word for today. Now, here is George Bryan.

GEORGE BRYAN: COMMERCIAL

MURROW: A French writer once said, "France is a country where miracles have become a tradition. Proof lies in the fact that we're still here. For a miracle to happen," he continued, "things must be really bad. Our ministers are taking care of that. You can tell they are preparing the ground for a really fine miracle."

Goodnight and good luck!

Edward R. Murrow Wed., March 19, 1958

This is the news:

Russia has made a new attempt tp block the establishment of American missile bases in Britain. / In a letter to British Prime Minister Macmillan...published tonight...Premier Bulganin assails the Anglo-American agreement for these bases, as well as the meeting of NATO defense ministers, scheduled for next month. / Bulganin says these moves cannot be construed as anything but an effort "to hinder the convening, and the success, of a summit conference." / Bulganin goes on to say other things which are not new. My colleague, Alex Kendrick, cables me from London that the informed British reaction to Bulganin's letter is, that it was really addressed to

the Labour opposition, rather than to the prime minister... that it was designed to whet the desire of the Labourites for an early summit conference, and to provoke new debate over the stationing in Britain of American intermediate range missiles.

In Washington, Administration officials have let it be known that they are thinking in terms of a possible summit meeting in Geneva, sometime in late September or early October. Geneva is described as a better site than the United States because it is a neutral city and offers better physical accommodations. Another reason given is that Khrushchev has expressed strong interest in coming to the United States and it is felt that holding a summit conference here might enhance his prestige. Administration officials emphasize that, in any case, the United States will not agree to hold a summit conference unless "solid progress" is made beforehand, indicating that significant agreements can be reached. And the Administration is insisting that questions like the reunification of Germany can be discussed. (I should like to examine this question of a summit meeting further in a few minutes).

President Eisenhower today briefed the governors of eight states, on his proposal for extending the period in which jobless persons may receive unemployment compensation. The governors represented the executive committee of the Governors Conference. Details of the plan have not been formally announced, but it reportedly calls for extending state-administered unemployment benefits an additional 13 weeks. On the average, states now pay unemployment compensation for a maximum of 20 weeks. Funds would be supplied to the states on a loan basis, repayable in four years.

Mr. Eisenhower also called for a speed-up in the spending of two and a quarter billion dollars for a wide variety of projects...ranging from sewers and slum clearance to rural electrification. The stepped up spending will be for projects already authorized by Congress. More than a billion dollars of the money is in the form of loans, which must be paid back by local communities. And most of the other money is being put up by local and state governments.

The House today passed and sent to President Eisenhower a bill designed to promote the construction of an additional 200-thousand homes and create at least 500-thousand new jobs. This is emergency legislation, costing 1-billion, 850-million dollars. The Senate passed it unanimously last week, and today the House gave its approval in just one minute. There was no debate. The measure raises the maximum interest rate on G.I. home loans to four and three-quarters percent...in the hope of luring private capital into the G.I. housing program. G.I. mortgages have been paying four and one-half percent.

In another anti-recession move, the Army announces that it will let 100-million dollars' worth of contracts to the auto industry in the next 30 days. / The contracts are for the production of military trailers and trucks.

Democratic Senator Byrd charged today that the government is "plunging pell mell" into multi-billion-dollar "red ink" spending. / He said even if Congress doesn't cut taxes, a treasury deficit of 7-billion dollars is now in prospect. And on the subject of a possible tax cut, House Speaker Rayburn said again today, "It's still too early to jump."

The House Committee on Legislative Oversight heard testimony today from H. Earl Barber, former chief assistant to Richard Mack, who recently resigned under fire from the Federal Communications Commission. / Barber tendered his own resignation 36 hours after Mack quit. / The name of Thurman Whiteside, alleged "fixer" in a Miami television case, came up in today's testimony. Barber said he once received a 600-dollar loan from Whiteside (which he has not repaid) and that he had "fronted" for Whiteside as owner of a Florida liquor license. Whiteside, he said, had never talked to him about the TV case.

In Paris today, the Anglo-American "good offices" mission called on Premier Gaillard...and, reportedly, gave him Tunisia's proposals for settling the French-Tunisian dispute./ Nothing definite about the status of the negotiations was said after the meeting, but Gaillard is scheduled to go over the Tunisian proposals with his cabinet on Friday./ ~~Premier Gaillard apparently avoided a showdown with his cabinet today. Right-wing members of the cabinet have threatened to quit, if the premier shows signs of weakness in his stand toward Tunisia./ The cabinet met for five hours today, and there were no resignations.~~

Here in New York, at least nineteen persons have died in a five-alarm fire that swept through a loft building on Lower Broadway./ A Fire Department official says the death toll may reach 25. The victims are textile workers who were trapped in the five-story building, after smoke and flames spread from the third floor.

Edward R. Murrow: March 19, 1958. 7.45 p.m.

The United States has plenty of internal problems, like the recession, school integration, the lag in education, and the farm problem, to name a few. But it would not occur to the Administration that the best way to handle these troubles would be to distract public attention from them by proposing a summit meeting. President Eisenhower could fill the newspapers with letters to heads of state denouncing their foreign policies and challenging them to reverse them in the name of peace. This doesn't happen to be the way we do things. But unless we understand that it is the way the Russians do them, we may not grasp what can and cannot be expected from a summit meeting.

No doubt Nikita Khrushchev wants a summit meeting for what he can do to promote Soviet interests, propaganda-wise or in substance. But he also wants it because it will reduce the pressures on him of grave domestic difficulties. Distraction is not the only purpose. Khrushchev needs success abroad to offset failure and uncertainties at home. He cannot afford a failure at the summit. For that matter, neither can we. ~~But for Khrushchev the need is greater because in himself he is much more the Soviet Union than any President is the United States.~~ It should be part of

our strategy to know and evaluate the internal strains and stresses in the Soviet Union. It will help us better to judge the chances of any agreement whatever.

Khrushchev has identified himself with two tremendous changes in his country, one in agriculture, the other in the de-centralization of industry. The one in industry has made him lots of enemies, but it is too early to know how it is going to work out. But in agriculture there is big, immediate trouble.

Last year there was a drought throughout the newly plowed Virgin Lands area ~~and other regions~~. It is officially admitted that the drought was worse than the one that ended in the great famine of 1921. This time there won't be a famine, because the country is better organized and has had good harvests elsewhere. But part of the country has been hard hit.

Then there has been a setback in the farming of the Virgin Lands, one of Khrushchev's pet ~~XXXXXXX~~ projects. The government has belatedly had to admit that it can't budget for bumper crops right along without allowing some of the land to lie fallow.

Another crisis has been signalized by the new policy to allow

collective farms to have their own tractors. This does away with the Machine and Tractor Stations, which under Stalin and since, have been key instruments in the government's control of peasants. / As part of this change, the government now is backing state-owned farms ahead of collectives, where deliveries in kind are proving a cumbersome way of obtaining revenue. There is also a struggle on the farms between the current concept of higher incentives and the old Marxist standards of peasant discipline. Right now the peasants are winning out over communist theory, and Khrushchev, as high pontiff, is having to re-write Marxist dogma to make it all appear to be safe and regular.

No doubt the greatest pressure on Khrushchev is from the entire population below the level of the well-paid elite. / The vast majority want housing and consumer-goods. / They don't like to wait ten or twenty years more to enjoy the benefits of the Soviet Union's enormous power. So Khrushchev quite genuinely needs to reduce the incredibly large expenditure on atomic weapons.

Russians in Washington are saying that the summit meeting Khrushchev wants would last from a month to six weeks, and that there would be room for real bargaining. They are saying that America won't be expected to

give up its foreign bases all at once. A start might be made on the control of outer space through the United Nations if the United States gives up some of them, and if NATO gives up intermediate missile bases as part of the price for the Soviet abandonment of the inter-continental missile.

But the Russians in Washington also are saying that if the conference lasts four to six weeks, and no big agreements are forthcoming, it will still have been a success if its leaders argue reasonably and part agreeably. That in itself, they say, would help relax tensions.

In other words, the Russians are confident that they can out-propagandize the West at a big summit show, even if Western leaders avoid all the booby traps now being ~~dexterously~~ skillfully planted. And in this they may well be right.

Rank in current -

George Bryan -

Word for Today

Russian attitudes are sometimes difficult to understand. Winston Churchill once expressed this by saying that Russia's action is "a riddle, wrapped in a mystery, inside an enigma." But there is more to the quotation. Churchill went on to say, "Perhaps there is a key. And that key," he said, "is Russian national interest."

Goodnight and good luck!

EDWARD R. MURROW WITH THE NEWS
CBS RADIO NETWORK

WEDNESDAY, MARCH 19, 1958
7:45 - 8:00 PM EST

This is the news:

Russia has made a new attempt to block the establishment of American missile bases in Britain. In a letter to British Prime Minister Macmillan... published tonight...Premier Bulganin assails the Anglo-American agreement for these bases, as well as the meeting of NATO defense ministers scheduled for next month. Bulganin says these moves cannot be construed as anything but an effort "to hinder the convening and the success of a summit conference." Bulganin goes on to say other things which are not new. My colleague, Alex Kendrick, cables me from London that the informed British reaction to Bulganin's letter is that it was really addressed to the Labour opposition, rather than to the prime minister...that it was designed to whet the desire of the Labourites for an early summit conference and to provoke new debate over the stationing in Britain of American intermediate range missiles.

In Washington, Administration officials have let it be known thtt they are thinking in terms of a possible summit meeting in Geneva, sometime in late September or early October. Geneva is described as a better site than the United States because it is a neutral city and offers better physical accomodations. Another reason given is that Khrushchev has expressed strong interest in coming to the United States and it is felt that holding a summit conference here might enhance his prestige. Administration officials emphasize that, in any case, the United States will not agree to hold a summit confernnce unless "solid progress" is made beforehand, indicating that significant agreements can be reached. And the Administration is insisting that questions like the reunificationof Germany can be discussed. (I should like to examine this question of a summit meeting further in a few minutes.)

President Eisenhower today briefed the governors of eight states on his proposal for extending the period in which jobless persons may receive

unemployment compensation. The governors represented the executive committee of the Governors Conference. Details of the plan have not been formally announced, but it reportedly calls for extending state-administered unemployment benefits an additional 13 weeks. He said even if Congress doesn't cut taxes, a treasury deficit of 7-billion dollars is now in prospect. And on the subject of a possible tax cut, House Speaker Rayburn said again today, "It's still too early to jump."

The House Committee on Legislative Oversight heard testimony today from

H. Earl Barber, former chief assistant to Richard Mack who recently resigned under fire from the Federal Communications Commission. Barber tendered his own resignation 36 hours after Mack quit. The name of Thurman Whiteside, alleged "fixer" in a Miami television case, came up in today's testimony. Barber said he once received a 600-dollar loan from Whiteside (which he has not repaid) and that he had "fronted" for Whiteside as owner of a Florida liquor license. Whiteside, he said, had nevertalked to him about the TV case.

In Paris today, the Anglo-American "good offices" mission called on Premier Gaillard...and, reportedly, gave him Tunisia's proposals for settling the French-Tunisian dispute. Nothing definite about the status of the negotiations was said after the meeting, but Baillard is scheduled to go over the Tunisian proposals with his cabinet on Friday.

Here in New York, at least nineteen persons have died in a five-alarm fire that swept through a loft building on Lower Broadway. A Fire Department official says the death toll may reach 25. The victims are textile workers who were trapped tn the five-story building, after smoke and flames spread from the third floor.

The United States has plenty of internal problems, like the recession, school integration, the lag in education, and the farm problem, to name a few. But it would not occur to the Administration that the best way to handle these troubles would be to distract public attention from them by proposing a summit meeting. President Eisenhower could fill the newspapers with letters to heads of state denouncing their foreign policies and challenging them to reverse them in the name of peace. This doesn't happen to be the way we do things. But unless we understand that it is the way the Russians do them we may not grasp what can and cannot be expected from a summit meeting.

No doubt Nikita Khrushchev wants a summit meeting for what he can do to promote Soviet interests, propaganda-wise or in substance. But he also wants it because it will reduce the pressures on him of grave domestic difficulties.

Distraction is not the only purpose. Khrushchev needs success abroad to offset failure and uncertainties at home. He cannot afford a failure at the summit. For that matter, neither can we. It should be part of our strategy to know and evaluate the internal strains and stresses in the Soviet Union. It will help us better to judge the chances of any agreement whatever.

Khrushchev has indentified himself with two tremendous changes in his country, one in agriculture, the other in the de-centralization of industry. The one in industry has made him lots of enemies, but it is too early to know how it is going to work out. But in agriculture there is big, immediate trouble.

Last year there was a drought throughout the newly plowed Virgin Lands area. It is officially admitted that the drought was worse than the one that ended in the great famine of 1921. This time there won't be a famine because the country is better organized and has had good harvests elsewhere. But part of the country has been hard hit.

Then there has been a set-back in the farming of the Virgin Lands, one of Khrushchev's pet projects. The government has belatedly had to admit that it can't budget for bumper crops right along without allowing some of the land to lie fallow.

Another crisis has been signalized by the new policy to allow collective farms to have their own tractors. This does away with the Machine and Tractor Stations, which under Stalin and since, have been key instruments in the government's control of peasants. As part of this change, the government now is backing state-owned farms ahead of collectives, where deliveries in kind are proving a cumbersome way of obtaining revenue. There is also a struggle on the farms between the current concept of higher incentives and the old Marxist standards of peasant discipline. Right now the peasants are winning out over communist theory, and Khrushchev, as high pontiff, is having to re-write Marxist dogma to make it all appear to be safe and regular.

No doubt the greatest pressure on Khrushchev is from the entire population

below the level of the well-paid elite. The vast majority want housing and consumer goods. They don't like to wait ten or twenty years more to enjoy the benefits of the Soviet Union's enormous power. So Khrushchev quite genuinely needs to reduce the incredibly large expenditure on atomic weapons.

Russians in Washington are saying that the summit meeting Khrushchev wants would last from a month to six weeks, and that there would be room for real bargaining. They are saying that America won't be expected to live up its foreign bases all at once. A start might be made on the control of outer space through the United Nations if the United States gives up some of them, and if NATO gives up intermediate missile bases as part of the price for the Soviet abandonment of the inter-continental missile.

But the Russians in Washington also are saying that if the conference lasts four to six weeks, and no big agreements are forthcoming, it will still have been a success if its leaders argue reasonably and part agreeably. That in itself, they say, would help relax tensions.

In other words, the Russians are confident that they can out-propagandize the West at a big summit show, even if Western leaders avoid all the booby traps now being skillfully planted. And in this they may well be right.

This is Ed Murrow. I'll be back in a moment with the word for today. Now, here is George Bryan.

GEORGE BRYAN: COMMERCIAL

MURROW: Russian attitudes are sometimes difficult to understand. Winston Churchill once expressed this by saying that Russia's action is "a fiddle, wrapped in a mystery, inside an enigma." But there is more to the quotation. Churchill went on to say, "Perhaps there is a key. And that key," he said, "is Russian national interest."

Goodnight and good luck!

Edward R. Murrow Thurs., March 20, 1958

This is the news:

The Army has created a new, over-all command to cut down red tape in its missile program. Consolidated in the new Ordnance Missile Command will be all the Army's space activities, including the Jet Propulsion Laboratory in Pasadena, the White Sands proving grounds, the Redstone Arsenal, and all the Army work being done at Cape Canaveral. The projects involved range from missiles to anti-missile missiles to earth satellites. And they will all be brought under the command of General Medaris, who until now has headed up the Army's ballistic missile agency with headquarters in Huntsville. Under the new set-up, Medaris will have direct access to both General Taylor, the Army chief of staff, and to Secretary of the Army Brucker.

He will thus be able to take what the Army announcement calls "administrative shortcuts"...by-passing the numerous Pentagon echelons in between.

Major General Donald Yates of the Air Force said today that he "expects" the United States to beat Russia in getting a rocket to the moon. Yates is commander of the Air Force missile base at Cape Canaveral.

The House Armed Services Committee today approved and sent to the House floor a bill to increase the pay of members of the armed forces. The measure is designed to keep trained personnel from giving up their careers in the Army, Navy and Air Force, because of the prospect of higher income in private industry. The measure authorizes extra pay raises for men with special skills. A vote on it...by the full House...is expected early next week.

The Senate today approved and sent to the House a two-year extension of the surplus crop disposal program. An amendment by Republican Senator Jenner to bar the shipment of American farm surpluses to Poland and Yugoslavia was voted down.

The House voted a one-year "freeze" on farm price supports, despite President Eisenhower's implied threat that he will veto the legislation

→

if it ever comes to him for his signature. Because the Senate---unlike the House---places no time limit on the freeze, the bill now goes back to the Senate for a reconciliation of this difference.

Vice President Nixon said today---in a news conference--- that the American people "should make their plans on the assumption there is not going to be a depression." Mr. Nixon said a tax cut now would not "be timely". But, he said, it must be "one of the weapons in our arsenal." Taxes will be cut "if and when" it may become necessary. Nixon urged support for the Administration's mutual security program. He said that unless this program is supplemented by the funds asked for by President Eisenhower, the 44-billion-dollar defense budget will be "wasted". He said, "The money we spend in the mutual security field is really aid to ourselves. If the time comes when it doesn't meet that test, then I think we should reduce it."

The State Department today issued a statement...saying this country still awaits Russia's reply to the American note of March 6. In that note the United States asked Russia bluntly whether it wants a summit meeting which would be only a "spectacle", or a meeting which would result in "meaningful

→

decisions." Under the circumstances, the State Department said, it would be "premature" to deal with such matters as time, place and composition of either a foreign ministers meeting or a summit conference.

Russia has sent West Germany a new memorandum, reiterating its position that German reunification is not a subject which can be taken up in any summit talks. The Soviet memorandum says, "The German problem cannot be solved by anyone save the interested parties"---namely, the East and West German governments.

Chancellor Adenauer told the West German parliament today that West Germany will accept tactical nuclear weapons. "Why," he asked, "are atomic weapons harmless in the hands of the Russians and dangerous in the hands of the West?" Adenauer warned that if West Germany---"an important segment of NATO"---does not possess nuclear armaments, then (in his phrase) "NATO is reduced to insignificance."

President Bourguiba of Tunisia told his people today to have patience---that he is confident French troops will leave Tunisian soil. Bourguiba spoke on the second anniversary of independence from France. It was a moderate speech. He said Tunisia is "happy" to recognize the role of the Anglo-American good offices mission. It has helped, he said, to avoid "an aggravation of a crisis which could have degenerated into open conflict." Tunisia, he said, has chosen to stay with the West.

The Anglo-American conciliators---Robert Murphy and Harold Beeley---are scheduled to confer again tomorrow with French Premier Gaillard. A political showdown, which might wreck the Gaillard government, has been put off until at least next week. Conservative members of Gaillard's cabinet have threatened to resign... if, in their opinion, he goes too far in meeting Bourguiba's demands. The Conservative ministers voted to postpone until next Tuesday their decision whether to quit the government.

According to French military sources, Algerian rebels this week suffered their heaviest losses in the three-and-a-half-year war. In four days, the rebels reportedly lost 845 men---725 killed and 120 captured. French losses were not disclosed.

The Bank of England today reduced its interest rate to six percent. The rate had been raised to seven percent only last fall, as an anti-inflationary measure. The new reduced rate---still much higher than in most countries---makes for cheaper mortgages and encourages investment. The British man-in-the-street will have less trouble buying on installment. A government spokesman said, "This does not mean any relaxation in general monetary policy. But," he added, "inflationary influences are lessening." The British move fits the lower credit pattern being followed in other countries, including the United States.

Here in the United States, the eastern seaboard from Virginia to New England has been hit with the last heavy snowfall of winter...with gale warnings posted all along the coast. Thousands of homes in Southern New Jersey, Eastern Pennsylvania and the Washington area are without electricity---wires snapped by the wet, heavy snow. Washington has at least 10 inches. Up to 20 inches has falled in the Philadelphia area, and snow two feet deep is reported from Baltimore. Air and railroad traffic is the storm area is badly crippled. And the Pennsylvania Turnpike has been closed for 111 miles---from Harrisburg to the New Jersey state line.

Edward R. Murrow: March 20, 1958. 7.45 p.m.

The orbiting of the earth satellites was an item on the program of the International Geophysical Year. Since some people regard it as the most significant achievement of this generation, it is well to see how the scientists of the project propose to follow it up. Their plans and ideas are set forth by the Earth Satellite Panel of the United States Committee for the International Geophysical Year, in a report summarized in today's New York Times.

The next stages of outer space research will be relatively modest, and the cost is unofficially estimated at around 750 million dollars in five years. A great deal has to be learned before manned space-vehicles can investigate the conditions on the moon and the nearby planets. But this is the ultimate objective, and the panel has no doubt it can be done. It declines to predict how quickly, but the report says that the inevitable culmination of these efforts "will be manned space flights, and man's landing on the nearer planets. It is clear" it says," that he can develop the ability to do this, and it is hard to conceive of mankind stopping short when such a tempting goal is within reach."

The report admits that it isn't quite rational for human beings to do

the space exploration in person. They can devise flying vehicles equipped with all the instruments needed for "sensing" what the planets are like. These vehicles will be able to crawl along the face of the visited planets. They can measure, touch, look and listen to everything, and report back to earth all the impressions gained. / These would be remotely controlled robots, and they could be abandoned without a qualm when they ran out of fuel or broke down.

But the panel is not too greatly impressed by its own argument for exploration by robots alone. There may be a point, the report says, at which the complexity of the machine becomes intolerable and a man is found to be more efficient and reliable, and above all, more resourceful, when unexpected obstacles arise. "It is in a sense an article of faith" says the report, "that man will be required to do the job of cosmic exploration himself, whether required to or not."

This argument is over the ultimate drama. The work immediately ahead is less spectacular. First must come biological experiments with cosmic rays and solar radiation on life. / Then there must be more information about the effect on living things of weightlessness out beyond the [redacted] gravitational pull. More accurate measurements of length

have to be developed. We must first learn about the moon. We do not know with ultra-precise accuracy how much it weighs, and so cannot be dead-sure of the course of a space vehicle that draws near to it. We do not know if it has a magnetic field. We are sure it does not have an atmosphere, but suspect that gases lie on its surface that have leaked from the interior.

We can learn about the moon by hitting it with a rocket, and studying its trajectory. We can put a satellite into orbit around the moon to report back data from its instruments. And we can devise something that lands on it.

After the moon, Mars and Venus beckon. Getting to them would be no great problem if we can reach the moon, ~~for it takes only one-hundredth of one percent more initial velocity to leave the earth-moon system than to reach the moon.~~

The problem of placing instruments on Venus and Mars is similar to placing them on the moon. But some more distant planets have no inner cores to land on, and the examination will have to be done by designing an instrument carrier that can float in their gaseous envelope like a balloon.

While some men speculate and plan about outer space, other restless minds still work on the old problem of navigating the oceans. A British firm is designing an atomic-powered submarine -- an oil tanker - with a displacement as large as the Queen Elizabeth, the largest ship now afloat. The chairman of the company which builds atomic reactors says the vessel will be faster and more powerful than any ocean-going vessel now afloat. It could cross the ocean, submerged, with no human being aboard, steered and navigated by automation. It would travel at almost sixty miles an hour, submerged (faster than a destroyer). Under normal operating conditions this giant submarine-tanker would carry a crew of five. It ought to be fairly easy to arrange communications between the men on the moon and the men in the submarine, but the question would remain: what would they talk about?

Back in a moment. -
George Bryan

Word for Today

One is reminded continually of the potential of the atom [redacted] for both good and bad. A New York Times editorial expressed it well when it said, "The main question about the atom is simple indeed---Does it stand for twilight or for dawn?" As Dr. Wendell Stanley, the Nobel Prize-winning scientist, has observed, "The choice is ours---yours and mine."

Goodnight and good luck!

EDWARD R. MURROW WITH THE NEWS
CBS RADIO NETWORK

THURSDAY, MARCH 20, 1958
7:45 - 8:00 PM EST

This is the news:

The Army has created a new, over-all command to cut down red tape in its missile program. Consolidated in the new Ordnance Missile Command will be all the Army's space activities, including the Jet Propulsion Laboratory in Pasadena, the White Sands proving grounds, the Redstone Arsenal, and all the Army work being done at Cape Canaveral. The projects involved range from missiles to anti-missile missiles to earth satellites. And they will all be brought under the command of General Medaris, who until now has headed up the Army's ballistic missile agency with headquarters in Huntsville. Under the new set-up, Medaris will have direct access to both General Taylor, the Army chief of staff, and to Secretary of the Army Brucker. He will thus be able to take what the Army announcement calls "administrative shortcuts"...by-passing the numerous Pentagon echelons in between.

Major General Donald Yates of the Air Force said today that he "expects" the United States to beat Russia in getting a rocket to the moon. Yates is commander of the Air Force missile base at Cape Canaveral.

The House Armed Services Committee today approved and sent to the House floor a bill to increase the pay of members of the armed forces. The measure is designed to keep trained personnel from giving up their careers in the Army, Navy and Air Force because of the prospect of higher income in private industry. The measure authorized extra pay raises for men with special skills. A vote on it...by the full House...is expected early next week.

The Senate today approved and sent to the House a two-year extension of the surplus crop disposal program. An amendment by Republican Senator Jenner to bar the shipment of American farm surpluses to Poland and Yugoslavia was voted down.

The House voted a one-year "freeze" on farm price supports, despite

President Eisenhower's implied threat that he will veto the legislation if it ever comes to him for his signature. Because the Senate---unlike the House---places no time limit on the freeze, the bill now goes back to the Senate for a reconciliation of this difference.

Vice President Nixon said today---in a news conference---that the American people "should make their plans on the assumption there is not going to be a depression." Mr. Nixon said a tax cut now would not "be timely." But, he said, it must be "one of the weapons in our arsenal." Taxes will be cut "if and when" it may become necessary. Nixon urged support for the Administration's mutual security program. He said thtt unless this program is supplemented by the funds asked for by President Eisenhower, the 44-billion-dollar defense budget will be "wasted." He said, "The money we spend in the mutual security field is really aid to ourselves. If the time comes when it doesn't meet that test, then I think we should reduce it."

The State Department today issued a statement...saying this country still awaits Russia's reply to the American note of March 6th. In that note the United States asked Russia bluntly whether it wants a summit meeting which would be only a "spectacle," or a meeting which would result in "meaningful decisions." Under the circumstances, the State Department said, it would be "premature" to deal with such matters as time, place and composition of either a foreign ministers meeting or a summit conference.

Russia has sent West Germany a new memorandum, reiterating its position that German reunification is not a subject which can be taken up in any summit talks. The Soviet memorandum says, "The German problem cannot be solved by anyone save the interested parties"---namely, the East and West German governments.

Chancellor Adenauer told the West German parliament today that West Germany will accept tactical nuclear weapons. "Why," he asked, "are atomic weapons harmless in the hands of the Russians and dangerous in the hands of the

West?" Adenauer warned that if West Germany---"an important segment of NATO" does not possess nuclear armaments, then (in his phrase) "NATO is reduced to insignificance."

President Bourguiba of Tunisia told his people today to have patience---that he is confident French troops will leave Tunisian soil. Bourguiba spoke on the second anniversary of independence from France. It was a moderate speech. He said Tunisia is "happy" to recognize the role of the Anglo-American good offices mission. It has helped, he said to avoid "an aggravation of a crisis which could have degenerated into open conflict." Tunisia, he said, has chosen to stay with the West.

The Bank of England today reduced its interest rate to six percent. The rate had been raised to seven percent only last fall, as an anti-inflationary measure. The British move fits the lower credit pattern being followed in other countries, including the United States.

Here in the United States, the eastern seaboard from Virginia to New England has been hit with the last heavy snowfall of winter...with gale warnings posted all along the coast. Thousands of homes in Southern New Jersey, Eastern Pennsylvania and the Washington area are without electricty---wires snapped by the wet, heavy snow. Washington has at least 10 inches. Up to 20 inches has fallen in the Philadelphia area, and snow two feet deep is reported from Baltimore. Air and railroad traffic in the storm area is badly crippled.

The orbiting of the earth satellites was an item on the program of the International Geophysical Year. Since some people regard it as the most significant achievement of this generation, it is well to see how the scientists of the project propose to follow it up. Their plans and ideas are set forth by the Earth Satellite Panel of the United States Committee for the International Geophysical Year, in a report summarized in today's New York Times.

The next stages of outer space research will be relatively modest, and the cost is unofficially estimated at around 750 million dollars in five years.

A great deal has to be learned before manned space-vehicles can investigate the conditions on the moon and the nearby planets. But this is the ultimate objective, and the panel has no doubt it can be done. It declines to predict how quickly, but the report says that the inevitable culminiation of these efforts "will be manned space flights, and man's landing on the nearer planets. It is clear" it says, "that he can develop the ability to do this, and it is hard to conceive of mankind stopping short when such a tempting goal is within reach."

The report admits that it isn't quite rational for human beings to do the space exploration in person. They can devise flying vehicles equipped with all the instruments needed for "sensing" what the planets are like. These vehicles will be able to crawl along the face of the visited planets. They can measure, touch, look and listen to everything, and report back to earth all the impressions gained. These would be remotely controlled robots, and they could be abandoned without a qualm when they ran out of fuel or broke down.

But the panel is not too greatly impressed by its own argument for exploration by robots alone. There may be a point, the report says,at which the complexity of the machine becomes intolerable and a man is found to be more efficient and reliable, add above all, more resourceful, when unexpected obstacles arise. "It is in a sense an article of faith" says the report, "that man will be required to do the job of cosmic exploration himself, whether required to or not."

This argument is over the ultimate drama. The work immediately ahead is less spectacular. First must come biological experiments with cosmic rays and solar radiation on life. Then there must be more information about the effect on living things of weightlessness out beyond the gravitational pull. More accurate measurements of length have to be developed. We must first learn about the moon. We do not know with ultra-precise accuracy how much it weighs, and so cannot be dead-sure of the course of a space vehicle that draws near to it.

We do not know if it has a magnetic field. We are sure it does not have an atmosphere, but suspect that gases lie on its surface that have leaked from the interior.

We can learn about the moon by hitting it with a rocket, and studying its trajectory. We can put a satellite into orbit around the moon to report back data from its instruments. And we can devise something that lands on it.

After the moon, Mars and Venus beckon. Getting to them would be no great problem if we can reach the moon.

The problem of placing instruments on Venus and Mars is similar to placing them on the moon. But some more distant planets have no inner cores to land on, and the examination will have to be done by designing an instrument carrier that can float in their gaseous envelope like a balloon.

While some men speculate and plan about outer space, other restless minds still work on the old problem of navigating the oceans. A British firm is designing an atomic-powered submarine - an oil tanker - with a displacement as large as the Queen Elizabeth, the largest ship now afloat. The chairman of the company which builds atomic reactors says the vessel will be faster and more powerful than any ocean-going vessel now afloat. It could cross the ocean, submerged, with no human being aboard, steered and navigated by automation. It would travel at almost sixty miles an hour, submerged - faster than a destroyer. Under normal operating conditions this giant submarine-tanker would carry a crew of five. It ought to be fairly easy to arrange communications between the men on the moon and the men in the submarine, but the question would remain: what would they talk about?

This is Ed Murrow. I'll be back in a moment with the word for today. Now, here is George Bryan.

GEORGE BRYAN: COMMERCIAL

MURROW: One is reminded continually of the potential of the atom for both good

and bad. A New York Times editorial expressed it well when it said, "The main question about the atom is simple indeed---Does it stand for twilight or for dawn?" As Dr. Wendell Stanley, the Nobel Prize-winning scientist has observed, "The choice is ours---yours and mine."

Goodnight and good luck!

Edward R. Murrow Fri., March 21, 1958

This is the news:

The government announces that, despite the recession, living costs in February reached a new record high. / The increase over January amounted to two-tenths of one percent. / This is the sixteenth time in eighteen months that the cost-of-living index has risen to a new peak. And again the rise is due primarily to higher prices charged for food. Food, on the average, now costs four and a half percent more that it did a year ago. / Service costs also continue to rise. / The commissioner of labor statistics, Ewan Clague, says that durables (such as cars and electrical appliances) ~~dummy~~ and soft goods (such as clothes) have begun to respond to the generally depressed economy. / But he sees no appreciable decline in

→

the over-all cost of living in the months immediately ahead. /Democratic Leader Johnson told the Senate this news "accentuates" the urgency of the unemployment situation. /Johnson said, "Under any circumstances unemployment is cruel." But rising prices in the midst of a recession, he said, is "cruelty compounded." He called for "rapid action" to put unemployed persons back to work.

The Republican national chairman, Meade Alcorn, today accused the Democrats of "playing politics" with unemployment. /The Republicans, Alcorn said, "refuse to spread fear and panic." /Instead, he said, they quietly loosen credit, encourage enterprise, and carry out a solid program to accelerate spending only for things the country needs. /Alcorn said, "We don't hand our grandchildren a billion-dollar bill for 1958 leaf-raking." Democratic Senator Humphrey of Minnesota replied in a speech on the Senate floor...charging that the Administration had to be "coaxed" into action. /That this should have had to be done, he said, was "nothing less than shocking."

The Senate today approved...and sent to the White House...a one-year freeze on farm price supports. The vote was 48 to 32---less than the

→

two-thirds majority required to override a presidential veto./ Supporters of the measure call it an anti-recession move, arguing that it would prevent farm income from being reduced by half a billion dollars. President Eisenhower has backed Secretary Benson's plan for lower, flexible supports, and a veto is expected./ Thirteen Republicans today joined 35 Democrats in approving the freeze measure, which also bans the lowering of acreage allotments./ All the Republicans who voted for the bill in defiance of the Administration are from farm states. Tonight, Secretary Benson went ahead anyway...and ordered dairy supports cut, effective April first.

The Senate today also passed...and sent to the White House...the first regular money bill to clear Congress at this session---a measure carrying 4-billion dollars for the Treasury and Post Office Departments./ The House Appropriations Committee voted six and a half billion dollars for running more than a dozen government agencies. The committee gave President Eisenhower 600-million dollars more than he requested for these agencies./ And it wrote into the bill a direct appropriation of 177-million dollars for the construction of 66 public buildings. Democratic members of the committee overrode Republican opposition and stipulated

→

that the buildings are not to be put up by private investors under the government's "lease-purchase" program.

President Eisenhower today discussed the economic situation with his cabinet...at a meeting that lasted more than two hours. /News Secretary Hagerty announced that Mr. Eisenhower will fly to Augusta tomorrow for a week-end of golf. This morning---because of bad flying weather--- the President cancelled a trip he was to have made today to West Point. Mr. Eisenhower was scheduled to attend Founder's Day exercises at "The Point"... and present an award to Dr. Ernest Lawrence, inventor of the cyclotron, for his "material contribution" to the development of the electro-magnetic method of separating uranium isotopes. /The citation, which the White House telephoned to West Point, said Dr. Lawrence had helped the nation and "all humanity".

The snow storm which disrupted the President's plans is abating. The storm which hit ~~eight~~ THE eastern states, from Virginia to Maine, caused more than 40 deaths---many of them due to traffic accidents. /Up to three feet of snow fell in Eastern Pennsylvania, and Governor Leader of Pennsylvania declared "a state of extreme emergency." /At the peak of the storn, 400-thousand homes in Philadelphia were without electricity.

→

Many of them without heat. High-powered electric lines...snapped by the heavy snow...lay across streets and sidewalks, and Governor Leader directed all state agencies to cooperate with public utility companies in efforts aimed at the restoration of essential service./ That service is being restored, and similar emergency crews are at work in Washington and Baltimore and numerous other communities. /At one time, more than a million homes and business establishments were without power, and the American Telephone and Telegraph Company says some 300-thousand telephones in the area also were knocked out. /Schools were closed throughout most of the area, and transportation crippled. ~~Eight hundred persons...marooned for 24 hours in a restaurant on the Pennsylvania Turnpike...have been relieved by bulldozers that cleared the way through huge drifts.~~

The Atomic Energy Commission tonight announced that the Russians have conducted two more nuclear tests./ The first explosion occurred yesterday, at the usual Siberian testing ground, and the second today, north of the Arctic Circle./ According to the A.E.C., the "energy yield" of the first blast was small. But the other, it says, was "in a larger range."

Edward R. Murrow: March 21, 1958. 7.45 p.m.

The Communist high command in Yugoslavia -(which means Marshal Tito)- has sent a letter to all Party members in that country./ For many reasons it is a fascinating document. It might well have been written, not by Tito, but by his former comrade Milovan Djilas. But Djilas couldn't have written it, because he's now doing a three-year stretch in jail, for having heretical ideas - publishing a book called "The New Class". / Djilas accused the whole communist apparatus of bureaucracy, special privileges, favoritism, chauvinism and disorganization. Now Tito's letter does the same thing. In some cases in even stronger language. But there is one crucial difference between the charges made by the outcast prisoner Djilas, and those made by the Tito hierarchy. And this difference is the real reason why Djilas is in jail. He criticized the whole kit and caboodle - all strata of the new communist class from top to bottom. He contended that the top men in the Party merely carried out greater exploitation than those in the lower echelons, who received only crumbs from the tables of the big boys in the Party. But the Tito letter, while making the same charges, puts the whole blame on the minor officials, local administrators - factory directors, regional secretaries, and so forth.

The most revealing thing about this situation of the big boys blaming everything on the small fry, and absolving themselves of any possible guilt, is that Djilas spells it all out in his book. He says that "the absence of moral standards is embedded in the communist system, in which almost anything is permitted at the top - the upper circles - while the same things are condemned if they are practised at lower echelons - the lower circles.

Djilas wrote that country homes, the best housing, furniture, special quarters and exclusive rest homes were established for the highest bureaucracy, for the elite of the new class; those beneath were eligible for comparable privileges, depending upon their position in the hierarchy.

The Tito letter says: "Here are a few ways in which privileges were reflected: the purchase of luxurious cars -- the use of these cars for private purposes -- unnecessary, frequent and unjustified spending of money for buying gifts; the use of privileges in rest homes -- the acquiring of the best housing."

On the subject of bureaucracy, Djilas found that this existed everywhere in the communist system. The Tito letter says that the roots of bureaucracy were long ago cut at the center, but have increased on all

the lower levels. It claims that this lower-level bureaucracy has been encouraged by de-centralization. Djilas wrote: "De-centralization in the economy does not mean a change in ownership, but only gives greater rights to the lower strata of the bureaucracy."

Tito and his group have had to act against the lower strata, which has put its own interests above everything else in order to preserve the Party in its ruling role. Djilas foresaw this when he wrote: "The Party makes the new class, but the class grows stronger while the Party grows weaker. This is the inescapable fate of every communist party in power."

The Tito letter says: "New regulations have to be worked out at the center" to curb these privileges for the lower classes." However, it does not say anything about curbing the privileges at the center, that is at the top.

The Tito letter admits that serious errors have been made in the distribution of bonuses. "Certain high leaders have received high bonuses, which is untenable and also politically harmful." Djilas wrote that long ago, and that's another reason he's in jail.

The Tito letter to his fellow-communists discovers that the cult of personality is not dead in Yugoslavia, but of course it is only the little

local communists who are guilty of it. Tito himself is not mentioned as a "personality."

This Tito letter is a remarkable and revealing document. He can no longer appeal for national unity on the basis of opposing Stalin. He says he is not an enemy of Russia or of the West, but now he has apparently discovered a new enemy -- the lower ranks of his own communist party. Before long Tito may find another external enemy. / His government today protested to the Italian Government about the establishment of NATO rocket bases on Italian soil, and also announced that it is deeply concerned about the possibility of nuclear arms being supplied to the West German Army.

Djilas is in jail, but if they let him read he at least has the satisfaction of knowing he was right.

Back in a moment.

George Bergan

Word for Today

Tito and Djilas are criticizing their special brand of Communism from two different points of view, according to their prejudices. To a curious extent, they agree. And yet they disagree. H.L. Mencken once said, "Like all other forms of theology, Communism runs around on the fact that there are frequent bitter rows between its prophets."

Goodnight and good luck!

March 21

Rom Tighe, Jack Sloezum, Brothers---

Herewith, schedule of pipings ordered for Murrow show Monday:

8:15 a.m.-----Jack Beck, KNX
11:30 a.m.---Bill Sheehan, WJR
3 p.m.--------Charles Ashley, WEEI

These pieces are for broadcast on Tuesday, and will need to be put together in following order, with leader between---Boston, Detroit, Los Angeles---and piped down to Washington Tuesday forenoon or afternoon. If any trouble, you can reach me through Washington newsroom. Sorry to leave you this chore. And many thanks.

Ed Bliss

P.S. Might double-check Traffic on Monday morning to see if orders for Sheehan and Ashley all set. And, of course, would appreciate knowing earliest if Leiser comes through on Monday from Bucharest. Merci bien.

B.

Djilas is in jail, but if they let him read he at least has the satisfaction of knowing he was right.

This is Ed Murrow. I'll be back in a moment with the word for today. Now, here is Geor ge Bryan.

GEORGE BRYAN: COMMERCIAL

MURROW:Tito and Djilas are criticizing their special brand of Communism from two differenct points of view, according to their prejudices. To a curious extent, they agree. And yet they disagree. H.L. Mencken once said, "Like all other forms of theology, Communism runs around on the fact that there are frequent bitter rows between its prophets."

Goodnight and good luck!

Edward R. Murrow Mon., March 24, 1958

This is the news:

Russia charged tonight that the United States apparently is trying "to take the entire problem of a summit conference back to the starting point." The charge is part of Russia's answer to the American request...of March 6...that Soviet leaders define the kind of summit conference they want. The United States asked the Russians if they wanted "merely a spectacle", or did they want a serious meeting aimed at reaching "meaningful decisions?" The Russian answer---broadcast tonight by Moscow radio---says it is "surprising" that the United States "allows the possibility" of

→

of a summit meeting "being turned into a kind of theatrical performance."/"Some Western circles", it said, seem to be trying to "smear" the idea of a conference./ And it denied that Russia [redacted] wants [redacted] the right of veto, in determining the issues to be taken up at a meeting of heads of [redacted] government.

Washington.

Here in Washington today, Soviet Ambassador Menshikov called briefly at the State Department for what he termed a "routine" conference. "For the time being," he told reporters, "there is nothing to say."

President Eisenhower met with the National Security Council this afternoon to receive a special report, the nature of which was not disclosed. News Secretary Hagerty did say the report had no bearing on a possible summit meeting.

Secretary of State Dulles today defended the American program of aid to neutral countries like India...and to Communist countries like Poland and Yugoslavia. Dulles was testifying before the Senate Foreign Relations Committee. The United States helps Poland, he said, not because we like everything that goes on there, but because Poland has "a measure of independence", and America encourages independence from Russia everywhere it can. He said, "If Yugoslavia

→

were reduced again to complete dependence on Moscow, all of us would lose." And he warned that if India should lose its independence, the result would be "a blow to freedom, comparable to the blow which occurred when the Communists took over the mainland of China." Democratic Senator Fulbright suggested that there is too much emphasis on the military assistance phase of the aid program, "especially in such countries as Pakistan." Democratic Senator Kennedy shared this view. And the necessity of military aid to the Latin American countries also was questioned. Dulles said that, each year, the over-all percentage of military aid is being reduced. But, he said, this is not "just a military problem---you have got to take into account the feelings of the people and the governments involved." Mr. Dulles also had a prepared statement, in which he said:

(Tape runs 2 minutes, 10 seconds
Ends on cue: "---as well as to endanger
our security."

Under-secretary of State Dillon told the House Ways and Means Committee today that a five-year extention of the Reciprocal Trade Act is needed to meet Russia's economic offensive. Dillon said industrial production in Russia is growing at a rate of 10 percent a year, compared to 4 percent for the United States. What the Russians are aiming at, he said, is to make other countries dependent, economically...on the Soviet bloc. He warned that the challenge cannot be met by a "standstill policy on our part."

United Nations Secretary General Hammarskjold conferred in Moscow today, for two hours, with Nikita Khruchchev. Dispatches from Moscow say that "presumably" they discussed the deadlock on disarmament.

A shift of power in Saudi Arabia has Crown Prince Faisal gaining authority at the expense of King Saud, his eldest brother and---until now---absolute ruler of that Arab state. / Prince Faisal is pro-Egyptian. / The Saudi delegation at the United Nations confirms that, henceforth, Faisal will be premier and foreign minister in fact, as well as in name, and that he will have full charge of the armed forces. / Saud, who has supported United States policy in the Middle East, stays on as head of state...but with his authority sharply reduced. President Nasser has accused Saud of trying to block the merger of Egypt and Syria last month.

Cairo reports say Nasser fired General Bizri, commander of Syrian Army forces, [illegible] because Bizri refused to get rid of officers understood to be pro-Communist. So far, no successor to Bizri has been announced.

The executive committee of the AFL-CIO tonight called for an immediate tax cut of at least 6-billion dollars to help end the recession. The committee said the "bulk" of the cut should be concentrated among persons with taxable income of less than 5-thousand dollars. But it also called for a sharp cut in the excise taxes on electrical appliances and automobiles. The economic signposts, it said, show a "worsening" situation.

The Senate Rackets Committee today praised the AFL-CIO for the disciplinary action it took in ousting the Teamsters and Bakery Workers unions on corruption charges. The committee's expression of "deep satisfaction" was contained in a 12-thousand-word interim report on its first year of operation. In addition to the Teamsters and Bakery Workers, the report covers the committee's investigation of the United Textile Workers, the Allied Industrial Workers and the Operating Engineers. According to the report, the investigations showed that some 10-million dollars in union funds had "either been

→

stolen, embezzled, or misused" by top union officers in a period of 15 years. The committee also accused employers in seven states of "union busting" activities. But one member of the committee---Democratic Senator McNamara---said too much of the report read like "a blanket indictment of the labor movement." Legislative reforms...called for in the report...parallel those requested by President Eisenhower.

The civil war in Indonesia continues. But the California-Texas Oil Company was able to resume operations in Central Sumatra today, after a shutdown of two weeks.

And in the south of France, Sir Winston Churchill is reported "past all immediate danger" after a slight relapse.

EDWARD R. MURROW WITH THE NEWS

Monday, March 24, 1958
7:45 - 8:00 P.M.

MURROW: ... Mr. Dulles also had a prepared statement, in which he said:

SEC. DULLES: I think, however, we should bear in mind three things: First, this is no give-away program but an absolutely essential part of our great national effort to maintain peace and opportunity for our country. Not to have this program would be a give-away; we would then indeed give away to communism the control of a dozen or so nations, with their hundreds of millions of people; we would indeed then give away (indistinct) essential to our national peace and security and we would, indeed, give away the access which we and other nations have to essential resources and to trade upon which our well being depends. Second, unquestionably, we all wish for additional roads, schools, reclamation projects and other facilities here at home. But we will gain little and lose much if in our drive for them we recklessly tear down the very structure of the free world which makes it possible for us to enjoy in peace and freedom the material blessings we now have. Third, although the fundamental purpose of this program is to provide for the international security of our nation, our families and ourselves, it has added value of special significance now. Its effect is to counter the domestic economic recession. The great bulk of our mutual security funds - over three-fourths - are spent in the United States in the first instance. And one of the studies made for you last year showed, in 1955, for example, some 600,000 jobs were provided by the program for American farmers and workers. The remainder - not initially spent here in the United States, after aiding the economy of one of our allies - returns here sooner or later to be spent, and it mostly returns sooner, almost at once, to be spent in the United States for the products of United States industries and agriculture. To cut these funds would be to cut employment here at home,

as well as to endanger our security.

Murrow: ... A CBS News correspondent has gone to Communist Romania, and today for the first time since World War II, Americans are allowed to broadcast from there - and so we switch to Ernest Leiser in Bucharest.

LEISER: A ray of economic daylight at last appears to be penetrating the long Balkan nights in Romania. That's the first and strongest impression, Ed, that a reporter gets on a visit to this remote corner of Communist Europe. All observers the - both hostile Western diplomats as well as the most enthusiastic party propagandists - all observers agree that there has been a very marked improvement in the quantity and quality of consumer goods available in Romania and that the progress has mostly come just in the last year or so. There's more and better clothing here; there's a considerably greater variety of foods available. For the first time in Romania, really, early large-scale construction of housing is underway. Bucharest was little damaged by the way. But with the push into the city, then into industry, its post-war population shot up from 750,000 to more than a million-and-a-quarter. With people huddled together - often a family to a room - housing conditions have been worse here than in almost any other Communist capital. But now at last a real effort is being made to build.

Romania is still not precisely an economic Garden of Eden. With the list price of a little Soviet-built Muskevich car, set at nearly five years' pay for an average factory worker, with bicycles costing a month's pay, there aren't any cars or even very many bicycles around. And you can still see people queuing up here even for some of the necessities, decent meat for example is in intermittent short supply. But the important factor is that of substantial improvement over a short enough time so that the Romanians have been able to notice and appreciate it.

Not all the changes here have been economic. There's been a slight softening too, of the political line here; movement of people in and out is a little freer; and the movement of ideas is a little greater. One small sign of change is this broadcast. This is the first time since the war that a correspondent for a U.S. radio network has been able to broadcast from Bucharest. And by Romanian standards, there's been a virtual invasion of American reporters. Six of us have been here in the past few weeks. There seems generally some greater willingness nowhere for two-way contact with the West. But the political changes have been marginal at the most, and there's been no relaxation of Communist discipline here, which is every bit as rigid as it is in Moscow. The chief transformation is in the economic look. And what seems especially interesting about this "new look" is that it is by no means confined in the Communist bloc to Romania. Last week I passed through Hungary; and in Budapest there's a striking improvement over 1956, if you judge by what's in the stores and what people can buy in the stores. Six weeks ago I was in Poland, and I could notice improvements there too, though on a lesser scale. And in East Germany, three weeks ago, the people were noticeably better dressed and the shops better stocked.

There seems to be a concerted effort - perhaps there's been a concerted decision by the (indistinct) countries of the Soviet Union to direct substantially more of their production to the things that make daily living easier and more pleasant. In post-revolution Hungary, the increased attention to consumer goods has clearly been the (indistinct) techniques of control. Here in Romania, the improvement also dates from the Hungarian uprising. Although by no means all the old Balkan hands here are sure that Hungary (indistinct) for what's happening in Romania. There are some who feel that this country's industrial (indistinct) its oil, its new gas and chemical industries, its steel has broadened enough so that the country's

Communist directors feel that they can afford to sweeten life a bit and that Moscow is either permitting or encouraging them to do so.

Whatever the reason, the change itself may be of almost as much interest to us as it is for the people in these parts. To date, much of our propaganda has pointed up the abject poverty that has accompanied communism in the countries of Eastern Europe. But now although they're still not living high off the hog, they're beginning to live better. The transformation, Ed, may force us to transform the way we think and act about these distant Soviet borderlands.

This is Ernest Leiser in Bucharest. Now, back to Edward R. Murrow in Washington.

Ed. trans. P. O.

EDWARD R. MURROW WITH THE NEWS
CBS RADIO NETWORK

MONDAY, MARCH 24, 1958
7:45 - 8:00 PM EST

This is the news:

Russia charged tonight that the United States apparently is trying "to take the entire problem of a summit conference back to the starting point." The charge is part of Russia's answer to the American request...of March 6... that Soviet leaders define the kind of summit conference they want. The United States asked the Russians if they wanted "merely a spectacle" or did they want a serious meeting aimed at reaching "meaningful decisions?" The Russian answer---broadcast tonight by Moscow radio---says it is "surprising" that the United States "allows the possibility" of a summit meeting "being turned into a kind of theatrical performance." "Some Western circles" it said, seem to be trying to "smear" the idea of a conference. And it denied that Russia wants the right to veto, in determining the issues to be taken up at a meeting of heads of government.

Secretary of State Dulles today defended the American program of aid to neutral countries like India...and to Communist countries like Poland and Yugoslavia. Dulles was testifying before the Senate Foreign Relations Committee. The United States helps Poland, he said, not because we like everything that goes on there, but because Poland has "a measure of independence," and America encourages independence from Russia everywhere it can. He said, "If Yugoslavia were reduced again to complete dependence on Moscow, all of us would lose." And he warned that if India should lose its independence, the result would be "a blow to freedom, comparable to the blow which occurred when the Communists took over the mainland of China."

Mr. Dulles also had a prepared statement, in which he said:

SEC. DULLES: I think, however, we should bear in mind three things: First, this is no give-away program but an absolutely essential part of our great national effort to maintain peace and opportunity for our country. Not to have this program would be a give-away; we would then indeed give away to communism the control of a dozen or so nations, with their hundreds of millions of people; we would indeed then give away (indistinct) essential to our national peace and security and we would, indeed, give away the access which we and other nations have to essential resources and to trade upon which our well being depends. Second, unquestionably, we all wish for additional roads, schools, reclamation projects and other facilities here at home. But we will gain little and lose much if in our drive for them we recklessly tear down the very structure of the free world which makes it possible for us to enjoy in peace and freedom the material blessings we now have. Third, although the fundamental purpose of this program is to provide for the international security of our nation, our families and ourselves, it has added value of special significance now. Its effect is to counter the domestic economic recession. The great bulk of our mutual security funds - over three-fourths - are spent in the United States in the first instance. And one of the studies made for you last year showed, in 1955 for example, some 600,000 jobs were provided by the program for American farmers and workers. The remainder - not initially spent here in the United States, after aiding the economy of one of our allies - returns here sooner or later to be spent, and it mostly returns sooner, almost at once, to be spent in the United States for the products of United States industries and agriculture. To cut these funds would be to cut employment here at home, as well as to endanger our security.

MURROW: United Nations Secretary General Hammarskjold conferred in Moscow today, for two hours, with Nikita Khrushchev. Dispatches from Moscow say that "presumably" they discussed the deadlock on disarmament.

A shift of power in Saudi Arabia has Crown Prince Faisal gaining authority at the expense of King Saud, his eldest brother and----until now----absolute ruler of that Arab state. Price Faisal is pro-Egyptian. The Saudi delegation at the United Nations confirms that henceforth, Faisal will be premier and foreign minister in fact, as well as in name, and that he will have full charge of the armed forces. Saud, who has supported United States policy in the Middle East, stays on as head of state...but with his authority sharply reduced. President Nasser has accused Saud of trying to block the merger of Egypt and Syria last month.

The executive committee of the AFL-CIO tonight called for an immediate tax cut of at least 6-billion dollars to help end the recession. The committee said the "bulk" of the cut should be concentrated among persons with taxable income of less than 5-thousand dollars. But it also called for a sharp cut in the excise taxes on electrical appliances and automobiles. The economic signposts, it said, show a "worsening" situation.

The Senate Rackets Committee today praised the AFL-CIO for the disciplinary action it took in ousting the Teamsters and Bakery Workers unions on corruption charges. The committee's expression of "deep satisfaction" was contained in a 12-thousand-word interim report on its first year of operation. In addition to theTeamsters and Bakery Workers, the report covers the committee's investigation of the United Textile Workers, the Allied Industrial Workers and the Operating Engineers. According to the report, the investigations showed that some 10-million dollars in union funds had "either been stolen, embezzled, or misused" by top union officers in a period of 15 years. The committee also accused employers in seven states of "union busting" activities. But one member of the committee---Democratic Senator McNamara---said too much of the report reads like "a blanket indictment of the labor movement."

And in the south of France, Sir Winston Churchill is reported "past all immediate danger" after a slight relapse.

A CBS News correspondent has gone to Communist Rumania, and today---for the first time since World War Two---Americans are allowed to broadcast from there. And so we switch to Ernest Leiser in Bucharest.

LEISER: A ray of economic daylight at last appears to be penetrating the long Balkan nights in Rumania. That's the first and strongest impression, Ed, that a reporter gets on a visit to this remote corner of Communist Europe. All observers the - both hostile Western diplomats as well as the most enthusiastic party propagandists - all observers agree that there has been a very marked improvement in the quantity and quality of consumer goods available in Rumania, and that the progress has mostly come just in the last year or so. There's more and better clothing here; there's considerably greater variety of foods available. For the first time in Rumania, really, early large-scale construction of housing is underway. Bucharest was little damaged by the way. But with the push into the city, then into industry, its post-war population shot up from 750,000 to more than a million-and-a-quarter. With people huddled together - often a family to a room- housing conditions have been worse here than in almost any other Communist capital. But now at last a real effort is being made to build.

Whatever the reason, the change itself may be of almost as much interest to us as it is for the people in these parts. To date, mouh of our propaganda has pointed up the abject poverty that has accompanied communism in the

countries of Eastern Europe. But now although they're still not living high off the hog, they're beginning to live better. The transformation, Ed, may force us to transform the way we think and act about these distant Soviet borderlands.

This is Ernest Leiser in Bucharest. Now, back to Edward R. Murrow in Washington.

MURROW: That was Ernest Leiser, reporting his impressions of Rumania in one of the first broadcasts from that satellite country since the war. This is Ed Murrow. I'll be back in a moment with the Word for Today. First, here is George Bryan.

GEORGE BRYAN: COMMERCIAL

MRRROW: My colleague Ernest Leiser...together with several other American network correspondents...are making their first broadcasts from Communist Rumania in thirteen years. One recalls the reference Schiller once made to "the slow, silent power of time." But more than time is involved here. Rumania's leaders would agree with Alexander Pope, who said: "What war can ravish, commerce can bestow."

Goodnight and good luck!

Edward R. Murrow Tues., March 25, 1958

This is the news:

President Eisenhower today sent Congress a special message, requesting authority to use federal money to "stretch out" the period in which unemployment compensation may be paid. / Various states... on the average...now pay unemployment benefits for 26 weeks. / The President would extend these varying periods---whatever they are--- by 50 percent. / And he estimates that doing this will cost the Federal Government between 500 and 600 million dollars. / The program, as outlined by Mr. Eisenhower, would run until April, 1959. The states would start reinbursing the government---without interest---four years after that date.

Senator Knowland said today...after ~~a meeting of~~ Republican congressional leaders met with the President...that legislation to speed up Federal Government spending in all fields will go to Congress in the next few days.

Senate Republicans voted this afternoon to ask President Eisenhower to sign the Democratic sponsored legislation "freezing" farm price supports for one year. The vote by the Senate Republican Policy Committee was close---17 to 14. Mr. Eisenhower has indicated he would veto the measure, calling it "a 180-degree turn in the wrong direction." He agrees with Secretary Benson that price supports on certain farm products should be reduced. (The bill is now on the President's desk).

The House today passed...and sent to the Senate...a measure to increase the pay of most members of the armed forces. The bill is designed...especially...to retain skilled personnel.

And the House Appropriations Committee today approved the

allotment of nearly 3-billion dollars, for running the Labor and Welfare Departments in the next fiscal year. / The committee said that because of the economic situation, more money will be needed.

Secretary of State Dulles today again urged Russia to negotiate a possible summit meeting, through confidential diplomatic channels, and not through "public note-writing". / At his news conference, Mr. Dulles deplored the "tone" of the latest Russian note...and said that if it were a preview of what to expect at the summit, then it would be better to forget about holding such a conference. / He read a prepared statement, setting forth the "very high political price" that Russia is demanding...and which, he said, the United States is not prepared to pay. / Mr. Dulles spoke forcefully when a reporter asked whether a meeting at the summit...on Russia's terms...would represent a "spectacle". / Dulles said such a meeting would be "something much worse than a spectacle." "It would mean," he said, "that on the way to the summit, we would have lost our shirt."

In Moscow tonight, a banquet was held in the Kremlin...in honor of United Nations Secretary General Hammarskjold./ But a Moscow broadcast, listing the names of top Soviet officials on hand, ommited the name of Premier Bulganin./ No reason was given for Bulganin's absence. But there has been speculation---not confirmed in Moscow---that he may soon resign.

The West German Parliament tonight approved the arming of West German troops with atomic weapons./ The approval...by a show of hands shortly before midnight, Bonn time, climaxed four days of marathon debate. Socialist Party Leader Ollenhauer has not given up his fight against the measure. He says he will bring in a bill, calling for a national referendum on the atomic issue.

In Indonesia today, leftist students demonstrated in front of the American Embassy...demanding that the United States prevent American-made arms from reaching the rebel forces on Sumatra. U.S. Ambassador Howard Jones, said he would do what he could, but he pointed out that American arms can be bought anywhere on the international market.

A month ago, President Eisenhower "hoped" that March would mark the beginning of the end of the recession---that there would be more "job opportunities". I have asked three of my colleagues---in New England, in Detroit (the "capital" of the automotive industry), and on the West Coast---to report ~~for this program~~ OK the economic situation in their respective areas, as of this third week of March. First, Charles Ashley reporting from Boston.

PICK UP HERE

Tape runs 1:50, ends on cue, "to Ed Murrow in Washington."

An important barometer for the nation's economy is the production and sale of automobiles. For that story, we switch to Bill Sheehan in Detroit.

Tape runs 2:10, ends on cue, "to Ed Murrow in Washington."

Next, for a report on how the recession came to the West Coast, and the outlook for the future, here is Jack Beck.

Tape runs 2:00, ends on cue, "to Ed Murrow in Washington."

These reports---from Boston, Detroit, and Los Angeles---cannot pretend to be a complete survey of the economic situation today in the United States. They do indicate ~~we have a~~ the magnitude of the problem.

This is Ed Murrow. I'll be back in a moment with the Word for Today. First, here is George Bryan.

Word for Today

The experts agree that the economy is not well, but they disagree on what to prescribe...and when to prescribe it. Some would argue, with Publilius Syrus, that there are remedies worse than the disease. But others would cite the old Latin proverb, which says, "Even a doubtful remedy is better than none at all."

Goodnight and good luck!

CBS RADIO DIVISION

EDWARD R. MURROW WITH THE NEWS

Tuesday, March 25, 1958
7:45- 8:00 P. M.

E. R. MURROW: A month ago President Eisenhower hoped that March would mark the beginning of the end of the recession, that there would be more job opportunities. I have asked three of my colleagues in New England, in Detroit - the capital of the automotive industry and on the West Coast to report on the economic situation in their respective areas. As of this third week of March. First, Charles Ashley reporting from Boston.

ASHLEY: The business slump here in New England reminds us of an old time favorite dish when times were tough, huckleberry slump. It was a ball of flour dough simmered in blueberries and water. A meal in itself and the more people you had to feed the more water you added. The recession is here - these are the facts. All business except the resort is down. Unemployment is very high, people are cautious and worried. More savings dollars are being put in the bank instead of on the counter. These are the figures. From the United States Department of Labor, New England division, unemployment insurance is being paid this week to more then one-quarter of a million New Englanders. That's an increase of 93% over last year. Connecticut is the state hardest hit with a jump of 180% in jobless benifits. But, that can be traced to the defense shift in orders. Maine is next with an increase of 125% as compared with 1957. Vermont next with 117% out of work. New Hampshire - 108%. Massachusetts up 73%. Rhode Island - 35%.

A Labor Department official who quoted us these figures said it's a serious situation because at this time of year, unemployment usually decreases here. Department store sales are down 1½%. The expected increase for the Easter season has failed to materialize. Some stores/owners told us they need a good Easter business or it's down the drain they

go. Equally pessimistic was the New Haven Railroad's President who said, "this is no recession - it's a real depression."

Now, back to Ed. Murrow in Washington.

E. R. MURROW: An important barometer for the nations economy is the production and sale of automobiles. For that story we switch to Bill Sheean in Detroit.

SHEEAN: The recession in Michigan has cut about twice as deep as it has through the nation as a whole. And, there are no signs that the recovery action will be anything approaching a dramatic spurt. This is not good news for the rest of the country because there is a direct relation between the automotive economy and the economy as a whole. Here are the statistics that illustrate Michigan's plight. The preliminary figures on March unemployment indicates 415,000 persons are out of work. That's 14% of the labor force. Passanger (indistinct) output - the week just ended was 38% under the same week in 1957. The industry has produced a half a million cars less - thus far this year compared with last. Despite these drastic curtailments at the assembly plants, dealers across the nation have nearly 900,000 cars on the shelf waiting for buyers who have not even responded to the year end bargains in the springtime. This is a better then two months supply and explains why even a spring pick-up in thedealerships will not set the production lines humming again. The automakers have lowered their production sites to something like 4.7 million - where they were talking about 5½ million not many months ago. Four million seven hundred thousand cars will be the lowest since 1952 when production was curtailed because of the Korean War. The Detroit Automobile Dealers Association this week is launching a big spring campaign with the slogan "auto by days, mean pay days." This will coincide with the nationwide advertising drive against recession which is being launched by the advertising council, which clings to the theory that there is plenty of money lying idle in

the banks if the consumers want to spend it the recession will evaporate. Walter Reuther doesn't see it that way. He says there is an imbalance that must be righted by giving workers more money. Toward that end, he sat down this morning with General Motors the first of the auto companies to talk contract. With 14% of the state's labor force out of jobs most of them auto workers, with production down to the lowest point in years and with 900,000 cars waiting for new owners neither the company nor the union is bargaining for maximum strength.

Now, back to Ed Murrow in Washington.

E. R. MURROW: Next, for a report on how the recession came to the West Coast and the outlook for the future, here is Jack Beck.

BECK: On the Pacific Coast we have the same economic riddle that's puzzleing observers in the national scene. Namely, rising living costs and declining business activity. The pattern of the economic slow down moved from north to south. It was just a year ago this mnth, that the first evidence of trouble was reported from the state of Washington. By summer, fruit growers in Oregon were reporting the lowest prices in 20 years for their products - the highest growing costs. Logging, usually a booming summer time industry in Washington and Oregon had a quarter of its labor force laid off and orders were down almost 10%. By late summer, defense spending cutbacks began to have their effects in California. Aircraft plants cut employment through the fall and beginning of this year, so that there are (indistinct) or 35,000 less people employed in this line then a year ago. Aircraft manufacture represents 25% of Southern California's economy but only 5½% of the states business. As Governor Knight pointed out over the weekend, California's position is anomalous indeed because of its growing population which is increasing 4% per year. At the same time, employment in California as of January is down 7% from a year ago. This is more then the national decline of 6 and 8/10%. There are currently an

estimated 449,000 unemployed in California. The outlook at the moment is uncertain. Governor Rosellini of Washington foresee's little or no improvement for his industries this year. He has proposed an increase in unemployment benifits, loosening of credit restrictions, (indistinct) that the highway oconstruction program may help. Oregon looks for an upturn in logging and outdoor construction to help the 73,000 unemployed there. Southern California where one-third of the Federal budget for missilesand rocket components are spent hopes the space race may aid the economy. This is qualified by the knowledge that it takes fewer persons to build rockets and aireraft and the money won't go as far. It costs more to hire Ph.D's then it did to employ Rosid the Riviter.

Back now to Ed Murrow in Washington.

E. R. MURROW: The necessarily brief reports ...

TUESDAY, MARCH 25, 1958
7:45 - 8:00 PM EST

This is the news:

President Eisenhower today sent Congress a special message, requesting authority to use federal money to "stretch out" the period in which unemployment compensation may be paid. Various states...on the average...now pay unemployment benefits for 26 weeks. The President would extend these varying periods---whatever they are---by 50 percent. And he estimates that doing this will cost the Federal Government between 500 and 600 million dollars. The program, as outlined by Mr. Eisenhower, would run until April, 1959. The states would start reinbursing the government---without interest---four years after that date.

Senator Knowland said today...after Republican congressional leaders met with the President...that legislation to speed up Federal Government spending in all fields will go to Congress in the next few days.

Senate Republicans voted this afternoon to ask President Eisenhower to sign the Democratic sponsored legislation "freezing" farm price supports for one year. The vote by The Senate Republican Policy Committee was close---17 to 14. Mr. Eisenhower has indicated he would veto the measure, calling it "a 180-degree turn in the wrong direction." He agrees with Secretary Benson that price supports on certain farm products should be reduced. (The bill is now on the President's desk).

The House today passed...and sent to the Senate...a measure to increase the pay of most members of the armed forces. The bill is designed...especially...to retain skilled personnel.

And the House Appropriations Committee today approved the allotment of nearly 3-billion dollars for running the Labor and Welfare Departments in the next fiscal year. The committee said that because of the economic situation, more money will be needed.

Secretary of State Dulles today again urged Russia to negotiate a possible summit meeting through confidential diplomatic channels and not through

"public note-writing". At his news conference, Mr. Dulles deplored the "tone" of the latest Russian note...and said that if it were a preview of what to expect at the summit, then it would be better to forget about holding such a conference. He read a prepared statement, setting forth the "very high political price" that Russia is demanding...and which, he said, the United States is not prepared to pay. Mr. Dulles said such a meeting would be "something much worse than a spectacle". "It would mean," he said, "that on the way to the summit we would have lost our shirt."

In Moscow tonight, a banquet was held in the Kremlin...in honor of United Nations Secretary General Hammarskjold. But a Moscow broadcast listing the names of top Soviet officials on hand ommited the name of Premier Bulganin. No reason was given for Bulganin's absence. But there has been speculation---not confirmed in Moscow---that he may soon resign.

The West German Parliament tonight approved the arming of West German troops with atomic weapons. The approval...by a show of hands shortly before midnight, Bonn time, climaxed four days of marathon debate. Socialist Party Leader Ollenhauer has not given up his fight against the measure. He says he will bring in a bill, calling for a national referendum on the atomic issue.

In Indonesia today, leftist students demonstrated in front of the American Embassy...demanding that the United States prevent American-made arms from reaching the rebel forces on Sumatra. U. S. Ambassador Howard Jones said he would do what he could, but he pointed out that American arms can be bought anywhere on the international market.

A month ago, President Eisenhower "hoped" that March would mark the beginning of the end of the recession---that there would be more "job opportunities". I have asked three of my colleagues---in New England, in Detroit (the capital of the automotive industry), and on the West Coast ---to report on the economic situation in their respective areas, as of this third week of March. First, Charles Ashley reporting from Boston.

ASHLEY: The business slump here in New England reminds us of an old time favorite dish when times were tough, huckleberry slump. It was a ball of flour dough simmered in blueberries and water. A meal in itself and the more people you had to feed, the more water you added. The recession is here - these are the facts. All business except the resort is down. Unemployment is very high; people are cautious and worried. More savings dollars are being put in the bank instead of on the counter. These are the figures. From the United States Department of Labor, New England division, unemployment insurance is being paid this week to more than one-quarter of a million New Englanders. That's an increase of 93% over last year. Connecticut is the state hardest hit with a jump of 180% in jobless benefits. But, that can be traced to the defense shift in orders. Maine is next with an increase of 125% as compared with 1957. Vermont next with 117% out of work. New Hampshire - 108%, Massachusetts up 73%, Rhode Island - 35%.

A Labor Department official who quoted us these figures said it's a serious situation because at this time of year, unemployment usually decreases here. Department store sales are down 14%. The expected increase for the Easter season has failed to materialize. Some store owners told us they need a good Easter business or it's down the drain they go. Equally pessimistic was the New Haven Railroad's President who said, "This is no recession - it's a real depression."

Now, back to Ed Murrow in Washington.

MURROW: An important barometer for the nation's economy is the production and sale of automobiles. For that story, we switch to Bill Sheehan in Detroit.

SHEEHAN: The recession in Michigan has cut about twice as deep as it has through the nation as a whole. And, there are no signs that the recovery action will be anything approaching a dramatic spurt. This is not good news for the rest of the country because there is a direct relation between the automotive economy and the economy as a whole. Here are the statistics that illustrate Michigan's plight. The preliminary figures on March unemployment indicates 415,000 persons are out of work. That's 14% of the labor force. Passenger (indistinct) output - the week

just ended was 88% under the same week in 1957. The industry has produced a half a million cars less - thusfar this year compared with last. Despite these drastic curtailments at the assembly plants, dealers across the nation have nearly 900,000 cars on the shelf waiting for buyers who have not even responded to the year-end bargains in the spring time. This is a better than two months supply and explains why even a spring pick-up in the dealerships will not set the production lines humming again. The automakers have lowered their production sights to something like 4.7 million - where they were talking about 5½ million not many months ago. Four million seven hundred thousand cars will be the lowest since 1952 when production was curtailed because of the Korean War. The Detroit Automobile Dealers Association this week is launching a big spring campaign with the slogan "auto buy days mean pay days." This will coincide with the nationwide advertising drive against recession which is being launched by the advertising council, which clings to the theory that there is plenty of money lying idle in the banks if the consumers want to spend it the recession will evaporate. Walter Reuther doesn't see it thay way. He says there is an imbalance that must be righted by giving workers more money. Toward that end, he sat down this morning with General Motors the first of the auto companies to talk contract. With 14% of the state's labor force out of jobs most of them auto workers, with production down to the lowest point in years and with 900,000 cars waiting for new owners, neither the company nor the union is bargaining from maximum strength.

Now, back to Ed Murrow in Washington.

MURROW: Next for a report on how the recession came to the West Coast and the outlook for the future, here is Jack Beck.

BECK: On the Pacific Coast we have the same economic riddle that's puzzling observers in the national scene. Namely, rising living costs and declining business activity. The pattern of the economic slow-down moved from north to south. It was just a year ago this month, that the first evidence of trouble was reported from the state of Washington. By summer, fruit growers in Oregon were reporting

the lowest prices in twenty years for their products - the highest growing costs. Logging, usually a booming summertime industry in Washington and Oregon had a quarter of its labor force laid off and orders were down ammost 10%. By late summer, defense spending cutbacks began to have their effects in California. Aircraft plants cut employment through the fall and beginning of this year, so that there are (indistinct) or 35,000 less people employed in this line than a year ago. Aircraft manufacture represents 25% of Southern California's economy but only 5½% of the state's business. As Governor Knight pointed out over the weekend, California's position is anomalous indeed because of its growing population which is increasing 4% per year. At the same time, employment in California as of January is down 7% from a year ago. This is more than the national decline of 6 and 8/10%. There are currently an estimated 449,000 unemployed in California. The outlook at the moment is uncertain. Governor Rosellini of Washington forsees little or no improvement for his industries this year. He has proposed an increase in unemployment benefits, loosing of credit restrictions, (indistinct) that the highway construction program may help. Oregon looks for an upturn in logging and outdoor construction to help the 73,000 unemployed there. Southern California where one-third of the federal budget for missiles and rocket components are spent hopes the space race may aid the economy. This is qualified by the knowledge that it takes fewer persons to build rockets and aircraft and the money won't go as far. It costs more to hire Ph.D's than it did to employRosie the Riviter.

Back now to Ed Murrow in Washington.

MURROW: These reports---from Boston, Detroit, and Los Angeles---cannot pretend to be a complete survey of the economic situation today in the United States. They do indicate the magnitude of the problem.

This is Ed Murrow. I'll be back in a moment with the Word for Today. First, here is George Bryan.

GEORGE BRYAN: COMMERCIAL

MURROW: The experts agree that the economy is not well, but they disagree on what to prescribe...and when to prescribe it. Some would argue, with Publius Syrus, that there are remedies worse than the disease. But others would cite the old Latin proverb, which says, "Even a doubtful remedy is better than none at all."

Goodnight and good luck!

Edward R. Murrow Wed., March 26, 1958

This is the news:

The United States has placed in orbit its third earth satellite. The "Explorer Three"...launched by the Army Jupiter-C vehicle today at Cape Canaveral...joins "Explorer One", launched by the Army in January, and "Vanguard One", put up later by the Navy. / The second Sputnik...put up by the Russians in November...also is circling the earth in outer space. / "Explorer Two" (which the Army launched three weeks ago) did not achieve orbit, because of failure of the fourth stage to ignite. / Today's launching was a qualified success. Because of deviation from the planned orbit, the "Explorer Three"

→

has a life expectancy officially described as "rather short". However, this life expectancy is being calculated in days---not hours--- and American scientists say that if the satellite lasts only two weeks, it still will be a success because of the information it will have relayed back to earth. The transmitting equipment in "Explorer Three" is "more sophisticated" than the equipment in "Explorer One". Dr. William Pickering says it will be able to provide five times as much information on cosmic rays.

President Eisenhower tonight made public what he termed "An Introduction to Outer Space", a 4-thousand-word study by his Scientific Advisory Committee of what may lie ahead. Among other things, the scientists estimate that to put a man on the moon---and bring him back---would cost about 2-billion dollars. (I'd like to discuss this scientific report further in a few minutes).

Mr. Eisenhower told his news conference today that he is sending legislation to Congress...calling for civilian control of civilian outer space programs.

The President said he has never excluded the "possibility" of cutting taxes to bolster the economy, if the situation requires./ But the Administration is not going to be "stampeded" into taking this step./ An "unwise" tax cut, he said, "can hurt us badly in the future./ We have to think of the years to come."/ Mr. Eisenhower said there are "many factors" implying that the bottom of the recession is close, or has even possibly been reached./ "My own feeling," he said, "is that we are going through the worst of it right now." He thought businessmen could help by trying harder to sell their products---by better packaging and more advertising--- and that consumers could help by buying more when they see a bargain. For his own part, Mr. Eisenhower today sent Congress a program whereby government civilian agencies could accelerate their procurement of about 840-million dollars' worth of supplies.

→

To implement the program, he needs the permission of Congress to spend money earmarked for the next fiscal year.

The President announced that United Nations observers are being invited to witness a nuclear test this summer at the Pacific proving ground. He said he was "hopeful" that the United Nations Scientific Committee on the Effects of Atomic Radiation would be designated to attend. (Russia and Czechoslovakia are members of this committee). Mr. Eisenhower said the test will consist of "a large nuclear explosion in which radio-active fallout will be drastically reduced." Regarding a possible summit meeting, he said he was trying to maintain "a conciliatory position"---one which reflects "reasonableness, and logic, and truth as we see it." Mr. Eisenhower was asked about reports that the Administration feels that if a summit meeting is held, Geneva might be a better site than Washington, "in view of the feeling that Khrushchev might use a visit to the United States for his own propaganda purposes." The President said, "By no means do I fear the results

→

on America, of a visit by Mr. Khrushchev."

Secretary General Hammarskjold said today that disarmament "remains a United Nations problem." / He told a news conference in Moscow that "all his experience"---including his current talks with Soviet leaders---confirms this point of view. / The problem of ending nuclear bomb tests, he said, is [redacted] linked with international inspection and controls on bomb production.

Hammarskjold said he has not seen Premier Bulganin since his arrival in Moscow on Sunday. And the United Press---quoting authoritative [redacted] sources in London---says Russia's leaders met today, and gave tentative approval to Bulganin's retirement. Last year, Bulganin sided with Molotov and Malenkov---against [redacted] Khrushchev---in the policy dispute that ended with the two former premiers "falling from grace". / An announcement of Bulganin's resignation could come tomorrow, at the meeting of the new Supreme Soviet.

Khrushchev says tonight...in a copyright interview with the New York Journal of Commerce...that full trade between the United States and the Soviet Union should be restored. / He says resumption of trade not only would ease international tension but would "eliminate" the recession. / He accuses American politicians of being "blinded by hatred" to the common good.

In Congress today, the Senate Rules Committee approved a resolution that would cut down on filibusters. The resolution would permit a simple majority of Senate members--- instead of the [redacted] two-thirds majority now required---to shut off debate. [redacted] The measure was approved in committee by a vote of 5 to 4... a very narrow margin, and it will face strong Southern opposition should it be called up for action on the Senate floor.

It is a sign of the times that the President of the United States today circulated a report by his Science Advisory Committee on a program for exploring outer space. It is not a detailed program, and a few years ago it would have passed for a chapter of science fiction. But this is anything but fiction. The scientists think they have been cautious and modest in what they ~~say~~ report. The committee, headed by Dr. James R. Killian, says that four factors give importance and inevitability to the advancement of space technology. It puts human curiosity first, defense second, national prestige third, and the opportunities for increasing man's knowledge of the universe fourth.

Perhaps the most unexpected statement in the report has to do with defense. The committee does not believe outer space is going to be a theater of war. For one thing, a satellite cannot drop a bomb. An object released from it does not fall. So there is no special advantage in being over a target. If a weapon is to be launched it must be done from a moving platform half-way around the world, with

every disadvantage compared to a missile from the ground. So the prime military value of satellites, the report suggests, will be in reconaissence and communications. But we must be sure, it says, that space is not used to endanger our security, and if it is used for military purposes, we must be prepared to use space to defend ourselves.

Study of the moon looms largest in the projected exploration. It is predicted that the moon will be approached in three stages, a simple shot, ending either in a hard landing or a circling of the moon. Then a soft landing. And finally a soft landing followed by a safe return to earth. The report gives one rough estimate that it will cost around two billion dollars, spent over a number of years, to land a man on the moon and return him safely to earth. This is about the original cost of developing the A-bomb in World War Two. It might be done in one or two decades, the report thinks, or not in this century, depending on how rapidly the program is expanded.

But before man is landed on the moon, there can be remotely controlled instrumental explorations of the moon and

the nearer planets. The report predicts it will be easier to receive a clear radio message from an instrument inspecting Mars than between New York and Tokyo.

The report points out that a satellite can do three things. It can sample the strange new environment through which it is moving. It can look down and see the earth as it has never been seen before. And it can look out into the universe and record information that could not pass through the earth's atmosphere.

In sampling its new environment, the satellite's instruments can measure the magnetic fields and currents that now are only vaguely ~~now~~ known to exist in the solar system. They can give a detailed picture of the earth's gravity and magnetic fields. It will be able to test Einstein's prediction that a clock runs faster when the gravitational field around it is reduced.

Satellites also can serve as high-flying radio relay stations, able to receive TV signals from any point on earth and relay them directly--or through a second satellite--to any other point. That is, they may make worldwide TV transmission a reality. And powered with

solar batteries, these stations could keep on working for many years.

An immediate and certain gain is predicted from improved weather forecasting. Now only ten percent of the atmosphere is under surveillance. With two or three satellites, a complete inventory of all the globe's clouds could be made every few hours, and all large storms, especially hurricanes, could be found in their early stages. Long-term weather prediction would be possible, ~~through knowledge never before gained about~~ the inbalances of energy between the tropics and polar regions.

The committee ends, one might say, with its feet on the ground. It warns that exploration of space is not so important as scientific exploration in the laboratories of science. And it pleads for a balanced national effort in all science and technology.

Back in a moment -

George Bryan

Word for Today

Our probing of outer space

~~The President's scientific advisory committee has issued a sort of primer on what we can expect in outer space. And it all~~ demonstrates that Man in fact---not fiction---has come a long way.

But lest we become conceited, Joseph Wood Krutch once remarked, "It was only yesterday that man invented navigational techniques as ingenious as those used by bees, who steer by polarized light from the sun."

Goodnight and good luck!

Long-term weather prediction would be possible,

The committee ends, one might say, with its feet on the ground. It warns that exploration of space is not so important as scientific exploration in the laboratories of science. And it pleads for a balanced national effort in all science and technology.

This is Ed Murrow. I'll be back in a moment with the word for today. Now, here is George Bryan.

GEORGE BRYAN: COMMERCIAL

MURROW: Our probing of outer space demonstrates that Man in fact---not fiction---has come a long way. But lest we become conceited, Joseph Wood Krutch once remarked, "It was only yesterday that man invented navigational techniques as ingenious as those used by bees, who steer by polarized light from the sun."

Goodnight and good luck!

Edward R. Murrow Thurs., March 27, 1958

This is the news:

Nikita Khrushchev today became premier of the Soviet Union, succeeding Nikolai Bulganin, who "resigned." / Khrushchev will also continue to serve as first secretary of the Communist Party central committee, and thus...in holding both positions of power... he emulates Stalin. / For a first-hand report on this development, we switch to Paul Niven in Moscow.

(Tape runs 2:36, ends on cue:
"--to Edw. R. Murrow in Washington."

Here in Washington, the State Department says the appointment of Khrushchev as premier was "not unexpected"...since he has been the real spokesman for the foreign and domestic policies of the Soviet Union for some time./ It says, "This development clarifies a situation in which Mr. Khrushchev has been participating at meetings of heads of government, even though he occupied no official position."/ If a summit meeting is arranged, Khrushchev would now attend as actual head of the Soviet government.

So far, there has been no reaction from the White House. Senator Mansfield reflected congressional reaction when he said, "The only difference is, that the guy who used to dictate the letters, is now signing them."

One of the first Moscow correspondents to translate correctly the "writing on the wall," as it pertained to Bulganin, was my colleague Dan Schorr. Schorr is now in this country, and here is his background report.

(Tape runs 3:00, ends on cue:
"---to Edw. R. Murrow in Washington."

There was some speculation that Foreign Minister Gromyko would address the Supreme Soviet today...and announce that Russia, unilaterally, was suspending all nuclear weapons tests. Today's session of the Supreme Soviet adjourned, however, until tomorrow without hearing Gromyko. / There are indications now that he will speak on Saturday. / Newspapers in Poland say Russia has decided to suspend all nuclear tests. And here in Washington, Democratic Senator Humphrey warned that even if the Russians don't keep their word, such an announcement would have "great propaganda effect."

President Eisenhower has ordered the Defense Department to proceed with projects, aimed at sending unmanned space vehicles "to the vicinity of the moon." / The White House statement... announcing the order...did not spell out the projects in detail. Nor, will any timetable be announced. / However, News Secretary Hagerty said the projects could include hitting the moon, as well as placing satellites in orbit about the moon, for purposes of lunar observation. The work will be carried on, at this stage, by the [redacted] Advance Research Projects Agency, operating in the Pentagon.

The new Explorer satellite...launched by the Army (yesterday... [redacted]) is still orbiting about the earth, although somewhat off course. Scientists are giving it a higher "life expectancy" than they did yesterday---the Naval Research Laboratory now says it may stay aloft for four to six months. / Other scientists, less optimistic, are (predicting [redacted]) it will stay up "at least three to four weeks." Dr. Richard Porter of the I.G.Y. says, "Receipt of data from the satellite has been proceeding successfully."

A Cairo newspaper said today that King Saud, of Saudi Arabia, has decided to take a "rest cure" in Austria. The newspaper said that while Saud is gone, his brother, Crown Prince Feisal, will develop a new foreign policy, aligning Saudi Arabia with Nasser's United Arab Republic. Saud has supported United States policy in the Middle East. A week ago, he surrendered to Feisal actual control over the country's foreign and domestic affairs.

In Beirut tonight, a group of 82 Lebanese leaders...most of them pro-Nasser...issued a manifesto, warning President Chamoun of Lebanon against seeking re-election. The president was educated at the American University in Beirut and is pro-Western.

President Eisenhower will warn...in a speech tonight...that America faces "deadly peril", unless Congress extends the Administration's foreign trade program. Mr. Eisenhower would be permitted, under the program, to cut tariffs gradually up to 25 percent. The Reciprocal Trade Act also would be renewed for five years. The President will point out the dangers inherent not only in Russia's economic offensive (which we must meet), but will again note that world trade makes jobs for at least four and a half million American workers. Adlai Stevenson joined Administration leaders today in urging a five-year extension of the Reciprocal Trade Act. (The President's talk will be heard over many of these CBS Radio stations at 9:30 tonight, Eastern Standard Time).

This morning, Mr. Eisenhower ordered a 15 percent reduction in imports of crude oil. The reduction is effective April first.

The Senate tonight passed the highway bill by a vote of 84 to 4. The measure would make an additional 1-billion, 800-million

→

dollars available this year for federal highway construction. ~~It also includes financial incentives~~, for states to limit the posting of billboards. ~~The bill now goes to a Senate-House conference committee.~~

United Auto Workers President Walter Reuther testified today before the Senate committee investigating the Kohler strike. Reuther suggested that President Eisenhower name a fact-finding board to "deal with the issues" in the walkout, now in its fourth year.

The United States Coast Guard today captured at least 35 alleged Cuban rebels in the Gulf of Mexico, off Brownsville, Texas. The men were aboard a Nicaraguan freighter...and were heavily armed.

Back in a moment -
George Bryant

Nikita Khrushchev is following in the footsteps of Stalin, [redacted] in holding the powerful offices of premier and first secretary of the party at the same [redacted] time. There is a little of the feeling "This is where we came in." And one recalls the [redacted] wise observation of [redacted] Charles A. Beard, who said, "All despotisms, under whatever name they masquerade, are efforts to freeze history."

Goodnight and good luck!

EDWARD R. MURROW WITH THE NEWS

Thursday, March 27, 1958
7:45 - 8:00 P. M. EST.

E. R. MURROW: This is the news. Nikita Khrushchev today became Premier of the Soviet Union succeeding Nikoli Bulganin who resigned. Khrushchev will also continue to serve as First Secretary of the Communist Party Central Committee. And thus, in holding both positions of power, he emulates Stalin. For a first hand report on this development, we switch to Paul Niven in Moscow.

NIVEN: The news came late in the day a (indistinct) of today's session of the newly elected Supreme Soviet. In the morning, each of the two chambers met separately. The Council of the Union gathered at ten with Nikita Khrushchev and other leaders who belong to that body in their usual places on the platform. Then the Council of Nationalities was convened. Among the Kremlinleaders who holds seats in it is Mr. Bulganin. And the 62-year old Marshal was in his usual place. Like most of the other leaders he wore a conservative blue suit, white shirt and gray necktie. Bulganin sat quietly during the hour long session seldom conversing with his platform neighbors. These morning sessions delt with routine committee appointments superior to each chamber. Other business, including the formation of the new government was deferred to a joint session in the late afternoon. Again the leaders walked onto the platform. Detectable Bulganin took a seat in the second row of chairs rather then in the first row along side Mr. Khrushchev. He sat in fact almost directly in back of Khrushchev. The Chairman of the session read a declaration from Bulganin tendering his resignation and that of all his ministers. That is standard procedure at the beginning of a new Supreme Soviet. Then, Marshal Kliment Voroshilov was re-nominated and re-elected by acclimation as President of the Soviet Union. Voroshilov then took the rostum himself to nominate the new government. He proposed Nikita Khrushchev as Chairman of the Council of

Ministers or Prime Minister. There was a second of silence and then applause. But, the (indistinct) Bulganin joined in the applause. Khrushchev himself did not. He stood quietly, his head bowed looking down. Voroshilov praised him as an outstanding personage of the Communist Party and the Soviet Government and sited his challenge to the country to overtake the United States in industrial production. A few minutes later, Khrushchev's nomination like everything else today was thunderously approved without a single dissenting vote. He received many congratulatory handshakes from his colleagues. Bulganin was beaming also, but he was in the second row and nobody in the first row turned around to notice him. Khrushchev thanked the Assembly for its confidence, said, he would not spare strength or health or life to service. He then began a two hour and forty minute speech on the proposed sale of machines and tractors to state and collective farms. He did not name the rest of his government. There is therefore no clue tonight as to what if any office Marshal Bulganin will hold.

Now, back to EDWARD R. MURROW in Washington.

E. R. MURROW: Here in Washington, the State Department ...

One of the first Moscow correspondents to translate correctly the writing on the wall as it pertained to Bulganin was my colleague Dan Schorr. Schorr is now in this country and here is his background report.

SCHORR: Last October When Marshal Zhukov was ousted as Defense Minister, Khrushchev told us at a reception, "in life one cell must die another takes its place - life goes on." By this process that Khrushchev tries to picture as a kind of biolggical inevitability another cell - Bulganin's power has now died. Actually, its decay began last June when Bulganin vacsalated during the Malenkov-Molotov revolt against Khrushchev and voted against him at one point. The next month, I watched him take a back seat - way back as he toured Czechoslovakia with the Party Chief. Then, Bulganin omitted from a tour of East Germany, from a trip to Roumania to see

Tito of Yugoslavia. And from then on when I saw him at receptions in Moscow it was clear he had been side tracked from his center of power. He replied to our questions with vague generalities - no longer seemed to have the authority to speak. Since then, the only question in our minds, was whether he would be retained as Premier with nominal authority or dismissed at the appropriate time. The rubber stamp election and the new session of the Supreme Soviet provided an appropriate time. It was more or less in the cards. The dying cell finally lopped off. But more significant is Khrushchev's assumption himself of the post of Premier. A post he could have given to his lieutenant Anastas Mikoyan. It would be hasty to see this as a simple amassing of power by Khrushchev as a sign of his strength. Actually, Khrushchev may have found it hard to get anyone to take a post involving responsibility for carrying out Khrushchev policies but with little power to change them. More and more in recent months, the tendency has been to pin pn Khrushchev personally the policies about which other Communist leaders have misgivings. He has been made personally responsible in the Communist Councils fár industrial re-organization for the new lands program, for liquidation of machine tractor stations, for the wavering policy of liberalisation in the satellite states, for the co-existance campaign with the West. Now, he is responsible also for executing them on the government level. Now, as Party Chief and Premier he has a double function that Stalin had that Malenkov had for only a few weeks after Stalin's death. He has risen to the summit, but for Khrushchev it is a cold and lonely summit with Stalin's responsibilities but without Stalin's absolute authority. And, any failure will be accounted now as his and his alone. Maybe Khrushchev wanted it that way - but it may also be that others wanted it that way. The inexorable process which Khrushchev says he cannot halt continues. One cell has died another looks strong for the moment, but life goes on.

Now, back to Edward R. Murrow in Washington.

E. R. MURROW: There was some speculation ...

EDWARD R. MURROW WITH THE NEWS
CBS RADIO NETWORK

THURSDAY, MARCH 27, 1958
7:45 - 8:00 PM EST

This is the news:

Nikita Khrushchev today became premier of the Soviet Union, succeeding Nikolai Bulganin, who "resigned." Khrushchev will also continue to serve as first secretary of the Communist Party central committee, and thus...in holding both positions of power...he emulates Stalin. For a first-hand report on this development, we switch to Paul Niven in Moscow.

NIVEN: The news came late in the day a (indistinct) of today's session of the newly elected Supreme Soviet. In the morning, each of the two chanbers met separately. The Council of the Union gathered at ten with Nikita Khrushchev and other leaders who belong to that body in their usual places on the platform. Then the Council of Nationalities was convened. Among the Kremlin leaders who hold seats in it is Mr. Bulganin. And the 62-year old Marshal was in his usual place. Like most of the other leaders he wore a conservative blue suit, white shirt and gray necktie. Bulganin sat quietly during the hour long session seldom conversing with his platform neighbors. These morning sessions delt with routine committee appointments superior to each chamber. Other business, including the formation of the new government was deferred to a joint session in the late afternoon. Again the leaders walked onto the platform. Detectable?Bulganin took a seat in the second row of chairs rather than in the first row alongside Mr. Khrushchev. He sat in fact almost directly in back of Khrushchev. The chairman of the session read a declaration from Bulganin tendering his resignation and that of all his ministers. That is standard procedure at the beginning of a new Supreme Soviet. Then, Marshal Kliment Voroshilov was re-nominated and re-elected by acclimation as President of the Soviet Union. Voroshilov then took the rostrum himself to nominate the new government. He proposed Nikita Khrushchev as Chairman of the Council of Ministers or Prime Minister. There was a second of silence and then applause. But, the (indistinct) Bulganin joined in the

applause. Khrushchev himself did not. He stood quietly, hishead bowed looking down. Voroshilov praised him as an outstanding personage of the Communist Party and the Soviet Government and cited his challenge to the country to overtake the United States in industrial production. A few minutes later, Khrushchev's nomination like everything else today was thunderously approved without a single dissenting vote. He received many congratulatory handshakes from his colleagues. Bulganin was beaming also, but he was in the second row and nobody in the first row turned around to notice him. Khrushchev thanked the Assembly for its confidence, said, he would not spare strength or health or life to service. He then began a two hour and forty minute speech on the proposed sale of machines and tractors to s ate and collective farms. He did not name the rest of his government. There is therefore no clue tonight as to what if any office Marshal Bulganin will hold.

Now back to Edward R. Murrow in Washington.

MURROW: Here in Washington, the State Department says the appointment of Khrushchev as premier was "not unexpected"...since he has been the real spokesman for the foreign and domestic policies of the Soviet Union for some time. It says, "This development clarifies a situation in which Mr. Khrushchev has been participating at meetings of heads of government, even though he occupied no official position." If a summit meeting is arranged, Khrushchev would now attend as actual head of the Soviet govennment.

So far, there has been no reaction from the White House. Senator Mansfield reflected congressional reaction when he said, "The only difference is that the guy who used to dictate the letters is now signing them."

One of the first Moscow correspondents to translate correctly the "writing on the wall" as it pertained to Bulganin was my colleague Dan Schorr. Schorr is now in this country, and here is his background report.

SCHORR: Last October when Marshal Zuukov was ousted as Defense Minister, Khrushchev told us at a reception,"In life one cell must die, another takes its

place - life goes on." By this process that Khrushchev tries to picture as a kind of biological inevitability another cell - Bulganin's power has now died. Actually, its decay began last June when Bulganin vacillated during the Melenkov-Molotov revolt against Khrushchev and voted against him at one point. The next month, I watched him take a back seat - way back as he toured Czechoslovakia with the Party Chief. Then, Bulganin omitted from a tour of East Germany, from a trip to Roumania to see Tito of Yugoslavia. And from then on when I saw him at receptions in Moscow, it was clear he had been sidetracked from his center of power. He replied to our questions with vague generalities - no longer seemed to have the authority to speak. Since then, the only question in our minds, was whether he would be retained as Premier with nominal authority or dismissed at the appropriate time. The rubber stamp election and the new session of the Supreme Soviet provided an appropriate time. It was more or less in the cards. The dying cell finally lopped off. But more significant is Khrushchev's assumption himself of the post of premier. A post he could have given to his lieutenant Anastas Mikoyan. It would be hasty to see this as a simple amassing of power by Khrushchev as a sign of his strength. Actually, Khrushchev may have found it hard to get anyone to take a post involving responsibility for carrying out Khrushchev policies but with little power to change them. More and more in recent months, the tendency has been to pin on Khrushchev personally the policies about which other Communist leaders have misgivings. He has been made personally responsible in the Communist Councils for industrial re-organiaztion for the new lands program, for liquidation of machine tractor stations, for the wavering policy of liberalization in the satellite states, for the co-existence campaign with the West. Now, he is responsible also for executing them on the government level. Now, as Party Chief and Premier, he has a double function that Stalin had that Malenkov had only a few weeks after Stalin's death. He has risen to the summit, but for Khrushchev, it is a cold and lonely summit with Stalin's responsibilities, but without Stalin's absolute authority.

And, any failure will be accounted now as his and his alone. Maybe Khrushchev wanted it that way - but it may also be that others wanted it that way. The inexorable process which Khrushchev says he cannot halt continues. One cell has died, another looks strong for the moment, but life goes on.

Now, back to Edward R. Murrow in Washington.

MURROW: There was some speculation that Foreign Minister Gromyko would address the Supreme Soviet today...and announce that Russia, unilaterally, was suspending all nuclear weapons tests. Today's session of the Supreme Soviet adjourned, however, until tomorrow without hearing Gromyko. There are indications now that he will speak on Saturday.

President Eisenhower has ordered the Defense Department to proceed with projects aimed at sending unmanned space vehicles "to the vicinity of the moon." The White House statement...announcing the order...did not spell out the projects in detail. Nor, will any timetable be announced. However, News Secretary Hagerty said the projects could include hitting the moon as well as placing satellites in orbit about the moon for purposes of lunar observation. The work will be carried on, at the stage, by the Advance Research Projects Agency, operating in the Pentagon.

The new Explorer satellite...launched by the Army yesterday...is still orbiting about the earth, although somewhat off course. Scientists are giving it a higher "life expectancy" than they did yesterday---the Naval Research Laboratory now says it may stay aloft for four to six months. Other scientists less optimistic, are predicting it will stay up "at least three to four weeks." Dr. Richard Porter of the I.G.Y. says, "Receipt of data from the satellite has been proceeding successfully."

A Cairo newspaper said today that King Saud, of Saudi Arabia, had decided to take a "rest cure" in Austria. The newspaper said that while Saud is gone, his brother Crown Prince Faisal will develop a new foreign policy, aligning Saudi Arabia with Nasser's United Arab Republic.

In Beirut tonight, a group of 82 Lebanese leaders...most of them pro-Nasser...issued a manifesto, warning President Chamoun of Lebanon against seeking re-election. The president was educated at the American University in Beirut and is pro-Western.

President Eisenhower will warn...in a speech tonight... America faces "deadly peril," unless Congress extends the Administration's foreign trade program. Mr. Eisenhower would be permitted, under the program, to cut tariffs gradually up to 25 percent. The Reciprocal Trade Act also would be renewed for five years. The President not only will point out the dangers inherent in Russia's economic offensive (which we must meet) but will again note that world trade makes jobs for at least four and a half million American workers. Adlai Stevenson joined Administration leaders today in urging a five-year extension of the Reciprocal Trade Act. (The President's talk will be heard over many of these CBS Radio stations at 9:30 tonight, Eastern Standard Time.)

This morning, Mr. Eisenhower ordered a 15 percent reduction in imports of crude oil. The reduction is effective April 1st.

The Senate tonight passed the highway bill by a vote of 84 to 4. The measure would make an additional 1-billion, 800-million dollars available this year for federal highway construction.

United Auto Workers President, Walter Reuther testified today before the Senate committee investigating the Kohler strike. Reuther suggested that President Eisenhower name a fact-finding board to "deal with the issues" in the walkout, now in its fourth year.

The United States Coast Guard today captured at least 35 alleged Cuban rebels in the Gulf of Mexico, off Brownsville, Texas. The men were aboard a Nicaraguan freighter...and were heavily armed.

This is Ed Murrow. I'll be back in a moment with the word for today. Now here is George Bryan.

GEORGE BRYAN: COMMERCIAL

MURROW: Nikita Khrushchev is following in the footsteps of Stalin, in holding the powerful offices of premier and first secretary of the party at the same time. There is a little of the feeling "This is where we came in." And one recalls the wise observation of Charles A. Beard, who said, "All despotisms, under whatever name they masquerade, are efforts to freeze history."

Goodnight and good luck!

Edward R. Murrow Fri., March 28, 1958

This is the news:

Secretary of State Dulles said today that he "wouldn't think" Khrushchev's assumption of the Soviet premiership will affect relations between Russia and the United States. / Mr. Dulles spoke to reporters after what he called a "routine" conference with the President.

In Moscow today, the Supreme Soviet...or Parliament...heard a long series of speeches praising Khrushchev's agricultural program---in particular, his plan to downgrade the state tractor stations, by allowing collective farms to buy their own tractors. / Ex-premier Bulganin showed up again at today's session, and chatted occasionally with the man who took his job. / Western newsmen say he looked "happier" than yesterday.

→

Khrushchev did not announce the composition of his new government. / That is expected to come next Monday or Tuesday...along with the announcement, by Foreign Minister Gromyko, that Russia has decided, unilaterally, to suspend all nuclear weapons tests.

President Tito of Yugoslavia sent Khrushchev a message today, congratulating him on becoming premier. (I should like to discuss the Khrushchev development further, in a few minutes).

President Eisenhower left Washington today, for a week-end on his Gettysburg farm. / News Secretary Hagerty said he did not "think" Mr. Eisenhow will act on the measure to "freeze" farm-price supports until sometime next week. Five Republican senators called at the White House today and appealed to the president, personally, <u>not</u> to veto the legislation. / The senators were Mundt of South Dakota, Young of North Dakota, Allott of Colorado, Carlson of Kansas and Aiken of Vermont. | They said Mr. Eisenhower listened "sympathetically", but gave no indication what he would do.

The government today issued new reports on the national economy. The Labor Department said that 3-million, 264-thousand persons were claiming unemployment benefits in the week ending March 15. | This represents

→

a small decline of 10-thousand, 7-hundred from the previous week. The total, however, is still twice what it was in the corresponding week a year ago.

The Agriculture Department reports that the prices farmers received for their products in the month ending March 15 jumped 4 percent. In the same month, the prices farmers had to pay for goods and services went up 1 percent to a new record high.

The House Appropriations Committee today voted three and a quarter billion dollars for running the Agriculture Department in the next fiscal year. But, at the same time, it rapped the Administration's farm policy. Much of the economic slump, it said, can be attributed to depressed farm income. It reported farm income at its lowest point in 15 years.

The House committee approved President Eisenhower's plan to speed up the purchasing of supplies for the government's civilian agencies. Under the plan, the government would be able---in the next three months--- to spend at least 100-million dollars which otherwise could not be spent until the next fiscal year. The committee called the action "unprecedented in the history of American government." It was going along with the President, it said, because of the "serious" economic situation.

Secretary of Labor Mitchell urged Congress to approve Mr. Eisenhower's proposal for extending...temporarily...the period in which unemployment compensation may be paid. Mitchell testified before the House Ways and Means Committee, and most of the opposition came from Republican members. Representative Byrnes of Wisconsin voiced misgivings...saying that when the Federal Government embarks on an emergency program, it "very seldom is terminated."

Today...at the Senate Rackets Committee hearing...Walter Reuther accused Republican Senator Goldwater of "trying to smear" the United Auto Workers Union. Goldwater had produced a photograph of four men beating another man during a strike against Ford in 1941. / Reuther said the photograph illustrated an "isolated incident"...that Harry Bennett, who was in charge of police at the Ford plant, had hired "gangsters" that "beat up" the strikers. / Reuther noted that Mrs. Edsel Ford...and other members of the Ford family...later got rid of Bennett.

The Administration today recommended that Congress appropriate 100-million dollars to help pay off some owners of German and Japanese assets seized during World War Two. The 100-million dollars would be added to nearly 83-million dollars already available in the accounts of the Office of

Alien Property. The money would then be used to reimburse certain former owners of seized assets, as well as to pay off the claims which Americans have filed against Germany and Japan for damage suffered during the war.

In England, the Liberal Party today won its first parliamentary by-election in 29 years. / Results of the voting in Torrington, Devonshire, show the liberal candidate edging out the Conservative candidate, with the Labourite a weak third. The Conservative vote was down 27 percent, compared with the last general election in 1955. And this is the third consecutive by-election the Conservatives have lost.

Here in New York today, W.C. Handy, composer of the "St. Louis Blues", died after a long illness. He was 84.

Edward R. Murrow: March 28, 1958. 7.45 p.m.

A new "ism" has been added to the many "isms" of the twentieth century - Krushchevism. It is unpredictable and almost unpronounceable, but it means power. One fiction in Soviet life has now come to an end. The myth of collective leadership. It was a convenient name to call the interim period in which contending leaders tested their strength against their rivals. It was clear from the outset that collective leadership in a dictatorship was a contradiction in terms. Sooner or later, by a kind of natural law, power would gravitate to fewer and fewer men, and ultimately to a single man. Khrushchev must now proceed to consolidate his power. He has now become fully and officially responsible for his radical industrial and agricultural reforms. He is now the commander of the satellites, the commander of Soviet scientific progress, responsible for improving living conditions at home, maintaining the peace, and negotiating with the free world. He now is committed; he has to go all the way and take all the power; he cannot compromise. That, in a dictatorship, is the nature of things. He must deal with the disappointed followers of such men as Malenkov, Molotov, Zhukov and Kaganovich. He must placate the members of the industrial bureaucracy who have been down-graded through de-centralization.

For the time being Khrushchevism looks like Stalinism, with a smile, a kind of semi-enlightened totalitarianism. Krushchev is a realist - a product of the most brutal and cynical school in political history. He, better than anyone, knows the price of failure in that system. He is a gambling man, and is now gambling on his ability to wield total power. Even if Khrushchev strives to be an enlightened despot, despotism is perpetually insecure. One reason is that the despot is mortal, and when he passes the walls shake and the ground quakes, and nobody knows whether the whole structure will collapse. He probably does not know whether this process of bloodless execution can continue, or whether he must resort to the strong-arm techniques of Stalin.

Already his vanity - never in short supply - must have been considerably inflated. Over the last two months the Soviet Press has carried on a hidden persuader kind of campaign, aimed at convincing the Russian people that Krushchev is the world's outstanding authority on agriculture, housing, art, politics, ballistic missiles and international negotiations. His name is in the headlines countless times every day, so is his picture - touched up so that he looks as though he's balding, not bald. He is hailed as "the leading theoretician of communism" - that puts him in line with Marx, Engels, Lenin

and Stalin. The Khrushchev personality cult is in full flower. / He obviously wants to be in complete charge of the entire industrial and agricultural reform - doesn't seem to trust it to anyone else. / If a summit conference is called, he wants to be the Russian leader who will talk with Mr. Eisenhower, not sit in the shadow of a figurehead premier. And Khrushchev a devoted communist who has an immense faith in the vitality and expansion possibilities of the Soviet economic system. He is convinced it can do any job, even catching up to the United States and surpassing us, which would make Khrushchev, in the eyes of communist history, a greater communist than even Lenin.

Khrushchev feels that given ten years of peace, he personally can lead Russia to its final victory over capitalism, and not fire a shot. He believes he can bring Russia the unchallenged economic mastery of the world; then, by its example, the under-developed areas of the world will be brought into the communist camp and the Western World will be isolated. That is his dream, and he now has the power to try to make it come true. / He will try to continue to outwit and out-maneuver the leaders of the West in the field of propaganda. He must seek successes abroad to bolster his position at home. He will probably be a harder man for the West to deal with.

At home he must continue to train scientists and technicians in increasing numbers, but like the enlightened despots of the eighteenth century, Khrushchev in this century may discover that enlightenment is a two-edged sword; that a literate population may turn against the despot.

No one knows what this elevation will do to Khrushchev the man; but Lord Acton was certainly right when he said: "All power corrupts, and absolute power corrupts absolutely." Khrushchev has made no secret of his intentions, and we have certainly been adequately warned.

Back in a moment.
George Bryan

Khrushchev is a better "mixer" than Stalin ever was. He attends more parties, likes to get around more, and apparently enjoys talking to foreign correspondents. And so Khrushchevism looks like Stalinism---with a smile. But the smile should deceive no one. For as Stendhal said: "What counts is not the personality of the tyrant but the essence of tyranny."

Goodnight and good luck!

EDWARD R. MURROW WITH THE NEWS
CBS RADIO NETWORK

FRIDAY, MARCH 28, 1958
7:45 - 8:00 PM EST

This is the news:

Secretary of State Dulles said today that he "wouldn't think" Khrushchev's assumption of the Soviet premiership will affect relations between Russia and the United States. Mr. Dulles spoke to reporters after what he called a "routine" conference with the President.

In Moscow today, the Supreme Soviet...or Parliament...heard a long series of speeches praising Khrushchev's agricultural program...in particular, his plan to downgrade the state tractor stations by allowing collective farms to buy their own tractors. Ex-premier Bulganin showed up again at today's session and chatted occasionally with the man who took his job. Western newsmen say he looked "happier" than yesterday. Khrushchev did not announce the composition of his new government. That is expected to come next Monday or Tuesday...along with the announcement by Foreign Minister Gromyko that Russia has decided, unilaterally, to suspend all nuclear weapons tests.

President Tito of Yugoslavia sent Khrushchev a message today, congratulating him on becoming Premier. (I should like to discuss the Khrushchev development further in a few minutes.)

President Eisenhower left Washington today for a week-end on his Gettysburg farm. News Secretary Hagerty said he did not "think" Mr. Eisenhower will act on the measure to "freeze" farm price supports until sometime next week. Five Republican senators called at the White House today and appealed to the president, personally not to veto the legislation. The senators were Mundt of South Dakota, Young of North Dakota, Allott of Colorado, Carlson of Kansas and Aiken of Vermont. They said Mr. Eisenhower listened "sympathetically" but gave no indication what he would do.

The government today issued new reports on the national economy. The Labor Department said that 3-million, 264-thousand persons were claiming

unemployment benefits in the week ending March 15th. This represents a small decline of 10-thousand, 7-hundred from the previous week. The total, however, is still twice what it was in the corresponding week a year ago.

The Agriculture Department reports that the prices farmers received for their products in the month ending March 15 jumped 4 percent. In the same month, the prices farmers had to pay for goods and services went up 1 percent to a new record high.

The House Appropriations Committee today voted three and a quarter billion dollars for running the Agriculture Department in the next fiscal year. But, at the same time, it rapped the Administration's farm policy. Much of the economic slump, it said, can be attributed to depressed farm income. It reported farm income at its lowest point in 15 years.

The House committee approved President Eisenhower's plan to speed up the purchasing of supplies for the government's civilian agencies. Under the plan, the government would be able---in the next three months--- to spend at least 100-million dollars which otherwise could not be spent until the next fiscal year. The committee called the action "unprecedented in the history of American government." It was going along with the President, it said, because of the "serious" economic situation.

Secretary of Labor Mitchell urged Congress to approve Mr. Eisenhower's proposal for extending...temporarily...the period in which unemployment compensation may be paid. Mitchell testified before the House Ways and Means Committee, and most of the opposition came from Republican members. Representative Byrnes of Wisconsin voiced misgivings...saying that when the Federal Government embarks on an emergency program, it "very seldom is terminated."

Today...at the Senate Rackets Committee hearing...Walter Reuther accused Republican Senator Goldwater of "trying to smear" the United Auto Workers Union. Goldwater had produced a photograph of four men beating another man during a strike against Ford in 1941. Reuther said the photograph illustrated an "isolated

incident"...that Harry Bennett, who was in charge of police at the Ford plant, had hired "gangsters" that "beat up" the strikers. Reuther noted that Mrs. Edsel Ford...and other members of the Ford family...later got rid of Bennett.

The Administration today recommended that Congress appropriate 100-million dollars to help pay off some owners of German and Japanese assets seized during World War Two. The 100-million dollars would be added to nearly 83-million dollars already available in the accounts of the Office of Alien Property. The money would then be used to reimburse certain former owners of seized assets, as well as to pay off the claims which Americans have filed against Germany and Japan for damage suffered during the war.

In England, the Liberal Party today won its first parliamentary by-election in 29 years. Results of the voting in Torrington, Devonshire, show the liberal candidate edging out the Conservative candidate, with the Labourite a weak third. The Conservative vote was down 27 percent compared with the last general election in 1955. And this is the third consecutive by-election the Conservatives have lost.

Here in New York today, W.C. Handy, composer of the "St. Louis Blues," died after a long illness. He was 84.

A new "ism" has been added to the man "isms" of the twentieth century - Khrushchevism. It is unpredicaable and almost unpronounceable, but it means power. One fiction in Soviet life has now come to an end. The myth of collective leadership. It was a convenient name to call the interim period in which contending leaders tested their strength against their rivals. It was clear from the outset that collective leadership in a dictatorship was a contradiction in terms. No one knows what this elevation will do to Khrushchev the man; but Lord Acton was certainly right when he said: "All power corrupts, and absolute power corrupts absolutely." Khrushchev has made no secret of his intentions, and we have certainly been adequately warned.

This is Ed Murrow. I'll be back in a moment with the word for today. Now, here is George Bryan.

GEORGE BRYAN: COMMERCIAL

MURROW: Khrushchev is a better "mixer" than Stalin ever was. He attends more parties, likes to get around more, and apparently enjoys talking to foreign correspondents. And so Khrushchevism looks like Stalinism---with a smile. But the smile should deceive no one. For as Stendhal said: "What counts is not the personaility of the tyrant but the essence of tyranny."

Goodnight and good luck!

Edward R. Murrow Mon., March 31, 1958

This is the news:

Russia today announced its suspension of nuclear weapons tests./ The announcement was made by Foreign Minister Gromyko to the Supreme Soviet, or parliament...in keeping, he said, "with the innermost yearnings of millions of people in all countries of the world." /Gromyko challenged the United States and Britain to follow Russia's example. /If the United States and Britain continue their tests, he said, then the Soviet government will be free to [redacted] resume <u>its</u> tests./ Gromyko accused the United States of using the development of "clean" hydrogen bombs as a pretext for setting off new explosions. And he warned West Germany that <u>if</u> it arms

itself with atomic weapons, a new obstacle to disarmament will have been created...and Russia will have to take "the necessary steps."

The Supreme Soviet also heard Premier Khrushchev announce his new cabinet. The big difference is that Nikolai Bulganin---who was premier---now becomes chairman of the Soviet state bank, a position he held 20 years ago. The Supreme Soviet approved the new cabinet, the cessation of nuclear tests, and Khrushchev's program for distributing the machinery of the tractor stations to the collective farms. All votes of approval were unanimous.

The State Department has made what it calls "some general observations" on the Gromyko announcement. It points out that the announcement came on the heels of "an intensive series of secret Soviet tests"...and that Russia has been boycotting the United Nations Disarmament Commission. It also points out that the General Assembly has approved a comprehensive first-step disarmament proposal, including the studies necessary for a supervised suspension of nuclear tests. The State Department says the United States "stands ready instantly to respond to that resolution, but the Soviet Union refuses to comply." The department goes on to say, "It is

elemental that free nations which want to remain free will not---and should not---forego their indispensable collective capacity to deter and defend against aggression, merely in reliance on a Soviet statement of intentions for which there is no system of verification."

The State Department news chief, Lincoln White, told reporters the United States will go ahead with its scheduled tests in the Pacific as planned.

In Congress, Chairman Durham of the joint atomic energy committee called the Soviet announcement "phony, like everything else they have done in that line." Democratic Senator Humphrey said the Administration, through procrastination, has let Russia inflict "a terrible propaganda blow."

Britain and France today joined the United States in reaffirming the Western position that a summit meeting can give promise of success only if there is careful preparation in advance. The new notes delivered in Moscow have the approval of the 15-member NATO Council. The notes (which are unusually brief) suggest that diplomatic exchanges looking toward a possible summit meeting should start in Moscow in about two weeks. These exchanges, if fruitful, would lead to a conference of foreign ministers

→

who would draw up an agenda. The success achieved by the foreign ministers would determine whether a meeting is called at the summit.

President Eisenhower and Secretary of State Dulles conferred at the White House this afternoon, shortly after the President's return from a week-end at his Gettysburg farm. / The White House conference lasted an hour and ten minutes, and News Secretary Hagerty says it may be assumed that the new notes to Russia...and Russia's unilateral suspension of nuclear tests...were discussed.

President Eisenhower today vetoed the bill that would have frozen farm price supports for one year. / Mr. Eisenhower called the measure "ill-advised from the standpoint both of the nation and of our farm families." With regard to government controls, he said, "What the farm economy needs is a thaw, rather than a freeze." / He said the Democratic-sponsored legislation (which Republican senators from farm states had urged him to sign) would pile up more farm products in government warehouses, and restrict the growth of markets. And he contended it would by-pass the problems of the small operator who, he said, "produces so little for sale that price supports have scant meaning." A Democratic attempt to override

→

the veto ~~have~~ HAS been put off until after the Easter recess. (The bill was passed originally by considerably less than the two-thirds majority necessary to override).

Secretary Benson followed up the veto announcement by setting the 1958 price support rate for corn at one dollar and 36 cents a bushel. The rate for the 1957 crop was a dollar and forty cents a bushel.

The House today passed...and sent to the Senate...an Administration bill to speed up the purchasing of equipment by the government's civilian agencies.

And the Senate Banking Committee approved legislation that would make 1-billion dollars available for municipal public works projects in the form of federal loans.

Secretary of Labor Mitchell said today that he does not expect the unemployment situation in March (to be "much different" from the situation in February. There may be no real improvement, he said, until around June.

Democratic Senator McNamara of Michigan resigned today from the Senate Rackets Committee. McNamara said the Kohler hearings had demonstrated that he could spend his time "more profitably" on other standing committees of which he is a member.

The Supreme Court today upheld the right of Congress to revoke the citizenship of a native-born American who votes in a foreign election. At the same time, it ruled un-constitutional a section of the Nationality Act of 1940...which says a serviceman convicted of wartime desertion automatically loses his citizenship. The court...in a 5-to-4 decision... said that loss of citizenship for desertion would amount to "cruel and unusual punishment" forbidden by the Eighth Amendment.

The Supreme Court refused to review the appeals of Matthew J. Connelly and T. Lemar Caudle, two former officials of the Truman Administration convicted on conspiring to fix a tax case. Both men are under sentence to serve two years in jail.

There was a new incident today on the Syria-Israeli frontier, near the Sea of Galilee. Israel accused the Syrians of opening fire on a group of Israeli laborers, working on a drainage project. Syria charges the work is going on in a demilitarized zone. Two Syrians were killed yesterday in a similar incident.

In the Canadian parliamentary election, the Canadian Press says the re-election of John Diefenbaker's Conservative Government is indicated.

~~This is on the basis of early, incomplete returns.~~

Edward R. Murrow: March 31, 1958. 7.45 p.m.

The Soviet offer to give up nuclear tests is easy to disparage. It was made when they had just finished a series of elaborate secret tests. Normally they wouldn't run another series for a year. Now if we and the British don't give up testing, the Russians will have lost nothing, and could make political and propaganda capital out of resuming the tests. The offer does not include an inspection system; it doesn't promise a halt in the manufacture of nuclear weapons, or even a slowdown. The Russians continue to refuse to talk disarmament at the United Nations. Presumably they will continue to test their inter-continental ballistic missiles.

However, any realistic assessment of this move must recognize that the Russian move was shrewd, well-timed, and will meet with very considerable response not only in the neutral nations, but among our allies.

Our government also wanted to stop testing, but we wanted it linked with an agreement to stop the manufacture of nuclear weapons, and a reasonable system of inspection. The Russians said, in effect: everybody talks about stopping testing - let's just go ahead and do it. They acted first, and again they have the initiative. Much of the world will regard this move as a step forward. The intricacies, and indeed the importance of the

arguments surrounding real disarmament will be lost. Even if we produce a clean bomb during our tests, it won't help us very much. To most laymen a clean bomb is not terribly important. We can assume that most of the bombs in the Russian stockpile, and in ours, are dirty bombs. Will the Russians transform their pile into clean bombs? Will we? Both claim the bombs are there as deterrents. They are there to blast and burn and kill, and the dirtier they are, the more they ought to deter. It is fair to say that our record in the disarmament talks has been more presentable than that of the Russians. We have made some courageous proposals that probably would have worked, had the Russians negotiated in good faith. But the memory of sound proposals will not weigh very heavily against the Russian action.

This Russian move didn't take our government by surprise. There was plenty of warning. We were merely out-maneuvered. There may be excellent and indeed compelling reasons why the national interest - our survival - demands that we go on testing. But if that is true, the Administration has not made them clear.

This Russian action may create even more difficulties for the British than for us. Alex Kendrick cables me from London that the British Government is under great pressure to stop its tests, and even to give up its nuclear

weapons program entirely, leaving the deterrent role entirely in the hands of the United States. Some Conservatives in Britain are saying she just can't stand to pay the price. The Liberals, who just won a bye-election in Torrington, want Her Majesty's Government to give up its individual nuclear role and rely on the United States and NATO. / And the large left wing of the Labor Party has been clamoring for some time for an end to the tests.

Militarily, Britain is behind in the nuclear race and needsto do more testing. They are planning a new Christmas Island shoot in a couple of weeks. If we were to tell the British what we've learned from our tests, their deterrent posture would be improved. But under existing legislation we can't do that. / So the net result is that our most robust and reliable ally faces a dilemma that is ~~more~~ deeper and more difficult than the one we confront.

We need to have the non-communist world with us, pressing the Russians to accept adequate controls, through the United Nations, in all aspects of arms reduction. / We haven't got that now. / It will take alertness, vision, courage and candor for us to regain that leadership.

Back in a moment-
George Bryan

Word for Today

The Russians have again shown themselves to be masters in the art of making propaganda. [redacted] In acting [redacted] to suspend nuclear tests they have taken the leadership which, for the good of the free world, ought to belong to the West. [redacted] As Disraeli warned a long time ago, "The practice of politics in the East may be defined by one word---dissimulation."

Goodnight and good luck!

If we were to tell the British what we've learned from our tests, their deterrent posture would be improved. But under existing legislation we can't do that. So the net result is that our most robust and reliable ally faces a dilemma that is deeper and more difficult than the one we confront.

We need to have the non-communist world with us, pressing the Russians to accept adequate controls through the United Nations in all aspects of arms reduction. We haven't got that now. It will take alertness, vision, courage, and candor for us to regain that leadership.

This is Ed Murrow. I'll be back on a moment with the word for today. But first, here is George Bryan.

GEORGE BRYAN: COMMERCIAL

MURROW: The Russians have again shown themselves to be masters in the art of making propaganda. In acting to suspend nuclear tests they have taken the leadership which, for the good of the free world, ought to belong to the West. As Disraeli warned a long time ago, "The practice of politics in the East may be defined by one word---dissimulation."

Goodnight and good luck!

Edward R. Murrow Tues., Apr. 1, 1958

This is the news:

The United States seriously considered "stealing the march" on Russia, by announcing a suspension of American nuclear tests/ Secretary of State Dulles revealed this today at his weekly news conference./ He said U.S. intelligence knew Russia was going to announce a suspension of tests...and that President Eisenhower met about 10 days ago with his top advisers, to decide whether to beat the Russians to the punch with a similar announcement by the United States./ Dulles said that after careful consideration of

→

the pro's and con's, it was decided...deliberately...to let the Russians score their propaganda victory, rather than do something "basically unsound". The decision was made, he said, "in fairness to the American people and perhaps to humanity." He explained that if America had taken the action, it would not have been tied in with any disarmament plan looking toward the elimination of nuclear weapons themselves. / The United States, he said, will continue with tests for the development of a "clean" bomb, making it more of a tactical weapon and less a weapon of mass destruction. / Dulles stressed that in waging propaganda with Russia, "we face conditions which are totally different and," he said, "I thank God that we do." He said that with a free press, an opposition party, and allies who are not puppets, Russia can do things in a propaganda way which we cannot approach. / Democratic Senator Humphrey calls the failure of the United States to take the initiative in ending nuclear tests "an unbelievable tragedy." "Someone," he says,

talked the President out of it, "and that 'someone' apparently was the Secretary of State."

Prime Minister Macmillan said today that Britain is still anxious to work out an international agreement for the ending of nuclear weapons tests---with close inspection. Macmillan, under Labourite questioning in the House of Commons, said that Britain with other Western powers suggested "as long ago as last July" that a United Nations committee of experts be drawn up to map an inspection system. He expressed hope that Russia will accept the new Western proposal that preliminary negotiations for a summit meeting be started through diplomatic channels next month. [redacted] that Russia's announcement of a suspension of nuclear tests came just after Russia had completed "an intensive and accelerated series of tests," and just before the United States and Britain were scheduled to carry out tests. He insisted that the Conservative Government wants a summit meeting "at which this whole question can be brought to a conclusion."

President Eisenhower's plan for an independent space agency was outlined to Republican congressional leaders today, at their regular weekly meeting at the White House. / The agency would deal with outer space problems of a civilian or purely scientific nature. / It would encompass work now being done by the National Advisory Committee for Aeronautics, as well as non-military activities being carried on by the Advanced Research Projects Agency in the Defense Department. / Senate Republican Leader Knowland said Mr. Eisenhower will send Congress a special message on this subject, perhaps tomorrow. / The President also is preparing for Congress a special message on his plan for reorganizing the Defense Department. / That, too, came up at today's White House meeting, but Republican leaders withheld details. / Knowland said he regarded the plan as "a considerable improvement over the present situation." / It reportedly would increase the authority of the Secretary of Defense and the chairman of the Joint Chiefs of Staff.

President Eisenhower today signed the 1-billion, 850-million dollar housing bill. This is the first major anti-recession measure passed by Congress. / It seeks to encourage home building...and create jobs...by lowering the down payments required for FHA-insured mortgages. / The measure also extends the G.I. home loan program for two years. / But it raises the interest rate on G.I. home loans, as a means of attracting private lenders. Although Mr. Eisenhower signed the bill, he said there were sections of which he disapproved. / He cited the federal purchasing of veterans' mortgages at par value, as a "wholly unnecessary" additional burden on the taxpayers of the country.

Bernard Baruch told the Senate Finance Committee today that it is "folly" to talk of tax reductions at this time. / Baruch warned against carrying out public works projects through deficit financing. "If we want new dams, highways and school houses," he said, "we should be willing to pay for them." / [illegible]

The Cuban Congress today declared a state of emergency, and gave President Batista extraordinary power to cope with the revolutionary movement led by Fidel Castro. The state of emergency allows Batista to rule by decree for the next 45 days. In Oriente Province today, Castro's forces stepped up their attacks on rail and highway traffic, and crippled communications between Santiago and the rest of Eastern Cuba.

In the Canadian parliamentary election, Prime Minister Diefenbaker's Conservative Party has won 209 of the 265 seats in the House of Commons. The Liberals have 47 seats, the Socialists 8.

→

4:55

[redacted] Diefenbaker's landslide victory is [redacted] greater than had been anticipated, and has astonished even Canadians. If it does not astonish Americans, it is simply because Americans don't pay much attention to Canada's domestic affairs. But they will do well to give this election some heed. For one result of it will be to develop still greater Canadian independence from the United States, and this is bound to affect us, both in economic and military ways.

The election was not fought on the issue of relations with the United States. The winning Conservatives are not anti-Americans, and the losing Liberals are not pro-Americans. But one of the biggest factors in Canada's existence is the nearness and bigness of the United States, with the cultural pull of its television programs, the dominant role of American capital, and the way Americans seem to take for granted that what is good for them is good for Canadians. The Liberal Party, in its twentytwo years of power, was closely identified with United States policy. A reaction against this set in before the Diefenbaker victory last June. The Liberals had begun to cool off to Washington, but they did not do

it soon enough. Yesterday's election turned the defeat into a rout. Obviously the country wanted to get rid of the Liberals for a long time to come.

Canadian dissatisfaction with the United States rises from several sources. We have been selling farm surpluses abroad in the interest of our foreign policy, and this has been at the expense of customers, or potential customers, of Canada. With a recession creeping up, this offended farmers.

Canadians strongly resented recent restrictions on oil imports into the United States. These were imposed in the name of defense [redacted] Canadians cannot understand how their sale of oil to us affects our security. Miners of Canadian lead and zinc live in daily fear of higher duties being set on these minerals. Canadians also are jealous of their lawful share of power resources from oil, gas and waterways in regions where American interests are involved.

We in this country have been favorably impressed by the cooperation of Canada in setting up the DEW line, which defends us and them from suprise attack over the Arctic. But we should not be under the illusion that the Canadians

are as happy about it as we are./They grumble about the circulation of airforce personnel in their country, and one even hears a phrase about the northern region"being garrisoned by foreign troops." One of Mr. Diefenbaker's winning campaign proposals was to spend a billion dollars to develop the resources in the North./This was his chief device for combatting the recession, and he linked it with a dream about the North comparable with the American dream about the West in our earlier history. If this program goes as expected, the Canadians in due course will want a much larger share in determining policy for the DEW line, and ultimately many want to replace our personnel altogether.

Another point of friction has arisen over trade with Communist China./Canadian subsidiaries of American companies in some cases were forbidden by their parent companies from filling orders for mainland China./This was in a time of unemployment, and caused an outcry because the policy against selling the goods to Red China was Washington's and not Ottawa's./The question arose about the right of subsidiaries to impose United States policy on their Canadian employes./One socialist candidate in the campaign even proposed the appointment of a government manager for all foreign

subsidiaries to prevent such things happening. The introduction of legislation to devise some form of supervision of the subsidiaries is expected in the coming session of parliament.

Since the United States is responsible for nearly twothirds of Canada's total trade, and owns nearly as great a proportion of Canada's most productive industries, this country is much too important a neighbor for Canada to treat badly. It has to get along with us for its own sake. But the day is over when we can take Canadian compliance for granted. And it will be in our own interest to start finding out why Canadians behave like Canddians.

Word for Today

This is April Fool's Day. On this date, in 1870, Josh Billings observed in his Almanac: "Dandylions planted this month are almost sure to hed out, so are tud stools. This month iz also helthy for planting onions. Onions are a luxury, and are good for a bad breth, or are bad for a good breth, i hav forgot which. But either way iz right."

Goodnight and good luck!

In the Canadian parliamentary election, Prime Minister Diefenbaker's Conservative Party has won 209 of the 265 seats in the House of Commons. The Liberals have 47 seats, the Socialists 8.

Diefenbaker's landslide victory is greater than had been anticipated, and has astonished even Canadians. If it does not astonish Americans, it is simply because Americans don't pay much attention to Canada's domestic affairs. But they will do well to give this election some heed. For one result of it will be to develop still greater Canadian independence from the United States, and this is bound to affect us, both in economic and military ways.

The election was not fought on the issue of relations with the United States. The winning Conservatives are not anti-Americans, and the losing Liberals are not pro-Americans. But one of the biggest factors in Canada's existence is the nearness and bigness of the United States, with the cultural pull of its television programs, the dominant role of American capital, and the way Americans seem to take for granted that what is good for them is good for Canadians. The Liberal Party, in its twenty-two years of power, was closely identified with United States policy. A reaction against this set in before the Diefenbaker victory last June. The Liberals had begun to cool off to Washington, but they did not do it soon enough. Yesterday's election turned the defeat into a rout. Obviously the country wanted to get rid of the Liberals for a long time to come.

Canadian dissatisfaction with the United States rises from several sources. We have been selling farm surpluses abroad in the interest of our foreign policy, and this has been at the expense of customers, or potential customers, of Canada.

With a recession creeping up this offended farmers.

Canadians strongly resented recent restrictions on oil imports into the United States. These were imposed in the name of defense. Canadians cannot understand how their sale of oil to us affects our security. Miners of Canadian lead and zinc live in daily fear of higher duties being set on these minerals. Canadians also are jealous of their lawful share of power resources from oil, gas, and waterways in regions where American interests are involved.

We in this country have been favorably impressed by the cooperation of Canada in setting up the DEW line, which defends us and them from surprise attack over the Arctic. But we should not be under the illusion that the Canadians are as happy about it as we are. They grumble about the circulation of our air force personnel in their country, and one even hears a phrase about the northern region "being garrisoned by foreign troops." One of Mr. Diefenbaker's winning campaign proposals was to spend a billion dollars to develop the resources in the North. This was his chief device for combatting the recession, and he linked it with a dream about the north comparable with the American dream about the West in our earlier history. If this program goes as expected, the Canadians in due course will want a much larger share in determining policy for the DEW line, and ultimately may want to replace our personnel altogether.

Another point of friction has arisen over trade with Communist China. Canadian subsidiaries of American companies in some cases were forbidden by their parent companies from filling orders for mainland China. This was in a time of unemployment, and caused an outcry becuuse the policy against selling the goods to Red China was Washington's and not Ottawa's. The question arose about the right of subsidiaries to impose United States policy on their Canadian employees. One socialist candidate in the campaign even proposed the appointment of a government manager for all foreign subsidiaries to prevent such things happening. The introduction of legislation to devise some form of supervision of the subsidiaries is expected in the coming session of parliament.

Since the United States is responsible for nearly two-thirds of Canada's total trade, and owns nearly as great a proportion of Canada's most productive industries, this country is much too important a neighbor for Canada to treat badly. It has to get along with us for its own sake. But the day is over when we can take Canadian compliance for granted. And it will be in our own interest to start finding out why Canadians behave like Canadians.

This is Ed Murrow. I'll be back in a moment with the word for today. Now, here is George Bryan.

GEORGE BRYAN: COMMERCIAL

MURROW: This is April Fool's Day. On this date, in 1870, Josh Billings observed in his Almanac: "Dandylions planted this month are almost sure to hed out, so are tud stools. This month iz also helthy for planting onions. Onions are a luxury and are good for a bad breth, or are bad for a good breth, I have forgot which. But either way iz right."

Goodnight and good luck!

Edward R. Murrow Wed., Apr. 2, 1958

This is the news:

President Eisenhower today asked Congress for an emergency appropriation of 1-billion, 455-million dollars for defense. This is in addition to the extra billion, 410-million appropriated by Congress in February, and it raises to more than 40-billion dollars the defense budget for the next fiscal year. About a fourth of the new money requested by the President would be spent for B-52 bombers and "tanker" aircraft. Two hundred and eighteen million would go for speeding up the Army missile program, 180-million for

→

outer space research. And the Navy would get 207-million dollars for two additional submarines, capable of firing the Polaris missile. Members of the House Appropriations Committee indicate that the President's request will get prompt consideration. Democratic Senator Jackson, who is a member of the Senate Armed Services Committee, said Mr. Eisenhower is "short-changing" the Polaris submarine program, that he should be asking money for 15 of the missile-launching submarines---not just two.

President Eisenhower today also sent Congress his plan for a new independent agency to carry out non-military projects related to outer space. The new agency would absorb the National Advisory Committee for Aeronautics. And it would have a civilian director, backed up by a board of experts. On occasion, the agency would cooperate with the Defense Department in military space research.

Mr. Eisenhower told his news conference today that he will send his plan for reorganizing the Defense Department to Congress tomorrow.

He said the announcement by Russia, that it was suspending nuclear tests, was a "gimmick"...but added that he has not abandoned hope of eventually reaching a disarmament agreement. / He listed the proposals the United States has made unilaterally for peace... starting with the Baruch Plan more than ten years ago...and said it is not right to call the American position negative, "just because you stand firm on what you believe." | Mr. Eisenhower said that perhaps the "full possibilities" of psychological warfare had not been explored by his administration. / And it might be a good idea, he said, if some one were given the sole duty of directing operations in that field. / In response to a question, he said this was not something which could be turned over to Vice President Nixon. He knew of no Vice President who had been given more opportunity to participate in the affairs of government than Mr. Nixon, but he believed it was impossible...as a matter of practice...to assign the Vice President additional duties in the Executive Department.

Regarding a tax cut, the President said this was not a question to be decided hastily without careful study. The recession, he said, cannot be cured merely by spending Federal money---"We could just be building trouble for ourselves in the future." He said it was "just ridiculous" to talk about information being withheld from him by the White House "palace guard". "Palace guard," he said, "is like other expressions that we get in the habit of using which, to my mind, have no meaning."

In Detroit today, the American Motors Corporation proposed a two-year freeze on wages and fringe benefits. The company made the proposal to the United Auto Workers Union, with whom it is scheduled to open bargaining talks later this month. Negotiations with Ford, General Motors and Chrysler already are under way. The International Electrical Workers Union today joined the U.A.W. in demanding a profit-sharing program. The electrical workers served notice of their demand in the opening round of their talks with General Motors.

A report...issued today...says the American recession probably will be

→

a damper on the European economy through most of 1958. / The report was prepared by the United Nations Economic Commission for Europe. It says an economic revival in the United States "seems unlikely before autumn at the earliest." / And it predicts that America, [redacted] in the meantime, will make fewer purchases from abroad.

The United Press reports tonight...from Havana...that President Batista has just received five planeloads of arms from the Dominican Republic, to help him put down the revolt led by Fidel Castro. "Severe fighting" is reported tonight from Oriente Province, and the city of Santiago is [redacted] said to be under a virtual state of siege. / The Communist Party in Cuba has come out in support of Castro, but a rebel spokesman, in New York, says the revolutionary movement has never received Communist support in the past, and that it will not accept support from the Communists in the future..."because they represent tyranny, and that is what we are fighting against."

Soviet Premier Khrushchev flew to Budapest today for a [redacted] meeting with [redacted] leaders of the Hungarian puppet government. The →

occasion...ostensibly...was the 13th anniversary of the "liberation" of Hungary by the Russian Army in 1945. The speech made by Khruchchev, on his arrival, contained no reference to the other role played by the Red Army in 1956.

A colleague of mine---Richard Hottelet---has just returned from assignment in West Germany, and I have asked him if he would give us a report on what he observed. ~~Hottelet is an authentic expert on Germany. He was covering Germany as far back as 1939---part of the time from the inside of a Nazi jail.~~ Here is Dick Hottelet.

Tape runs 5:30
Ends on cue: "--to Ed Murrow in Washington."

That was my colleague, Richard Hottelet, telling what he saw, and heard, ~~on his recent assignment~~ in Germany. This is Ed Murrow. I'll be back on a moment with the Word for Today.

[redacted] Now, here is George Bryan.

And here is a bulletin... Witchita Falls, Texas, was hit tonight by ~~three~~ TWO tornadoes. There appears to have been considerable damage. No deaths are reported.

Word for Today

Dick Hottelet said that Chancellor Adenauer, and the Western allies, are going to have to "keep proving" they know where they are going. They want to travel the road of freedom. But the great German, Goethe, said: "Those men alone deserve life and freedom who earn both anew each day."

Goodnight and good luck!

CBS RADIO DIVISION

EDWARD R. MURROW WITH THE NEWS

Wednesday, April 2, 1958
7:45 - 8:00 P.M.

MURROW: ... A colleague of mine, Richard Hottelet, has just returned from assignment in West Germany, and I've asked him if he would give us a report on what he observed. Here is Dick Hottelet.

HOTTELET: When Andrei Gromyko announced on Monday that the Soviet Union would stop the testing of nuclear weapons, his words were addressed not only to the great nuclear powers, Britain and the United States, more than a third of his speech was aimed at West Germany. The Soviet Foreign Minister recalled the tragedy of Nazi aggression and warned Europe that, in his words, "the power of unleashing atomic war has been placed in the hands of Hitlerites and American generals." Mr. Gromyko declared that if the West German Army were equipped with atomic weapons, German unity would be impossible. More than that, he went on, in Europe - the wave of fire of an atomic rocket war would sweep - first of all - over West German territory. These were strong words. But if they've had any effect on either German policy or public opinion that effect is not visible.

Western Germany's lack of response to Soviet threats and Soviet promises is one of the pillars of the North Atlantic alliance. If Germany were to waver or follow the temptation of making its own peace with the Soviet Union, NATO would have lost its meaning. I've just returned from an assignment which kept me in Germany for nearly two months, trying to gain and record an insight into German thinking. And one thing I believe is certain - if the Germans ignore both the Soviet carrot and the stick, it is not from ignorance. For the past year - some of the most articulate elements in public life have sought to rouse the German people to a state of alarm over the issues of peace and reunification. No

one holds a position of greater respect in German society than the university professor - and in these twelve months, groups of professors have been issuing one appeal after another against atomic weapons and for prompt negotiations with Moscow. Some of the biggest and most influential newspapers have steadily advocated a disengagement of forces in Europe and have favorably discussed the neutralization of Germany and have attacked Chancellor Adenauer and the West for not having tried hard enough to find a way out of the stalemate with Russia.

The main opposition parties, the Free Democrats and the much more powerful Social Democrats, have used every political means at their disposal to mobilize the country against the Chancellor. Last week they ended four days of tumultuous debate in the Bundestag, in Bonn, by demanding that the Parliament proclaim a national emergency, that Chancellor Adenauer make way for a government of national union. They rang the changes on atomic horror and pinned it on Adenauer and NATO. They accused the Chancellor of not wanting German unity, painted him as an old reactionary who would sell Germany's birthright and gamble Germany's existence on membership in the Western alliance. Some opposition speakers reached a pitch of hysteria shriller than anything yet heard in parliamentary debate. And every word of the proceedings was broadcast, live, on the West German radio network. The public listened, apparently, mainly, in disgust. So much so that sessions of the Bundestag will no longer be broadcast. But there is no sign that Chancellor Adenauer or his government suffered.

Ten days ago, at the height of the four-day debate, the Social Democrats sponsored a big public rally in Frankfurt. Its motto was: Struggle against atomic death. But the hope that this rally would lead to mass action has not been realized. The great Federation of

Trade Unions was called upon to stage a general strike against atomic weapons. But lacking enough support, even in their own ranks, the unions have settled for protest demonstrations and a poll of public opinion.

It's not as though the German public were apathetic or in dbout about the issues. The government has laid its position squarely on-the-line. That position is, in a nutshell, as follows: The first duty of a German government must be to secure peace and freedom for its country. In the face of Soviet expansion, Germany cannot stand along. It can find security only in a family of Western nations. In return, Germany must accept duties and obligations as a member of the alliance, which include the burden of rearmament and equipment with tactical atomic weapons under NATO's direction.

If the West is strong, says the German government, the Russians will not make the mistake that Hitler made of thinking that they might get away with an adventure. Only if the West is strong and united is there a chance of controlled disarmament, a negotiated world settlement with the Soviets and of the reunification of Germany in peace and freedom. This is the view that Chancellor Adenauer and his supporters take.

In the general election last September, an absolute majority of the German electorate endorsed this view. And I found in talking to people in the past two months, that most of them still do. But the forces of both criticism and confusion are strong in Germany today. Together with the constant, enormous psychological pressure from the Soviet Union, they could change the political climate. The German people are in no mood to gamble. But to retain their support, the Chancellor and the Western allies have got to keep proving that they know where they're going.

Now, back to Ed Murrow in Washington.

MURROW: ...

The German people are in no mood to gamble. But to retain their support, the Chancellor and the Western allies have got to keep proving that they know where they're going.

Now, back to Ed Murrow in Washington.

MURROW: That was my colleague, Richard Hottelet, telling what he saw, and heard in Germany. This is Ed Murrow. I'll be back in a moment with the Word for Today. Now here is George Bryan.

GEORGE BRYAN: COMMERCIAL

MURROW: And here is a bulletin...Witchita Falls, Texas was hit tonight by two tornadees. There appears to have been considerable damage. No deaths are reported.

Dick Hottelet said that Chancellor Adenauer and the Western allies are going to have to "keep proving" they know where they are going. They want to travel the road of freedom. But the great German, Goethe said: "Those men alone deserve life and freedom who earn both anew each day."

Goodnight and good luck!

Edward R. Murrow Thurs., Apr. 3, 1958

This is the news:

President Eisenhower today sent Congress his plan for reorganizing the defense establishment. The program...outlined in a special 7-thousand-word message...vastly increases the authority of the Secretary of Defense. Mr. Eisenhower said the change is essential if strategic and tactical planning is to be "completely unified." Separate ground, sea and air warfare, he warned, no longer exists. The President said it was "mandatory" that the initiative for strategic planning and basic operational direction rest---not with

→

the separate services---but "directly with the Secretary of Defense and his operational advisers, the Joint Chiefs of Staff." The Joint Chiefs [redacted] would, in the future, serve as staff assisting the Secretary of Defense in his exercise of direction over unified commands. Orders issued to the commands by the Joint Chiefs of Staff would be under the authority and in the name of the defense secretary. Mr. Eisenhower said, "We must organize our fighting forces into operational commands that are truly unified, each assigned a mission in full accord with our over-all military objectives." The commands would be established on order of the President. They would be under the Defense Department but separate from the military departments---that is, the Army, Navy and Air Force. Mr. Eisenhower [redacted] said that, in proposing this, it was not his intent to "merge or abolish the [redacted] traditional services." The chain of command would be streamlined. ~~The President suggests that it should be possible to eliminate "at least one, and perhaps two" of the four assistant secretaries now authorized for each military department.~~

He recommends that a new position be created---that of Director of Defense Research and Engineering, who would have a staff, civilian and military, "highly qualified in science and technology." This director would take the place of the present Assistant Secretary of Defense for Research and Engineering, and would have rank equal to that of the secretary of any of the armed services. Then the President makes the following suggestion: "I strongly urge that in the future the Congress make appropriations for the Defense Department in such fashion as to provide the secretary of defense adequate authority and flexibility to discharge his heavy responsibilities." He goes on to say that he has directed estimates for the defense budget for the fiscal year 1960 "to be prepared in a form to accomplish this end." The White House says Mr. Eisenhower is asking, in effect, that Congress no longer appropriate the bulk of defense money to the military departments but to the Secretary of Defense. The money would then channel through him to the various services. Congress is not taking kindly to

this proposal. Democratic Representative Kilday estimated that the plan would give Secretary McElroy "probably greater economic power than should be possessed by one individual." / Kilday is chairman of a House subcommittee that will start hearings on the reorganization program later this month. / Chairman Russell of the Senate Armed Services Committee said he was against any legislation that would destroy the identity of the armed forces. / And Republican Senator Bridges told McElroy...at a hearing this afternoon...that giving him such broad control over all defense funds would be "pretty much of a surrender on the part of Congress." / Democratic Senator Symington told McElroy that "perhaps with some changes," the new proposals could be made to work.

Congress adjourned late this afternoon for its Easter Recess, after completing action on the 1-billion, 800-million-dollar highway bill. / The measure, as finally passed by Congress, retains the provision that encourages the limitation of billboards.

The State Department said today that it is the present policy of the United States not to ship arms to either side in the Cuban civil war. The department confirmed that it halted a shipment of Girand rifles to the Batista government two weeks ago.

In Cuba today, President Batista issued a series of decrees aimed at forestalling a general strike. Under the decrees, a striker would lose his job for life. An employer calling a work stoppage, even at gunpoint, would be sent to jail. Government workers and businessmen may carry firearms and shoot to kill in case of attack during a strike. And any judge ruling against the government would be promptly dismissed.

There is a run on the banks in Havana, despite government assurances that bank deposits will not be confiscated. Leaflets have appeared, calling for the "paralysis" of Cuba "until tyranny falls." The rebel leader, Fidel Castro, last month gave Batista [redacted] until this Saturday to resign. Castro said he would call a general strike, to back up his guerrilla fighters, but there is no definite word on

when a general strike will be called. The rebels have sabotaged power lines...and communications...to the extent that Oriente Province is virtually cut off. The state telegraph to Santiago, the second largest city of Cuba, is reported out.

The Anglo-American "good offices" team of Robert Murphy and Harold Beeley flew back to Tunisia today, from Paris, in a continuation of their effort to settle the French-Tunisian dispute. French Premier Gaillard reportedly turned down their proposal that the Algerian frontier be supervised by a small international force. Gaillard wants a big international force capable of sealing the border.

Soviet Premier Khrushchev made a speech today in Budapest, where he is conferring with Hungarian leaders...and he again accused the United States of throwing roadblocks in the way of a summit conference. The United States is doing this, he said, by insisiting that the question of the Eastern European satellites and a divided Germany be discussed. CBS News Correspondent Ernest Leiser →

passed through Budapest today. (The Communists saw to it that he didn't stay). For a report on what Leiser was able to see, we switch now to Vienna.

Tape runs 4:20
Ends on cue: "---to ERM in Washington."

That was my colleague Ernest Leiser, reporting on the Khrushchev visit to Hungary. This is Ed Murrow. I'll be back in a moment with the Word for Today. Now, here is George Bryan.

Word for Today

as Camus said,

The visit of Khrushchev to Budapest ~~incredibly~~ brings to mind what happened there less than two years ago. Nor will the world soon forget. Albert Camus recently said, "The Hungarian revolt blew to bits, the biggest lie of the century---a lie that tried to pass off as proletarian revolution a regime of police tyranny."

Goodnight and good luck!

CBS RADIO DIVISion

EDWARD R. MURROW WITH THE NEWS

Thursday, April 3, 1958
7:45 - 8:00 P. M. EST

E. R. MURROW: Soviet Premier Khrushchev made a speech today in Budapest, where he is conferring with Hungarian leaders. And, he again, accused the United States of throwing what he called "road blocks" in a the way of a summit conference. "The United States is doing this," he said, "by insisting that the question of the Eastern European satellites and a divided Germany be discussed." CBS NEWS correspondent Ernest Leiser passed through Budapest today. He was on his way back from Bucarest and the Communists saw to it that he did not stay in Budapest. For a report on what Leiser was able to see we switch now to Vienna.

LEISER: Budapest is hiding the scars of its hate? for the Soviets tonight under a fantastic cover of bunting and banners which profess the undying friendship of the Hungarians for their Soviet big-brothers and specifically for the biggest brother Nikita Sergieovich Khrushchev. Equally as conspicuous as the flags and the placards, however, are the police precautions to protect Khrushchev from his Hungarian friends. Uniformed security forces are out in very considerable number in Budapest. The malitia has re-routed traffic through the city most of the day for security reasons. And, the plain clothes secret police of the Admiral?? are out in force. I drove into Budapest from the Communist East - from Roumania today, and was stopped by police road blocks twice before reaching the city. And, the authorities made very sure that cameraman Paul Brook and I drove out of the city and the country tonight. Our requrest to stay overnight at least on our transit visa was reasonably politely but very firmly turned down. Out of the country by dark we were ordered. Nor was our case unique. No Western applicants for visa's to cover Khrushchev's visit had been let into Budapest since his arrival. In the face of the Hungarian Security measures, Khrushchev put on quite a show of some concern for his own personal security

tdday. The big show this morning was a wreath laying ceremony by the Hungarian Communist brass at the monument on Freedom Square that commemorates the Soviets liberation of Hungary 13-years ago. Khrushchev was very conspicuously present there and after the formal showwas over, he mingled with the crowd briefly and self-confidently - shaking hands and even kissing children. It was quite an impressive demonstration, although to this reporter it did recall another impression sight on Freedom Square 17-months ago tomarrow when the Soviets began what I suppose they'll ultimately call Ed their second liberation of Hungary. On that day, November 4, 1956 I watched from the U. S. legation windows as buttoned up Soviet tanks fired across the square on any man,woman or child who appeared within gun-sight.

Too re-inforce the impression of Socialist solidarity about which Khrushchev and company have been talking since their arrival in Budapest, the Hungarians have patched up and builded up all the many Soviet monuments which were damaged or destroyed during the revolution. And today there are even a few Red flags on the scaffolding that covers the gutted (indistinct) barracks where the Hungarian Freedom Fighters held out longest and most bravely 17-months ago against the Russian tanks.

Although Hungary's Communist rulers seem to have everything well in hand for the big liberation day parade tomorrow with Khrushchev guest of honor there to, the enthusiasm of individual Hungarians does not exactly seem to match the rosy-glow of the banners and the slogans. Driving across the country I was struck by the absence of flags either the Hungarian national colors or Communism's Red flag on individual houses. During the revolution before the Russians struck back dozens of hours houses in each village were bedecked with the red-white-green of Hungary or with the black flags of mourning for the revolutions dead. Today, except for the activity busily being organisdd by the local party headquarters and a

around state runned factories and other institutions, the towns and villages themselves look dead. Many flags on public buildings -not a flag on a private house.

Khrushchev himself may not really discover how the vast majority of his ten million Hungarian friends feel about him and the Soviet Army that still rolls along every road in Hungary, but it doesn't take a less sheltered visitor very long in this country and it doesn't take very many conversations to indicate that the enthusiasm of the Hungarian workers and pesants for their Soviet liberators is not appreciably greater today then it was when the Russians showed up shooting on sight 17-months ago tomorrow.

This is Ernest Leiser in Vienna. Now, back to EDWARD R. MURROW in Washington.

E. R. MURROW: That was my colleague Ernest Leiser reporting first hand from Khrushchev's visit to Hungary. The broadcast originated from Vienna which Mr. Leiser reached today after driving through Hungary.

This is Ed Murrow ...

EDWARD R. MURROW WITH THE NEWS
CBS RADIO NETWORK

THURSDAY, APRIL 3, 1958
7:45 - 8:00 PM EST

This is the news:

President Eisenhower today sent Congress his plan for reorganizing the defense establishment. The program...outlined in a special 7-thousand-word message...vestly increases the authority of the Secretary of Defense. Mr. Eisenhower said the change is essential if strategic and tactical planning is to be "completely unified." Separate ground, sea and air warfare, he warned, no longer exists. The President said it was "mandatory" that the initiative for strategic planning and basic operational direction rest - not with the separate services - but "directly with the Secretary of Defense and his operational advisers, the Joint Chievs of Staff." The Joint Chiefs would, in the future, serve as staff assisting the Secretary of Defense in his exercise of direction over unified commands. Orders issued to the commands by the Joint Chiefs of Staff would be under the authority and in the name of the defense secretary. Mr. Eisenhower said, "We must organize our fighting forces into operational commands that are truly unified, each assigned a mission in full accord with our over-all military objectives." The commands would be established on order of the President. They would be under the Defense Department but separate from the military departments - that is, the Army, Navy and Air Force. Mr. Eisenhower said that, in proposing this, it was not his intent to "merge or abolish the traditional services." The chain of command would be streamlined. He recommends that a new position be created - that of Director of Defense Research and Engineering, who would have a staff, civilian and military, "highly qualified in science and technology." Then the President makes the following suggestion: "I strongly urge that in the future the Congress make appropriations for the Defense adequate authority and flexibility to discharge his heavy responsibilities." He goes on to say that he has directed estimates for the defense budget for the fiscal year 1960 "to be prepared in a form to accomplish this end." The

White House says Mr. Eisenhower is asking, in effect, that Congress no longer appropriate the bulk of defense money to the military departments but to the Secretary of Defense. The money would then channel through him to the various services. Congress is not taking kindly to this proposal. Democratic Representative Kilday estimated that the plan would give Secretary McElroy "probably greater economic power than should be possessed by one individual." Kilday is chairman of a House subcommittee that will start hearings on the reorganization program later this month. Chairman Russell of the Senate Armed Services Committee said he was against any legislation that would destroy the identity of the armed forces. And Republican Senator Bridges told McElroy...at a hearing this afternoon...that giving him such broad control over all defense funds would be "pretty much of a surrender on the part of Congress." Democratic Senator Symington told McElroy that giving him such broad control over all defense funds would be "pretty much of a surrender on the part of Congress." Democratic Senator Symington told McElroy that "perhaps with some changes" the new proposals could be made to work.

Congress adjourned late this afternoon for its Easter Recess, after completing action on the 1-billion, 800-million-dollar highway bill. The measure, as finally passed by Congress, retains the provision that encourages the limitation of billboards.

The State Department said today that it is the present policy of the United States not to ship arms to either side in the Cuban civil war. The department confirmed that it halted a shipment of Girand rifles to the Batista government two weeks ago.

In Cuba today, President Batista issued a series of decrees aimed at forestalling a general strike. Under the decrees, a striker would lose his job for life. An employer calling a work stoppage, even at gunpoint, would be sent to jail. Government workers and businessmen may carry firearms and shoot to kill in case of attack during a strike. And any judge ruling against the government would be promptly dismissed.

There is a run on the banks in Havana, despite government assurances that bank deposits will not be confiscated. Leaflets have appeared, calling for the "paralysis" of Cuba "until tyranny falls." The rebel leader, Fidel Castro, last month gave Batista until this Saturday to resign. Castro said he would call a general strike, to back up his guerrilla fighters, but there is no definite word on when a general strike will be called. The rebels have sabotaged power lines...and communications...to the extent that Oriente Province is virtually cut off. The state telegraph to Santiago, the second largest city of Cuba, is reported out.

The Anglo-American "good offices" team of Robert Murphy and Harold Beeley flew back to Tunisia today, from Paris, in a continuation of their effort to settle the French-Tunisian dispute. French Premier Gaillard reportedly turned down their proposal that the Algerian frontier be supervised by a small international force. G illard wants a big international force capable of sealing the border.

Soviet Premier Khrushchev made a speech today in Budapest, where he is conferring with Hungarian leaders...and he again accused the United States of throwing roadblocks in the way of a summit conference. The United States is doing this, he said, by insisting that the question of the Eastern European satellites and a divided Germany be discussed. CBS News Correspondent Ernest Leiser passed through Budapest today. The Communists saw to it that he didn't stay. For a report on what Leiser was able to see, we switch now to Vienna.

LEISER: Budapest is hiding the scars of its heat for the Soviets tonight under a fantastic cover of hunting and banners which profess the undying friendship of the Hungarians for their Soviet big-brother and specifically for the biggest brother Nikita Sergieovich Khrushchev. Equally as conspicuous as the flags and the placards, however, are the police precautions to protect Khrushchev from his Hungarian friends. Uniformed security forces are out in very considerable number in Budapest. The militia has re-routed traffic through the city most of the day

for security reasons. And, the plain clothes secret police of the (indistinct) are out in force. I drove into Budapest from the Communist East - from Roumania today, and was stopped by police road blocks twice before reaching the city. And, the authorities made very sure that cameraman Paul Brook and I drove out of the city and the country tonight. Our request to stay overnight at least on our transit visa was reasonably politely but very firmly turned down. Out of the country by dark we were ordered. Nor was our case unique. No Western applicants for visas to cover Khrushchev's visit had been let into Budapest since his arrival. In the face of the Hungarian Security measures, Khrushchev put on quite a show of some concern for his own personal security today. The big show this morning was a wreath laying ceremony by the Hungarian Communist brass at the monument on Freedom Square that commemorates the Soviets liberation of Hungary 13 years ago. Khrushchev was very conspicuously present there and after the formal show was over, he mingled with the crowd briefly and self-confidently - shaking hands and even kissing children. It was quite an impressive demonstration, although to this reporter it did recall another impression sight on Freedom Square 17 months ago tomorrow when the Soviets began what I suppose they'll ultimately call Ed, their second liberation of Hungary. On that day, November 4, 1956, I watched from the U.S. legation windows as buttoned up Soviet tanks fired across the square on any man, woman or child who appeared within gun-sight.

To reinforce the impression of Socialist solidarity about which Khrushchev and company have been talking since their arrival in Budapest, the Hungarians have patched up and built up all the many Soviet monuments which were damaged or destroyed during the revolution. And today there are even a few Red flags on the scaffolding that covers the gutted (indistinct) barrecks where the Hungarian Freedom Fighters held out longest and most bravely 17 months ago against the Russian tanks.

Although Hungary's Communist rulers seem to have everything well in hand for the big liberation day parade tomorrow with Khrushchev guest of honor there too,

the enthusiasm of individual Hungarians does not exactly seem to match the rosy glow of the banners and the slogans. Driving across the country, I was struck by the absence of flags either the Hungarian national colors or Communism's Red flag on individual houses. During the revolution before the Russians struck back, dozens of houses in each village were bedecked with the red-white-green of Hungary or with the black flag of mourning for the revolutions dead. Today, except for the activity busily being organized by the local party headquarters and around state run factories and other institutions, the towns and villages themselves look dead. Many flags on public buildings - not a flag on a private house.

Khrushchev himself may not really discover how the vast majority of his ten million Hungarian friends feel about him and the Soviet Army that still rolls along every road in Hungary, but it doesn't take a less sheltered visitor very long in this country and it doesn't take very many conversations to indicate that the enthusiasm of the Hungarian workers and peasants for their Soviet liberators is not appreciably greater today then it was when the Russians showed up shooting on sight 17 months ago tomorrow.

This is Ernest Leiser in Vienna. Now, back to Edward R. Murrow in Washington.

MURROW: That was my colleague Ernest Leiser reporting first hand from Khrushchev's visit to Hungary. The broadcast originated from Vienna which Leiser reached today after driving through Hungary.

This is Ed Murrow. I'll be back in a moment with the Word for Today. Now, here is George Bryan.

GEORGE BRYAN: COMMERCIAL

MURROW:As Ernest Leiser said,the visit of Khrushchev to Budapest brings to mind what happened there less than two years ago. Nor will the world soon forget. Albert Camus recently said, "The Hungarian revolt blew to bits the biggest lie of the century---a lie that tried to pass of as proletarian revolution, a regime of police tyranny."

Goodnight and good luck!

Edward R. Murrow Fri., April 4, 1958

This is the news:

Nikita Khrushchev today challenged the United States "to make the same propaganda" as Russia by announcing a suspension of nuclear weapons tests. / Khrushchev spoke in Budapest, at a mass rally celebrating the "liberation" of Hungary by the Red Army 13 years ago. / The Soviet premier said that President Eisenhower's dismissal of the Russian announcement (that it was suspending tests) as propaganda had caused the world "disappointment and despair." / Khrushchev said the United States and Britain could show their "goodwill" by following Russia's example. / If it will help, he said, the Soviet Union will agree to international supervision. / He did not spell out what he meant by "supervision".

The reply from the State Department was prompt. It said the "greatest expression" of goodwill---not only with respect to testing, but with respect to production of nuclear weapons---was the United Nations resolution of last November, "which was overwhelmingly adopted by the General Assembly but rejected by the U.S.S.R." The State Department spokesman, Lincoln White, said: "It is perhaps significant that this statement by Khrushchev is made in Budapest, where Russia demonstrated its 'goodwill' by the slaughter of the Hungarian people...who sought only to lift from their backs the yoke of foreign-imposed domination." White pointed out that the United States, and Britain and France, have still to receive a reply to their latest note to Russia. In that note, the Western powers proposed that diplomatic negotiations get underway...this month...looking toward a possible summit conference.

My colleague Daniel Schorr is standing by in Washington with some new information on the recent Soviet tests and radio-active fallout. We switch now to Dan Schorr.

(Schorr to run approx 4:30
(Returns on cue: "--to ERM in N.Y."

President Eisenhower today announced steps to implement the housing bill, passed by Congress earlier this week. Included in these steps is the action by the Veterans Administration eliminating the down payments required on G.I. home loans. [redacted] The National Association of Home Builders [redacted] predicts the creation of some 300-thousand new jobs.

The Labor Department announced tonight that unemployment was still climbing, as of the end of March. It says new claims for unemployment benefits rose to 422-thousand last week--an increase of 12-thousand, 500 over the previous week.

The situation in Cuba may be nearing the show-down stage. For a direct telephone report, we switch now to Harry Reasoner in Havana.

(Tape runs 2:00
Returns on cue: "--to EMR in NY."

House investigators said today that the conduct of some members of the Federal Communications Commission over the years has been such as to "seriously undermine" public confidence in the government agency. The charge is made in an interim report, based on nine weeks of hearings by the House subcommittee on legislative oversight. The 18-page report questions the propriety of "wholesale attendance" by F.C.C. members at industry functions. It feels "very strongly" that the government should pay the full expenses of commissioners attending these functions. And it finds "undesirable" the practice of the broadcasting industry in furnishing F.C.C. members with free color television sets and radios. It also condemns the practice by some members of the industry in which commissioners are provided what it calls "excessive entertainment". The report recommends that Congress "make clear" the authority of the President to remove a member of the commission for malfeasance, that members of the commission be prohibited from accepting fees, or honorariums, for making speeches. And that the F.C.C. adopt a "code of ethics" to govern the conduct of members so as to avoid "even the appearance of misconduct." It [illegible] strengthened to [illegible],

→

[redacted] Chairman Harris said [redacted] that all testimony received so far has been sent to the Justice Department "for appropriate action."

President Eisenhower tonight declared California a "disaster area", because of recent flooding in the northern part of that state. The civil defense agency is thereby authorized to allocate money to supplement local efforts to fight the storm damage.

Back in a moment.—

George Bryan.

Word for Today

There is no gainsaying that we live in a new age of awful responsibility. Charles F. Kettering once said, "We are reading the first verse of the first chapter of a book whose pages are infinite." Mr. Kettering confessed he was quoting the words of someone else, and that he could not remember the source. "But," he said, "I have always likes them because they hold out hope."

Goodnight and good luck!

CBS RADIO DIVISION

EDWARD R. MURROW WITH THE NEWS

Friday, April 4, 1958
7:45 - 8:00 P.M.

MURROW: ... My colleague, Daniel Schorr, is standing by in Washington, with some new information on the recent Soviet tests and radioactive fallout. We switch now to Dan Schorr.

SCHORR: On this Good Friday, men and events are conspiring to dramatize further the issue of radioactive fallout. Part of the melancholy pageant being enacted on the international scene, the latest Khrushchev challenge which Ed Murrow just reported, part being played out within the American Administration - the latest effort of President Eisenhower to get some agreement in his official family to negotiate a ban on nuclear testing. But while the diplomats and the officials spar on what to do about it, the issue of fallout becomes more and more poignant. It's now revealed that Soviet atomic explosions a year ago, helped to increase the fallout of Strontium 90 by about 50% in the northeast of the United States. That was a year ago. But the latest Soviet tests that ended on March 22nd were much bigger. There is as yet no official word on the effects of these tests. But how great the fallout is likely to be is indicated by the nature and extent of those tests. About this, an informed estimate was given to me today as follows: that it was certainly the biggest nuclear tests ever staged by the Russians, perhaps by anyone, a probable energy yield of about 25-megatons, equivalent to 25-million tons of TNT. The energy of the American tests at Bikini, in 1954, estimated about 15-megatons. This gives you some idea. It's believed the Russian tests included a large variety of small weapons, two, five and eight kilotons, presumably warheads for rockets and missiles. Then one big explosion - that may have been the first test of Russia's fully-perfected hydrogen bomb. The energy yield does not provide any exact idea of the fallout. But the Russians have not been much concerned with "clean" weapons and it could be supposed that

half to two-thirds of the materials exploded were fissionable. That is, the kind that produce radioactivity. The fallout must have been tremendous.

Senator Hubert Humphrey, Chairman of the Senate's Disarmament sub-committee, has charged that the Atomic Energy Commission is keeping its knowledge of the Russian tests a closely guarded secret because it wants to play down the fallout danger. The AEC assured me today that the only reason for secrecy is national security, to keep the Russians from judging the efficiency of our early detection and intelligence. But the AEC's Acting Chairman, Dr. Willard Libby, - Chairman Lewis Strauss is away for the Passover holiday - Dr. Libby told me today that a report on the fallout in the Russian tests will be issued when all the information is in; perhaps in about three weeks. And Dr. Libby said "We are not bad or malevolent people. We are working for all of us." No one thinks of the AEC as bad or malevolent people, but good and benevolent people may differ. And today I was present as another group of good and benevolent people started a novel legal action. Eighteen persons - Americans, Britons, Japanese, a Canadian, a German and a Frenchman - are filing suits in the courts of the United States, Britain and Russia, seeking injunctions to stop these countries from testing weapons that produce fallouts. Their legal grounds could be stated simply: Every individual is potentially endangered by fallout and so the officials conducting these tests, in the three countries, have no right to do so. The plaintiffs call themselves "private individuals" - private inidivduals like the British philosopher Bertrand Russell, Dr. Martin Niemoeller, head of the German Evangelical Church, and Dr. Linus Pauling, the California Nobel Prize winning chemist. Dr. Pauling appeared at a news conference today, and among the other plaintiffs with him, Mrs. Stephanie May, of Bloomfield, Connecticut, a 29-yr. old housewife, accompanied by her blond 3-yr. old daughter, Elizabeth. As

Elizabeth gurgled and played, Mrs. May said "There is Strontium 90 in the bones of my two babies and I don't want it there. For the first time in my life I'm not proud to be an American and I want to be proud again."

How far Dr. Pauling and Russell and Mrs. May will get with their suits is problematical. The Justice Department will oppose the American suit in the U.S. District Court here in Washington. The two lawyers who visited the Soviet Embassy today to ask for visas to Moscow, failed to see Ambassador Mikhail Menshikov and got a non-committal reply from a consular officer. The chances of getting a Soviet court to enjoin the Russian tests whenever they're resumed are at the least problematical. But the novel and perhaps quixotic action gains impact from the dilemma it springs from, the dilemma of fallout - and somehow this appeal of private individuals to the courts to grant them relief in a legal and literal sense, captured the imagination of some on a day when we learned of increased fallout in New York, and of a bigger fallout report yet to come.

Now, back to Ed Murrow in New York.

MURROW: ...

MURROW: There is no gainsaying that we live in a new age of awful responsibility. Charles F. Kettering once said, "We are reading the first verse of the first chapter of a book whose pages are infinite." Mr. Kettering confessed he was quoting the words of someone else, and that he could not remember the source. "But," he said, "I have always liked them because they hold out hope."

Goodnight and good luck!

Edward R. Murrow Mon., April 7, 1958

This is the news:

The United States today expressed "regret" that the central government of Indonesia had chosen to purchase arms from the Communist bloc. / The State Department spokesman, Lincoln White, referred to the Indonesian announcement...over the week-end...that Indonesia was buying military equipment, including jet fighters and bombers, from behind the Iron Curtain. White said the arms had been purchased "for possible use in killing Indonesians who openly oppose the growing influence of Communism in Indonesia." He denied charges that the United States is supplying arms to the Indonesian rebels. / And he said the United States hopes for

→

in an early settlement without further bloodshed.

President Sukarno of Indonesia today called on the guerrilla forces in Sumatra to end their revolt. / Indonesia, he said, does not want to belong to either the Western or Communist blocs.

In Cuba, a Cuban Army communique claims that a rebel column has been repulsed, near Santiago, with "goodly losses"...and that another rebel force, led by Fidel Castro himself, has been cut off in the Sierra Maestra Mountains. Rebel sources disparage this report, saying that Castro has frequently been "cut off" in the mountains, ever since he started his revolt in December, 1956. / Police seized a cache of rebel propaganda and arms today in Havana. Twenty-six suspects were placed under arrest.

We have no report, so far, that the two American college students arrested by Cuban authorities in Santiago have been released. The students were alleged to be in contact with the Cuban rebels, and the American Consulate in Santiago has been assured they will be set free. They are identified as James Ellsman and Barton Huthwaite, both of the University of Michigan.

Soviet Premier Khrushchev visited a collective farm in Hungary today and predicted that the Soviet Union will gain the economic leadership of the world. / The Americans are "good people," he said, but they are destined for second place. He asked, "Which country has the largest number of people getting higher education? Which country sent the first Sputnik into outer space?"

Egypt today concluded a 10-million-dollar agreement with Russia, whereby Russian wheat will be bartered for Egyptian cotton and other goods. The agreement takes effect in September.

In Washington today, the National Education Association predicted that this country will face the severest teacher shortage in its history when schools open next fall. / It said there will be 135-thousand fewer teachers than the nation's elementary and secondary schools will require.

Secretary of the Treasury Anderson said today that...in combating the recession...the government should beware of "hasty proposals". / Matters such as tax-reduction, he warned, call for the "most competent judgment and prudent thought."

Official unemployment figures will be issued tomorrow for the month of March. / Secretary of Labor Mitchell says the March unemployment figure →

will be about the same as February, when more than 5-million persons were looking for jobs. / The report is expected, at the same time, to show more persons employed.

Technicians handling radio and television programs went on strike today against CBS, following a breakdown in contract talks. / An emergency plan has been placed in operation , so that the CBS Radio and [redacted] Television networks may continue broadcasting. / CBS has offered the technicians a pay increase of seven percent over a period of two and a half years...in what it calls the "most generous contract in the industry." A union spokesman says the main issue is job security, that the wage offer...with a base pay of 185 dollars a week...is near what the union wants. (The present base pay is 175 dollars a week). A company spokesman says, "There have been no lay-offs among these employes. No such issue (as job security) is involved."

A United States Air Force plane has taken off from Japan, with the intention of setting a non-stop speed record between Tokyo and Madrid. The aircraft...a jet strato-tanker...is making an eastbound flight across the Pacific Ocean and the United States, and then across the Atlantic--- a distance of better than 12-thousand miles.

Congress has been given two appraisals of the threat posed by Russian submarines operating off the American coast. The testimony was given by Rear Admiral Rickover, head of the Navy nuclear propulsion program, and Vice Admiral Davis, deputy chief of naval operations for air, and their testimony...in censored form...was released today. Both Davis and Rickover agreed that Russia has slowed down its submarine production considerably, presumably to revise their program in favor of new types capable of launching missiles. Admiral Davis said we are not in "deadly peril today", of large numbers of Russian submarines "lying off our coast threatening us with missiles." Admiral Rickover said the possibility of attack by Russian submarines...firing atomic or hydrogen missiles...is "the gravest immediate threat facing this country." Rickover estimated it would take the Russians only two to three months to convert some of its existing submarines to the missile type.

The United States Supreme Court today threw out the government suit aimed at revoking the citizenship of New York gambler Frank Costello. The court found...in a ~~unanimous~~ decision...that the Justice Department had failed to file the necessary "affidavit of good cause" by the deadline required by law. Costello became a naturalized citizen of the United States in 1925. The Justice Department ~~charged~~ contends that the naturalization was obtained ~~fraudulently~~ by Fraud. ~~That Costello failed to pay state and federal income taxes during the five years preceding his citizenship application, and that, in his application, he concealed a prior criminal record.~~ The Justice Department ~~may now file an entirely new de-naturalization proceeding against Costello, if it so chooses.~~

~~The Civil Aeronautics Administration today began an "on the scene"~~ investigation of the Capital Airlines crash last night, near Freeland, Michigan, which claimed 47 lives. The aircraft was a four-engine Vicount. It is the first major mishap involving a Viscount...and Capital Airlines' first fatal accident since 1949. The turbo-jet was making an instrument landing in a light snowstorm at the time of the crash. There were no survivors.

Edward R. Murrow: April 7, 1958. 7.45 p.m.

It is by now possible to strike a kind of propaganda balance-sheet on the subject of the suspension of nuclear tests. The Soviet announcement that it is giving up the tests has echoed around the world and it has met wide approval, much of it uncritical approval. It has not been known, or recognized, that the Soviet Union timed its offer to come at the conclusion of its own tests that contaminated the atmosphere more than any nuclear tests ever made. Nor was it widely noted that the Kremlin can resume testing any time it chooses, and that its recess carries no provision for international inspection.

But the United States reply, which also has echoed around the world, has not won this wide approval. Our dismissal of the Soviet announcement as meaningless, and President Eisenhower's description of it as a "gimmick", have not been endorsed abroad. Mr. Dulles had a success with his argument that because we have a free press, and an opposition party in this country, we are forbidden from winning propaganda victories in the Soviet way. This was a plea to the jury, but the jury was the American public. And winning over American support is only part of the objective of such propaganda, one might say a minor part. It is Allied opinion, and world opinion beyond that,

that has to be convinced, if American prestige is to be maintained.

The American case was probably made less effective by Mr. Dulles's revelation that President Eisenhower and his advisers had actually considered stealing a march on the Russians, and announcing a suspension of nuclear tests first. They decided not to, and Mr. Dulles told why. / It was not because such a course would be unworthy of us. / It was for another reason, and on this reason we now have staked our prestige. / Mr. Dulles explained that we do want to eliminate nuclear weapons from world arsenals altogether, but, he went on, if that is not going to be done, we wish to develop clean weapons, that can be used effectively without mass destruction of humanity. It is a duty to the American people and to humanity, he said, to develop small, clean bombs for tactical use.

Had Mr. Dulles promised that we will only use the small, clean, tactical weapons, and were foregoing strategic bombing, and the concept of massive retaliation, that would have been revolutionary, and much more sensational than any recess in tests. / But that is not what Mr. Dulles meant. And what he said in effect was that we are determined to add to our present nuclear arsenal. / It may well be in our national interest to do so. But many people, who do not understand the complexities of disarmament

negotiations or the rivalry in power, believe that humanity would be better served by suspending tests, than by adding new weapons, even clean ones.

What makes our case hard to explain is, that there has been a kind of surge in Washington to modify our disarmament program, and to start with an offer to suspend tests under adequate international controls. We had been linking this with a cut-off in manufacturing nuclear weapons, which the Russians opposed. But we have been on the verge of separating the issues, so as to get disarmament negotiations going again. The National Security Council has not actually recommended that this be done, but too many persons in the Administration and in Congress believe in it, for the idea to be scorned.

So what stands between us and the Russians on the test issue may be only international inspection. And Khrushchev in Budapest said that if that is so, the Russians are willing to negotiate international inspection. With that assurance we have a chance to restore our prestige. We can offer to call a recess in testing, just as soon as our current program is over - which is just what the Russians have done. Further, we can publish what we know about the record-breaking contamination from the Russian tests,

and point out again, that we shall be testing relatively clean weapons. And we can offer to start negotiating the terms of international inspection immediately.

It is reliably reported that such an offer is under active consideration in Washington. / If it is made, the world may recognize that a first step in disarmament is at last possible. If it is not made, some other proposal of equal persuasiveness had better be made quickly. Our prestige needs it.

/

Back in a moment —

George Bryan

Word fpr Today

If the prestige of the United States is not to suffer, we must have an imaginative policy. /We need new ideas./ Norman Cousins once said, "The goal of the United States should not only be to send up bigger missiles, but also to send up bigger ideas." And Woodrow Wilson observed, "The world is run by ideas. Only the fool thinks otherwise."

Goodnight and good luck!

EDWARD R. MURROW WITH THE NEWS
CBS RADIO NETWORK

MONDAY, APRIL 7, 1958
7:45 - 8:00 PM EST

This is the news:

The United States today expressed "regret" that the central government of Indonesia had chosen to purchase arms from the Communist bloc. The State Department spokesman, Lincoln White, referred to the Indonesian announcement...over the weekend...that Indonesia was buying military equipment, including jet fighters and bombers from behind the Iron Curtain. White said the arms had been purchased "for possible use in killing Indonesians who openly oppose the growing influence of Communism in Indonesia." He denied charges that the United States is supplying arms to the Indonesian rebels. And he said the United States hopes for an early settlement without further bloodshed.

President Sukarno of Indonesia today called on the guerrilla forces in Sumatra to end their revolt. Indonesia, he said, does not want to belong to either the Western or Communist blocs.

In Cuba, a Cuban Army communique claims that a rebel column has been repulsed, near Santiago with "goodly losses"...and that another rebel force, led by Fidel Castro himself, has been cut off in the Sierra Maestra Mountains. Rebel sources disparage this report, saying that Castro has frequently been "cut off" in the mountains, ever since he started his revolt in December, 1956. Police seized a cache of rebel propaganda and arms today in Havana. Twenty-six suspects were placed under arrest.

Soviet Premier Khrushchev visited a collective farm in Hungary today and predicted that the Soviet Union will gain the economic leadership of the world. The Americans are "good people," he said, but they are destined for second place. He asked, "Which country has the largest number of people getting higher education? Which country sent the first Sputnik into outer space?"

Egypt today concluded a 10-million-dollar agreement with Russia, whereby Russian wheat will be bartered for Egyptian cotton and other goods. The agreement

takes effect in September.

In Washington today, the National Education Association predicted that this country will face the severest teacher shortage in its history when schools open next fall. It said there will be 135-thousand fewer teachers than the nation's elementary and secondary schools will require.

Secretary of the Treasury Anderson said today that...in combating the recession...the government should beware of "hasty proposals." Matters such as tax-reduction, he warned, call for the "most competent judgment and prudent thought."

Official unemployment figures will be issued tomorrow for the month of March. Secretary of Labor Mitchell says the March unemployment figure will be about the same as February, when more than 5-million persons were looking for jobs. The report is expected, at the same time, to show more persons employed.

Technicians handling radio and television programs went on strike today against CBS, following a breakdown in contract talks. An emergency plan has been plaeed in operation, so that the CBS Radio and Television networks may continue broadcasting. CBS has offered the technicians a pay increase of seven percent over a period of two and a half years..in what it calls the "most generous contract in the industry." A union spokesman says the main issue is job security, that the wage offer....with a base pay of 185 dollars a week...is near what the union wants. (The present base pay is 175 dollars a week.) A company spokesman says, "there have been no lay-offs among these employees. No such issue (as job security) is involved."

A United States Air Force plane has taken off from Japan, with the intention of setting a non-stop speed record between Tokyo and Madrid. The aircraft...a jet strato-tanker...is making an eastbound blight across the Pacific Ocean and the United States, and then across the Atlantic---a distance of better than 12-thousand miles.

Congress has been given two appraisals of the threat posed by Russian

submarines operating off the American coast. The testimony was given by Rear Admiral Rickover, head of the Navy nuclear propulsion program, and Vice Admiral Davis, deputy chief of naval operations for air, and their testimony...in censored form...was released today. Both Davis and Rickover agreed that Russia has slowed down its submarine production considerably, presumably to revise their program in favor of new types capable of launching missiles. Admiral Davis said we are not in "deadly peril today" of large numbers of Russian submarines "lying off our coast threatening us with missiles." Admiral Rickover said the possibility of attack by Russian submarines...firing atomic or hydrogen missiles... is "the gravest immediate threat" facing this country. Rickover estimated it would take the Russians only two to three months to convert some of its existing submarines to the missile type.

The United States Supreme Court today threw out the government suit aimed at revoking the citizenship of New York gambler Frank Costello. The court found... in a unanimous decision...that the Justice Department had failed to file the necessary "affidavit of good cause" by the deadline required by law. Costello became a naturalized citizen of the United States in 1925. The Justice Department contends that the naturalization was obtained by fraud.

It is by now possible to strike a kind of propaganda balance-sheet on the subject on the suspension of nuclear tests. The Soviet announcement that it is giving up the tests has echoed around the world and it has met wide approval, much of it uncritical approval. It has not been known, or recognized, that the Soviet Union timed its offer to come at the conclusion of its own tests that contaminated the atmosphere more than any nuclear tests ever made. Nor was it widely noted that the Kremlin can resume testing any time it chooses, and that its recess carries no provision for international inspection.

But the United States reply, which also has echoed around the world has not won this wide approval. Our dismissal of the Soviet announcement as meaningless, and President Eisenhower's description of it as a "gimmick" have not been

endorsed abroad. Mr. Dulles had a success with his argument that because we have a free press and an opposition party in this country, we are forbidden from winning propaganda victories in the Soviet way. This was a plea to the jury, but the jury was the American public. And winning over American support is only part of the objective of such propaganda, one might say a minor part. It is Allied opinion, and world opinion beyond that has to be convinced, if American prestige is to be maintained.

The American case was probably made less effective by Mr. Dulles's revelation that President Eisenhower and his advisers had actually considered stealing a march on the Russians, and announcing a suspension of nuclear tests first. They decided not to, and Mr. Dulles told why. It was not because such a course would be unworthy of us. It was for another reason, and on this reason we now have staked our prestige. Mr. Dulles explained that we do want to eliminate nuclear weapons from world arsenals altogether, but, he went on, if that is not going to be done, we wish to develop clean weapons that can be used effectively without mass destruction of humanity. It is a duty to the American people and to humanity, he said, to develop small, clean bombs for tactical use.

Had Mr. Dulles promised that we will only use the small, clean, tactical weapons and were foregoing strategic bombing and the concept of massive retaliation, that would have been revolutionary and much more sensational than any recess in tests. And we can offer to start negotiating the terms of international inspection immediately.

It is reliably reported that such an offer is under active consideration in Washington. If it is made, the world may recognize that a first step in disarmament is at last possible. If it is not made, some other proposal of equal persuasiveness had better be made quickly. Our prestige needs it.

This is Ed Murrow. I'll be back in a moment with the word for today. Now, here is George Bryan.

GEORGE BRYAN: COMMERCIAL

MURROW: If the prestige of the United States is not to suffer, we must have an imaginative policy. We need new ideas. Norman Cousins once said, "The goal of the United States should not only be to send up bigger missiles, but also to send up bigger ideas." And Woodrow Wilson observed, "The world is run by ideas. Only the fool thinks otherwise."

Goodnight and good luck!

Edward R. Murrow Tues., April 8, 1958

This is the news:

President Eisenhower has sent a note to Khrushchev, asking him to agree that, henceforth, fissionable materials shall be manufactured only for peaceful purposes. The note is in reply to the Soviet premier's letter...of last Friday...challenging the United States to follow Russia's lead and announce a suspension of nuclear weapons tests./ Mr. Eisenhower says that if ever there is to be an "agreed" cessation of tests, there must be a plan for international control./ The President asks Khrushchev, "Why should we not at once put our technicians to work to study together and advise as to what specific control measures are necessary?" Secretary of State Dulles told a news conference today that it is vital that Russia join the United States in discussing disarmament controls./ Dulles said it was →

the conclusion of the President's scientific advisers...after careful study...that no inspection system could be "100 percent sure" of detecting nuclear tests. /But such a system, he said, could make the chances of getting caught so great that no nation would be likely to try./ Dulles said the United States tests in the Pacific this summer may not suffice to perfect the "clean" tactical bomb we need. In that case, he said, if there is still no disarmament agreement, additional tests probably will be required.

Tonight, Khrushchev sent a new batch of letters to Sweden and Denmark, [redacted] as well as to other European countries, urging their support for [redacted] an end to nuclear weapons tests./ If the United States and Britain followed Russia's lead, he said, it would be "a great step forward toward establishing real international confidence and peace." (I should like to discuss this whole subject further in a few minutes).

The government today announced that 25-thousand more persons were unemployed in March than in February. At the same time, employment increased by 323-thousand. And President Eisenhower says these figures indicate "a slowing up of the decline." It is possible for employment and unemployment to both rise because of persons taking jobs who had not been listed previously as unemployed. The increase in employment... reported today...was mostly in agriculture, due to spring planting. The slight over-all gain in unemployment resulted from continued lay-offs in thw auto, fabricated metals and machine industries. The increase of 25-thousand jobless in March contrasts with an increase of 700-thousand in February and more than a million in January. But the March increase, however slight, still runs counter to the normal, seasonal trend...which calls...not for an increase...but for a sizeable decline. And total unemployment now stands higher than at any time in 16 and a half years. Five million, 198-thousand persons are without jobs. The number of persons on the job parttime...because of slack work...also has reached a high for the period since World War Two. Employment in manufacturing plants is down one and a half million from a year ago. President Meany of

→

the AFL-CIO says there is "nothing" in today's report to indicate that the recession has hit bottom, "let alone any sign of a pick-up." /Meany says the "only way" to change the situation is for the government "to act now."

Postmaster General Summerfield tonight announced the construction of 918 new Post Office buildings at an estimated cost of 49-million dollars. He said work on the various buildings already is under way, or will begin by early fall. /Most of the Post Offices will be built by private capital, and then leased to the government. /Summerfield urged approval of the bill...now pending in Congress...which would raise postal rates. /~~The additional revenue, he said, would provide more Post Offices and equipment with which to meet today's postal needs.~~

Russia and West Germany today concluded a three-year agreement which would double trade between the two countries. / The agreement climaxes nearly 10 months of talks, interrupted from time to time because of Russia's refusal to allow large numbers of German citizens held in the Soviet Union to go home. Russia now promises to give "sympathetic consideration" to their repatriation. / The agreement also calls for the setting up of consulates.

In Cuba, seven American correspondents, held by the Batista government, have been released. / These correspondents, including Bob Taber of CBS News, were taken into custody in Santiago, the capital of Oriente Province, where the rebel forces of Fidel Castro have been most active. / The United States Embassy in Havana says the Cuban government wants all American reporters to stay out of the Santiago area "because it feels responsible for their safety." / Taber says, "It begins to look like a dim future for American reporters who have come, hoping to learn the truth about what is going on." / Rumors spread through Havana that "thousands" of Cubans in Oriente Province are taking up arms to join the revolt. / A bulletin---issued

→

by a civic resistance movement in Havana---says, "This week, Cuba will be free." The movement is composed of many professional, business and religious leaders.

That Air Force jet tanker...flying non-stop from Tokyo with Madrid as its destination...landed in the Azores today---1-thousand, 259 miles short of its goal. The aircraft was forced to cut short its flight when high-velocity tailwinds failed to materialize and it began running low on fuel. However, its non-stop flight of 10-thousand, 228 miles set a new distance record for jets.

No progress is reported toward settlement of the strike of technicians and cameramen against CBS. So far as is known, the two parties are not in negotiation.

Edward R. Murrow: April 8, 1958. 7.45 p.m.

President Eisenhower's letter to Khrushchev, and Secretary Dulles's comments in his news conference today, leave no doubt that the United States is not ready at this time to meet the Russians halfway on the suspension of nuclear tests. / They both urged the Russians to start negotiations on international atomic controls. But they did not suggest that the United States, for its part, would suspend tests at the completion of the program set for Eniwetok this summer. / On the contrary, Mr. Dulles said that this summer's tests probably would not be enough, and we would require further tests to develop the clean tactical weapons we are after. / And Mr. Eisenhower in his letter to Khrushchev pulled no new ideas out of the hat. / Instead, he put on display the proposals that have become United States policy since 1953, and which the Kremlin has not accepted. / He pleaded eloquently with the Soviet premier to reconsider the rejection of the cut-off in the manufacture of nuclear weapons, and the reduction of existing stockpiles by transforming their energy for peacetime use. This the Russians have not responded to before, presumably because it would freeze stockpile levels to our advantage, since our pile is larger.

Mr. Dulles did not disclose on whose authority or advice the decision had been made probably to continue tests after this summer. He simply

informed newsmen that this is the case. And it raises an interesting question about the responsibility for such far-reaching decisions in the nuclear field. Congress has a remote control by holding the purse-strings of the Atomic Energy Commission, but it is too remote for it to dictate specific policy in such matters. Administration leaders do not take such issues to the public. Maybe "security" is too much involved. Anyway the public is left pretty much in the dark.

However, it is reasonable to assume that two conflicting interests are involved. One is to develop nuclear weapons that can be safely used for tactical purposes. These have to be "clean" so as not to wipe out our own forces that use them, as well as civilians in the region of fighting. The pressure to make such weapons is great, for with them we hope to be able to deal with superior Russian ground forces in any local war. The importance of adding such strength to our forces is obvious, if the arms race is to continue.

But there is the conflicting interest that calls for an end to testing as a way to start slowing down the arms race. The Soviet announcement of an end of testing is being accepted by much of the world as evidence that the Russians are sincere in wanting to slow down the arms race. And that is

of tremendous benefit to the Soviet Union. The Administration said in effect today that it will not now compete for this benefit. It has chosen instead to go ahead adding nuclear weapons to our arsenal.

It is reasonable to speculate why it made this choice. Perhaps it believes it will ultimately get better terms from the Russians by playing "hard to get" at this moment. Perhaps it believes it is far-fetched to hope for a reduction in tensions. Perhaps it believes that the British - who warmly endorsed the Eisenhower letter today - must not be pushed into stopping their own tests at this stage in the nuclear development.

Whatever the reason -- and it could be all three -- the decision invites a further propaganda setback. Nothing Mr. Eisenhower wrote Khrushchev, or Mr. Dulles said in his news conference, will strike the world as an imaginative new search for a formula to slow down the arms race.

That being the situation, some remarks by Mr. Dulles today about propaganda, are anything but clear. He said that the State Department is now aware of the advantages of good propaganda, and is speeding up its operation so as to compete better with the Soviet Union. [The United States is to act more quickly in attacking Soviet propaganda before it makes much headway, and he cited the Eisenhower letter as an example of such speed.]

He went on to doubt the need of a psychological warfare expert in the State Department. He also dismissed a suggestion that something be done in the department to avoid obscure phrases and to use simple English. But one thing he said is undeniably true. In our system, there can be no better propaganda than our policies. Good policy, not good language, makes good propaganda. Unfortunately it is hard to see how the policy announced by the President and Mr. Dulles today can be turned into effective propaganda, even by the most skillful use of language.

Back in moment — Food —

Now about Iran

George Reedy

Word for Today

The question arises as to how, [redacted]... a decision as far-reaching as that for the continuation of nuclear weapons tests is made. Who is responsible? The historian, George Bancroft, stated the idea when he said — ~~said~~, "The best government rests on the people, and not on the few; on persons, and not on property; on the free development of public opinion, and not on authority."

Goodnight and good luck!

Word for Today

The question arises as to how the decision whether to continue nuclear tests, shall be reached. Who shall be responsible? Perhaps the ideal was expressed by the historian, George Bancroft, who said: "The best government rests on the people, and not on the few; on persons and not on property; on the free development of public opinion, and not on authority."

Goodnight and good luck!

EDWARD R. MURROW WITH THE NEWS
CBS RADIO NETWORK

TUESDAY, APRIL 8, 1958
7:45 - 8:00 PM EST

This is the news:

President Eisenhower has sent a note to Khrushchev asking him to agree that, henceforth, fissionable materials shall be manufactured only for peaceful purposes. The note is in reply to the Soviet premier's letter...of last Friday...challenging the United States to follow Russia's lead and announce a suspension of nuclear weapons tests. Mr. Eisenhower says that if ever there is to be an "agreed" cessation of tests, there must be a plan for international control. The President asks Khrushchev, "Why shoudd we not at once put our technicians to work to study and advise as to what specific control measures are necessary?" Secretary of State Dulles told a news conference today that it is vital that Russia join the United States in discussing disarmament controls. Dulles said it was the conclusion of the President's scientific advisers...after careful study...that no inspection system could be "100 percent sure" of detecting nuclear tests. But such a system, he said, could make the chances of getting caught so great that no nation would be likely to try. Dulles said the United States tests in the Pacific this summer may not suffice to perfect the "clean" tactical bomb we need. In that case, he said, if there is still no disarmament agreement, additional tests probably will be required.

Tonight, Khrushchev sent a new batch of letters to Sweden and Denmark, as well as to other European countries, urging their support for an end to nuclear weapons tests. If the United States and Britain followed Russia's lead, he said, it would be "a great step forward toward establishing real international confidence and peace." (I should like to discuss this whole subject further in a few minutes.)

The government today announced that 25-thousand more persons were unemployed in March than in February. At the same time, employment increased by 323 thousand. And President Eisenhower says these figures indicate "a slowing up of the decline."

It is possible for employment and unemployment to both rise because of persons taking jobs who had not been listed previously as unemployed. The increase in employment...reported today...was mostly in agriculture, due to spring planting. The slight over-all gain in unemployment resulted from continued lay-offs in the auto, fabricated metals and machine industries. The increase of 2-thousand jobless in March contrasts with an increase of 700-thousand in February and more than a million in January. But the March increase, however slight, still runs counter to the normal, seasonal trend...which calls...not for an increase...but for a sizeable decline. And total unemployment now stands higher than at any time in 16 and a half years. President Meany of the AFL-CIO says there is "nothing" in today's report to indicate that the recession has hit bottom, "let alone any sign of a pick-up." Meany says the "only way" to change the situation is for the government "to act now."

Postmaster General Summerfield tonight announced the construction of 918 new Post Office buildings at an estimated cost of 49-million dollars. He said work on the various buildings already is underway, or will begin by early fall. Most of the Post Offices will be built by private capital and then leased to the government. Summerfield urged approval if the bill...now pending in Congress...which would raise postal rates. The additional revenue, he said, would provide more Post Offices and equipment with which to meet today's postal needs.

Russia and West Germany today concluded a three-year agreement which would double trade between the two countries. The agreement climaxes nearly 10 months of talks, interrupted from time to time because of Russia's refusal to allow large numbers of German citizens held in the Soviet Union to go home. Russia now promises to give "sympathetic consideration" to their repatriation. The agreement also calls for the setting up of consulates.

In Cuba, seven American correspondents held by the Batista government have been released. These correspondents, including Bob Taber of CBS News, were taken into custody in Santiago, the capital of Oriente Province, where the rebel forces

of Fidel Castro have been most active. The United States Embassy in Havana says the Cuban government wants all American reporters to stay out of the Santiago area "because it feels responsible for their safety." Taber says, "It begins to look like a dim future for American reporters who have come, hoping to learn the truth about what is going on." Rumors spread through Havana that "thousands" of Cubans in Oriente Province are taking up arms to join the revolt. A bulletin--issued by a civic resistance movement in Havana---says, "This week, Cuba will be free." The movement is composed of many professional, business and religious leaders.

The Air Force jet tanker...flying non-stop from Tokyo with Madrid as its destination...landed in the Azores today---1-thousand,259 miles short of its goal. The aircraft was forced to cut short its flight when high-velocity tailwinds failed to materialize and it began running low on fuel. However, its non-stop flight of 10-thousand, 228 miles set a new distance for jets.

President Eisenhower's letter to Khrushchev and Secretary Dulles's comments in his news conference today leave no doubt that the United States is not ready at this time to meet the Russians halfway on the suspension of nuclear tests. They both urged the Russians to start negotiations on international atomic controls. But they did not suggest that the United States, for its part, would suspend tests at the completion of the program set for Eniwetok this summer. On the contrary, Mr. Dulles said that this summer's tests probably would not be enough, and we would require further tests to develop the clean tactical weapons we are after. And Mr. Eisenhower in his letter to Khrushchev pulled no new ideas out of the hat. Instead, he put on display the proposals that have become United States policy since 1953, and which the Kremlin has not accepted. He pleaded eloquently with the Soviet premier to reconsider the rejection of the cut-off in the manufacture of nuclear weapons and the reduction of existing stockpiles by transforming their energy for peacetime use. This the Russians have not responded to before, presumably because it would freeze stockpile levels to our advantage,

since our pile is larger.

Mr. Dulles did not disclose on whose authority or advice the decision had been made probably to continue tests this summer. He simply informed newsmen that this is the case. And it raises an interesting question about the responsibility for such far-reaching decisions in the nuclear field. Congress has a remote control by holding the purse-strings of the Atomic Energy Commission, but it is too remote for it to dictate specific policy in such matters. Administration leaders do not take such issues to the public. Maybe "security" is too much involved. Anyway the public is left pretty much in the dark.

However, it is reasonable to assume that two conflicting interests are involved. One is to develop nuclear weapons that can be safely used for tactical purposes. These have to be clean so as not to wipe out our own forces that use them, as well as civilians in the region of fighting. The pressure to make such weapons is great, for with them we hope to be able to deal with superior Russian ground forces in any local war. The importance of adding such strength to our forces is obvious, if the arms race is to continue.

But there is the conflicting interest that calls for an end to testing as a way to start slowing down the arms race. The Soviet announcement of an end of testing is being accepted by much of the world as evidence that the Russians are sincere in wanting to slow down the arms race. And that is of tremendous benefit to the Soviet Union. The Administration said in effect today that it will not now compete for this benefit. It has chosen instead to go ahead adding nuclear weapons to our arsenal.

It is reasonable to speculate why it made this choice. Perhaps it believes it will ultimately get better terms from the Russians by playing "hard to get" at this moment. Perhaps it believes it is far-fetched to hope for a reduction in tensions. Perhaps it believes that the British - who warmly endorse the Eisenhower letter today - must not be pushed into stopping their own tests at this stage in the nuclear development.

Whatever the reason - and it could be all three - the decision the decision invites a further propaganda setback. Nothing Mr. Eisenhower wrote Khrushchev, or Mr. Dulles said in his news conference, will strike the world as an imaginative new search for a formula to slow down the arms race.

That being the situation, some remarks by Mr. Dulles today about propaganda, are anything but clear. He said that the State Department is now aware of the advantages of good propaganda, and is speeding up its operation so as to compete better with the Soviet Union. The United States is to act more quickly in attacking Soviet propaganda before it makes such headway, and he cited the Eisenhower letter as en example of such speed.

He went on to doubt the need of a psychological expert in the State Department. He also dismissed a suggestion that something be done in the department to avoid obscure phrases and to use simple English. But one thing he said is undeniably true. In our system, there can be no better propaganda than our policies. Good policy, not good language, makes good propaganda. Unfortunately it is hard to see how the policy announced by the President and Mr. Dulles today can be turned into effective propaganda, even by the most skillful use of language.

This is Ed Murrow. I'll be back in a moment with the word for today. Now here is George Bryan.

GEORGE BRYAN: COMMERCIAL

MURROW: The question arises as to how the decision whether to continue nuclear tests shall be reached. Who shall be responsible? Perhaps the ideal was expressed by the historian, George Bancroft, who said: "The best government rests on the people, and not on the few; on persons and not on prpperty; on the free development of public opinion, and not on authority."

Goodnight and good luck!

Edward R. Murrow Wed., April 9, 1958

This is the news:

The Cuban civil war spread today to downtown Havana. The Batista government says "many" rebels were killed, and that "complete order exists." For a first-hand report, here is CBS News Correspondent Harry Reasoner, speaking by telephone from Havana.

(Tape runs 1:50
Ends on cue: "---to ERM in New York."

Shortly before the outbreak in Havana, rebel leader Fidel Castro issued a call for more arms and ammunition for his men. His forces, he said, would wage "total war" until Batista is overthrown.

1 page

President Eisenhower today held his third news conference in three weeks. My colleague, Bob Pierpoint, covered the conference. And for his report, we switch direct to Washington.

(Pierpoint runs 4:30
(Returns on cue: "---to ERM in New York."

The White House announces that President Eisenhower will make a major speech on April 17th---a week from tomorrow---before the American Society of Newspaper Editors in Washington. Mr. Eisenhower will speak on the subject, "Why We have to Modernize our Defense Establishment", and the talk will be carried by CBS Radio.

The President's budget director...Maurice Stans...will also warn tonight against adopting "hasty" anti-recession measures. In a speech in Houston, he will ask that the economy "be given a chance to show its strength" before embarking on a tax cut. That later, if the economy does need a massive shot in the arm, a "selective" tax reduction would be preferable to any large public works program. Public works projects, he will say, are "slow-moving" and the big budgets they ultimately entail "may be the last thing we want." Mr. Stans will predict a federal deficit...this fiscal year...of at least 1-billion, 400-million dollars. This is a deficit three and a half times larger than was anticipated in January.

Reports from Paris say that the Anglo-American "good offices" mission has reached an impasse in its effort to arrange a conciliation between Tunisia and France. / The good offices team of Robert Murphy and Harold Beeley returns to Paris tonight, after an urgent six-hour conference with French Premier Gaillard at his country home in Southwestern France. / The French foreign minister, Christian Pineau, joined the meeting. CBS News Correspondent Lou Cioffi cables from Paris that the stumbling block is still the question of border control. / France wants both sides of the frontier between Algeria and Tunisia to be patrolled. The Tunisians say the French, or some neutral organization---such as the United Nations---can patrol the Algerian side of the frontier. / What goes on on their side of the border, they say, is their own affair. / The French cabinet is meeting on Friday to study the situation.

Soviet Premier Khrushchev wound up his visit to Hungary tonight with a communique---issued jointly by him and leaders of the puppet government of Hungary. The communique calls for "the liquidation of military bases on foreign territory", an apparent reference to American bases overseas. / And it says what Khrushchev has said many times before, that the question of

→

Russia's satellite states cannot be discussed at a summit conference.

Red China and Communist North Korea have been asked to clarify their proposal for the unification of Korea through free elections. The request was made by Great Britain on behalf of the sixteen countries---including the United States---which formed the United Nations Command during the Korean War. We want the Communists to define what they mean by "free elections" and to say whether the elections---if held---would be conducted under United Nations supervision. Also, we want representation in any new all-Korean parliament to be based on population, and not equally divided between North and South. More than two-thirds of the total Korean population lives in South Korea.

The Chinese Nationalists today announced settlement of a dispute with Japan arising from Japanese trade with Red China. Three weeks ago, the Formosa government broke off commercial relations with Japan over fears that a Chinese Communist trade mission in Tokyo would be allowed to fly the Red flag. National China said this would be tantamount to Japanese recognition of Red China. The Japanese government has now given assurances that the trade mission will not fly the Chinese Communist flag. And it says Japan has no intention of switching its diplomatic recognition.

In the Formosa Channel today, Chinese Communist shore batteries fired on the Nationalist-held island of Quemoy. The Nationalist Defense Ministry says the Communists fired 89 rounds, but that the bombardment "caused no harm."

Sir Winston Churchill said today that he "feels obliged" to cancel his visit to the United States. He and Lady Churchill were scheduled to come to Washington late this month, as guests of President and Mrs. Eisenhower. Churchill...who was recently ill with pneumonia...said he was cancelling the visit "with much regret."

Back in a moment.—

George Bryan.—

Word for Today

The fighting in Cuba is symptomatic of desperate independence movements which are making themselves felt throughout the world. One recalls the words of Thoreau, who said: "I was not born to be forced. I will breathe after my own fashion. If a plant cannot live according to its nature it dies...and so a man."

Goodnight and good luck!

CBS RADIO DIVISION

EDWARD R. MURROW WITH THE NEWS

Wednesday, April 9, 1958
7:45 - 8:00 P.M.

MURROW: This is the news. The Cuban civil war spread today to downtown Havana. The Batista government says many rebels were killed and that complete order exists. For a first-hand report here is CBS News correspondent Harry Reasoner speaking by telephone from Havana.

REASONER: A tour by car of Havana this afternoon indicated that whatever was being attempted today is over for at least the time being. The city is relatively quiet. There're fewer people on the streets than usual. But all businesses are apparently open. On the Prado, a main business street, a car was still burning in mid-afternoon where a bomb went off at noon and apparently set fire to a gas main. What happened began at about 11:30 with an attack on CMQ, a big radio station in the Vadado section. A few men came in, got into the main control room, threw gasoline on the control (indistinct) and set it afire. One report said that they were also able to seize another transmitter and make a broadcast advising the country that the general strike had begun. At about the same time, the bomb went off in the manhole on the Prado, when a group of men attacked a gun shop in the port area. In this incident, police said that some rebels were killed. You can get any figure you want from three to ten.

Driving through the city at about noon time, you could hear maybe one shot, two shots, see one or two or three fires depending on what section you were in. There was no really heavy gun-fire; no troops up here that we could see. The whole incident seemed to be handled by police. (indistinct) Army said that it was a major attempt to start trouble and that it had been crushed. The Army also said that it was under Communist direction.

Rebel sources indicated some time ago that there

might be a number of things like this, that one (indistinct) trouble in Havana would become (indistinct) if it seemed to catch fire, if the people seemed to rise with it. Today there was no indication that there were any great numbers of people involved.

Now, back to Edward R, Murrow in New York.

MURROW: ... President Eisenhower today held his third news conference in three weeks. My colleague Bob Pierpoint covered the conference. And for his report we switch direct to Washington.

PIERPOINT: The President came in an unusual three minutes early today, seemed eager to get under way, fielded questions easily and was in excellent spirits through most of the rough give-and-take session. The only flare up of Presidential temper, and it was a strong one, came during a discussion of his plan for reorganization of the Department of Defense. A correspondent reminded President Eisenhower that powerful men in Congress of both parties oppose his reorganization plan. "I don't care how strong they are or how numerous they are," the President declared. "Here's something that is necessary for the United States. I would get onto the air as often as the television companies would let me on," Mr. Eisenhower added. "I would keep it up until I would have the United States understanding that it is their pocketbook. More than that - it is their safety." Obviously speaking about a subject very close to him, the President said he did not care who was against defense organization. It was something the United States needs and he was for it. In an unusual reference to his military career, President Eisenhower added "It just happens, I have got a little bit more experience in military organization and the directing of unified forces than any one else in the active list." He also stated that talk of the Secretary of Defense becoming a military czar makes no sense in view of America's traditional democratic safeguards.

The President seemed to be taking a far different

attitude today than in his news conference of a few months ago, when he indicated that though he had opinions on defense reorganisation, he was not going to force those opinions on any one else.

To those who have predicted that if the President expects to get Congress to approve his plan for a more unified military force, that he will have to fight for it, the answer now seems clear. Today President Eisenhower talked like a fighting man.

After the conference White House News Secretary James Hagerty told us "That fight will begin one week from next Thursday, when the President addresses an international conference of newspaper editors." Originally scheduled as a foreign policy speech, Mr. Hagerty indicated that the President will have considerable to say about defense reorganisation at that time.

While at no other period during today's news conference did President Eisenhower answer other questions with the force that he used in discussing the reorganisation problem, he was also quite positive on the economic situation. He said he thought there were real grounds for expecting an upswing soon in the economy, Mentioned in support of this optimistic viewpoint that 62-million people are working, declared there is still tremendous purchasing power, plenty of savings in our banks. The President had his own one-word answer to spurring the economy, "Buy," he said, "not carelessly but selectively." On that score, he had a word of advice for manufacturers. "I think," warned President eisenhower, "that our people are being just a little bit disenchanted by a few items that have been choked down their throats. I think it would be a very good thing," he added, "when the manufacturers wake up and begin to give the things we want instead of the things they think we want." Anticipating one more question, he then added quickly, "And I'm not going to name names." As for a tax cut, the President added weight to the

growing conviction here in Washington that the Administration hopes to get by without one. He said he sees no need for action on a tax cut now, and that the decision could be postponed until the end of this session of Congress. That, of course, would just about kill hopes for a tax cut this year.

On the complicated and controversial issue of nuclear tests, the President stood fairly close to the position expressed by Secretary of State Dulles yesterday. President Eisenhower agreed with Dulles that we will not stop testing nuclear weapons just because the Russians may have. He said we would consider very seriously a unilateral halt to the tests but only after American scientists have found out most of what they want to know about the development of a so-called "clean" bomb.

The biggest laugh of the day came when Mr. Eisenhower was asked if he would care to assess the Republican chances in the '58 elections. His answer was short and sharp. "No." After the laughter had subsided, he did add that he thinks the Republicans can win if they will work hard and intelligently.

Back now to Edward R. Murrow in New York.

Ed. trans. - P. O.

EDWARD R. MURROW WITH THE NEWS
CBS RADIO NETWORK

WEDNESDAY, APRIL 9, 1958
7:45 - 8:00 PM EST

This is the news:

The Cuban civil war spread today to downtown Havana. The Batista government says "many" rebels were killed and that "complete order exists." For a first-hand report, here is CBS News Correspondent Harry Reasoner speaking by telephone from Havana.

REASONER: A tour by car of Havana this afternoon indicated that whatever was being attempted today is over for at least the time being. The city is relatively quiet. There're fewer people on the streets than usual. But all businesses are apparently open. On the Prado, a main business street, a car was still burning in mid-afternoon where a bomb went off at noon and apparently set fire to a gas main. What happened began at about 11:30 with an attack on CMQ, a big radio station un the Vadado section. A few men came in, got into the main control room, threw gasoline on the control (indistinct) and set it afire. One report said that they were also able to seize another transmitter and make a broadcast advising the country that the general strike had begun. At about the same time, the bomb went off in the manhole on the Prado, when a group of men attacked a gun shop in the port area. In this incident, police said that some rebels were killed. You can get any figure you want from three to ten.

Driving through the city at about noon time, you could hear maybe one shot, two shots, see one or two or three fires depending on what section you were in. There was no really heavy gun fire; no troops up here that we could see. The whole incident seemed to be handled by police. (Indistinct) Army said that it was a major attempt to start trouble and that it had been crushed. The Army also said that it was under Communist direction.

Rebel sources indicated some time ago that there might be a number of things like this, that one (indistinct) trouble in Havana would become (indistinct) if it seemed to catch fire, if the people seemed to rise with it. Today there

was no indication that there were any great numbers of people involved.

Now, back to Edward R. Murrow in New York.

MURROW: Shortly before the outbreak in Havana, rebel leader Fidel Castro issued a call for more arms and ammunition for his men. His forces, he said, would wage "total war" until Batista is overthrown.

President Eisenhower today held his third news confernce in three weeks. My colleague, Bob Pierpoint covered the conference. And for his report, we switch direct to Washington.

PIERPOINT: The President came in an unusual three minutes early today, seemed eager to get under way, fielded questions easily and was in excellent spirits through most of the rough give-and-take session. The only flare up of Presidential temper, and it was a strong one, came during a discussion of his plan for re-organization of the Department of Defense. A correspondent reminded President Eisenhower that powerful men in Congress of both parties oppose his reorganization plan. "I don't care how strong they are or how numerous they are," the President declared. "here's something that is necessary for the United States. I would get onto the air as often as the television companies would let me on." Mr. Eisenhower added. "I would keep it up until I would have the United States understanding that it is their pocketbook. More than that - it is their safety." Obviously speaking about a subject very close to him, the President said he did not care who was against defense organization. It was something the United States needs and he was for it. In an unusual reference to his military career, President Eisenhower added,"It just happens, I have got a little bit more experience in military organization and the directing of unified forces than any one else in the active list." He also stated that talk of the Secretary of Defense becoming a military czar makes no sense in view of America's traditional democratic safeguards.

The President seemed to be taking a far different attitude today than in his news conference of a few months ago, when he indicated that though he had opinions on defense reorganization, he was not going to force these opinions on

anyone else.

To those who have predicted that if the President expects to get Congress to approve his plan for a more unified military force, that he will have to fight for it, the answer now seems clear. Today President Eisenhower talked like a fighting man.

After the conference, White House News Secretary James Hagerty told us "That fight will begin one week from next Thursday, when the President addresses an international conference of newspaper editors." Originally scheduled as a foreign policy speech, Mr. Hageryy indicated that the President will have considerable to say about defense reorganization at that time.

While at no other period during today's news conference did President Eisenhower answer other questions with the force that he used in discussing the reorganization problem, he was also quite positive on the economic situation. He said he thought there were real grounds for expecting an upswing soon in the economy, mentioned in support of this optimistic viewpoint that 62-million people are working, declared there is still tremendous purchasing power, plenty of savings in our banks. The President had his own one-word answer to spurring the economy. "Buy," he said, "not carelessly but sleectively." On that scare, he had a word of advice for manufacturers. "I think," warned President Eisenhower, "that our people are being just a little bit disenchanted by a few items that have been choked down their throats. I think it would be a very good thing," he added, "when the manufacturers wake up and begin to give the things we want instead of the things they think we want." Anticipating one more question, he then added quickly, "And I'm not going to name names." As for a tax cut, the President added wieght to the growing conviction here in Washington that the Administration hopes to get by without one. He said he sees no need for action on a tax cut now, and that the decision could be postponed until the end of this session of Congress. That of course, would just about kill hopes for a tax cut this year.

On the complicated and controversial issue of nuclear tests, the President stood fairly close to the position expressed by Secretary of State Dulles yesterday. President Eisenhower agreed with Dulles that we will not stop testing nuclear weapons just because the Russians may have. He said we would consider very seriously a unilateral halt to the tests, but only after American scientists have found out most of what they want to know about the development of a so-called "clean" bomb.

The biggest laugh of the day came when Mr. Eisenhower was asked if he would care to assess the Republican chances in the '58 elections. His answer was short and sharp. "No." After the laughter had subsided, he did add that he thinks the Republicans can win if they will work hard and intelligently.

Back now to Edward R. Murrow in New York.

MURROW: The White House announces that President Eisenhower will make a major speech on April 17th---a week from tomorrow---before the American Society of Newspaper Editors in Washington. Mr. Eisenhower will speak on the subject, "Why We have to Modernize our Defense Establishment" and the talk will be carried by CBS Radio.

The President's budget director...Maurice Stans...will also warn tonight against adopting "hasty" anti-recession measures. In a speech in Houston he will ask that the economy " be given a chance to show its strength" before embarking on a tax cut. That later, if the economy does need a massive shot in the arm, a "selective" tax reduction would be preferable to any large public works program. Public works projects, he will say, are "slow-moving" and the big budgets they ultimately entail "may be the last thing we want." Mr. Stans will predict a federal deficit...this fiscal year...of at least 1-billion, 400 million dollars. This is a deficit three and a half times larger than was anticipated in January.

Reports from Paris say that the Anglo-American "good officis" mission has reached an impasse in its effort to arrange a conciliation between Tunisia and France. The good offices team of Robert Murphy and Harold Beeley returns to Paris tonight after an urgent six-hour conference with French Premier Gaillard at his country home in Southwestern France. The French foreign minister, Christian Pineau joined the meeting. CBS News Correspondent Lou Cioffi cables from Paris that the stumbling block is still the question of border control. France wants both sides of the frontier between Algeria and Tunisia to be patrolled. The Tunisians say the French or some neutral organization---such as the United Nations--- can patrol the Algerian side of the frontier. What goes on on their side of the border, they say, is their own affair. The French cabinet is meeting on Friday to study the situation.

Soviet Premier Khrushchev wound up his visit to Hungary tonight with a communique---issued joinly by him and leaders of the puppet government of Hungary. The communique calls for "the liquidation of military bases on foreign territory," an apparent reference to American bases overseas. And it says what Khrushchev has said many times before, that the question of Russia's satellite states cannot be discussed at a summit conference.

Red China and Communist North Korea have been asked to clarify their proposal for the unification of Korea through free elections. The request was

made by Great Britain on behalf of the sixteen countries---including the United States---which formed the United Nations Command during the Korean War. We want the Communists to define what they mean by "free elections" and to say whether the elections---if held---would be conducted under United Nations supervision. Also, we want representation in any new "all-Korean" parliament to be based on population and not be equally divided between North and South. More than two-thirds of the total Korean population lives in South Korea.

The Chinese Nationalists today announced settlement of a dispute with Japan arising from Japanese trade with Red China. Three weeks ago, the Formosa government broke off commercial relations with Japan over fears that a Chinese Communist trade mission in Tokyo would be allowed to fly the Red flag. National China said this would be tantamount to Japanese recognition of Red China. The Japanese government has now given assurances that the trade mission will not fly the Chinese Communist flag. And it says Japan has no intention of switching its diplomatic recognition.

In the Formosa Channel today, Chinese Communist shore batteries fired on the Nationalist-held island of Quemoy. The Nationalist Defense Ministry says the Communists fired 89 rounds, but that the bombardment "caused no harm."

Sir Winston Churchill said today that he "feels obliged" to cancel his visit to the United States. He and Lady Churchill were scheduled to come to Washington late this month as guests of President and Mrs. Eisenhower. Churchill who was recently ill with pneumonia...said he was cancelling the visit "with much regret."

This is Ed Murrow. I'll be back in a moment with the word for today. Now, here is George Bryan.

GEORGE BRYAN: COMMERCIAL

MURROW: The fighting in Cuba is symptomatic of desperate independence movements

which are making themselves felt throughout the world. One recalls the words of Thoreau, who said: "I was not born to be forced. I will breathe after my own fashion. If a plant cannot live according to its nature it dies...and so a man."

Goodnight and good luck!

Edward R. Murrow Thurs., April 10, 1958

This is the news:

In Cuba, rebel forces today continued their "hit-and-run" attacks with the main action in Santiago, the capital of Oriente Province. Rebel bands...roaming the streets of Santiago...hurled small, home-made fire bombs at shops [redacted] failing to answer Fidel Castro's call for a general strike. / Cuban Army troops fired on the rebels with machine-guns, mounted on house-tops, and late today the army reported the situation in Santiago "in hand". Police in Havana are reported making a house-to-house search, in some sections of the city, for rebel sympathizers. Havana stores were open today as usual. Brief exchanges of gunfire are reported from three towns in Havana Province.

In Washington today, Secretary McElroy said that the Defense Department needs to be reorganized "now". / He said, "We no longer have time (as in the past) to change command lines, or to shift from a peacetime to a wartime basis. / We go into a period when a potential enemy may have operational long-range missiles, in substantial quantities. Our reaction time," he warned, "must be measured in minutes, instead of hours." / McElroy was speaking at the National Press Club in support of President Eisenhower's program for "modernizing" the defense establishment. / Under the program, orders would flow directly from the commander-in-chief and the Secretary of Defense to the field commands, by-passing the separate military services. The Secretary of Defense also would be given greater control over military appropriations. / McElroy denied that he would become a "czar", or that there would emerge a "Prussian-type general staff." What is being asked, he said, is that he be given authority to transfer a "minor percentage" of monies appropriated by Congress. / He said this "flexibility" in money matters would permit the exploitation of sudden, technological breakthroughs. / And the authority, he promised, would be used only after notifying the appropriate committees of Congress. / McElroy said that Pentagon officials...testifying

→

before Congress on the reorganization plan....should give their views "fully and frankly." He said, however, that he <u>also</u> expected each official to answer questions "with consideration of his position as a member of the defense organization, which is commanded by the President."/ He said there was "no excuse" for officials making speeches against the program. And he hinted, that if an official could not conscientiously support the program, he ought to resign.

President Eisenhower worked most of the afternoon on the broadcast he will make next Thursday in support of the reorganization program. Tomorrow, he will fly to Augusta for a week-end of golf. News Secretary Hagerty says he "wouldn't be surprised" if Mr. Eisenhower takes along a draft of his speech.

A warning today...by Douglas Dillon...that Russia has made "considerable headway" in its economic penetration of the so-called underdeveloped countries. Dillon is deputy under-secretary of state for economic affairs. He said the United States must help the new nations of Asia and Africa to develop... because we shall be finally isolated and "strangled", if we allow them to slip into the Soviet orbit one by one. The economic cold war with Russia, Dillon said, is "waxing warm."

Soviet Premier Khrushchev returned to Moscow today after his eight-day visit to Hungary. He told the crowd welcoming him that the Hungarian party leader, Janos Kadar, is "a man we can rely on." Khrushchev said Russia does not want war. "War," he said, "means killing people. Why should we want war when we have other means?" And Khrushchev added, "I mean consumer goods." In reference to President Eisenhower's

→

"open skies" proposal as part of a disarmament system Khrushchev said, "We don't want to fly over your country, and we don't want you to fly over ours." Russia, he said, already has declared its willingness to accept controls. But he accused the West...vaguely...of laying down "unacceptable conditions."

In Geneva today, Russia called for long-range development of East-West trade. The proposal was made by Soviet Deputy Foreign Minister Zakharov, at a meeting of the United Nations Economic Commission for Europe. He suggested that representatives of all European countries...and the United States...meet next fall to work out a joint program for combating what he called the "Western" recession. "We Russians," he said, "do not rejoice at the sight of the growing unemployment in the West. We deeply sympathize with the victims of this scourge."

The Smithsonian Observatory...in Cambridge, Massachusetts...says the second Russian sputnik may start burning up, when it plunges into dense atmosphere over New England on Saturday. The observatory says the flash in the sky, reported by an airline pilot flying over Louisiana early today, probably was a meteorite.

Negotiations between C.B.S. and the striking International Brotherhood of Electrical Workers are scheduled to be resumed in Washington on Saturday. C.B.S. and union officials will meet at that time with federal mediators. The strike by radio and television technicians is in its fourth day.

My colleague, Dan Schorr (whose normal base of operations is Moscow) has just completed a 20-thousand-mile lecture tour of the United States. After each lecture, there were questions. And I have asked Dan---whose temporary assignment is Washington---for a report on the kind of questions he was asked.

(Tape runs 6:10
Ends on cue: "--to ERM in New York."

Obviously, as Schorr said, America today is "full" of questions. Questions of all kinds. And that is good.

This is Ed Murrow. I'll be back in a moment with the Word for Today. Now, here is George Bryan.

Word for Today

On his lecture tour, Dan Schorr traveled 20-thousand miles up and down America, lecturing and answering questions about Russia. He found an awareness of the problems, and an eagerness to know. And he learned from the questions. For as Seneca said, "Speech is the index of the mind." #

"And curiosity," Julius Charles said, "is little more than another name for hope."

Goodnight and good luck!

schorr for murrow march 12

6:08

For two months, Ed, I have been on the lecture circuit... traveling 20,000 miles up and down America...talking about Russia to 26 groups of all kinds--students, town halls, womens' organizations and trade conventions. I don't know how much they learned, but for me it has been an exciting voyage of discovery. From the hundreds of questions put to me in Mississippi and Ohio, in New Jersey and California, in New York and Oklahoma, I got a sense of America's post-Sputnik mood about the Soviet Union...which, in a way, reflects America's mood about itself. [And what I learned compensated, in part, for the rigors of the one-night stand...the terrors of facing live audiences on a first lecture tour.]

America today is full of questions...uneasy, self-examining questions. I got them not only in formal question periods, but from people who would come up later to ask something special that was in their hearts...from fellow passengers on airplanes, and from taxi drivers. There were differences based on region, on profession, on special interest. But there was a clear and definite pattern of questions that arose everywhere.

It was clear that Sputnik had shaken, if not shattered, many conceptions about Russia...but new conceptions had not yet been crystallized. A University of Miss. student, with an air of now wanting to know the worst, asked if I would list the most common misconceptions about Russia. Others suggested that they had long been misled about Soviet strength. One wanted to know why America had been lulled with propaganda all these years. A few still inquired hpefully, but without much sense of conviction any more, whether Soviet rockets were all made by captured Germans...whether there was enough unrest in Russia to make the overthrow of the Communist regime possible...whether the death of Premier Khrushchev might not plunge Russia into chaos.

Khrushchev is a personality, fascinated many. At a luncheon of Detroit bankers and industrialists, one asked: How long will he last? And, for some reason, the question was followed by laughter. All over the country I was queried about his habits, and what languages he spoke, and just how did he run the country. Americans like to personalize their problems. But, now they are aware that it isn't just Khrushchev, but Russia which must be understood. And the attempt to comprehend was deep, and searching.

The la. student asked: Would it help to invite him to America?

Are there fewer people in prison these days? asked the southern student. What is the average Russian like? asked many. There were questions about a wide range of matters dealing with Soviet life. But always it came back to the crucial subject of whether we can live with the Russians. There were many questions along the line of: Can we TRUST the Russians, or as a middle-aged lady in New York put it, do the Russians trust anyone, including each other?

What was really on their minds was put by a lady in Cleveland:

Are we in greater danger of war since Sputnik? And a very old lady in Pomona, California, got up and said: "We in America are numb at the idea of an atomic war. How do the Russian people feel about this possibility?"

No one asked about the feasability of a preventive war against Russia...not once. That idea seems almost obsolete today. But there was much perplexity about whether we could negotiate with the Russians and, if so, how? Why, asked the Drake University student in Des Moines...why is Russia pushing so hard for a Summit conference? An auto company executive in Detroit, a housewife in Pomona and a student in Florida were ~~xxx~~ among the many who wanted to know how to work out a settlement with Russia. There was considerably more thinking about negotiations with Moscow than I had ever known before.

And, along with that, the deep, uneasy feeling that our leaders are not showing enough imagination and flexibility to negotiate... that today's events are leaving us behind. At ~~the Baptist college~~ of Georgetown, Ky., asked if ~~I thought~~ feared that we were losing world leadership...slipping in o the position of a second-rate power. Why, asked many, had Ambassador Charles Bohlen been replaced in Moscow? A girl at San Diego State College in Calif. asked if I felt that our Administration was a little psychotic about Russia. And many inquired whether it would help if Secretary of State Dulles was replaced. At a forum im Beverly Hills, Calif., a lady asked; half -seriously: "Who is the greatest obstacle to peace--Dulles or Khrushchev?"

Many questioners asked for an explanation of George Kennan's ideas about disengagement in Central Europe...saying it was not clear from local papers what his ideas were. And, again and again, the question: Are the Russians sincere? Can they be trusted? At San Diego State College, the question: What can we, as citizens, do to make ~~them~~ our Administration more aware?

In Tulsa, Okla., a young businessman at a dinner club flatteringly asked if the State Department shouldn't get the advice of foreign correspondents. It was natural that audiences, looking for some point of contact with mysterious Russia, asked about me...my life in Russia...how freely I could travel...my censorship problems.

The American, trying to project himself into a strange world, thinks in personal terms. How do Russians feel about Americans? was a favorite question. And several said they were considering trips to Russia--how would they be treated? And, even, was it safe to go?

~~But Americans are also concerned almost everywhere with questions about religion in Russia. Were people free~~

Many questions reflected special concerns. Almost everywhere the question about religion in Russia; could people go to church freely today? Some wanted to know about anti-Semitism in the Soviet Union. And, oddly enough, almost every time I spoke in the South a question came--usually at the end of the evening and uttered with some misgivings--about the reaction in Russia to American problems of Negro integration. It ~~is~~ was a subject which, as a visiting lecturer, ~~I never raised~~ aware of local sensitivities, I never raised; always, in the South, it was raised with me--~~usually~~ usually with a bit of embarrassment.

xMaxyxxxjxx

@nxthexmindexxfx

Of course, there was much on Soviets education and snience. Stddents, especially, wanted to know in detail about the life of Russian students...and xxxx was the Sov et really turning out phenomenal scientists by the thousand. And there was a disposition to draw the necessary conclusions: A Detroit businessman asked what modifications should be made in our educational system as a result of what I observed in Russia. At one teachers' college, students, with some bitterness, told me that in their institution there were still only two mathematics teachers for almost 200 math majors.

Many questinns reflected a profound hope that the West in general, and America in particular, could penetrate Russia. How effective, they asked in Oklahoma City, and in Palm Springs Beach, and Des Moines...how effective is the Voice of America? ~~In~~ The student at Pennsylvania State Teachers College wanted to know if American history is tagght in Russian schools. And, in San Diego, the wider question: Why is their propaganda so effective and ours so ineffective?

This, Ed, is a sampling of hundreds of questions I have been asked about Russia. America--or at least the Americans who attend lectures--today feel shaken from their comfortable moorings about Russia. They are aware that the Soviet Union is a problem to live with. They xxxxxxxxxxxx are looking for simple, understandable answers that do not come. But they are open-minded and searching, more ready than I have ever known them to discard prejudice and misconception. That is the sense of their questions to a lecturer. As to the answers...that, I'm afraid, would mean--heaven forbid--another lecture.

Now back to ERM in New York.

EDWARD R. MURROW WITH THE NEWS
CBS RADIO NETWORK

THURSDAY, APRIL 10, 1958
7:45 - 8:00 PM EST

This is the news:

In Cuba, rebel forces today continued their "hit-and-run" attacks with the main action in Santiago, the capital of Oriente Province. Rebel bands...roaming the streets of Santiago...hurled small, home-made fire bombs at shops failing to answer Fidel Castro's call for a general strike. Cuban Army troops fired on the rebels with machine-guns, mounted on house-tops, and late today the army reported the situation in Santiago "in hand." Police in Havana are reported making a house-to-house search, in some sections of the city, for rebel sympathizers. Havana stores were open today as usual. Brief exchanges of gun-fire are reported from three towns in Havana Province.

In Washington today, Secretary McElroy said that the Defense Department needs to be reorganized "now." He said, "We no longer have time (as in the past) to change command line, or to shift from a peacetime to a wartime basis. We go into a period when a potential enemy may have operational long-range missiles in substantial quantities. Our reaction time," he warned, "must be measured in minutes, instead of hours." McElroy was speaking at the National Press Club in support of President Eisenhower's program for "modernizing" the defesne establish-ment. Under the program, orders would flow directly from the commander-in-chief and the Secretary of Defense to the field commands, by-passing the separate military services. The Secretary of Defense also would be given greater control over military appropriations. McElroy denied that he would become a "czar," or that there would emerge a "Prussian-type general staff." What is being asked, he said, is that he be given authority to transfer a "miner percentage" of monies appropriated by Congress. He said this "flexibility" in money matters would permit the exploitation of sudden, technological breakthroughs. And the authority he promised would be used only after notifying the appropriate committees of Congress. McElroy said that Pentagon officials...testifying before Congress on

the reorganization plan...should give their views "fully and frankly." He said however, that he also expected each official to answer questions "with consideration of his position as a member of the defense organization, which is commanded by the President." He said there was "no excuse" for officials making speeches against the program. And he hinted that if an official could not conscientiously support the program, he ought to resign.

A warning today...by Douglas Dillon...that Russia has made "considerable headway" in its economic penetration of the so-called underdeveloped countries. Dillon is deputy under-secretary of state for economic affairs. He said the United States must help the new nations of Asia and Africa to develop...because we shall be finally isolated and "strangled" if we allow them to slip into the Soviet orbit one ny one. The economic cold war with Russia, Dillon said, is "waxing warm."

Soviet Premier Khrushchev returned to Moscow today after his eight-day visit to Hungary. He told the crowd welcoming him that the Hungarian party leader, Janos Kadar is "a man we can rely on." Khrushchev said Russia does not want war. "War," he said, "means killing people. Why should we want war when we have other means?" And Khrushchev added, "I mean consumer goods." In reference to President Eisenhower's "open skies" proposal as part of a disarmament system Khrushchev said, "we don't want to fly over your country, and we don't want you to fly over ours." Russia, he said, already has declared its willingness to accept controls. But he accused the West...vaguely...of laying down "unacceptable conditions."

Negotiations between CBS and the striking International Brotherhood of Electrical Workers are scheduled to be resumed in Washington on Saturday. CBS and union officials will meet at that time with federal mediators. The strike by radio and television technicians is in its fourth day.

My colleague, Dan Schorr (whose normal base of operations is Moscow) has just completed a 20-thousand mile lecture tour of the United States. After each

lecture, there were questions. And I have asked Dan---whose temporary assignment is Washington---for a report on the kind of questions he was asked.

DAN SCHORR: For two months, Ed, I have been on the lecture circuit...traveling 20,000 miles up and down America...talking about Russia to 26 groups of all kinds---students, town halls, women's organizations and trade conventions. I don't know how much they learned, but for me it has been an exciting voyage of discovery. From the hundreds of questions put to me in Mississippi and Ohio, in New Jersey and California, in New York and Oklahoma, I got a sense of America's post-Sputnik mood about the Soviet Union...which, in a way, reflects America's mood about itself.

America today is full of questions...uneasy, self-examining questions. I got them not only in formal question periods, but from people who would come up later to ask something special that was in their hearts...from fellow passengers on airplanes, and from taxi drivers. There were differences based on region, on profession, on special interest. But there was a clear and definite pattern of questions that arose everywhere.

It was clear that Sputnik had shaken if not shattered, many conceptions about Russia...but new conceptions had not yet been crystallized. A University of Mississippi student, with an air of now wanting to know the worst, asked if I would list the most common misconceptions about Russia. Others suggested that they had long been misled about Soviet strength. One wanted to know why America had been lulled with propaganda all these years. A few still inquired hopefully, but without much sense of conviction any more, whether Soviet rockets were all made by captured Germans...whether there was enough unrest in Russia to make the over throw of the Communist regime possible...whether the death of Premier Khrushchev might not plunge Russia into chaos.

Khrushchev as a personality, fascinated many. At a luncheon of Detroit bankers and industrialists, one asked: How long will he last? And, for some reason, the question was followed by laughter. All over the country I was queried about his habits, and what languages he spoke and just how did he run the country.

The Louisiana student asked: Would it help to invite him to America? Americans like to personalize their problems. But, now they are aware that it isn't just Khrushchev, but Russia which must be understood. And the attempt to comprehend was deep and searching.

What was really on their minds was put by a lady in Cleveland: Are we in greater danger of war since Sputnik? And a very old lady in Pomona, California, got up and said: "We in America are numb at the idea of an atomic war. How do the Russian people feel about this possibility?"

No one asked about the feasibility of a preventive war against Russia... not once. That idea seems almost obsolete today. But there was much perplexity about whether we could negotiate with the Russians and, if so, how? Why, asked the Drake University student in Des Moines...why is Russia pushing so hard for a Summit conference? An auto company executive in Detroit, a housewife in Pomona, and a student in Florida were among the many who wanted to know how to work out a settlement wtth Russia. There was considerably more thinking about negotiations with Moscow than I had ever known before.

And along with that, the deep uneasy feeling that our leaders are not showing enough imagination and flexibility to negotiate...that today's events are leaving us behind. A girl at San Diego State College in California, asked if I felt that our Administration was a little psychotic about Russia. And many inquired whether it would help if Secretary of State Dulles was replaced. At a forum in Beverly Hills, California...a lady asked, half seriously: "Who is the greater obstacle to peace---Dulles or Khrushchev?"

Many questioners asked for an explanation of George Kennan's ideas about disengagement in Central Europe...saying it was not clear from local papers what hisideas were. And, again and again, the question: Are the Russians sincere? Can they be trusted? At San Diego State College, the question: What can we, as citizens do to make our Administration more aware?

Many questions reflected special concerns. Almost everywhere the question

about religion in Russia; could people go to church freely today? Some wanted to know about anti-Semitism in the Soviet Union. And, oddly enough, almost every time I spoke in the South a question came---usually at the end of the evening and uttered with some misgivings--- about the reaction in Russia to American problems of Negro integration. It was a subject which, as a visiting lecturer, aware of local sensitivities, I never raised; always, in the South, it was raised with me---usually with a bit of embarrassment.

Many questions reflected a profound hope that the West in general and America in particular could penetrate Russia. How effective, they asked in Oklahoma City, and in Palm Beach and Des Moines...how effective is the Voice of America? The student at Pennsylvania State Teachers College wanted to know if American history is taught in Russian schools. And, in San Diego, the wider question: Why is their propaganda so effective and ours so ineffective?

This Ed, is a sampling of hundreds of questions I have been asked about Russia. America---or at least the Americans who attend lectures--today feel shaken from their comfortable moorings about Russia. They are aware that the Soviet Union is a problem to live with. They are looking for simple, understandable answers that do not come. But they are open-minded and searching, more ready than I have ever known them to discard prejudice and misconception. That is the sense of their questions to a lecturer. As to the answers...that, I'm afraid, would mean---heaven forbid---another lecture.

Now, back to Ed Murrow in New York.

MURROW: Obviously, as Schorr said, America today is "full" of questions. Questions of all kinds. And that is good.

This is Ed Murrow. I'll be back in a moment with the Word for Today. Now, here is George Bryan.

GEORGE BRYAN: COMMERCIAL

MURROW: On his lecture tour, Dan Schorr traveled 20-thousand miles up and down America, lecturing and answering questions about Russia. He found an awareness of the problem and an eagerness to know. And he learned from the questions. For as Seneca said, "Speech is the index of the mind." "And curiosity," Julius Charles said, "is little more than another name for hope."

Goodnight and good luck!

This is the news:

Russia has suggested next Thursday as a date for starting negotiations looking toward a summit conference. / Russia agrees with the Western proposal of last week that the talks be held on the ambassadorial level. It does not agree on what the ambassadors should talk about. / The United States, Britain and France said the ambassadors should "examine the position of the various governments on the major questions at issue." / The function of the ambassadors would be to lay the groundwork for a meeting of foreign ministers. / And the ministers, in turn, would try to prepare a meeting at the summit. / Russia says...in notes delivered today to

→

the Western powers...that the ambassadorial talks should not be concerned with "major questions at issue" but should be limited to a "minimum" of questions related directly to the composition of the foreign ministers meeting and the setting of a time and place. Russia says this meeting on the ministers level should be held "not later" than sometime between the end of April and the middle of May. And it goes further. It says that if the foreign ministers meeting fails, there should still be a summit conference. "It is obvious," says Russia, "that the difficulties can and must be overcome at the conference of statesmen who have greater powers."

In Washington, the White House issued a statement saying that the Soviet reply "manifestly" was not an acceptance of the Western proposal. In London, a British official in touch with the Prime Minister said that the Soviet Government "seems more interested in the holding of a summit conference than in the success of such a conference."

President Eisenhower delayed his departure from Washington (for a week-end of golf in Augusta) in order to confer with Secretary Dulles on the new Russian note. The take-off was delayed 40 minutes, and he arrived in Augusta in early afternoon.

The Navy disclosed today that it has test-fired a fullscale "model" of the Polaris ballistic missile...from under-water...for the first time. The announcement was made by Rear Admiral Raborn, director of the Polaris program. The test was made in the Pacific Ocean, off the Southern California coast, on March 23. The Polaris is a missile of 15-hundred-mile range, designed for launching from submarines. Raborn said the basic problems of the weapon, from the scientific to the engineering stage, have been licked. The launching device, he said, is now "actual hardware" and is undergoing daily tests.

The Atomic Energy Commission acted today to prevent four Quakers from sailing into the atomic testing grounds at Eniwetok...as a protest against the continuation of nuclear weapons tests. The Quakers sailed from San Pedro, California, last month in a 30-foot ketch. What the commission did today was issue a regulation, effective immediately, which prohibits all American citizens...or other persons subject to United States jurisdiction...from entering or attempting to enter, the danger zone. If the Quakers proceed with their plan, they will be subject to arrest.

In Paris, the emergency cabinet meeting...scheduled for today in the French-Tunisian dispute...has been postponed until tomorrow. / And there are reports that five Conservative members of the cabinet have again threatened to resign. / Premier Gaillard cancelled today's cabinet meeting, after conferring with the American "good offices" representative, Robert Murphy, reportedly in order to give him and his British counter-part, Harold Beeley, more time in which to try to break the deadlock. / The Conservative ministers have said all along that if Gaillard offers the Tunisians too much in a compromise, they will quit the cabinet and bring down the Gaillard government. They are said to be demanding...now...that Gaillard break off the diplomatic negotiations and take the matter to the United Nations Security Council. Once it has been taken to the council, they would have France try to have Tunisia cited for "interfering" in the Algerian revolt. A spokesman for these Conservatives says, "The affair must be settled tomorrow, once and for all." The cables from Paris tonight speak of a new "crisis".

There are new reports of violence in Cuba...although on a smaller scale than during the past two days. In Eastern Oriente Province, rebel saboteurs

→

blew up a dynamite dump, shattering windows in Santiago, 12 miles away. Other rebel forces are reported to have burned the city hall in the nearby town of El Cobre. Havana is quiet, although some gunfire was heard during last night. Three Catholic Action youth leaders are reported to have been shot by police as rebel sympathizers. Notices have appeared of their deaths, but whether they were executed is not confirmed.

In Washington, the government reports that retail sales dropped one percent in March. The annual rate of personal income for the month also was down by about 300-million dollars but in each instance the drop was not as steep as in January and February.

Former President Truman arrived in Washington today, for a meeting of Democratic leaders, and took issue with President Eisenhower's view that the recession can be largely overcome if people will go out and buy. A real stimulus to the economy, Mr. Truman said, can come when only when people who are now unemployed "go to work."

Edward R. Murrow: April 11, 1958. 7.45 p.m.

The Russians are elusive rivals - they change their tactics quickly. Attention no sooner gets focused on the missile race, than it shifts to the suspension of nuclear testing. That stirs up talk of disarmament and inspection. / But while this is going on, the Russians are effectively at work on the economic front.- the front they keep telling us will be the decisive one. / Here the events are not as sensational as Sputniks, but they are at best disconcerting, and may well be cause for alarm.

In the news [redacted] is the spectacle of a Soviet Deputy Foreign Minister, at a meeting of the United Nations Economic Commission for Europe in Geneva, wringing his hands over the growing unemployment in the West. "We deeply sympathize with the victims of this scourge" he said, and held out a promise of greater Soviet purchase of Western goods. / But in the world markets, the Soviet Union is conducting an operation of selling non-ferrous metals at below world market prices, that is actively contributing to unemployment.

It may be arguable that the Soviet sale of aluminum, tin, lead and zinc in European markets is not intentional mischief-making, though it is hard to believe that the political right-hand of the Soviet regime does not know what the economic left-hand is doing. As to aluminum, the Soviet Union does find that its production is rising and its military demands are

declining somewhat, since aluminum is not needed for big missiles and high-speed planes as before. A new aluminum plant was commissioned in Azerbaijan in July, and another will soon open in Siberia.

But the startling fact is, that the Soviet Union is now the second-largest supplier of aluminum to the United Kingdom. Canada still ranks first, but has lost its monopoly. The Aluminum Company of Canada calls this dumping, and has asked the British Board of Trade for an investigation. My colleague Alexander Kendrick in London tells me that the Soviet Union last year began offering aluminum in London at one to two cents a pound below the Canadian price. The Canadian company counter-attacked by giving a two percent "loyalty discount" to British buyers. However, the Russian price advantage is about ten percent, and the Canadian premium didn't keep the Russians out of the market. The result is that the Canadian company is operating at eighty percent capacity.

By itself aluminum might not be so significant, but the Soviet Union is selling about nine thousand tons of tin a year, which is cutting into the sales of Malaya. Britain took twenty-two hundred tons of Soviet tin last year as against three hundred tons the year before. The Dutch took thirty-eight hundred tons as against ten tons the year before. Britain now

is getting eighteen percent of its zinc from the Soviet Union, and has begun importing pig lead. Copper is the only non-ferrous metal the Russians are still buying from the West. They export all the others. This is creating consternation in the world markets, for these metals once were Russia's largest import group. And as Russia's reserves of most of these metals are the largest in the world, the pattern may become permanent.

Mr. Sakharov, who wrung his hands over Western unemployment, can hardly be unaware of the unemployment the Soviet trade policy is creating. But he is making propaganda for trade talks aimed at lifting all trade restrictions by the West on the Soviet Union, and increasing the volume of the trade. The trade agreement with West Germany, just signed, is an instance of this policy. Western European countries are trying to cushion the effects of the American recession, so they are interested in what Sakharov is saying. Yesterday he asked a conference of trade ministers of fifteen countries, the United States included, to be held in the Fall.

For our part, we are intent on maintaining the ban on strategic trade with the Soviet Union and Communist China. But with the growing economic power of the Soviet Union, and with the ability of the Kremlin to buy and sell at will and keep its wage costs down - as though Marx had never lived -

the economic rivalry will be continually harder to meet .

C. Douglas Dillon, Deputy Under-Secretary of the State Department, said yesterday that the Russian economic challenge is fully as important as the military one. "Certainly" he declared, "the Soviet Union does not intend to fight the economic war according to Marquis of Queensberry rules".

Back in a moment.—

George Bruce

Word for Tpday

There is a tendency...among ~~tee~~ many of us...to regard the Cold War primarily in military terms. The Russians mean to press us hard on the economic front, ~~and we must respond.~~ Thoreau said, "The frontiers (are not ~~[illegible]~~ East or West, North or South, ~~wherever there is a front~~) but wherever a man fronts a fact." And the Greek philosopher, Pythagoras, counseled, "On reaching the frontier, do not ~~pass~~ turn back."

Goodnight and good luck!

This is Ed Murrow. I'll be back in a moment with the word for today. Now, here is GeorgeBryan.

GEORGE BRYAN: COMMERCIAL

MURROW: There is a tendency...among many of us...to regard the Cold War primarily in military terms. The Russians mean to press us hard on the economic front. Thoreau said, "The frontiers are not East or West, North or South, but wherever a man fronts a fact." And the Greek philosopeer, Pythagoras counseled, "On reaching the frontier, do not turn back."

Goodnight and good luck!

Edward R. Murrow Mon., April 14, 1958

This is the news:

Secretary of State Dulles said today that talks looking toward a summit meeting may be started "within a few days." Mr. Dulles was speaking off the cuff at a meeting of the International Press Institute in Washington. The talks to which he referred would be on the ambassadorial level. Russia has suggested that they get underway on Thursday, as a first step toward a foreign ministers conference and a meeting at the summit. Russia would have the ambassadors limit themselves to routine matters---such as selecting a time and place for the ministers conference. And it wants a meeting of heads of government, regardless of whatever progress is made

toward agreement at the lower level. Dulles said again today that there must be "extensive" preparatory work, so that "meaningful" decisions can be reached at the summit. To think that world agreements can be arrived at without this kind of preparation, he said, is an illusion.

In Paris today, the permanent NATO Council is reported to have approved this position. The United States, Britain and France will discuss a possible summit conference with Russia but they will not commit themselves to a summit conference in advance.

A NATO communique...issued tonight...says that Britain and West Germany may have found a possible basis of agreement over the cost of maintaining British troops in West Germany. The communique gives no details. But the agreement is said, in broad outline, to be as follows: West Germany would reduce its direct payments to Britain to somewhere between 30 and 40-million dollars a year, and Britain would cut its forces stationed in West Germany to slightly under 50-thousand men. West Germany, in turn, would make premature payments on certain postwar debts to Britain. And more money would be deposited in the German account in London for sterling purchases of arms.

The British government reports that unemployment in Britain last month reached its highest level in five years.

In this country, the Federal Reserve Board says that industrial production declined in March for the seventh consecutive month. The production index in March dropped two points to 128 percent of the 1947-49 average. Democratic Senator Douglas says the new figure represents a 12 percent decline in industrial production since last August---"the biggest, and fastest, decline," he says, "since the war." The Federal Reserve Board notes, however, that the twp percent drop last month constitutes a slight leveling off.

Secretary of Agriculture Benson told a news conference today that the rise in unemployment---so far---has not "significantly" affected the demand for food. Net "spendable" farm income in the first quarter of this year, he said, "may be fairly close to a rate of 13-billion dollars compared with a rate of less than 12-billion in the same quarter of 1957." He said the prices farmers receive are catching up a little with the rest of the economy.

Former President Truman said today that the recession will not be overcome by "faint-hearted measures." He called for a 5-billion-dollar

→

tax cut for low and middle-income families and increased spending for public health, education, natural resources development, foreign technical assistance (and other phases of the foreign aid program) and national defense. Mr. Truman was testifying before the House Banking Committee. "What the average American consumer actually lacks," he said, "is not confidence but income after taxes." He proposed that revenues lost by the tax cut be made up by removing what he called "glaring loopholes" in the tax structure, such as the oil depletion allowance. He also urged the lowering of interest rates on the national debt---a move, he said, which would save the Federal Government 2-billion dollars a year. And he called for a permanent increase in Social Security benefits, including the immediate expansion of the unemployment compensation system.

The White House announces that President Eisenhower will make a major speech dealing with the national economy on May 20th. The President will speak here in New York, at a special conference on economic mobilization sponsored by the American Management Association.

Russia today announced officially that its second Sputnik...carrying the body of the dog Laika...has entered the dense lower atmosphers and

→

"ceased to exist." The disintegration of the second Sputnik last night leaves three American satellites alone...for the time being...in outer space. The first Sputnik came down in January after being up for three months.

A motion was filed today...asking that the treason indictment, pending against the poet Ezra Pound for the past 15 years, be dismissed. The motion was filed in Washington federal court by attorneys representing Pound's wife. Pound was indicted, in absentia, on charges of making treasonable broadcasts from Italy during World War Two. In 1946, he was found mentally unfit for trial, and he has been confined in a mental hospital ever since. The superintendent of the hospital says that, if the indictment is dismissed, he will recommend that Pound be released from the hospital and placed in the custody of Mrs. Pound. He believes Pound to be incurably insane but "not a dangerous person." The poet Robert Frost has also asked that Pound be released.

President Eisenhower opened the 1958 baseball season today by tossing out the first ball in Griffith Stadium. The ball was caught by Whitey Herzog, Washington center fielder. A second toss, for the benefit of photographers, went to Jimmy Ryan, the Washington batboy. And Washington went on to beat

→

the Boston Red Sox, 5 to 2. The other major league teams begin their season tomorrow.

Edward R. Murrow: April 14, 1958. 7.45 p.m.

This year the Defense Department will spend forty billion dollars. That's about half of all the money spent by the Federal Government for all purposes. The President wants to re-organize the Defense Department, not so much to effect savings as to provide greater flexibility, more unity of command, and considerably more power for the Secretary of Defense. The President wants Mr. McElroy to have authority to "transfer, re-assign, abolish or consolidate functions of the Defense Department". The Joint Chiefs of Staff would in effect become a staff for the Secretary of Defense. Forces in the field, both at home and abroad, would be under a single command. Control of research and development of new weapons would be centralized. The Secretary of Defense would choose and be able to fire the top-ranking Generals and Admirals.

These proposals would enormously strengthen the power of the Secretary of Defense. But there is another proposal which is going to start some old-fashioned political guerilla warfare in Congress and in the armed forces. That is the recommendation that Mr. McElroy be authorized to take money from one service and give it to another. Mr. McElroy indicates that he wouldn't take vast sums from one of the fighting services and give them to another.

He says all he wants is a "modest flexibility in money matters." / Congress, of course, appropriates the money, and is jealous of its power. / The armed services compete, often bitterly, for their share of a defense dollar. Members of the Congress develop allegiance to one or another of the services. The Army, Navy, Air Force and the Marines lobby energetically for their appropriations. According to former President Truman, the service with the most pull generally gets the most money. It's on this matter of money, that the President is going to have his greatest difficulty.

Today two powerful senators had words to say on this subject - Lyndon Johnson, the Democratic leader of the Senate, said he's in favor of a re-organization of the Defense Department, but "Congress is not going to do away with its appropriating power." Styles Bridges, Chairman of the Senate Republican Policy Committee, and a member of the Armed Services and Appropriations Committees, says he's in favor of some streamlining, but he isn't going to "surrender the power of the purse to Mr. McElroy, the President, or anybody else." / Some critics contend that the President is trying to make a czar out of McElroy. / The President denies it, and says he's going to fight for his plan, regardless of how strong or how numerous his congressional opponents may be.

This appears to represent a change in Mr. Eisenhower's attitude toward the presidency. During most of his administration he has contended that the President should not attempt to cajole, coerce or interfere with the legislative or judicial branches of the government. He appeared to accept the Whig philosophy that the powers of the presidency ought to be strictly and severely limited. Now he says he's going to do everything possible to beat down congressional opposition to his plan.

Not all of the opposition will be found in Congress. High ranking members of the services will also oppose it. But they have been warned by Mr. McElroy that if they can't support the proposals they ought to turn in their uniforms. He says they ought to testify "fully and frankly" before congressional committees, but he strongly implies that public criticism by the top brass will not be welcomed. This is going to put a great strain upon a number of Admirals and Generals, because congressional committees will be asking and demanding their full, frank, personal and professional opinions. Some of them will in a sense be caught in a crossfire between perjury, silence and insubordination. It isn't going to be easy for anyone concerned.

It will be a real test of the President's leadership in an area where his stature is great. It will do much to determine how much Mr. McElroy has learned about the art of politics, and the handling of men in uniform, who are resistant to change. It would be hard to overestimate the importance of the outcome, for it involves policy as well as men and money.

The importance of military decisions is seldom appreciated in peacetime. For example, the men who decided to build a fighter around eight machine guns and call it a Spitfire, were apparently only approving the design of a new aircraft. They were in fact taking a decision which saved Britain, and probably the rest of Western civilization. So what is involved here is more than money and metal and men. [redacted] It is a question of the making of decisions and speed of execution.

Back in a moment.—

George Bryan—

Word for Today

All Presidents...starting with George Washington...have been concerned deeply with the readiness of the United States to defend itself. And President Eisenhower doubtless probably would agree with Franklin Roosevelt, who said: "We have had the lesson before us over and over again---nations that were not ready, and were unable to get ready, found themselves overrun by the enemy."

Goodnight and good luck!

EDWARD R. MURROW WITH THE NEWS
CBS RADIO NETWORK

MONDAY, APRIL 14, 1958
7:45 - 8:00 PM EST

This is the news:

Secretary of State Dulles said today that talks looking toward a summit meeting may be started "within a few days." Mr. Dulles was speaking off the cuff at a meeting of the International Press Institute in Washington. The talks to which he referred would be on the ambassadorial level. Russia has suggested that they get underway on Thursday, as a first step toward a foreign ministers conference and a meeting at the summit. Russia would have the ambassadors limit themselves to routine matters---such as selecting a time and place for the ministers conference. And it wants a meeting of heads of government, regardless of whatever progress is made toward agreement at the lower level. Dulles said again today that there must be "extensive" preparatory work, so that "meaningful" decisions can be reached at the summit. To think that world agreements can be arrived at without this kind of preparation, he said is an illusion.

In Paris today, the permanent NATO Council is reported to have approved this position. The United States, Britain and France will discuss a possible summit conference with Russia, but they will not commit themselves to a summit conference in advance.

A NATO communique...issued tonight...says that Britain and West Germany may have found a possible basis of agreement over the cost of maintaining British troops in West Germany. The communique gives no details. But the agreement is said, in broad outline, to be as follows: West Germany would reduce its direct payments to Britain to somewhere between 30 and 40million dollars a year, and Britain would cut its forces stationed in West Germany to slightly under 50-thousand men. West Germany, in turn, would make premature payments on certain postwar debts to Britain. And more money would be deposited in the German account in London for sterling purchases of arms.

The British government reports that unemployment in Britain last month

reached its highest level in five years.

In this country, the Federal Reserve Board says that industrial production declined in March for the seventh consecutive month. The production index in March dropped two points to 128 percent of the 1947-49 average. Democratic Senator Douglas says the new figure represents a 12-percent decline in industrial production since last August---"the biggest, and fastest decline," he says, "since the war." The Federal Reserve Board notes, however, that the two percent drop last month constitutes a slight leveling off.

Secretary of Agriculture Benson told a news conference today that the rise in unemployment---so far---has not "significantly" affected the demand for food. Net "spendable" farm income in the first quarter of this year, he said, "may be fairly close to a rate of 13-billion dollars compared with a rate of less than 12-billion in the same quarter of 1957." He said the prices farmers receive are catching up a little with the rest of the economy.

Former President Truman said today that the recession will not be overcome by "faint-hearted measures." He called for a 5-billion-dollar tax cut for low and middle-income families and increased spending for public health, education, natural resources development, foreign technical assistance (and other phases of the foreign aid program) and national defense. Mr. Truman was testifying before the House Banking Comittee. "What the average American consumer actually lacks," he said, "is not confidence but income after taxes." He proposed that revenues lost by the tax cut be made up by removing what he called "glaring loopholes" in the tax structure, such as the oil depletion allowance. He also urged the lowering of interest rates on the national debt---a move, he said, which would save the Federal Government 2-billion dollars a year. And he called for a permanent increase in Social Security benefits, including the immediate expansion of the unemployment compensation system.

The White House announces that President Eisenhower will make a major speech dealing with the national economy on May 20th. The President will speak

here in New York at a special conference on economic mobilization sponsored by the American Management Association.

Russia today announced officially that its second Sputnik..carrying the body of the dog Laika...has entered the dense lower atmosphere and "ceased to exist." The disintegration of the second Sputnik last night leaves three American satellites alone...for the time being...in outer space. The first Sputnik came down in January after being up for three months.

A motion was filed today...asking that the treason indictment, pending against the poet Ezra Pound for the past 15 years, be dismissed. the notion wss filed in Washington federal court by attorneys representing Pound's wife. Pound was indicted, in absentia, on charges of making treasonable broadcasts from Italy during World War Two. In 1946, he was found mentally unfit for trial, and he has been confined in a mental hospital ever since.

President Eisenhower opened the 1958 baseball season today by tossing out the first ball in Griffith Stadium. The ball was caught by Whitey Herzog, Washington center fielder. And Washington went on to beat the Boston Red Sox 5 to 2. The other major league teams begin their season tomorrow.

This year the Defense Department will spend forty billion dollars. That's about half of all the money spent by the Federal Government for all purposes. The President wants to re-organize the Defense Department, not so much to effect savings as to provide greater flexibility, more unity of command, and considerably more power for the Secretary of Defense. The President wants Mr. McElroy to have authority to "transfer, re-assign, abolish or consolidate functions of the Defense Department." The Joint Chiefs of Staff would in effect become a staff for the Secretary of Defense. Forces in the field, both at home and abroad, would be under a single command. Control of research and development of new weapons could be centralized. The Secretary of Defense would choose and be able to fire the top-ranking Generals and Admirals.

These proposals would enormously strengthen the power of the Secretary of

Defense. But there is another proposal which is going to start some old-fashioned political guerilla warfare in Congress and in the armed forces. That is the recommendation that Mr. McElroy be authorized to take money from one service and give it to another. Mr. McElroy indicates that he wouldnt take vast sums from one of the fighting services and give them to another. He says all he wants is a "modest flexibility in money matters." Congress, of course, appropriates the money, and is jealous of its power. The armed services compete, often bitterly, for their share of a defense dollar. Members of the Congress develop allegiance to one or another of the services. The Army, Navy, Air Force and the Marines lobby energetically for their appropriations. According to former President Truman, the service with the most pull generally gets the most money. It's on this matter of money that the President is going to have his greatest difficulty.

Today two powerful senators had words to say on this subject - Lyndon Johnson, the Democratic leader of the Senate said he's in favor of a re-organization of the Defense Department, but "Congress is not going to do away with its appropriating power." Styles Bridges, Chairman of the Senate Republican Policy Committee and a member of the Armed Services and Appropriations Committees, says he's in favor of some streamlining, but he isn't going to "surrender the power of the purse to Mr. McElroy, the President, or anybody else." Some critics contend that the President is trying to make a czar out of McElroy. The President denies it, and says he's going to fight for his plan, regardless of how strong or how numerous his congressional opponents may be.

This appears to represent a change in Mr. Eisenhower's attitude toward the presidency. During most of his administration he has contended that the President should not attempt to cajole, coerce or interfere with the legislative or judicial branches of the government. He appeared to accept the Whig philosophy that the powers of the presidency ought to be strictly and severely limited. Now he says he's going to do everything possible to beat down congressional opposition to his plan.

Not all of the opposition will be found in Congress. High ranking members of the services will also oppose it. But they have been warned by Mr. McElroy that if they can't support the proposals they ought to turn in their uniforms. He says they ought to testify "fully and frankly" before congressional committees, but he strongly implies that public ciiticism by the top brass will not be welcomed. This is going to put a great strain upon a number of Admirals and Generals, because congressional committees will be asking and demanding their full, frank, personal and professional opinions. Some of them will in a sense be caught in a crossfire between perjury, silence and insubordination. It isn't going to be easy for anyone concerned.

It will be a real test of the President's leadership in an area where his stature is great. It will do much to determine how much Mr. McElroy has learned about the art of politics and the handling of men in uniform who are resistant to change. It would be hard to overestimate the importance of the outcome for it involves policy as well as men and money.

The importance of military decisions is seldom appreciated in peacetime. For example, the men who decided to build a fighter around eight machine guns and call it a Spitfire, were apparently only approving the design of a new aircraft. They were in fact making a decision which saved Britain and probably the rest of Western civilization. So what is involved here is more than money and metal and men. It is a question of the making of decisions and speed of execution.

This is Ed Murrow. I'll be back in a moment with the word for today. Now, here is George Bryan.

GEORGE BRYAN: COMMERCIAL

MURROW: All Presidents...starting with George Washington...have been concerned deeply with the readiness of the United States to defend itself. And President Eisenhower doubtless probably agrees with Franklin Roosevelt, who said: "We have had the lesson before us over and over again---nations that were not ready and were unable to get ready, found themselves overrun by the enemy."

Goodnight and good luck!

Edward R. Murrow Tues., April 15, 1958

This is the news:

The French National Assembly tonight defeated Premier Gaillard on his policy of resuming direct talks with Tunisia. / The vote against Gaillard was 321 to 255. Technically, it was not a constitutional vote of confidence. Gaillard is not required to resign. / But Gaillard had served notice that if he was defeated on this issue, he would resign. He called it one of the "gravest" votes taken in French parliamentary history. / In a few minutes we will switch to my colleague, David Schoenbrun, in Paris for a direct, first-hand report.

Secretary of State Dulles today accused Russia of "prostituting" diplomacy for propaganda purposes and thereby endangering world peace. Dulles referred...at his news conferences...to the many public letters which [redacted] Russia has been sending to the leaders of the Western countries. / The United States, he said, has always felt that such exchanges were designed, "generally on a highly confidential level, sincerely to achieve some practical result." / Dulles again expressed hope that talks could begin within a few days on the ambassadorial level in preparation for [redacted] a possible summit conference. / But he reiterated that the talks would have to demonstrate that a meeting at the summit would be worthwhile.

Mr. Dulles said that hitting the moon ahead of the Russians doubtless would have propaganda value. But the decision whether to try to do this, he said, should be based on the scientific merits. / And he said he was not sure that the scientific advantages of being first in such an experiment would justify the cost.

The American rocket expert, Wernher Von Braun, said today [redacted] he is convinced that if the United States doesn't get a man into outer space soon,

→

the Russians will. He said the Russians...right now...have the capability of sending a man 200 miles into space. If the United States wanted, he said, it could do almost as well one year from the time THE GO-AHEAD WAS GIVEN FOR such a project. Von Braun was testifying before the special House committee on space problems.

The Air Force Association today promised its full support to all-out unification of the armed forces. The association called President Eisenhower's plan for reorganizing the Defense Department "a considerable advance in the direction of true unification." But at the same time it criticized some of its features. It does not like the provision which would have the joint chiefs continue to serve their separate services while, simultaneously, serving AS planners of strategy. It said this would be a "clear violation of the old principle that you can delegate authority but not responsibility."

President Eisenhower today vetoed the omnibus bill authorizing a billion, 500-million dollars for flood control and river and harbor improvement. Mr. Eisenhower said he vetoed the measure with [redacted] regret ... that while he approved of many of the projects, others were "not justified." He discounted Democratic arguments that the bill would stimulate the economy. He said, "With a few minor exceptions, it would be many months---even years in the CASE of the larger projects---before the necessary plans could be completed and actual construction begun." There is already, he said, a 5-billion-dollar backlog of public works projects which have been authorized and which the Administration is trying to expedite.

~~Congressional action to override the veto was immediately called for by three Democratic senators---Monroney of Oklahoma, Humphrey of Minnesota and Kefauver of Tennessee.~~

Secretary of the Interior Seaton today urged Congress to extend the 27 and a half percent depletion allowance granted the oil and natural gas interests. Seaton would also give the allowance to producers of oil shale and coal, when these deposits are used to make synthetic liquid fuels.

—INSERT—

Representatives of eight African states met today in Ghana. The meeting opened with a speech by Prime Minister Nkrumah of Ghana, who called for an end to colonialism in Africa. And other speakers---from Tunisia, Morocco and Libya---denounced the "French" war of extermination" in Algeria.

In London today, a 15 and a half billion dollar budget was submitted to the House of Commons. / The budget offers no direct income tax relief. But it would reduce the sales tax on many household appliances such as washing machines and refrigerators. / The chancellor of the British exchequer---Derick Heathcoat-Amory---said he had "every confidence" that Britain's economic position will remain strong....although, he said, the American recession "naturally is causing a feeling of uncertainty."

Now, for the background on the French political crisis, here is David Schoenbrun, reporting from Paris.

(Tape runs 6:15
(ends on cue: "--to ERM in New York."

That was my colleague David Schoenbrun, reporting on a crisis---not just of a government---but of the French regime itself.

INSERT

This is Ed Murrow. I'll be back in a moment with the Word for Today. Now, here is George Bryan.

Gaillard tried to compromise - steer a middle course. While offering to resume direct talks with Tunisia, he promised to keep working on the problem of border control. The Assembly action voting down this program may not seem logical. But one recalls the French maxim, which says: "Logic and politics seldom slip their feet between the same sheets."

Goodnight and good luck!

CBS RADIO DIVISION

EDWARD R. MURROW WITH THE NEWS

Tuesday, April 15, 1958
7:45 - 8:00 P. M. EST

MURROW: Now, for the background on the French political crisis, here is David Schoenbrun reporting from Paris.

SCHOENBRUN: There have been many stormy sessions in the French Parliament. There was the night that the Communists marched out in a body gathered outside on the Concorde Bridge and sang the song of the deportees. There was the night that the Right and Left clashed in a free-for-all and the speaker had to call out the guards to break up the fight. And, there was the day that the EDC Treaty was killed in a tricky procedural vote and all America's European policy came tumbling down one black day in August 1954. Tonight, April 15th, 1958, will take its place in the books as one of the blackest chapters in post-war French and Western history.

The performance here in Paris tonight had to be seen and heard to be believed. At one point, a leading Catholic Party Deputy, Maurice Schuman arose to plead with his colleagues to be reasonable and responsible, he said, "I beseech you not to yield to dispair, if you overthrow this government only God knows when or how the next govdrnment will be formed." His pathetic appeal was greeted with an outburst of jeers, cat-calls and laughter by Right Wing Deputies who seemed to have lost all control and then they voted the government out of office. One of them, a follower of bully-boy-Poujade, his name is Lepann and he's a big powerful bruiser stood on the speakers platform, his face twisted with rage and hate, and shouted, "in North Africa today, the United States is a greater menace to France then Russia. If our national independence requires it," he shouted, "let's get out of NATO." Nothing could be more typical of the current crisis of France then this anti-American - anti-NATO threat at this particular moment. For while Parliament was tossing through this debate on the Left Bank of the River Seine - just across the River on the Right bank, the

military chiefs and Defense Ministers of NATO have been holding an important meeting studying ways to increase the strength of the West. Thus, oncone bank of the River, the West is being strengthened while on the opposite shore it is being destroyed. This is symbolic of the role that France has played in world affairs since the liberation of this tortured land. For France is at one and the same time the essential ~~lynch~~ linch pin and the weakest link of the North Atlantic Alliance. It is the essential ~~lynch~~ linch pin because geographically, politically, culturally - in every way - Europeand Western civilization on this birthplace continent cannot be defended, cannot be healthy without France. Yet, France is sick, racked by fevers, torn by internal divisions, bleeding from open wounds in Africa after having been drained of blood and resources in Asia and Europe.

This crisis today is the most violent, the most dangerous. For it's not merely a crisis of overseas France, bthis crisis is the long expected crisis of the regime itself, of the French Republic, of the democratic system. The men leading the attack on the government tonight, men like the Fascist LePann and the Communist Duclos, these men are just not leaders of the democratic opposition, such as the opposition parties in America and Britain. These men are opposed not only to the government in power, they are opposed to the Democratic regime. They are aspiring dictators of the Right and of the Left. France is the only Democratic nation which suffers from a disloyal opposition on both Wings and profiting from this crisis are a number of other ambitious power hungry or frustrated men such as ex-police Lieut. Jaeques Soustelle who charged tonight that America treats France as an ally in Europe, but as an enemy in the Middle East and Africa. Or there are men like Pierre Montel and Pierre Andre - men of the past still living in the pre-world war one dream of France the greatest power in the world. These men resent the new power of America. Tonight, they attacked Russia, Britain and America viciously. Pierre Andre said and I quote, "we need no lessons from the criminals of Budapest, from

the murders of the Mau Mau or from those who massacred tens of thousands at Hiroshima and Nagasaki." As for Montel, he shouted, "the stubborness of Mr. Dulles is equaled only by his blindness. Hasen't he suffered enough defeats in the Middle East to acknowledge his own ignorance."

These questions I believe reveal the key and the inner meaning of the crisis here in France which symbolizes the greater crisis of confidence and faith in the entire Western world. The West for centures supreme in the world, its doctrines, its power, its prosperity have success unchallanged - now finds itself challenged everywhere in every field. Recession in the United States, the break-up of the British and French Empires, the division of Germany, the decadence of Spain, the parallel growth and vigor of Russia. Russia's sensational technological advances - all of these world shaking developments occuring simultaneously along with the awakening of sleeping giants like China and India and the first stirring of African and Moslem nationalism. These revolutions, among the most momentus in human history are all brought into focus right here in France, the microcosm of the world. This one country with its long history of revolution of intellectual ferment and of imperial adventure - this is a miniture world laboratory. Catholic France's largest political party is Communist. European France is the storm center of a world empire. Capitalist France has its key industries nationalized. France is a cauldron in a mirror in which we can see the fires consuming the whole world. It's difficult therefore for a foreigner here to be merely an observer, for we're watching our own fate being played out. And, as I watched from the gallery of the Palais Bourbon today, I thought of the advice of the philosopher Spinoza, "do not laugh, do not cry, try to understand!"

This is David Schoenbrun from Paris, returning you now to EDWARD R. MURROW in New York.

FT/n.m.

The performance here in Paris tonight had to be seen and heard to be believed. At one point, a leading Catholic Party Deputy, Maurice Schuman arose to plead with his colleagues to be reasonable and responsible, he said, "I beseech you not to yield to despair, if you overthrow this government, only God knows when or how the next government will be formed." His pathetic appeal was greeted with an outburst of jeers, cat-calls and laughter by Right Wing Deputies who seemed to have lost all control and then they voted the government out of office. One of them, a follower of bully-boy-Poujade, his name is Lepann? and he's a big powerful bruiser stood on the speaker's platform, his face twisted with rage and hate, and shouted, "In North Africa today, the United States is a greater menace to France than Russia. If our national independence requires it," he shouted, "let's get out of NATO." Nothing could be more typical of the current crisis of France than this anti-American, anti-NATO threat at this particular moment. For while Parliament was tossing through this debate on the Left Bank of the River Seine - just across the river of the Right bank, the military chiefs and Defense Ministers of NATO have been holding an important meeting studying ways to increase the strength of the West. Thus, on one bank of the river, the West is being strengthened while on the opposite shore, it is being destroyed. This is symbolic of the role that France has played in world affairs since the liberation of this tortured land. For France is at one and the same time the essential link pin and the weakest link of the North Atlantic Alliance. It is the essential link pin because geographically, politically, culturally - in every way - European and Western civilization on this birthplace continent cannot be defended, cannot be

defended, cannot be healthy without France. Yet, France is sick, racked by fevers, torn by internal divisions, bleeding from open wounds in Africa after having been drained of blood and resources in Asia and Europe.

This crisis today is the most violent, the most dangerous. For it's not merely a crisis of overseas France, this crisis is the long expected crisis of the regime itself, of the French Republic, of the democratic system. The men leading the attack on the government tonight, men like the Fascist LePann and the Communist Duclos, these men are just not leaders of the democratic opposition, such as the opposition parties in America and Britain. These men are opposed not only to the government in power, they are opposed to the Democratic regime. They are aspiring dictators of the Right and of the Left. France is the only Democratic nation which suffers from a disloyal opposition on both Wings and profiting from this crisis are a number of other ambitious power hungry or frustrated men such as ex-police Lieut. Jacques Soustell who charged tonight that America treats France as an ally in Europe, but as an enemy in the Middle East and Africa. Or there are men like Pierre Montel and Pierre Andre - men of the past still living in the pre-world war one dream of France, the greatest power in the world. These men resent the new power of America. Tonight, they attacked Russia, Britain and America viciously. Pierre Andre said and I quote, "We need no lessons from the criminals of Budapest, from the murders of the Mau Mau or from thsoe who massacred tens of thousands at Hiroshima and Nagasaki." As for Montel, he shouted, "The stubborness of Mr. Dulles is equaled only by his blindness. Hasn't he suffered enough defeats in the Middle East to acknowledge his own ignorance."

These questions I believe reveal the key and the inner meaning of the crisis here in France which symbolizes the greater crisis of confidence and faith in the entire Western world. The West for centuries supreme in the world, its doctrines, its power, its prosperity have success unchallenged - now finds itself challenged everywhere in every field. Recession in the United States, the

break-up of the British and French Empires, the division of Germany, the decadence of Spain, the parallel growth and vigor of Russia. Russia's sensational technological advances - all of these world shaking developments occuring simultaneously along with the awakening of sleeping giants like China and India and the first stirring of African and Moslem nationalism. These revolutions, among the most mementous in human history are all brought into focus right here in France, the microcosm of the world. This one country with its long history of revolution, of intellectual ferment and of imperial adventure - this is a miniature world laboratory. Catholic France's largest political party is Communist. European France is the storm center of a world empire. Capitalist France has its key industries nationalized. France is a cauldron in a mirror in which we can see the fires consuming the whole world. It's difficult therefore for a foreigner here to be merely an observer, for we're watching our own fate being played out. And, as I watched from the gallery of the Palais Bourbon today, I thought of the advice of the philosopher Spinoza,"Do not laugh, do not cry, try to understand!"

This is David Schoenbrun from Paris, returning you now to EDWARD R. MURROW in New York.

MURROW: That was my colleague David Schoenbrun, reporting on a crisis---not just of a government---but of the French regime itself.

Representatives of eight African states met today in Ghana. The meeting opened with a speech by Prime Minister Nkrumah of Ghana, who called for an end to colonialism in Africa. And other speakers---from Tunisia, Morocco and Libya denounced the French "war of extermination"in Algeria.

This is Ed Murrow. I'll be back in a moment with the word for today. Now, here is George Bryan.

GEORGE BRYAN: COMMERCIAL

MURROW: Gaillard tried to compromise - steer a middle course. While offering

to resume direct talks with Tunisia, he promised to keep working on the problem of border control. The Assembly action voting down this program may not seem logical. But one recalls the French maxim, which says: "Logic and politics seldom slip their feet between the same sheets."

Goodnight and good luck!

Edward R. Murrow Wed., April 16, 1958

This is the news:

The United States, Britain and France have told Russia in a formal note that they are ready to begin talks tomorrow in preparation for a possible summit conference. The talks would be held in Moscow on the ambassadorial level. The Western note says it is "essential" that the ambassadors should be concerned...not only with routine procedures...but with an examination of the major questions at issue. As regards a summit meeting, it says, "Such a meeting will not be fruitful, unless the ground has been thoroughly prepared in advance and it is clear that there is broad agreement on the nature and order of the agenda, and a real desire to make

→

practical progress toward a settlement." / Russia has expressed opposition to this, saying---as it did last week---that it did not want questions of substance taken up at the ambassadorial level. / The West said today that this disagreement might well be discussed by the ambassadors themselves. "Such discussions," it said, "may be more likely to lead to agreement than a further exchange of public communications. That is our hope."

The question of a summit meeting came up today at President Eisenhower's news conference. For a first-hand report, we switch to my colleague Bob Pierpoint in Washington.

(Pierpoint runs 5:06
(Returns on cue: "--to ERM in New York."

After his news conference, President Eisenhower ~~President Eisenhower today~~ signed the highway bill...designed to make an extra billion, 800-million dollars available this year for the building of roads. / Supporters of the measure say that---over the long haul---it will create half a million new jobs. / Mr. Eisenhower signed the bill reluctantly, because of provisions which he said could establish "unfortunate precedents". His principal objection concerned the suspension, for one year, of the long-established practice ~~of federal aid highway programs~~ under which the cost of federal aid highway programs was ~~paid~~ shared with the states on a 50-50 basis. / The President said →

he "deplored the possibility that some may try to use this departure from a sound arrangement" as a precedent for them to follow. Under the bill, states for the next year will have to put up only 1 dollar for each 2 dollars put up by the Federal Government. This applies to the construction of roads which are not part of the inter-state highway network. Mr. Eisenhower said he signed the measure because it will speed up the building of roads and help relieve unemployment.

The Senate tonight passed an anti-recession bill...which would make a billion dollars in federal money available to cities and states on a loan basis. The money would be used for public works projects, and would DRAW interest at the rate of three and a half percent. The measure now goes to the House.

A former chairman of the Federal Reserve Board called today for an immediate tax cut of from six to seven billion dollars. Marriner S. Eccles, who served in both the Roosevelt and Truman Administrations, told the Senate Finance Committee that the tax reduction should be aimed...primarily...to help the low-income groups. He accused organized labor of forcing wages up "far in excess of increased productivity." And labor unions, he said, should be brought under the anti-trust laws.

The House today passed...and sent to the Senate...a bill designed to make more government information available to the public. Under the measure, government agencies may not use an old "housekeeping" law passed in 1789 as grounds for withholding information. That law authorizes department heads to issue regulations for the "custody, preservation and use of records." Democratic Representative Moss of California, sponsor of the new legislation, says the old law was abused...so as to prevent the public from getting information it was entitled to have.

Senator Kerr Scott, of North Carolina, died today in a hospital in Burlington, North Carolina. The senator...who was 61...suffered a heart attack a week ago. He served as governor of North Carolina from 1948 to 1952, and was elected to the Senate in 1954.

In Paris today, the defense ministers of the NATO alliance approved plans for a defense force of 30 divisions to repel any Soviet aggression. The present strength of NATO's European "defense shield" is 20 divisions, and these are not at full strength.

On the French political scene, Felix Gaillard is continuing to serve as premier, despite the vote in the National Assembly last night against his Tunisian policy. Gaillard is serving...at the request of President Coty...until a new government can be formed. The United States and Britain, meantime, have suspended their "good offices" efforts to achieve a reconciliation in the French-Tunisian dispute.

The Indonesian civil war got hotter today. Warships of the central Indonesian government shelled the rebel-held port of Padang, on the Sumatra coast. Rebel shore batteries returned the fire. But apparently neither side inflicted any real damage. Reports from both government and rebel sources indicate that a new invasion of Sumatra by Indonesian Army troops is imminent. A government spokesman in Jakarta says, "Our operations will be finished soon."

Back in moment—
George Bryan

Word for Today

Diplomatic talks with Russia would appear to be imminent.

On the subject of diplomatic negotiation, Brien McMahon once said:

"Talking with your antagonist to avoid strife is a moral duty.

Appeasement comes when, in order to avoid strife and to achieve a supposed

security, you sacrifice a principle which you know to be a sacred right."

Goodnight and good luck!

April 16, 1958

CBS for Ed Murrow...Bob Pierpoint

Mr. Eisenhower said today that he agreess with a statement made by former State Secretary Dean Acheson yesterday that presidents whould not impair their detached judgements by becoming involved in summit conferences. But he also stated that if he is finally convinced that a summit conference is the only way to make some progress, then he is ready to take the risks.

The president stated that he did not feel the current government cirisisin France would hurt the chances for a meeting at the summit, because..as President Eisenhower put it...even the preliminary discussions of the top level conference have not yet reached the point where this particular fall of the government would have any affect. He declined to discuss any other possible effects of the latest French cabinet crisis, saying that since no new premier has been maned yet, we don't know what will happen. Asked to comment on recent anti-American outbursts in t he French parliament, President Eisenhower reminded correspondents that jumping on 'Uncle Shylock' was a favorite political gimmick even when he was stationed in France the first time, back in 1928. But he stated that he saw no justification for the latest anti-americanism. He said that

2) Bob Pierpoint CBS News

after his most friendly talks with Premier Gaillard in Paris last December, he felt that America and France had a complete agreement on policy.

The President was most animated today when discussing his modernization plan for the defense department...appeared anxious to forestall any criticism that he may be weakening his fighting stand of last week. On the touchy problem of greater control over military funds by the defense secretary...at the expense of Congress... the president said emphatically that "Never, in all the years he had been in the military, or since, had he advocated the making of appropriations in one single lump sum to the Secretary of Defense or to any other individual." His reorganization bill, sent to Capitol Hill later today..certainly bears this out. To the surprise of some observers, the letter to Congress that accompanies the bill points out that there is no requested change at all in the Congressional allocation of funds. Instead the bill is mainly designed, as the President explanined this morning, to give the Secretary of Defense and the Joint Chiefs of Staff greater power to make strategic plans and operations, removing this power from the various service Secretaries.

But this concentration of control with the Defense Secretary is already under attack on Capitol Hill today. Representative Carl Vinson, democrat of Georgia and powerful chairman of the House Armed Services Committee, accused the president of trying to establish a "Prussian-type Supreme High Command." Indicating the president will face a stiff fight to achieve Pentagon reorganization, Representative Vinson, strongly pro-Navy, in a speech prepared for the House, branded Mr. Eisenhower's modernization plan "an open invitation to the concept of the man on horseback."

If and when a military officer is called by Congress to testify on that reorganization bill, the President told us this morning that he believes the officer has an absolute duty to give his personal convictions. There would be no thought of reprisals of any kind, said Mr. Eisenhower. But speaking out in public against the reorganization plan, was another matter. Mr. Eisenhower warned that military officers who do this might be considered "insubordinate" to the Defense Secretary.. Public and voluntary insubordination, the President warned "would require correction."

Again today President Eisenhower stated his position against a tax cut at this time. Asked to comment on former President Tru-

man's proposal for a five billion dollar tax reduction, the president said "When I can be convinced that this tax cut will be for the benefit of the United States, then it will be taken up." Once again Mr. Eisenhower expressed his dislike for some public works...said he was against spending billions and billions on uncoordinated and unwise operations that are brought forward in the name of anti-recession measures but which are not necessarily that." The president called for "Conservative fiscal operations." "Let's try to use some common sense and not just get a Sputnik attitude about everything," he said. This reference to a 'Sputnik attitude', by the way, intrigued some correspondents. It was further evidence that the President holds to the belief that the nation was unduly whipped into a state of alarm by newsmen and anti-administration politicians when the Soviet Union successfully launched it's first Sputnik satellite. This controversy over the psychological and military significance of the Sputniks and over how far ahead of America it may show the Russians to be in rockets and misselry...still rages in Washington. Apparently it also still rankles the president.

Back now to Edward R. Murrow in New York.

EDWARD R. MURROW WITH THE NEWS
CBS RADIO NETWORK

WEDNESDAY, APRIL 16, 1958
7:45 - 8:00 PM EST

This is the news:

The United States, Britain and France have told Russia in a formal note that they are ready to begin talks tomorrow in preparation for a possible summit conference. The talks would be held in Moscow on the ambassadorial level. The Western note says it is "essential" that the ambassadors should be concerned... not only with routine procedures...but with an examination of the major questions at issue. As regards a summit meeting, it says, "Such a meeting will not be fruitful, unless the ground has been thoroughly prepardd in advance and it is clear that there is broad agreement on the nature and order of the agenda and a real desire to make practical progress toward a settlement." Russia has expressed opposition to this, saying---as it did last week---that it did not want questions of substance taken up at the ambassadorial level. The West said today that this disagreement might well be discussed by the ambassadors themselves. "Such discussions," it said, "may be more likely to lead to agreement than a further exchange of public communications. That is our hope."

The question of a summit meeting came up today at President Eisenhower's news conference. For a first-hand report, we switch to my colleague Bob Pierpoint in Washington.

PIERPOINT: Mr. Eisenhower said today that he agrees with a statement made by former State Secretary Dean Acheson yesterday that presidents should not impair their detached judgments by becomeng involved in summit conferences. But he also stated that if he is finally convinced that a summit conference is the only way to make some progress, then he is ready to take the risks.

The president stated that he did not feel the current government crisis in France would hurt the chances for a meeting at the summit, because...as President Eisenhower put it...even thejpreliminary discussions of the top level conference have not yet reached the point where this particular fall of the

government would have any effect. He declined to discuss any other possible effects of the latest French cabinet crisis, saying that since no new premier has ben named yet, we don't know what will happen. Asked to comment on recent anti-American outbursts in the French parliament, President Eisenhower reminded correspondents that jumping on 'Uncle Shylock' was a favorite political gimmick even when he was stationed in France the first time, back in 1928. But he stated that he saw no justification for the latest anti-americanism. He said that after his most friendly talks with Premier Gaillard in Paris last December, he felt that America and France had a complete agreement on policy.

The President was most animated today when discussing his modernization plan for the defense department...appeared anxious to forestall any criticism that he may be weakening his fighting stand of last week. On the touchy problem of greater control over military funds by the defense secretary...at the expense of Congress...the president said emphatically that "Never, in all the years he had been in the military, or since, had he advocated the making of appropriations in one single lump sum to the Secretary of Defense or to any other individual." His reorganization bill, sent to Capitol Hill later today...certainly bears this out. To the surprise of some observers, the letter to Congress that accompanies the bill points out that there is no requested change at all in the Congressional allocation of funds. Instead the bill is mainly designed as the President explained this morning to give the Secretary of Defnese and the Joint Chiefs of Staff greater power to make strategic plans and operations, removing this power from the various service Secretaries. But this concentration of control with the Defense Secretary is already under attack on Capitol Hill today. Representative Carl Vinson, democrat of Georgia and powerful chairman of the House Armed Services Committee, accused the president of trying to establish a "Prussian-type Supreme High Command." Indicating the president will face a stiff fight to achieve Pentagon reorganization, Rrpresentative Vinson, strongly pro-Navy in a speech prepared for the House, branded Mr. Eisenhower's modernization

plan "an open invitation to the concept of the man on horseback."

If and when a military officer is called by Congress to testify on that reorganiztion bill, the President told us this morning that he believes the officer has an absolute duty to give his personal convictions. There would be no thought of reprisals of any kind, said Mr. Eisenhower. But speaking out in public against the reorganization plan, was another matter. Mr. Eisenhower warned that military officers who do this might be considered "insubordinate" to the Defense Secretary. Public and voluntary insubordination, the President warned "would require correction."

Again today President Eisenhower stated his position against a tax cut at this time. Asked to comment on former President Truman's proposal for a five billion dollar tax reduction, the president said, "When I can be convinced that this tax cut will be for the benefit of the United States, then it will be taken up." Once again Mr. Eisenhower expressed his dislike for some public works... said he was against spending billions and billions on uncoordinated and unwise operations that are brought forward in the name of anti-recession measures, but which are not necessarily that." Back now to Edward R. Murrow in New York.

MURROW: After his news conference, President Eisenhower signed the highway bill... designed to make an extra billion, 800 million dollars available this year for the

building of reads. Supporters of the measure say that---over the long haul---it will create half a million new jobs. Mr. Eisenhower signed the bill reluctantly, because of provisions which he said could establish "unfortunate precedents." His principal objection concerned the suspension, for one year, of the long-established practice under which the cost of federal aid highway programs was shared with the states on a 50-50 basis. The President said he "deplored the possibility that some may try to use this departure from a sound arrangement" as a precedent for them to follow. Under the bill, states for the next year will have to put up only 1 dollar for each 2 dollars put up by the Federal Government. This applies to the construction of roads which are not part of the inter-state highway network. Mr. Eisenhower said he signed the measure because it will speed up the building of roads and help relieve unemployment.

The Senatetonight passed an anti-recession bill...which would make a billion dollars in federal money available to cities and states on a loan basis. The money would be used for public works projects, and would draw interest at the rate of three and a half percent. The measure now goes to the House.

A former chairman of the Federal Reserve Board called today for an immediate tax cut of from six to seven billion dollars. Marriner S. Eccles, who served in both the Roosevelt and Truman Administrations, told the Senate Finance Committee that the tax reduction should be aimed...primarily...to help the low-income groups. He accused organized labor of forcing wages up "far in excess of increased productivity." And labor unions, he said, should be brought under the anti-trust laws.

The House today passed...and sent to the Senate...a bill designed to make more government information available to the public. Under the measure, government agencies may not use an old "housekeeping" law passed in 1789 as grounds for withholding information. That law authorizes department heads to issue regulations for the "custody, preservation and use of records." Democratic

Representative Moss of California, sponsor of the new legislation, says the old law was abused...so as to prevent the public from getting information it was entitled to have.

Senator Kerr Scott of North Carolina, died today in a hospital in Burlington, North Carolina. The senator...who was 61...suffered a heart attack a week ago. He served as governor of North Carolina from 1948 to 1952 and was elected to the Senate in 1954.

In Paris today, the defense ministers of the NATO alliance approved plans for a defense force of 30 divisions to repel any Soviet aggression. The present strength of NATO's European "defense shield" is 20 divisions, and these are not at full strength.

On the French political scene, Felix Gaillard is continuing to serve as premier, despite the vote in the National Assembly last night against his Tunisian policy. Gaillard is serving...at the request of President Coty...until a new government can be formed. The United States and Britain, meantime, have suspended their "good offices" efforts to achieve a reconciliation in the French-Tunisian dispute.

The Indonesian civil war got hotter today. Warships of the central Indonesian government shelled the rebel-held port of Padang, on the Sumatra coast. Rebel shore batteries returned the fire. But apparently neither side inflicted any real damage. Reports from both government and rebel sources indicate that a new invasion of Sumatra by Indonesian Army troops is imminent. A government spokesman in Jakarta says, "Our operations will be finished soon."

This is Ed Murrow. I'll be back in a moment with the Word for Today. Now, here is George Bryan.

GEORGE BRYAN: COMMERCIAL

MURROW: Diplomatic talks with Russia would appear to be imminent. On the subject of diplomatic negotiation, Brien McMahon once said: "Talking with your

antagonist to avoid strife is a moral duty. Appeasement comes when, in order to avoid strife and to achieve a supposed security, you sacrifice a principle which you know to be a sacred right."

Goodnight and good luck!

Edward R. Murrow: April 17, 1958. Thurs. 7.45 p.m.

This is the News—

"Safety with Solvency....No single Chief of Staff...no Czar.... no forty-billion-dollar blank checks...no undermining of the constitutional powers of Congress!" That was the text President Eisenhower chose for his speech to newspaper editors in Washington today. / He was defending his proposal to re-organize the Defense Department. / The President warned against overspending by over-indulging sentimental attachments to out-moded military machines and concepts. / The waging of war by separate ground, sea and air forces is gone forever. / We require real unification, clear lines of military command, from the top to the man with the gun. We must do a better job of integrating new weapons into our fighting forces. It is high time for all of us to pay more attention to America's strategic requirements, and less to individual service claims. Mr. Eisenhower believes that the American people feel it is far more important to be able to hit the target, than it is to haggle over who makes a weapon or who pulls the trigger. We can't afford three sets of overlapping scientists and laboratories for research and development. / He doesn't want to give the Secretary of Defense a blank check for forty billion dollars, merely a "reasonable flexibility" in the use of funds.

He doesn't want to merge our traditional forces into a single armed

service, but top Generals and Admirals must be fitted temperamentally and by conviction for responsibilities that transcend their individual services. To reward parochialism with promotion is to invite disunity.

The President contended that "the Congress willing," his plan would accomplish all these things. He used that phrase repeatedly, "the Congress willing".

His speech was a closely reasoned and at times eloquent effort to make the Congress more willing than it now is.

President Bourguiba of Tunisia said today that he cannot wait for weeks for a new French government. / Bourguiba said that if France does not have a government in one week, which will accept the proposals of the Anglo-American good offices mission, he will press a charge of aggression against France in the United Nations Security Council. (He referred to the French bombing of Sakiet on February 8). It was the willingness of Premier Gaillard to negotiate directly with Tunisia on the basis of these proposals which toppled his government. / The proposals...drawn up by the good offices mission...called for the withdrawal of French troops from Tunisia (with the exception of those stationed at the Bizerte naval base) and the re-opening of French consulates. / Airfields in Tunisia would be placed under international supervision to insure against their use on behalf of the Algerian rebels. / French rightists opposed this program because there was no guarantee...by Bourguiba...that he would bar rebels from crossing the frontier between Algeria and Tunisia. / Bourguiba praised the United States and Britain for their good offices endeavor. American policy, he said, "shows why the free peoples of Africa should avoid Communism." / The expectation is that Bourguiba will take Tunisia's case back to the Security Council; it is highly unlikely that France

will have a new government within a week.

Reports from Paris tonight say that France has decided to accept American missile bases and nuclear warheads. It is reported that an accord formalizing the decision, is now being negotiated by the United States and France. Britain already has signed a bilateral agreement with the United States for the establishment of missile bases on British soil, but the formal agreement with France may be delayed because of the French government crisis. The French defense minister did not attend today's final meeting of the NATO defense ministers, and the French acceptance of American missile bases could be withdrawn by a new government.

The four-day NATO conference ended, as usual, with the issuance of a communique. For a direct report on that, here is David Schoenbrun speaking from Paris.

(Tape runs 3 minutes
Ends on cue "---to CBS News in N.Y."

President García of the Philippines said today that he...personally... favors the setting up of American nuclear missile bases in his country. But, García told the United Press, there is "plenty of room" for improvement

→

in the conduct of American diplomacy in the Far East. He suggested, as an example, that the United States...as leader of the free world... should more clearly define its Indonesian policy.

The central government of Indonesia says it landed "thousands" of troops today on the west coast of Sumatra...and that an airfield near Padang is now in government hands. / It says the landings were effected by sea and air, that the resistance was "negligible". / The rebel radio on Sumatra claims the landings were repulsed. (Padang is the principal rebel-held city on the Sumatra west coast).

Secretary of ~~Defense~~ State Dulles told Congress today that hopes for disarmament---and the control of nuclear weapons---will not be jeopardized if we share atomic secrets with our allies. / He said that to the contrary, the chances for realizing these hopes would be improved. / President Eisenhower has asked Congress to amend present law, so that the United States can share atomic information and materiel with countries with whom it is allied. / And Mr. Dulles was testifying before the joint subcommittee on atomic energy in support of this request. Dulles said that if the United States does not share its know-how, "it would, in effect, impose on

→

our NATO allies such an incapacity to use nuclear tactical weapons that Soviet dominance over Western Europe would be largely achieved." / In that case, Dulles said, Russia would have little incentive to limit its own armament.

The United States ambassador to Russia, Llewellyn Thompson, conferred with Soviet Foreign Minister Gromyko today in Moscow. / The meeting lasted 35 minutes, and the Soviet news agency Tass says, "Questions connected with preparations for a summit conference were discussed." / Thompson himself declined comment. The United States, Britain and France said yesterday / that they were ready to start negotiating with Russia today on the ambassadorial level. Thompson met tonight with the British and French ambassadors, apparently to fill them in on his conversation with Gromyko earlier in the day.

In Washington, the Federal Reserve Board took new action today...aimed at combating the recession. It approved another cut of one-half of one percent in the discount rate for the five reserve banks in New York, Philadelphia, St. Louis, Chicago and Minneapolis. The new discount rate...starting tomorrow...will be one and three-quarters percent, and that is the lowest rate since August, 1955. // ~~The action makes it easier~~ →

for the reserve banks to loan money to regular commercial banks belonging to the federal reserve system. Today, the Federal Reserve Board also authorized a further reduction in the reserves which the central reserve banks in large cities must maintain against demand deposits. The action is technical, but---again---the effect is to increase the availability of funds.

Government experts in Washington say the new cost-of-living index (due to be announced next week) will show consumer prices at a new all-time high. The biggest increase, they say, was in the price of meat.

CBS has made a new wage offer in the strike of radio and television technicians against the network. Details of the offer have not been released, but Gilbert McCutcheon, the federal mediator, says the [illegible] proposal is being submitted to the union membership for a vote. [illegible] The referendum is expected to take about 48 hours. The walkout is now in its 11th day.

That controversial television case...involving the award of Channel 10 in Miami to National Airlines...has been returned to the Federal Communications Commission for a full-dress review. The review was ordered by the United States Court of Appeals in Washington, after hearing the commission's request for such action in the light of "significant new information" disclosed by House investigators.

Back in a moment—

George Bryan—

Word for Today

President Eisenhower said today that American strength is inseparable from the waging of peace. And this is not the peace that derives from supine submission. Rather it is what Theodore Roosevelt called "the peace of reighteousness and justice in the world." Homer said, "Beyond his strength may no man fight, howsoever eager he be."

Goodnight and good luck!

CBS RADIO DIVISION

DAVID SCHOENBRUN:

The Defense Ministers of NATO concluded a four-day meeting today here in Paris, with a communique that talks of progress made in strengthening the sword and the shield of Western defense. Highlight of the meeting was a unanimous adoption of the secret plan known as MC-70, the new Five Year Plan for Western rearmament as streamlining of the alliance to meet the challenge of warfare in the atomic age. MC-70 - according to officials I spoke to today - will be the blueprint, the bible of the West for years to come. It lays down the force goals, the production and equipment goals of a nuclear striking force for the West. It is hailed as one of the most brilliant plans, one of the most remarkable accomplishments of the planners of this alliance. All of that is certainly correct and it is good news. However, there remains one question still unresolved, who is going to pay for MC-70? When you ask that question of officials here in Paris, you get a lot of blank stares and flushed faces. The British, among others, but the British above all, with their usual forthrightness, praised MC-70 but called for a priority allocation of targets. And when diplomats speak of priorities what they are doing is admitting that the plan, as it stands, cannot be fully realized on schedule. Thus, the diplomats avoid calling for a cutback which is an admission of inability and instead they talk of priorities and short falls. Short fall is a special word here used to mean a failure to meet plans on time - and short fall is the word for MC-70. The cost of this new plan is prohibitive. One is only to look at facts rather than plans to see this. In the past eight years our country has given Europe thirteen billion dollars of military equipment in end item aid. End item means equipment that we send to Europe. In addition, we provided five billion dollars more in defense support, which means direct budgetary aid. In other words, eighteen billion dollars from America. Right now American

military aid has been reduced to one billion dollars a year for Europe. Thus, in the next five years we can only provide five billion dollars. However, we must replace eighteen billion dollars worth of obsolescent equipment of the past. Thus, NS-70 is thirteen billion dollars short on conventional equipment. But you must add seven to ten billion dollars for the cost of new atomic equipment. So, under the happy mask of planned progress, there is bad news really in Paris tonight, for the West is faced with the reality of a serious cutback and what amounts to unilateral disarmament in the face xx of an even greater Soviet threat.

Now, back to CBS News in New York.

EDWARD R. MURROW WITH THE NEWS
CBS RADIO NETWORK

THURSDAY, APRIL 17, 1958
7:45 - 8:00 PM EST

This is the news:

"Safety with Solvency...No single Chief of Staff...no Czar...no forty-billion dollar blank checks...no undermining of the constitutional powers of Congress." That was the text President Eisenhower chose for his speech to newspaper editors in Washington today. He was defending his proposal to re-organize the Defense Department. The President warned against overspending by over-indulging sentimental attachments to outmoded military machines and concepts. The waging of war by separate ground, sea, and air forces is gone forever. We require real unification, clear lines of military command, from the top to the man with the gun. We must do a better job of integrating new weapons into our fighting forces. It is high time for all of us to pay more attention to America's strategic requirements, and less to individual service claims. Mr. Eisenhower believes that the American people feel it is far more important to be able to hit the target, than it is to haggle over who makes a weapon or who pulls the trigger. We can't afford three sets of overlapping scientists and laboratories for research and development. He doesn't want to give the Secretary of Defense a blank check for forty billion dollars, merely a "reasonable flexibility" in the use of funds.

He doesn't want to merge our traditional forces into a single armed service, but top Generals and Admirals must be fitted termperamentally and by conviction for responsibilities that transcend their individual services. To reward parochialism with promotion is to invite disunity.

The President contended that "the Congress willing," his plan would accomplish all these things. He used that phrase repeatedly, "the Congress willing."

His speech was a closely reasoned and at times eloquent effort to make the Congress more willing than it now is.

President Bourguiba of Tunisia said today that he cannot wait for weeks for a new French government. Bourguiba said that if France does not have a government in one week, which will accept the proposals of the Anglo-American good offices mission, he will press a charge of aggression against France in the United Nations Security Council. (He referred to the French bombing of Sakiet on February 8.) It was the willingness of Premier Gaillard to negotiate directly with Tunisia on the basis of these proposals which toppled his government. The proposals...drawn up by the good offices mission...called for the withdrawal of French troops from Tunisia (with the exception of those stationed at the Bizerte naval base) and the re-opening of French consulates. Airfields in Tunisia would be placed under international supervision to insure against their use on behalf of the Algerian rebels. French rightists opposed this program because there was no guarantee...by Bourguiba...that he would bar rebels from crossing the frontier between Algeria and Tunisia. Bourguiba praised the United States and Britain for their good offices endeavor. American policy, he said, "shows why the free peoples of Africa should avoid Communism." The expectation is that Bourguiba will take Tunisia's case back to the Security Council; it is highly unlikely that France will have a new government within a week.

Reports from Paris tonight say that France has decided to accept American missile bases and nuclear warheads. It is reported that an accord formalizing the decision, is now being negotiated by the United States and France. Britain already has signed a bilateral agreement with the United States for the establishment of missile bases on British soil.

The four day NATO conference ended, as usual, with the issuance of a communique. For a direct report on that, here is David Schoenbrun speaking from Paris.

DAVID SCHOENBRUN: The Defense Ministers of NATO concluded a four day meeting today here in Paris, with a communique that talks of progress made in

strengthening the sword and the shield of Western defense. Highlight of the meeting was a unanimous adoption of the secret plan known as MC-70, the new Five Year Plan for Western rearmament as streamlining of the alliance to meet the challenge of warfare in the atomic age. MC-70 - according to officials I spoke to today - will be the blueprint, the bible of the West for years to come. It lays down the force goals, the production and equipment goals of a nuclear striking force for the West. It is hailed as one of the most brillant plans, one of the most remarkable accomplishments of the planners of this alliance. All of that is certainly correct and it is good news. However, there remains one question still unresolved, who is going to pay for MC-70? When you ask that question of officials here in Paris, you get a lot of blank stares and flushed faces. The British, among others,but the British above all, with their usual forthrightness, praised MC-70 but called for a priority allocation of targets. And when diplomats speak of priorities what they are doing is admitting that the plan, as it stands, cannot be fully realized on schedule. Thus, the diplomats avoid calling for a cutback which is an admission of inability and instead they talk of priorities and short falls. Short fall is a special word here used to mean a failure to meet plans on time - and short fall is the word for MC-70. The cost of this new plan is prohibitive. One has only to look at facts rather than plans to see this. In the past eight years our country has given Europe thirteen billion dollars of military equipment in end? item aid. End item means equipment that we send to Europe. In addition, we provided five billion dollars more in defense support, which means direct budgetary aid. In other words, eighteen billion dollars from America. Right now American military aid has been reduced to one billion dollars a year for Europe. Thus, in the next five years we can only provide five billion dollars. However, we must replace eighteen billion dollars worth of obsolescent equipment of the past. Thus, MC-70 is thirteen billion dollars short on conventional equipment. But you must add seven to ten billion dollars for the cost of new atomic equipment. So, under the happy mask of planned

progress, there is bad news really in Paris tonight, for the West is faced with the reality of a serious cutback and what amounts to unilateral disarmament in the face of an even greater Soviet threat.

Now, back to CBS News in New York.

MURROW: President Garcia of the Philippines said today that he...personally... favors the setting up of American nuclear missile bases in his country. But, Garcia told the United Press, there is "plenty of room" for improvement in the conduct of American diplomacy in the Far East. He suggested, as an example, that the United States...as leader of the free world... should more clearly define its Indonesian policy.

The central government of Indonesia says it landed "thousands" of troops today on the west coast of Sumatra...and that an airfield near Padang is now in government hands. It says the landings were effected by sea and air, that the resistance was "light." The rebel radio on Sumatra claims the landings were repulsed. (Padang is the principal rebel-held city on the Sumatra west coast.)

Secretary of State Dulles told Congress today that hopes of disarmament and the control of nuclear weapons---will not be jeopardized if we share atomic secrets with our allies. He said that to the contrary, the chances for realizing these hopes would be improved. President Eisenhower has asked Congress to amend present law, so that the United States can share atomic information and material with countries with whom it is allied. And Mr. Dulles was testifying before the joint subcommittee on atomic energy in support of this request. Dulles said that if the United States does not share its know-how, "it would, in effect, impose on our NATO allies such an incapacity to use nuclear tactical weapons that Soviet dominance over Western Europe would be largely achieved." In that case, Dulles said, Russia would have little incentive to limit its own armament.

The United States ambassador to Russia, Llewellyn Thompson, conferred with Soviet Foreign Minister Gromyko today in Moscow. The meeting lasted 35 minutes, and the Soviet news agency Tass says, "Questions connected with preparations for

a summit conference were discussed," Thompson himself declined comment. The United States, Britain and France said yesterday that they were ready to start negotiating with Russia today on the ambassadorial level. Thompson met tonight with the British and French ambassadors, apparently to fill them in on his conversation with Gromyko earlier in the day.

In Washington, the Federal Reserve Board took new action today...aimed at combating the recession. It approved another cut of one-half of one percent in the discount rate for the five reserve banks in New York, Philadelphia, St. Louis, Chicago, and Minneapolis. The new discount rate...starting tomorrow... will be one and three-quarters prrcent, and that is the lowest rate since August, 1955.

Government experts in Washington say the new cost-of-living index (due to be announced next week) will show consumer prices at a new all-time high. The biggest increase, they say, was in the price of meat.

CBS has made a new wage offer in the strike of radio and television technicians against the network. Details of the offer have not been released, but Gilbert McCutcheon, the federal mediator, says the proposal is being submitted to the union membership for a vote. The referendum is expected to take about 48 hours. The walkout is now in its 11th day.

That controversial television case...involving the award of Channel 10 in Miami to National Airlines...has been returned to the Federal Communcations Commission for a full-dress review. The review was ordered by the United States Court of Appeals in Washington, after hearing the commission's request for such action in the light of "significant new information" disclosed by House investigators.

This is Ed Murrow. I'll be back in a moment with the word for today. Now, here is George Bryan.

GEORGE BRYAN: COMMERCIAL

MURROW: President Eisenhower said today thatAmerican strength is inseparable from the waging of peace. And this is not the peace that derives from supine submission Rather it is what Theodore Roosevelt called "the peace of righteousness and justice in the world." Homer said, "Beyond his strength may no man fight, howsoever eager he be."

Goodnight and good luck!

Edward R. Murrow Fri., April 18, 1958

This is the news:

The United Nations Security Council will meet "at an early date" to consider Russia's charge that the United States is endangering peace by sending nuclear bombers "in the direction of the Soviet frontier." # The request for an urgent meeting of the council was made by Soviet Delegate Sobolev...after Foreign Minister Gromyko told a news conference in Moscow, earlier in the day, that the action was being taken. / Under the rotation system, the president of the Security Council this month is the United States ambassador, Henry Cabot Lodge. [It was Lodge's alternate, James J. Wadsworth, who said the decision as to a meeting would be made promptly, after consultation with other council members.] There is no doubt that a meeting will be held. / In asking for council consideration, Sobolev...like Gromyko...said international peace was being threatened by "numerous flights of American bombers loaded with hydrogen bombs toward the territory of the U.S.S.R."

Gromyko charged that...due to the American excursions...humanity had "several times been within a hairbreadth of a new war." He referred to reports that bombers of the Strategic Air Command had "repeatedly" flown in the direction of Russia, in the Arctic area, because of vague radar shapes which were taken to be possible Soviet aircraft or missiles...but which actually were electronic interferences or meteorites. This, he said, "constitutes playing with fire---a game too dangerous to tolerate." /And he called on "all countries" to join Russia in protesting the flights. The Soviet Government, he said, was reluctant to believe that President Eisenhower, personally, would sanction such a policy. He said that Russia has "all the necessary means to inflict a smashing retaliatory blow."

In Washington, the State Department issued a special statement...denying that the Strategic Air Command is making "provocative flights" over the polar region. "Mr. Gromyko's charges," it said, "appear to be an attempt to raise the fears of mankind in the nuclear age." / It insisted the aircraft are sent up under a "foolproof" system "which could not possibly be the accidental cause of war." The special statement said [redacted] we welcome discussion [redacted] in the Security Council, that the operations of the Strategic

Air Command constitute the "mainstay" of the free world's deterrent power. And it said these operations will continue. The United States, it added, is "ready and willing" to work with all nations to reduce tension and particularly the fear of sudden surprise attack."

Today, Foreign Minister Gromyko conferred with the British and French ambassadors in Moscow...in further exploratory talks, regarding a possible summit conference. He saw the American ambassador, Llewellyn Thompson, yesterday. These are not the formal talks on the ambassadorial level which the West had requested. Rather, as one diplomat remarked, they are talks preparatory to the ambassadorial talks. Gromyko says they do not mean that Russia agrees to the procedures laid down by the West. "We have spoken," he said, "in favor of an exchange of opinion."

A sidelight... The United Press quotes a Soviet lecturer as saying that Marshal Zhukov, the former Soviet defense minister, has been retired completely from military service. Zhukov was ousted as defense minister last fall...allegedly for trying to curb party influence among members of armed forces.

Chancellor Adenauer of West Germany and Prime Minister Macmillan of

→

Britain issued a joint communique today, in which they said one of the most urgent subjects to be taken up at a summit conference would be controlled disarmament. They also said there can be no lasting settlement in Europe until Germany is reunited. Adenauer has been visiting in London for the past three days.

In Paris today, Foreign Minister Pineau summoned the American ambassador to his office...demanding clarification of [redacted] United States policy with regard to Algeria. Pineau wanted to know why American correspondents in Paris are suddenly reporting that the United States favors direct negotiations between France and the Algerian rebel leaders. The French suspect that the stories...filed by the correspondents...were officially inspired. The American ambassador said he was not aware of any inspired American campaign but that he would look into the matter. [redacted]

In Washington, French Ambassador Alphand met for 75 minutes this afternoon with Under-secretary of State Herter. After the meeting, a state department officer read a statement saying it has always been the hope of the United States Government, and still is, that France itself will be able to work out a peaceful, democratic and just [redacted] settlement of the Algerian revolt, The department statement avoided saying anything [redacted] about the prospect of direct French talks with the rebel leaders.

In Indonesia, government troops on Sumatra are threatening the rebel capital of Bukittinggi (BOO-KETT-TENG'-GEE). The town is 40 airline miles north of Padang, which fell to the invading government forces last night.

The Defense Department...in Washington...today announced plans for building two more bases for launching intercontinental ballistic missiles. The two new launching sites will be near Omaha, Nebraska, and Spokane, Washington, and will cost in the neighborhood of 50-million dollars.

Senator Saltonstall will introduce a bill in the Senate on Monday, aimed at carrying out President Eisenhower's program for reorganizing the Defense Department. Saltonstall is the senior Republican member of the Senate Armed Services Committee. He says he believes in the "objectives" of the President's program.

The House Ways and Means Committee today approved legislation that would expand unemployment compensation benefits far beyond the limits recommended by President Eisenhower. Not only would the benefits be extended an additional 16 weeks for persons whose payment periods have expired, but benefits would also go to workers who lose jobs which are not covered by the present compensation program. This would include domestic workers and people who work on farms. The measure was strongly opposed by →

Republican members of the committee, and the final vote was 14 to 7.

Radio and television technicians...striking against CBS...voted today to end their walkout. The technicians accepted a three-year contract, calling for a six and four-tenths percent wage increase now, retroactive to February first, with another increase of two and four-tenths percent scheduled to go into effect in August, 1959.

The United States district court in Washington today dismissed the treason indictment against the American poet, Ezra Pound. Pound was indicted 12 years ago for broadcasts he made from Italy during World War Two. Since his indictment, he has been in a mental hospital.

Edward R. Murrow: April 18, 1958. 7.45 p.m.

In the continuing propaganda war the Russians have slugged us again. The background is this: About ten days ago Frank Bartholomew of United Press wrote a story describing the state of alert of our strategic air command; how B-52 bombers carrying thermo-nuclear bombs were on constant alert, how they are airborne within a matter of minutes after the radar-scopes indicated a convergence of unidentified objects flying swiftly toward the United States. Bartholomew went on to describe the "fail safe" system which would prevent our bombers from going all the way and dropping their bombs on pre-determined targets, if the objects should turn out to be meteorites rather than long-range Russian missiles. Bartholomew's piece was cleared by the Strategic Air Command, and it didn't get much play, either in print or radio because what he wrote was already widely known.

Today Gromyko based his charges on Bartholomew's story, presumably in an effort to place us on the defensive just when preliminary talks for a summit conference were getting underway.

Our legitimate concern is not to lose aircraft on the ground in case of a Russian sneak attack. Retaliation, if it's to be effective, must be immediate. We do have B-52's in the air, with hydrogen bombs, not only over the Polar regions but over parts of Western Europe as well. When

unidentified objects are detected approaching the United States, the big bombers do take off, and they do head for pre-determined, carefully studied targets in Russia. They certainly wouldn't head away from Russia. That brings us to the "fail safe" system. What happens if a B-52, being airborne and on course, loses all communication with ground control; the unidentified objects turn out to be meteorites, or some electronic interference, and the mission is recalled; but there's that one 52 heading for the target with his radio out. He can't hear the order to return to base. Under the "fail safe" system, when he reaches a certain pre-determined point he can't go on unless he receives additional coded instructions; and these additional orders to proceed to the target can be given only on the authority of the President. So unless he gets new orders at the "fail safe" point, the pilot must go home.

It is reasonable to ask whether this system is foolproof. The answer is that it's as foolproof as it can be made, technically. But no system can eliminate the possibility of human error, or the unhinged mind.

Our denial of Gromyko's charges is based primarily on the contention that these flights cannot be considered "provocative" to the Soviet Union. That would seem to depend upon how near to Soviet air space the "fail safe"

point is. And that information is, of course, classified.

Presumably the Russians have an adequate warning system, and scramble their planes just as we do, but all that is covered by secrecy. XXXX

This Russian move, haling us before the Security Council, may at least help to put into perspective the proposals for disengagement or neutralization in Middle Europe. We can't disengage in the air. We are in contact wherever a plane can fly.

The skill of today's move by Gromyko isn't merely that he put us on the defensive again, as he did with the announcement that Russia was stopping nuclear tests. He was hammering on exposed nerve ends that can be found in many parts of the world. That is the fear that we are trigger happy, too fond of living on the brink; and that we are as much a danger to the peace as is the Soviet Union. The fact that this is not true doesn't make the nerves less sensitive.

XXXXXXXXXXXXXX This attitude toward our responsibility and stability is not confined to the so-called neutral or under-developed countries. There are considerable groups within allied nations who feel that we are reckless, inflexible and unduly bellicose.

One reason the British, for example, pressed so hard for further

negotiations with the Russians during the NATO Conference last December, was the explosive nature of British reaction when the public learned that our B-52's were flying about over their heads with a bellyfull of hydrogen bombs.

It is difficult to believe that the Russians have been so influenced by their own propaganda that they are persuaded that we threaten a nuclear war, either by accident or design. It seems more likely that they merely saw an opportunity to score another propaganda victory, and to create more distrust and suspicion of this country.

The Russians have maneuvered the United States, which does not want war, does want disarmament, and is the principal defender of man's right to be free - they have maneuvered us into the position of appearing before the Security Council as the accused. It is quite an accomplishment.

Back in a moment.
George Ruyan

When Gromyko speaks of the danger of error lurking in our nuclear defense tactics he can cite the voluminous case history of Man's mistakes. But some element of danger remains, no matter what we do. Machiavelli said, "A man's wisdom is most conspicuous where he is able to distinguish among dangers and make a choise of the least."

Goodnight and good luck!

EDWARD R. MURROW WITH THE NEWS
CBS RADIO NETWORK

FRIDAY, APRIL 18, 1958
7:45 - 8:00 PM EST

This is the news:

The United Nations Security Council will meet "at an early date" to consider Russia's charge that the United States is endangering peace by sending nuclear bombers "in the direction of the Soviet frontier." The request for an urgent meeting of the council was made by Soviet Delegate Sobolev...after Foreign Minister Gromyko told a news conference in Moscow, earlier in the day, that the action was being taken. Under the rotation system, the president of the Security Council this month is the United States ambassador, Henry Cabot Lodge. There is no doubt that a meeting will be held. In asking for council consideration, Sobolev...like Gromyko...said international peace was being threatened by "numerous flights of American bombers loaded with hydrogen bombs toward the territory of the U.S.S.R."

Gromyko charged that...due to the American excursions...humanity had "several times been within a hairbreadth of a new war." He referred to reports that bombers of the Strategic Air Command had"repeatedly" flown in the direction of Russia, in the Artic area, because of vague radar shapes wehch were taken to be possible Soviet aircraft or missiles...but which actually were electronic interferences or meteorites. The Russians have maneuvered the United States, which does not want war, does want disarmament, and is the principal defender of man's right to be free - they have maneuvered us into the position of appearing before the Security Council as the accused. It is quite an accomplishment.

This is Ed Murrow. I'll be back in a moment with the word for today. Now, here is George Bryan.

GEORGE BRYAN: COMMERCIAL

MURROW: When Gromyko speaks of the danger of error lurking in our nuclear defense tactics he can cite the voluminous case history of Man's mistakes. But some element of danger remains, no matter what we do. Machiavelli said, "A man's wisdom is most conspicuous where he is able to distinguish among dangers and make a choice of the least."

Goodnight and good luck!

Edward R. Murrow Mon., April 21, 1958

This is the news:

[redacted] Russia today submitted a resolution in the United Nations Security Council, charging that flights of American strategic bombers in the Arctic region..."toward the frontiers of the Soviet Union"...are a menace to peace. / The flights, Soviet Delegate Sobolev said, could lead to "the outbreak of destructive atomic war." / American Ambassador Lodge answered that the aircraft fly only in the nation's [redacted] legitimate self-defense, and that the flights are safe-guarded, so that they cannot accidentally set off a war. / The delegates of other countries are now speaking, and a vote on the Soviet resolution could come later tonight. / Russia wants the vote put off, so that the record of what is being said can be studied. (I should like to discuss today's debate in the Security Council further in a few minutes).

Nikita Khrushchev said tonight...at a Moscow reception... "We will beat the capitalists, but that does not mean killing anyone." / Khrushchev praised what he called the "re-education" of capitalists in China. / And then, pointing to American Ambassador Thompson, he said, "When we win this competition, we will also re-educate you." / He also said, "The main problem is to avoid a military clash." / Khrushchev had a warning for Yugoslavia. "All members of the socialist camp," he said, "must be on the same level, and help each other. We advance together."

The State Department says new doubt has been created, as to whether Russia wants a "meaningful" summit conference or just a "spectacle." / The department spokesman, Lincon White, referred to the refusal of Soviet Foreign Minister Gromyko to meet the American, British and French ambassadors in Moscow in one group. / Up to now, Gromyko has insisted on seeing the Western ambassadors one at a time.

British Prime Minister Macmillan sent a brief letter to Khrushchev today, saying that if he is really interested in having everyone suspend nuclear tests, he will join the West in technical talks...so that there can be set up "an agreed system of inspection and control."

Forty-nine persons were killed today when a United Airliner collided over the Nevada desert with an Air Force jet. The collision occurred at about 21-thousand feet in clear weather. There were no survivors in either aircraft. The airliner---a DC7---was flight No. 736, bound from Los Angeles to New York with 42 passangers and a crew of five. Eye-witnesses say that, upon impact, there was an explosion...and that in its dive the airliner left a trail of black smoke. The other aircraft---an F-100-F fighter-trainer from Nellis Air Force Base with two aboard---crashed three miles from the wreckage of the DC-7. Neither of the Air Force fliers had been able to use his parachute. They had been flying an instrument training mission. And it is not known whether---at the time of the collision---the pilot-instructor or the student was at the controls. The Air Force has identified the instructor as Captain Tom Coryell, of Indianapolis. The student was First Lieutenant Gerald Moran of Rapid City, South Dakota.

In Washington, Chairman Harris of the House Commerce Committee says he may ask for a special congressional investigation of the accident. Three months ago, two military aircraft collided over a Los Angeles suburb, killing 47 persons in the planes and one person on the ground.

Legislation for carrying out President Eisenhower's defense reorganization program was introduced in Congress today by Republican Senator Saltonstall of Massachusetts. / Saltonstall said he was "in sympathy with" the President's objectives. / Two Democratic senators---Clark of Pennsylvania and Symington of Missouri---said too many members of Congress are criticizing the reorganization plan before examining it in detail. There is too much sniping at it, Symington said, with the use of such words as "czar". / The plan, of course, increases the authority of the Secretary of Defense.

Dr. John Hagen, director of the Navy Vanguard project, testified today before the House Committee on Outer Space. Dr. Hagen said that scientists have the problem---not only of sending satellites into outer space---but of seeing to it that they are brought down. / He warned against the danger of filling outer space with a great number of "dead" satellites, which, he said, would be difficult to distinguish from missiles or meteors. He said "dead" satellites can become a serious menace to national defense.

Democratic Governor Harriman of New York told the House Banking Committee today that the recession has been brought on by the Administration's "ill-advised policies." / He called for emergency tax relief and "a large

→

and diversified program of public works."

Former President Truman has admitted that he made a mistake in his testimony last week before the House Banking Committee. Mr. Truman had told the committee that an interview he gave Arthur Krock of the New York Times in 1950 "did not happen." The matter came up at the committee hearing when Republican Representative Talle quoted Mr. Truman as saying---in the Krock interview---that "a certain amount" of unemployment is "supportable". was quoted Mr. Truman has now explained in letters to both Mr. Krock and the committee that he failed to remember the quotation---as given by Representative Talle--- because it was given only in part and because "my memory, like that of most people, sometimes fails to work quickly." "I was taken by surprise," he told Krock, "and thought an effort was being made to embarrass me at your expense." The Times correspondent has answered Mr. Truman, thanking him for the letter. Krock agreed that the quotation should have been used in full. He also told Mr. Truman, "Your statement that a certain amount of unemployment was 'supportable' in our economy is wholly different from, and indeed exclusive of, any implication that this is 'desirable'."

In a speech tonight---before a group of Democratic women---Mr. Truman blamed the recession in large part on the Administration's tight-money policy.

The House Ways and Means Committee tonight approved the Democratic program for extending federal benefits to unemployed workers who have exhausted their state payments. The program is much more liberal than the plan submitted by President Eisenhower. It would include jobless workers not now covered by unemployment compensation. And all costs, including the costs of state administration, would be paid for by the Federal Government.

The Senate today passed...and sent to the White House...a bill authorizing a speed-up in the purchase of 250-million dollars' worth of government supplies.

Edward R. Murrow: April 21, 1958. 7.45 p.m.

Ambassador Sobolev did not try to duck the charge that he was making propaganda, in bringing the American bomber flights in the Arctic before the United Nations Security Council today. / He quoted a Russian proverb that dirt does not cling to something clean - an odd proverb which hardly can be called self-evident - and said that the Russians are not offended at being accused of making propaganda for peace. / He would welcome it, he said, if the United States would do likewise.

The question is not whether the Russians were making propaganda, but how <u>effectively</u> they were making it. In one detail they scored a point, which was not directly answered by Ambassador Lodge. / That was in the description of the American flights, which take off when suspicious objects are seen on the radar screen, and which turn out to be electronic disturbances or meteors. The Soviet air force, Mr. Sobolev said, also has radar, and also sees these objects. / Suppose its planes set out toward the American border. Then it would be possible for the two air forces to meet, and either one might believe an actual attack was underway. The American "fail safe" system requires that a personal order of the President be received at a given point before the bomber can proceed on its mission. / But Mr. Lodge did not try to explain how

the President under such circumstances would know that the Soviet planes were not attacking.

But as propaganda Mr. Lodge had a good propaganda answer. He could point out that the President's open skies proposal, had it been accepted, would make massive surprise attack impossible, which would avoid the whole difficulty. He reminded the council that Mr. Eisenhower had proposed to include the whole of the United States, Alaska and the Soviet Union, in the inspection flights, or to start by limiting them to the Arctic. And on the mention of the Arctic he could quote Khrushchev as calling the proposal to photograph the Arctic as "utterly comical", and Mikoyan as saying that all that could be photographed would be polar bears, "who weren't going to attack anybody".

Mr. Sobolev called the American strategic maneuvers a manifestation of a definite and deliberate policy, and even suggested that the Arctic flights were being made at this very time to block the negotiations for a Summit Conference. He presumably aimed this part of his argument at European countries, who he said were indignant at our "aggressive dementia". He described our allies as caught in the network of their military obligations to the United States, having to give us rocket bases, and live in the danger of

our planes flying with H-bombs over their countries around the clock.

But that is an old Kremlin story which has been told in European capitals ever since the campaign started to break up NATO. It is the bald case that the Soviet Union wants peace, and that the United States and NATO don't. But in making it in the United Nations, Mr. Sobolev was at a painful disadvantage. For Mr. Lodge could point out that the disarmament resolution passed by the last Assembly had been ignored by the Soviet Union, which so far had refused even to discuss disarmament any further, under U.N. sponsorship. And as for the United States trying to block a summit conference, Mr. Lodge could ask how the Russians thought they could advance a summit conference simply by slandering the United States.

If the Soviet Union wanted peace, he asked, why did not the Soviet Union accept the Eisenhower proposal of April 8, to start at once on a technical discussion of disarmament. He pointed out that the Russian people had not even been told about this invitation. After reviewing the efforts we had made to get going with disarmament, he argued that until effective international arrangements are produced, the United States is obliged to have strong, alert forces that cannot be surprised. This, he said, could not by any stretch of the imagination be considered a threat to the Soviet Union. By its very

nature, he said, the United States could not be aggressive, whereas the Soviet Union not only had been, but still was; and he referred to Hungary and the continued enslavement of Eastern European countries.

The Lodge reply was well drafted and confidently delivered. Probably the only criticism to make of it is that it had to be on the defensive. But that also is an old story. The Russians no doubt are not worried at losing the debate. They did not have to defend themselves.

Back in a moment -
now a word from Ford+

Word for Today

In his Security Council speech, Soviet Delegate Sobolev was using words as tools of propaganda. He made no bones about it. He was directing his words at the ear of the world. American Ambassador Lodge was quick to point out that Russia had, in the past, refused to go along with aerial inspection. Lodge might well quote Artemus Ward, who said: "What we want is more cider and less talk."

Goodnight and good luck!

EDWARD R. MURROW WITH THE NEWS
CBS RADIO NETWORK

MONDAY, APRIL 21, 1958
7:45 - 8:00 PM EST

This is the news:

Russia today submitted a resolution in the United Nations Security Council, charging that flights of American strategic bombers in the Arctic region..."toward the frontiers of the Soviet Union"...are a menace to peace. The flights, Soviet Delegate Sobolev said, could lead to "the outbreak of destructive atomic war." American Ambassador Lodge answered that the aircraft fly only in the nation's legitimate self-defense, and that the flights are safeguarded, so that they cannot accidentally set off a war. The delegates of other countries are now speaking, and a vote on the Soviet resolution could come later tonight. Russia wants the vote put off, so that the record of what is being said can be studied. (I should like to discuss today's debate in the Security Council further in a few minutes.)

Nikita Khrushchev said tonight...at a Moscow reception..."We will beat the capitalists, but that does not mean killing anyone." Khrushchev praised what he called the "re-education" of capitalists in China. And then, pointing to American Ambassador Thompson, he said, "When we win this competition, we will also re-educate you." He also said, "The main problem is to avoid a military clash." Khrushchev had a warning for Yugoslavia. "All members of the socialist camp," he said, "must be on the same level and help each other. We advance together."

The State Department says new doubt has been created, as to whether Russia wants a "meaningful" summit conference or just a "spectacle." The department spokesman, Lincon White, referred to the refusal of Soviet Foreign Minister Gromyko to meet the American, British and French ambassadors in Moscow in one group. Up to now, Gromyko has insisted on seeing the Western ambassadors one at a time.

British Prime Minister Macmillan sent a brief letter to Khrushchev today,

saying that if he is really interested in having everyone suspend nuclear tests, he will join the West in technical talks...so that there can be set up "an agreed system of inspection and control."

Forty-nine persons were killed today when a United Airliner collided over the Nevada desert with an Air Force jet. The collision occurred at about 21-thousand feet in clear weather. There were no survivors in either aircraft. The airliner---a DC7---was flight No. 736 bound from Los Angeles to New York with 42 passengers and a crew of five. Eye-witnesses say that, upon impact, there was an explosion...and that in its dive, the airliner left a trail of black smoke. The other aircraft--an F-100-F fighter-trainer from Nellis Air Force Base with two aboard---crashed three miles from the wreckage of the DC-7. Neither of the Air Force fliers had been able to use his parachute. They had been flying an instrument training mission. And it is not known whether---at the time of the collision---the pilot-instructor or the student was at the controls. The Air Force has identified the instructor as Captain Tom Coryell, of Indianapolis. The student was First Lieutenant Gerald Moran of Rapid City, South Dakota.

Legislation for carrying out President Eisenhower's defense reorganization program was introduced in Congress today by Republican Senator Saltonstall of Massachusetts. Saltonstall said he was "in sympathy with" the President's objectives. Two Democratic senators---Clark of Pennsylvania and Symington of Missouri---said too many members of Congress are criticizing the reorganization plan before examining it in detail. There is too much sniping at it, Symington said, with the use of such words as "czar." The plan, of course, increases the authority of the Secretary of Defense.

Dr. John Hagen, director of the Navy Vanguard project, testified today before the House Committee on Outer Space. Dr. Hagen said that scientists have the problem---not only of sending satellites into outer space---but of seeing to it that they are brought down. He warned against the danger of filling outer

space with a great number of "dead" satellites, which, he said, would be difficult to distinguish from missiles or meteors. He said "dead" satellites can become a serious menace to national defense.

Democratic Governor Harriman of New York told the House Banking Committee today that the recession has been brought on by the Administration's "ill-advised policies." He called for emergency tax relief and "a large and diversified program of public works."

Former President Truman has admitted that he made a mistake in his testimony last week before the House Banking Commmttee. Mr. Truman had told the committee that an interview he gave Arthur Krock of the New York Times in 1950 "did not happen." Mr. Truman has now explained in letters to both Mr. Krock and the committee that he failed to remember the quotation---because it was given only in part and because "my memory, like that of most people, sometimes fails to work quickly."

In a speech tonight---before a group of Democratic women---Mr. Truman blamed the recession in large part on the Administration's tight-money policy.

The House Ways and Means Committee tonight approved the Democratic program for extending federal benefits to unemployed workers who have exhausted their state payments. The program is much more liberal than the plan submitted by President Eisenhower. It would include jobless workers not now covered by unemployment compensation. And all costs, including the costs of state administration, would be paid for by the Federal Government.

The Senate today passed...and sent to the White House...a bill authorizing a speed-up in the purchase of 250 million dollars' worth of government supplies.

Ambassador Sobolev did not try to duck the charge that he was making propaganda, in bringing the American bomber flights in the Arctic before the United Nations Security Council today. He quoted a Russian proverb that dirt does not cling to something clean - an odd proverb which hardly can be called

self-evident - and said that the Russians are not offended at being accused of making propaganda for peace. He would welcome it,he said, if the United States would do likewise.

The question is not whether the Russians were making propaganda, but how effectively they were making it. In one detail they scored a point, which was not directly answered by Ambassador Lodge. That was in the description of the American flights, which take off when suspicious objects are seen on the radar screen and which turn out to be electronic distrrbances or meteors. The Soviet air force, Mr. Sobolev said, also has radar, and also sees these objects. Suppose its planes set out toward the American border. Then it would be possible for the two air forces to meet, and either one might believe an actual attack was underway. The American "fail safe" system requires that a personal order of the President be received at a given point before the bomber can proceed on its mission. But Mr. Lodge did not say to explain how the President under such circumstances would know that the Soviet planes were not attacking.

But as propaganda Mr. Lodge had a good propaganda answer. He could point out that the President's open skies proposal, had it been accepted, would make massive surprise attack impossible, which would avoid the whole difficulty. And on the mention of the Arctic, he could quote Khrushchev as calling the proposal to photograph the Arctic as "utterly comical" and Mikoyan as saying that all that could be photographed would be polar bears, "who weren't going to attack anybody."

Mr. Sobolev called the American strategic maneuvers a manifestation of a definite and deliberate policy, and even suggested that the Arctic flights were being made at this very time to block the negotiations for a Summit Conference. He presumably aimed this part of his argument at European countries, who he said were indignant at our "aggressive dementia." He described our allies

as caught in the network of their military obligations to the United States, having to give us rocket bases, and live in the danger of our planes flying with H-bombs over their countries around the clock.

But that is an old Kremlin story which has been told in European capitals over since the campaign started to break up NATO. It is the bald case that the Soviet Union wants peace, and that the United States and NATO don't. But in making it in the United Nations, Mr. Sobolev was at a painful disadvantage. For Mr. Lodge could point out that the disarmament resolution passed by the last Assembly had been ignored by the Soviet Union, which so far had refused even to discuss disarmament any further, under U.N. sponsorship. And as for the United States trying to block a summit conference, Mr. Lodge could ask how the Russians thought they could advance a summit conference simply by slandering the United States.

If the Soviet Union wanted peace, he asked, why did not the Soviet Union accept the Eisenhower proposal of April 8, to start at once on a technical discussion of disarmament. He pointed out that the Russian people had not even been told about this invitation. After reviewing the efforts we had made to get going with disarmament, he argued that until effective international arrangements are produced, the United States is obliged to have strong, alert, forces that cannot be surprised. This, he said, could not by any stretch of the imagination be considered a threat to the Soviet Union. By its very nature, he said, the United States could not be aggressive, whereas the Soviet Union not only had been, but still was; and he referred to Hungary and the contined enslavement of Eastern European countries.

The Lodge reply was well drafted and confidently delivered. Probably the only criticism to make of it is that it had to be on the defensive. But that also is an old story. The Russians no doubt are not worried at losing the debate. They did not have to defend themselves.

This is Ed Murrow. I'll be back in a moment with the Word for Today.

But first, a word from Ford.

COMMERCIAL: GEORGE BRYAN

MURROW: In his Security Council speech, Soviet Delegate Sobolev was using words as tools ofpropaganda. He made no bones about it. He was directing his words at the ear of the world. American Ambassador Lodge was quick to point out that Russia had, in the past refused to go along with aerial inspection. Lodge might well quote Artemus Ward, who said: "What we want is more cider and less talk."

Goodnight and good luck!

Edward R. Murrow Tues., April 22, 1958

This is the news:

The House Armed Services Committee began hearings today on President Eisenhower's plan for reorganizing the Defense Department. / Secretary McElroy...as first witness...told the committee that the future security of the country rests with the soundness of the decisions reached as a result of the congressional hearings. / He said, "It would be tragic indeed if, in the moment of crisis, we should be found wanting, because of an attempt to graft the weapons of modern warfare, onto an outmoded structure." The proposal, he said, does not contemplate merger of the Army, Navy and Air Force, any more than existing unified commands...such as the Continental

Air Defense Command and the Eruopean and Pacific Commands..."have tended to merge or destroy the services." McElroy again sought to overcome "misgivings" that the entire defense appropriation of some 40-billion dollars would be placed in the hands of the Secretary of Defense for him to dispose of as he sees fit. He said the President does not want this. The objective is simply to provide the Secretary of Defense with "modest flexibility" in the handling of defense funds, so that unanticipated needs of the unified commands can be met promptly and scientific breakthroughs can be exploited rapidly." Committee Chairman Vinson has opposed the program, saying that it would set up a "Prussian-type high command." McElroy said civilian control will be "fully retained." He told Vinson...in answer to questioning... that no officer testifying against the reorganization plan in Congress would be expected to resign. When Vinson asked, would the officer be penalized in any way...how about promotion...McElroy said there should be no question of retaliation. But his ban on speeches against the plan...outside committee rooms...is still in force.

Chairman Martin of the Federal Reserve Board told Congress today that he is against a tax cut at this time. He testified before the Senate Finance Committee.

And on the political front, Chairman Alcorn...of the Republican National Committee...said he "just doesn't think it is in the cards" for the Republicans to win control of the Senate in the November congressional elections. Alcorn predicted a "bare" Republican majority in the House.

The Administration today sent Congress a 700-million-dollar loan program to help the nation's railroads. [illegible] dollars would be in the form of short-term private loans, guaranteed by the Federal Government. This money would be used for the "cost-saving" improvement of plant facilities, other than [illegible] rolling stock. The other 200-million dollars in guaranteed [illegible] would be used for the purchase of new freight cars. No request is made for the repeal of federal excise taxes on either passenger [illegible] fares or freight.

The United States immigration commissioner...Joseph Swing...today authorized the return to this country of William Heikkila (HECK-A-LA), who was deported to Finland last week-end. Commissioner Swing said there had been "an

error in judgment." Heikkila...who was born in Finland...had admitted being a member of the Communist Party in the 1930's. He was taken into custody in San Francisco on Friday...and taken out of the country by immigration agents. His wife said she had not been notified in advance. Heikkila...who arrived in Helsinki today without luggage... charged he was "kidnaped".

Russia's United Nations representative, Arkady Sobolev, charged today that the United States had "hampered" the preparations for a summit conference. Sobolev referred to the American refusal last night in the Security Council to end its nuclear bomb flights in the polar region, as a protection against Russian surprise attack. Sobolev withdrew a Soviet resolution demanding an end to such flights when it became apparent that a council vote on the resolution would result in its defeat.

My colleague, Alexander Kendrick, says that the British government is "considerably upset" by the current visit of Soviet representatives in Bonn, where the Russians have gone to conclude a German trade agreement. Kendrick says this distress is also shared by the Labour Party.

He explains that Russia originally made a proposal to Britain for the building of various industrial plants in the Soviet Union [redacted] According to Kendrick's sources, the British were told by the United States that they should make no contracts until...and unless...an agenda was agreed on for a summit meeting. The British went along with this, and now they see these contracts going to Germany. They want to know how come.

President Tito opened the Yugoslav party congress today with a speech that was a mixture of criticism and praise for both Russia and the United States. He made no direct mention of the fact that the party congress is being boycotted by Russia and most of the other countries of the Communist bloc. But "certain comrades", he said, have been "shortsighted and tactless" in their dealings with Yugoslavia. Tito still holds to the theory that there are "different roads to socialism," and for Russia to try to "re-educate" Yugoslavia, he said, is not the way to promote confidence and good relations among Communist states. He said America has helped Yugoslavia "in a spirit of mutual cooperation and non-interference." But NATO, he contended, is aimed at "world domination and the attainment of goals from positions of strength."

In Paris today, Georges Bidault gave up his attempt to form a new government. His effort was doomed when his own Popular Republican Party as well as the Socialists refused to lend him support. Bidault advocated a "firmer" policy for Algeria. Tonight, President Coty asked former Premier Pleven, a middle-of-the-road Democrat, to try his hand at forming a new government.

Indonesian Army forces on Sumatra today continued their drive on the rebel capital of Bukittinggi (BOO-KETT-TENG-GEE). The city was bombed twice during the day, and one army column is reported less than 15 miles away.

A small naval engagement was fought today between Israel and Jordan in the Gulf of Aqaba. A Jordanian spokesman says two Israelis were killed, and that one small armed Israeli vessel was sunk. He claims the Israelis were in Jordanian territorial waters, and that they fired first. Israel says the incident began when an Israeli fishing boat was attacked in "international waters." The boat, according to Israel, was out looking for another fishing craft which had drifted from its moorings during the night. The lost boat was found later by an Israeli naval launch. Israel says one of its fishermen was killed and that another is missing.

Edward R. Murrow: April 22, 1958. 7.45 p.m.

The first conference of free African states, which ended today in Ghana, adopted a common foreign policy of disentanglement from either side, in the East-West rivalry for power. / But it did this in such moderate language that the result was considered a victory for the pro-Western members. / Five Arab and three Negro states took part. / The active pro-Western work behind the scenes was done by the Tunisian delegation.

The support of Tunisia of a moderate policy toward the West may count as a virtue, but it also is a grim necessity. / President Bourguiba's regime now stands ~~perilously~~ poised between survival and extinction. / Its only hope is moderation - moderation in its own behavior, moderation in crisis-ridden France, and moderation by the Algerian rebels.

Tunisia's position has been precarious ever since independence was achieved. / But it was expected to gain from the Murphy-Beeley good-offices mission. Now the fall of the French Government has thrown that hope out of the window. Now several quite sudden and shocking developments might occur, in Tunisia itself, in France and in Algeria, which could throw the whole world into turmoil.

In Tunisia, the Arab zealots in Bourguiba's followers, are pressing him

hard to give active support to the Algerian rebels. / They may press so hard / that he cannot withstand them. / Active support means recruiting Tunisians to serve in the Algerian National Liberation Army. / If that happened, no French Government could restrain the headstrong French army from marching in to re-conquer Tunisia. / The Tunisian army is so weak the country would fall, probably in twenty-four hours. / If it happened, the United States undoubtedly would crack down on France just as heavily as it did on France and Britain in the Suez crisis. This time it might mean the end of the alliance, with untold consequences in world affairs.

That is one possibility. Another is / that the French crisis will end with a sharp swing to the right, and this by itself would drive Bourguiba to side openly with the Algerian rebels. / The third is that the Algerian rebels may at any moment decide to set up a government-in-exile, and ask the world to recognize it. / A few weeks ago the Committee of National Liberation in Algeria was not ready to take this step. Now, according to reliable information, the majority of the committee is for it. / If the step is taken, nobody doubts that Bourguiba would have to recognize the government in exile, which would end the chances of a reasonable settlement with France. All the Arab countries would recognize it. That would give the Kremlin the influence

and leadership in the Middle East on a scale that has long been dreaded.

This has some of the qualities of a nightmare, one of them, fortunately, being that it has not yet happened. / Undoubtedly American influence is bearing as hard as it can on Bourguiba to continue to be moderate, and on the Algerian rebels not to do anything drastic. / A meeting of Moroccan, Tunisian and Algerian political leaders is being held next week in Tangiers - their first get-together. / Federation is sure to be discussed, though the three elements have too many jealousies to accomplish much at this time. / However, both Moroccans and Tunisians will be urging the Algerians not to set off any disastrous explosion.

But there is another dimension to the nightmare, and this is what may result from President Nasser's forthcoming visit to Moscow. / All the Middle East is speculating about that visit. / There is one reassuring theory that Nasser can't expect much from the Kremlin and, if anything, must do some appeasing, for the rude way he ousted the communists from Syria.

But there is a much more alarming theory. It has to do with a so-called Master Plan for Soviet action in the Middle East. According to this plan, the Soviet Union at the right moment will sponsor Arab countries in a demand to impose on Israel the borders of the 1947 armistice. There

These were rejected at the time by the Arab countries, and were superceded by the borders Israel obtained after winning the ensuing war. / To go back to the 1947 borders would be to dismember Israel, and if the Soviet Union intends to win over the Arab world, no doubt this would be the way to do it. That doing it might lead to world war is obvious, and that may be why the Master Plan hasn't been put into effect. / But there is ample evidence that Soviet diplomats have told Arab leaders about it.

North Africa and the Middle East are like a battlefield sown with land mines. The fact that the mines haven't blown up is no proof they aren't there / and aren't unspeakably dangerous. / They will remain dangerous until they are carefully excavated and rendered harmless. / Nobody at this time is going about the task of removing the mines. We know where the mines are; we don't need detectors - just a policy.

Back in a moment -
George Bryan

Word for Today

The Arab world has all kinds of possibilities. As Nasser himself once expressed it, "People in this area have national pride. Anything can happen." And it was Benito Mussolini, who had dreams of a North African empire, that said, "Everything is possible, including the impossible and the absurd."

Goodnight and good luck!

EDWARD R. MURROW WITH THE NEWS
CBS RADIO NETWORK

TUESDAY, APRIL 22, 1958
7:45 - 8:00 PM EST

This is the news:

The House Armed Services Committee began hearings today on President Eisenhower's plan for reorganizing the Defense Department. Secretary McElroy...as first witness...told the committee that the future security of the country rests with the soundness of the decisions reached as a result of the congressional hearings. He said, "It would be tragic indeed if, in the moment of crisis, we should be found wanting because of an attempt to graft the weapons of modern warfare onto an outmoded structure." The proposal, he said, does not contemplate merger of the Army, Navy and Air Force any more than existing unified commands... such as the Continental Air Defense Command the European and Pacific Commands... "have tended to merge or destroy the services." McElroy again sought to overcome "misgivings" that the entire defense appropriation of some 40-billion dollars would be placed in the hands of the Secretary of Defense for him to dispose of as he sees fit. He said the President does not want this. The objective is simply to provide the Secretary of Defense with "modest flexibility" in the handling of defense funds, "so that unanticipated needs of the unified commands can be met promptly and scientific breakthroughs can be exploited rapidly." Committee Chairman Vinson has opposed the program, saying that it would set up a "Prussian type high command." McElroy said civilian control will be "fully retained." He told Vinson...in answer to questioning...that no officer testifying against the reorganization plan in Congress would be expected to resign. When Vinson asked, would the officer be penalized in any way...how about promotion...McElroy said there should be no question of retaliation. That is one possibility. Another is that the French crisis will end with a sharp swing to the right, and this by itself would drive Bourguiba to side openly with the Algerian rebels. The third is that the Algerian rebels may at any moment decide to set up a government-in-exile, and ask the world to recognize it. A few weeks ago the Committee of National Liberation in Algeria was not ready to take this step. Now, according to reliable information, the majority of the committee is for it. If the step is taken, nobody doubts that Bourguiba would have to recognize the government in exile, which would end the chances of a reasonable settlement with France. All the Arab countries would recognize it. That would give the Kremlin the influence and leadership in the Middle East on a scale that has long been dreaded.

This has some of the qualities of a nightmare, one of them, fortunately, being that it has not yet happened. Undoubtedly American influence is bearing as hard as it can on Bourguiba to continue to be moderate, and on the Algerian rebels not to do anything drastic. A meeting of Moroccan, Tunisian, and Algerian political leaders is being held next week in Tangiers - their first get-together. Federation

is sure to be discussed, though the three elements have too many jealousies to accomplish much at this time. However, both Moroccans and Tunisians will be urging the Algerians not to set off any disastrous explosion.

But there is another dimension to the nightmare, and this is what may result from President Nasser's forthcoming visit to Moscow. All the Middle East is speculating about that visit. There is one reassuring theory that Nasser can't expect much from the Kremlin and, if anything, must do someappeasing, for the rude way he ousted the communists from Syria.

But there is a much more alarming theory. It has to do with a so-called Master Plan for Soviet action in the Middle East. According to this plan, the Soviet Union at the right moment will sponsor Arab countries in a demand to impose on Israel the borders of the 1947 armistice. These were rejected at the time by the Arab countries and were superceded by the borders Israel obtained after winning the ensuing war. To go back to the 1947 borders would be to dismember Israel, and if the Soviet Union intends to win over the Arab world, no doubt this would be the way to do it. That doing it might lead to world war is obvious, and that may be why the Master Plan hasn't been put into effect. But there is ample evidence that Soviet diplomats have told Arab leaders about it.

North Africa and the Middle East are like a battlefield sown with land mines. The fact that the mines haven't blown up is no proof they aren't there and aren't unspeakably dangerous. they will remain dangerous until they are carefully excavated and rendered harmless. Nobody at this time is going about the task of removing the mines. We know where the mines are; we don't need detectors - just a policy.

This is Ed Murrow. I'll be back in a moment with the word for today. Now, here is George Bryan.

GEORGE BRYAN: COMMERCIAL

MURROW: The Arab world has all kinds of possibilities. As Nasser himself once

expressed it, "People in this area have national pride. Anything can happen." And it was Benito Mussolini, who had dreams of a North African empire, that said, "Everything is possible, including the impossible and the absurd."

Goodnight and good luck!

Edward R. Murrow Wed., April 23, 1958

This is the news:

The Air Force tonight fired a two-stage rocket...aimed at testing a new secret nose-cone for its resistance in a plunge through the earth's atmosphere at better than 15-hundred miles an hour. The rocket combined the Air Force Thor with the Navy's Vanguard as the second stage. It was launched at Cape Canaveral at 7:10 tonight, Eastern Standard Time. The first stage ignited successfully, and the rocket disappeared from sight. Fifteen minutes after the launching, the Air Force announced that the second stage also had ignited AS PLANNED. This seemed to PROMISE a successful test.

Edward R. Murrow Wed., April 23, 1958

[redacted]

Soviet Premier Khrushchev has sent a new message to President Eisenhower. The White House says it rejects the Western proposal for immediate technical studies on the problem of controlled disarmament. The Moscow radio describes the note as "a comprehensive explanation of the Soviet stand on urgent world problems." It says that Khrushchev again called on the United States to cancel its scheduled nuclear weapons tests, with the suggestion that [redacted] if the scheduled tests of the United States and Britain are not cancelled, Russia will resume testing its nuclear devices. Khrushchev said the same thing last month in announcing Russia's suspension of tests. It is now time, he says, to take "practical steps". The new Khrushchev message comes just as the

United States, Britain and France are preparing a new note to Moscow, asking Khrushchev...bluntly...whether he wants to go ahead with preparations for a summit conference. / The American, British and French ambassadors in Moscow have been trying...since last week...to get Foreign Minister Gromyko to talk to them jointly about laying the groundwork for a summit meeting. Gromyko has insisted on seeing them separately.

President Eisenhower told his news conference today that Russia's behavior...with regard to a possible summit conference...is "really puzzling." He ruled out any meeting of just Khrushchev and himself. And he said that the Russians, in accusing the United States of making "provocative" flights toward the borders of Russia, had "indulged in a lot of overstatement." Our big, expensive bombers, he said, cannot be left sitting on airfields that could be targets. / And he repeated---they will fly on to Russia only when they receive proper orders from the President of the United States.

Mr. Eisenhower bristled at a question put to him regarding his program for reorganizing the Defense Department. / Sarah McClendon, representing a number of Texas newspapers, asked him about the charge that the program would make it possible for some ~~dictator~~ person, with a dictatorial bent,

to seize military power. The President asked Mrs. McClendon if she had read the proposed legislation. She said she had. Mr. Eisenhower retorted, "No, you didn't---I don't think." And then he went on to say that one-man control of the armed forces under his proposal "is just not possible, if we are sensible people." To talk about that danger, he said, is about as sensible as saying that Congress "is suddenly going nuts and completely abolishing the Defense Department."

Mr. Eisenhower said that he believes the recession is "flattening out." He does not want to be a Pollyanna; there still is a lot of agonizing reappraisal every day. But people who talk "blithely" about a tax cut do not stop to think of mounting defense costs, which we may be facing for the next 40 or 50 years. Mr. Eisenhower said the measure sponsored by the Democrats for liberalizing unemployment compensation would put people on the dole and destroy the unemployment insurance system. (The Democratic bill would extend compensation to persons not presently covered by the program and have the Federal Government pay most of the cost. Both Republicans and Democrats want to expand the payment period for unemployed persons who have exhausted their benefits.)

The President said he doesn't know why Republican National Chairman Meade Alcorn told reporters it "isn't in the cards" for the Republican Party to win control of the Senate in November. Mr. Eisenhower SAID it was never his practice to concede defeat in any fight in advance...and he wasn't doing it now.

The Labor Department reports that living costs went up seven-tenths of one percent in March---the biggest jump since July, 1956./ The increase is attributed largely to new high prices for food. (The commissioner of [redacted] Labor statistics, Ewan Clague, says this is probably the "last big bulge" as the result of bad weather, which damaged fruit and vegetable crops in the South. And he expects food prices generally to begin levelling off in May and June./ With today's report, the consumer price index stands at a new record high---nearly 4 percent above the level of a year ago. With this new increase, more than a million workers---with contracts geared to the cost of living---will receive pay raises ranging from two to four cents an hour.

The House Foreign Affairs Committee voted today to cut 339-million dollars out of President Eisenhower's foreign aid program. The biggest cut---of 160-million dollars---was in Mr. Eisenhower's request for a billion, 800-million dollars for military assistance. The special 200-million-dollar fund...which the President wanted in order to meet various unexpected contingencies...was cut in half.

The F.B.I. reported today that the number of major crimes committed in the United States last year reached a new all-time high. Persons under 18 accounted for nearly half of the crimes. According to the report, juvenile arrests since 1952 have increased 55 percent. And there was a sharper increase in teen-age arrests last year in small towns than in large cities. The report shows crime...in all age categories...to be increasing about four times as fast as the over-all population, with one major crime occurring every 11 and three-tenths seconds.

Edward R. Murrow: April 23, 1958. 7.45 p.m.

When Princess Margaret formally inaugurated the parliament of the West Indian Federation in Trinidad yesterday, the most important step was completed that has been taken in these islands, since the emancipation of slaves in 1833. / And it brought to the doorstep of the United States a new entity as a neighbor - a federation of three million people, mostly very poor people, living on a fourteen hundred-mile arc of islands, crowded into a total area about the size of the state of Maryland. / This new federation is the latest candidate for graduation from the British school of self-government.

The quiet, almost news-less way the federation has come into being is a remarkable instance of the art of the British in loosening and severing the once onerous ties of empire. / It comes at a time when colonialism remains a burning issue in world affairs, and where other imperial systems, notably the Dutch and the French, are making a much more raucous kind of news.

The West Indian Federation is not yet fully independent. / It is expected to have dominion status on a par with Canada within five years. / It must get its federation affairs running smoothly first. There is no doubt the British will grant it, and indeed with sincere relief.

Federation for the West Indies was a British idea. There was idealism

in it, but also acute self-interest. / Once upon a time these islands were a source of much old-time imperial booty. / That ended a long while ago. The West Indies became poor dependents, and cost the British people much more than they brought in. The islands are not large enough to hope to become independent states, so the only promise lay in federation. / By co-operation, pooled economies and united effort, they might save themselves.

But federation is no easy or natural solution for the problems of these islands. Only Jamaica and Trinidad are large enough and have diversified enough economies to hope for future prosperity. / Naturally they fear that the smaller and poorer islands will drain away their substance and send in their swarming workers to compete for jobs. The immediate task of the federation is to strike a balance between members. / First must come a customs union. This will be followed by free inter-island migration. Both mean hard fights. It is small wonder that the politicians on Jamaica and Trinidad are not enthusiastic about federation. Norman Manley, head of the Jamaican government, and reputed to be the most brilliant colored lawyer in the world, refused to run for prime minister of the federation. / So did Prime Minister Gomes of Trinidad. The office went to Sir Grantley Adams, Prime Minister of Barbados.

What part the United States will play in the future of the federation is very much in the minds of West Indians. / For a time they can count on subsidies from the United Kingdom, but not for long. / They would like to get help from Canada, which is a better market than the United Kingdom. But they look forward to much closer ties with the United States. / They would buy a great deal more from this country right now if it were not for the tight British controls. When full independence comes they are sure to do so.

Neighborhood with theUnited States raises another problem. The West Indies belong in our strategic bailiwick, not the British. / They lie in the midst of the defense zone of the Panama Canal. / We have a naval base at [redacted], on the island of Trinidad. / It was leased to us for 99 years in the destroyer deal President Roosevelt made with the British at the start of the last war. We have spent seventy million dollars on the base, and the Air Force is now installing missile-~~tracing~~ tracking equipment there. / The naval base is pretty much on a caretaker footing now, and the new federation wants the site for its new capital. The place is nicely modernized and just right for a government establishment. But the Navy says it must have a base of some sort and to move to another would cost 100 million dollars.

No doubt the Navy is within its rights. The question is how much we want to pay for the friendship of the new neighbor.

It would, of course, be of immense value to us if these islands governed themselves peacefully and well, and steadily increased their standard of living. / It would add to our security. / There is much that we can offer, not only vacationers, but manufacturers, new industries and our own markets. Our bauxite industry and that of Canada have perceptibly raised living standards in Jamaica in a few years' time. Now that the British are, in a sense, bowing out, we can well afford to show more interest in the welfare of the new neighbor.

Word for Today

Down through history, the British have adapted themselves adroitly to new conditions. The West Indian Federation is the latest of these adaptions in the political field. Thomas Carlyle said, "Today is not yesterday. We ourselves change. How can our works and thoughts, if they are always to be the fittest, continue always the same?"

Goodnight and good luck!

GEORGE BRYAN: COMMERCIAL

MURROW: Down through history, the British have adapted themselves adroitly to new conditions. The West Indian Federation is the latest of these adaptions in the political field. Thomas Carlyle said, "Today is not yesterday. We ourselves change. How can our works and thoughts if they are always to be the fittest, continue always the same?" Goodnight and good luck!'

Edward R. Murrow Thurs., April 24, 1958

This is the news:

Vice President Nixon said tonight that the "primary responsibility" for economic recovery must be assumed by American business and labor. To American business, he said: You must recognize that this is a buyer's market and act accordingly. "New products, increased advertising, and lower prices can have a dramatic effect on consumer psychology." Organized labor, he said, must realize that wage increases not based on increased productivity "mean higher prices, lower sales and fewer jobs." Mr. Nixon reiterated his feeling that if it becomes necessary, a tax cut is preferable to "massive" government spending. But a tax cut, he said, must be of the right kind. "It must be designed to put money in the hands of

→

investors and 'job creators' as well as consumers." / Mr. Nixon spoke at the meeting of the American Newspaper Publishers Association, here in New York.

President Eisenhower today signed a bill speeding up the government's purchasing program as it applies to civilian supplies.

And Republican Senator Knowland offered a new rivers and harbors bill, minus the 28 projects to which Mr. Eisenhower objected in vetoing an earlier measure. Knowland said the stripped down bill ought to be acceptable to everyone. Senate Democratic Leader Johnson immediately let it be known that it was not acceptable to him.

Secretary McElroy testified before the House Armed Services Committee for the third straight day...and said that, through the elimination of waste and duplication...President Eisenhower's plan for reorganizing the Defense Department could save the nation's taxpayers "hundreds of millions of dollars a year."

The House Foreign Affairs Committee today authorized a foreign aid program totaling 2-billion, 959-million dollars. / The final vote to cut the program by 339-million dollars was 18 to 5.

The United States, Britain and France today sent a new note to Russia on the question of preparations for a summit conference. / The Western powers express surprise that Foreign Minister Gromyko has refused to meet jointly with their ambassadors in Moscow. / They believe that "as a matter of practical procedure," joint meetings would be preferable to separate interviews. And they suggest that joint meetings between the Soviet foreign minister and the three ambassadors begin at once. The Western note was delivered less than 24 hours after Khrushchev sent a message to President Eisenhower, rejecting the President's plan for an immediate study of the technical problems relating to controlled disarmament.

The Air Force has abandoned search for the nose-cone of the experimental rocket launched at Cape Canaveral last night. The launching was a test, aimed at getting new technical information on the problem of re-entry from space, and the composition of the nose-cone is highly classified. The rocket itself consisted of a Thor missile and the second stage of the Vanguard, with a combined range of better than 5 thousand miles. Both stages ignited successfully. But because of other equipment failure, the rocket could not be traced accurately in its flight. The Air Force says that if the nose-cone is never found, the test must be regarded as only a "partial" success.

The Navy is preparing at Cape Canaveral tonight to launch its second earth satellite, again using the Vanguard vehicle. Its first satellite---launched last month---measured a little more than 6 inches in diameter. The satellite on the launching pad tonight has a diameter of 20 inches. The first Navy satellite and the other two put up by the Army are still in orbit.

A Defense Department expert said today that the United States is considering launching satellites on an average of once a month, starting in January. ~~satellites a month, starting next January. The~~

→

The statement was made by Dr. Herbert York, top scientist in the Pentagon's new Advanced Research Projects Agency. / He was testifying before a special House committee that is looking into space problems.

President Eisenhower today sent Congress a plan for merging the Office of Defense Mobilization with the federal civil defense administration. The new consolidated agency would be known as the Office of Defense and Civilian Mobilization. Mr. Eisenhower said he was (taking) the action in the interests of efficiency and economy. / The plan will go into effect automatically in 60 days, unless either the Senate or the House passes a resolution voicing disapproval.

The White House announces that President Eisenhower will fly to Augusta tomorrow for a long week-end of golf.

Israel marked its 10th anniversary with a military parade in Jerusalem, as scheduled. Jordan had protested the parade as a violation of the 1949 armistice agreement. It warned of possible trouble...and rushed reinforcements to its sector of the city, just in case. An estimated 300-thousand persons watched the parade of tanks, howitzers, self-propelled guns and troops pass through the streets of the Israeli sector---at one point within a few hundred yards of the demarcation line---but there was no incident. Later, in a speech in the new National Stadium, Prime Minister Ben Gurion reiterated Israel's desire for peace. "But Israel's defense forces," he said, "are the best guardians of our security."

~~The State Department said today that "close study" is being given~~ to the possibility of unfreezing the Egyptian assets held in this country since the Suez crisis, two years ago. The statement follows a report that Egypt and representatives of the old Suez Canal Company are near agreement as to compensation for Egypt's seizure of the canal. The assets in question ~~amount to about 30-million dollars.~~

President Bourguiba of Tunisia says he will not take his "differences with France" back to the United Nations Security Council. Bourguiba said

→

last Thursday that he would give the French a week to form a new government that would accept the compromise suggested by the Anglo-American good offices mission. He said today that there seems to be "an improvement of the atmosphere in France." He referred to the inability of Georges Bidault to win the support necessary to form a government. Bidault, he said, wanted to pursue a "harsh" North African policy.

Edward R. Murrow: April 24, 1958. 7.45 p.m.

For most of ~~the~~ this week the Communist Party of Yugoslavia meeting in Ljubiliana, has been kicking ~~the~~ their Russian comrades in the shins. / At one point the Russian Ambassador walked out in protest, and the other satellites, except for Poland, went with him. / The Russians have been accused of distorting Leninism, of "revisionism" -(in the Communist world that's just about the worst thing one Communist group can say about another.) The Yugoslavs say they cannot permit anyone -(meaning the Russians)- to decide what's good for Yugoslavia; that there does not exist any infallible, ideological judge - that a Communist Party in one country cannot impose its views on the Party in another country. The Yugoslavs insist on their right to follow their own road to socialism at home, and their non-alignment policy abroad.

This is one of those ideological and theoretical arguments in which Communists everywhere seem to derive so much satisfaction. But in this ~~XHXXX~~/ case it's only in part a disagreement between Moscow and Belgrade over which is the true inheritor and interpreter of the doctrines of Lenin. What the Yugoslavs are saying in effect to the Russians is: Let us alone; we are better and truer communists than you Russians. This might be tolerable,

might be regarded as a sort of academic debate by Moscow, but the Yugoslavs are preparing to go farther. / At this Party Congress -- the first in five-and-a-half years - they are engaged in re-writing the Party rules. For example: the new rules provide that a Party member "before a decision is made has the right to insist on his views." Also the old rules say that in order to convene a local or regional conference, fifty percent of all Party members in the region must demand it. The new regulation reduces this to only one-third of all Party members. | So in terms of the Party structure the new rules permit a little more freedom for the individual, and more opportunity for the expression of minority views.

But the real ~~key~~ nub of the argument has to do with international affairs. The Yugoslavs formally and officially deny that Russia has or is entitled to the dominant role in the Communist world. / They insist on discussion and mutual criticism between the various sections of the international communist movement. And they insist that the Yugoslav version of communism is the "genuine article." Titoism now emerges, not merely as a heresy but as a new faith embracing all fields of policy. | In their section dealing with relations with other Communist movements, the Yugoslavs say, "The forms of co-operation must not be invented or prescribed

in advance by any center." By which of course they mean Moscow. And then there is added a clause which really produced the anguish in Moscow. It reads: "The Yugoslav communists in present conditions lay most stress on the form of bi-lateral co-operation." This means they will make their international arrangements country by country in the light of their own national self-interest, and that they want no part of block arrangements and alliances directed and dominated by Moscow.

Finally, the Yugoslavs do not accept the Russian theory of the inevitability of war brought on by the forces of capitalism and imperialism. Their implication is that wars are caused, not by the imperialists alone but can be caused by the existence of inflexible rival blocs, even though one bloc styles itself socialist and anti-imperialist.

Obviously the manifesto produced by this Communist Party Conference won't alter very much the structure or the tyranny of the state, but it will mean a little more freedom of expression for the individual, considerably more de-centralization of industry, and a renewed declaration of independence of action. This document really wraps up and summarizes, also formalizes most of the speeches and articles by Yugoslavia's leading communists since Tito broke with Moscow in 1948.

To the Russians the threat is obvious. If the Yugoslavs get away with this degree of defiance and independence, it could become contagious, and the satellites along Russia's frontier might be stimulated to try and go and do likewise. It is part of the history of empires that they come unstuck because of the demand of component parts that they be permitted to run their own affairs. The Russian empire is no exception.

In this country we tend to regard the whole communist world as one solid [redacted] united block of power. This is to ignore both history and nationalism. Tito is a communist, all right, - in fact claims he is a more faithful disciple of Lenin than is Khrushchev. But Tito is also, and first of all, a Yugoslav.

Back in a moment -
George Bryan

"In Israel," Ben Gurion once told this reporter, "in order to be a realist, you have to believe in miracles." Israel's accomplishment of the impossible, in these past ten years, bears witness to this belief. A further insight may be found in something Walt Whitman wrote. "A great city," he said, "is that which has the greatest men and women."

Goodnight and good luck!

"New products, increased advertising and lower prices can have a dramatic effect on consumer psychology." Organized labor, he said, must realize that wage increases not based on increased productivity "mean higher prices, lower sales and fewer jobs." Mr. Nixon reiterated his feeling that if it becomes necessary, a tax cut is preferable to "massive" government spending. But a tax cut, he said, must be of the right kind. "It must be designed to put money in the hands of investors and 'job creators' as well as consumers." Mr. Nixon spoke at the meeting of the American Newspaper Publishers Association, here in New York.

President Eisenhower today signed a bill speeding up the government's purchasing program as it applies to civilian supplies.

And Republican Senator Knowland offered a new rivers and harbors bill, minus the 28 projects to which Mr. Eisenhower objected in vetoing an earlier measure. Knowland said the stripped down bill ought to be acceptable to everyone. Senate Democratic Leader Johnson immediately let it be known that it was not acceptable to him.

Secretary McElroy testified before the House Armed Services Committee for the third straight day...and said that, through the elimination of waste and duplication...President Eisenhower's plan for reorganizing the Defense Department could save the nation's taxpayers "hundreds of millions of dollars a year."

The House Foreign Affairs Committee today authorized a foreign aid program totaling 2-billion,959 million dollars. The final vote to cut the program by 339 million dollars was 18 to 5.

The United States, Britain and France today sent a new note to Russia on the

question of preparations for a summit conference. The Western powers express surprise that Foreign Minister Gromyko has refused to meet jointly with their ambassadors in Moscow. They believe that "as a matter of practical precedure," joint meetings would be preferable to separate interviews. And they suggest that joint meetings between the Soviet foreign minister and the three ambassadors begin at once. The Western note was delivered less than 24 hours after Khrushchev sent a message to President Eisenhower, rejecting the President's plan for an immediate study of the technical problems relating to controlled disarmament.

The Air Force has abandoned search for the nose-cone of the experimental rocket launched at Cape Canaveral last night. The launching was a test, aimed at getting new technical information on the problem of re-entry from space, and the composition of the nose-cone is highly classified.

The Navy is preparing at Cape Canaveral tonight to launch its second earth satellite, again using the Vanguard vehicle. Its first satellite---launched last month---measured a little more than 6 inches in diameter. The satellite on the launching pad tonight has a diameter of 20 inches. The first Navy satellite and the other two put up by the Army are still in orbit.

A Defense Department expert said today that the United States is considering launching satellites on an average of once a month, starting in January.

President Eisenhower today sent Congress a plan for merging the Office of Defense Mobilization with the federal civil defense administration. The new consolidated agency would be known as the Office of Defense and Civilian Mobilization. Mr. Eisenhower said he was taking the action in the interests of efficiency and economy. The plan will go into effect automatically in 60 days, unless either the Senate or the House passes a resolution voicing disapproval.

The White House announces that President Eisenhower will fly to Augusta tomorrow for a long week-end of golf.

Israel marked its 10th anniversary with a military parade in Jerusalem, as scheduled. Jordan had protested the parade as a violation of the 1949 armistice

agreement. It warned of possible trouble...and rushed reinforcement to its sector of the city, just in case. An estimated 300-thousand persons watched the parade of tanks, howitzers. self-propelled guns and troops pass through the streets of the Israeli sector---at one point within a few hundred yards of the demarcation line---but there was no incident. Later, in a speech in the new National Stadium, Prime Minister Ben Gurion reiterated Israel's desire for peace. "But Israel's defense forces," he said, "are the best guardians of our security."

President Bourguiba of Tunisia says he will not take his "differences with France" back to the United Nations Security Council. Bourguiba said last Thursday that he would give the French a week to form a new government that would accept the compromise suggested by theAnglo-American good offices mission. He said today that there seems to be "an improvement of the atmosphere in France." He referred to the inability of Georges Bidault to win the support necessary to form a government. Bidault, he said, wanted to pursue a "harsh" North African policy.

For most of this week the Communist Party of Yugoslavia meeting in Ljubiliana, has been kicking their Russian comrades in the shins. At one point the Russian Ambassador walked out in protest, and the other satellites except for Poland went with him. The Russians have been accused of distorting Leninism, of "revisionism"- in the Communist world that's just about the worst thing one Communist group can say about another. The Yugoslavs say they cannot permit anyone (meaning the Russians) to decide what's good for Yugoslavia; that there does not exist any infallible, ideological judge - that a Communist Party in one country cannot impose its views on the Party in another country. The Yugoslavs insist on their right to follow their own road to socialism at home and their non-allignment policy abroad.

This is one of those ideological and theoretical arguments in which Communists everywhere seem to derive so much satisfaction. But in this case, it's only in part a disagreement between Moscow and Belgrade over which is the true inheritor and interpreter of the doctrines of Lenin. What the Yugoslavs are saying in

effect to the Russians is: Let us alone; we are better and truer communists than you Russians. This might be tolerable, might be regarded as a sort of academic debate by Moscow, but the Yugoslavs are preparing to go farther. At this Party Congress - the first in five-and-a-half years - they are engaged in re-writing the Party rules. For example: the new rules provide that a Party member "before a decision is made has the right to insist on his views." Also the old rules say that in order to convene a local or regional conference, fifty percent of all Party members in the region must demand it. The new regulation reduces this to only one-third of all Party members. So in terms of the Party structure the new rules permit a little more freedom for the individual, and more opportunity for the expression of minority views.

But the real nub of the argument has to do with international affairs. The Yugoslavs formally and officially deny that Russia has or is entitled to the dominant role in the Communist world. They insist on discussion and mutual criticism between the various sections of the international communist movement. And they insist that the Yugoslav version of communism is the "genuine article." Titoism now emerges, not merely as a heresy but as a new faith embracing all fields of policy. In their section dealing with relations with other Communist movements, the Yugoslavs say, "The forms of co-operation must not be invented or prescribed in advance by any center." By which of course they mean Moscow. And then there is added a clause which really produced the anguish in Moscow. It reads: "The Yugoslav communists in present conditions lay most stress on the form of bi-lateral co-operation." This means they will make their international arrangments country by country in the light of their own national self-interest, and that they want no part of block arrangments and alliances directed and dominated by Moscow.

Obviously the manifesto produced by this Communist Party Conference won't alter very much the structure or the tyranny of the state. but it will mean a little more freedom of expression for the individual, considerably more

de-centralization of industry, and a renewed declaration of independence of action. This document really wraps up and summarizes, also formalizes most of the speeches and articles by Yugoslavia's leading communists since Tito broke with Moscow in 1948.

To the Russians the threat is obvious. If the Yugoslavs get away with this degree of defiance and independence, it could become contagious, and the satellites along Russia's frontier might be stimulated to try and go and do likewise. It is part of the history of empires that they come unstuck because of the demand of component parts that they be permitted to run their own affairs. The Russian empire is no exception.

In this country we tend to regard the whole communist world as one solid united block of power. This is to ignore both history and nationalism. Tito is a communist, all right - in fact claims he is a more faithful disciple of Lenin than is Khrushchev. But Tito is also, and first of all, a Yugoslav.

This is Ed Murrow. I'll be back in a moment with the word for today. Now, here is George Bryan.

GEORGE BRYAN: COMMERCIAL

MURROW: "In Israel," Ben Gurion once told this reporter, "in order to be a realist, you have to believe in miracles." Israel's accomplishment of the impossible, in these past ten years, bears witness to this belief. A further insight may be found in something Walt Whitman wrote. "A great city," he said, "is that which has the greatest men and women."

Good night and good luck!

Edward R. Murrow Fri., April 25, 1958

This is the news:

Secretary McElroy has issued an order implementing part of President Eisenhower's plan for increasing the efficiency of the Defense Department. The order...issued today...is aimed at curbing inter-service rivalry, and does not need Congressional approval in order to go into effect. The directive went to the three service departments. It says that, in the future, recommendations for senior flag and general officers are to be submitted to ~~him~~ the Secretary of Defense, rather than to the President. It also requires that the service secretaries...in ~~submitting their~~ recommendations...state whether the officer concerned has, in their

judgment, "demonstrated the capacity for dealing objectively---without extreme service partisanship---with matters of the broadest significance to our national security."

Secretary McElroy concluded four days of testimony before the House Armed Services Committee. He again said that there is "an opportunity" for changing some of the language in the President's reorganization program. He indicated that there would be no objection to certain clarifying changes in language, so long as objectives are not changed.

The Senate...by a vote of 53 to 37...tonight rejected an amendment that would have broadened the measure for policing union and management welfare funds. The amendment was offered by Republican Senator Knowland, and it would have added to the measure a clause calling for secret balloting in union elections. Sponsors of the bill want that taken up later in separate legislation.

The Labor Department tonight reported an increase in applications for unemployment compensation during the week ending April 15.

Great Britain made it evident today, that it is going ahead with its hydrogen bomb tests this Spring. / The British Admiralty issued a warning to all shipping companies to stay out of the Christmas Island area. The area, it said, "is declared dangerous due to testing of nuclear weapons from 26 April, until further notice." / Prime Minister Macmillan said [redacted] today that his government intends to carry on such tests "unless and until other international agreements make them unnecessary."

The United States...through Secretary General Hammarskjold...today formally invited the United Nations Atomic Radiation Committee to witness the explosion of "a large nuclear weapon" at our Pacific proving grounds in July. Russia is a member of the committee. Hammarskjold said in his letter to Russia...and the other 13 members of the committee...that they would observe "the progress American scientists have made in reducing radio-active fallout." / Each of the countries was invited to send observers who are "qualified scientists".

The four pacifists...who planned to sail [redacted] in protest into the test area...said in Honolulu today, that they are postponing their voyage, because of the temporary restraining order issued yesterday by a federal

→

court. The order was issued in response to a motion, filed on behalf of the Atomic Energy Commission.

In Tokyo today, an estimated two thousand Japanese students demonstrated in front of the United States Embassy...protesting the forthcoming series of nuclear tests.

Prime Minister Kishi dissolved the Japanese parliament today to prepare for new elections next month. The principal contest will be between Kishi's pro-Western Liberal Democratic Party and the Socialists, who favor a neutralist policy. The Socialists are wooing Japanese business interests with promises of recognition of Red China and stepped up trade with the Soviet bloc.

Russia and West Germany today signed a three-year pact calling for increased trade and the setting up of consulates in their respective countries. Soviet Deputy Premier Mikoyan flew to Bonn for the ceremony, formalizing the agreement concluded early this month. No formal accord has been reached for the repatriation of German citizens held in Russia, although Moscow did agree to give the matter "sympathetic consideration." That question is likely to come up tomorrow when Mikoyan confers with Chancellor Adenauer.

Foreign Minister Popovic of Yugoslavia said today that Yugoslav relations with Russia cannot be improved if ideological differences "are hidden and we achieve rotten compromises." For most of this week, the Yugoslav Party Congress has been publicly scoring Russia's insistance on conformity in the Communist bloc...and declaring Yugoslavia's full freedom to criticize. Tonight, at a private reception, a high-ranking member of the Yugoslav politburo...Vukmanovic...identified Khrushchev by name as Yugoslavia's principal target in these attacks.

A member of President Tito's staff denies as "ridiculous" the Italian news agency report that an attempt was made yesterday to assassinate Tito. According to the Italian report, Tito was not hurt.

The Immigration Service today returned William Heikkila to San Francisco, where he was seized by immigration agents a week ago and deported to Finland. Heikkila came to this country as a child 52 years ago, and never became naturalized. Ten years ago, the government started deportation proceedings against him on grounds that he had once belonged to the Communist Party. (Heikkila says he left the party in 1939.) Court action was still pending last week when he was picked up & flown to Finland, and when agents picked him up, he was not allowed to contact either his lawyer or his wife. On Tuesday, Commissioner Swing of the Immigration Service conceded that there had been "an error of judgment"... and ordered Heikkila returned to the United States. A federal judge in San Francisco today ordered Bruce Barber, director of the San Francisco immigration office, and his assistant, Stanley Olson, to show cause why they should not be held in civil contempt. They have until May second to reply.

Herman Hickman, the former Yale football coach, died in Washington today after an operation for a stomach ulcer. Hickman retired from coaching in 1951 and became a well-known radio and television BROADCASTER. He was 46.

Edward R. Murrow: April 25, 1958. 7.45 p.m.

The Thirteenth Congress of the Young Communist League, better known as the Komsomol, convened the other day in Moscow. / The principal speaker was no young communist. / He was sixty-four years old, First Secretary of the Soviet Communist Party, and Prime Minister of the country. / Nikita Khrushchev, as usual, did not have a little to say. He spoke extensively, and enthusiastically, about the duties of the eighteen million members of the Komsomol, and what he had to say -- and did not say - points up, more clearly than mountains of statistics, one of the basic dilemmas of Soviet Society.

Khrushchev wants the young people of Russia to be "vigorous", "dynamic", "activist" and "revolutionary". He wants them, as he said, to be the "courageous, conscientious builders of the future communist society". But, he finds many of them "afflicted with a terrible bourgeois disease". Khrushchev says many Komsomols get married in religious ceremonies, read western books, dance the rock-n-roll, wear pegged pants, and shun physical labor. Khrushchev also implied that the level of ideological training in the Komsomol could use a decided boost. / Other speakers were more elaborate on this point - said that some Komsomols are more imbued with the spirit of the bourgeoisie, which they quickly point out is alien to a socialist society, than with the spirit of communism.

This dilemma stated baldly is that Soviet society is more bourgeois than it likes to think, and in this conservative environment it is extremely difficult to be a revolutionary. For, to be a revolutionary in Russia would mean to be in a state of revolt against the established order -- and this, according to the peculiar ins and outs of the dialectic, would be counter-revolutionary, and therefore illegal.

Ever since the disillusioning experience of the Hungarian revolt, Russian youth have been asking themselves questions, for which they do not know the answers. Like, how is it possible for workers to rise against a socialist state? Or, is not the Soviet state itself at fault for having made possible the rise of Stalin? And, how do we know that Khrushchev himself, having assumed Stalin's dual authority over the state, as head of the Party and the government, will not turn into another Stalin? These are the questions that Russia's youth are still asking, but the party agitators do not give the answers.

Instead, like Khrushchev, they emphasize the necessity for more physical work, as though in strenuous labor, one forgets a haunting doubt. One of the latest issues of Pravda, which just reached New York, offers Khrushchev's answer in the form of another of his startling proposals. Khrushchev says

that from now on Russian teen-agers should go to a regular school until they are in the fifth or sixth grade; then, they should be switched to factory schools, where they will learn to work with their hands.

Too much work with their heads apparently bothers the communist leadership. For, over the last few months, a clear pattern of tightening authoritarian control has been in evidence. / The bold literature of 1956 and early 1957, when books like "Not By Bread Alone" were published, has been turned into the turgid prose associated with the Stalin era - books and plays which again portray the hero in a selfless pursuit of the fat harvest and the raised industrial norm. / No longer is he plagued, like the youth of Russia itself, by big doubts about communism.

Party lecturers have been told to speak more convincingly to the youth - to use persuasion not force. Communist gatherings in universities have been increased, and the line has been set - against bourgeois ideology, drunkenness, and hooliganism, which in the communist dictionary, in a period of internal stress, generally means healthy questioning and probing. / The success of this renewed propaganda effort may be questioned, because even Komsomol Pravda has had to admit recently that illegal newspapers are still distributed in Leningrad - newspapers such as "Heresy", published by the Institute of

Librarians; or "Fresh Voices", by the Institute of Railroad Engineering; or "Culture", by the Technical Institute.

In his speech the other day to the Komsomol, Khrushchev said that too many young people in Russia think they can avoid physical work, because their parents hold a privileged position in society. Then, Khrushchev stated most categorically, that this will not continue to be. Possibly, no firmer indication that the youth of Russia by the hundreds of thousands will forget their mushrooming doubts about their society, while they work this summer bringing in the harvest on the virgin lands. The New Slogan seems to be- More Physical Work will Make Ivan a less doubting boy.

Back in a moment-

Jack Bryan-

Now a word from Food.

Word for Today

The young Communists of Russia are beginning to have doubts. Many wise words have been written on this subject of doubt...and they are all flattering to the doubters in the new Soviet generation. Shakespeare called modest doubt "the beacon of the wise." And Oliver Wendell Holmes Junior said, "To have doubted one's own first principles is the mark of a civilized man."

Goodnight and good luck!

The new slogan seems to be - more physical work will make Ivan a less doubting boy.

This is Ed Murrow. I'll be back in a moment with the word for today. Now a word from Ford.

COMMERCIAL

MURROW: The young Communists of Russia are beginning to have doubts. Many wise words have been written on this subject of doubt...and they are all flattering to

the doubters in the new Soviet generation. Shakespeare called modest doubt "the beacon of the wise." And Oliver Wendell Holmes Junior said, "To have doubted one's own first principles is the mark of a civilized man."

Goodnight and good luck!

Edward R. Murrow Mon., April 28, 1958

This is the news:

Britain today tested "a nuclear device" at the Christmas Island proving grounds in the Central Pacific./ A British announcement says the device was exploded successfully at high altitude...and that according to early indications, the fallout "will again be negligible."/ Japan has protested the holding of British and American nuclear weapons tests in the Pacific as a health hazard./ Russia has announced a suspension of its tests, after conducting a long series of test explosions./ And it has threatened to resume testing if the United States and Britain did not follow suit. President Eisenhower has said that further tests will be

→

conducted, in order to perfect clean, tactical bombs.

The American scientist, Dr. Linus Pauling, said today that radioactive Carbon-14, generated by the explosion of so-called "clean" bombs, can---in the long run---do more genetic damage to the human race than Strontium-90./ Dr. Pauling expressed this view at a news conference in Washington. He conceded that the percentage of the earth's population injured by the tests...at this time...is extremely small.

Dr. Albert Schweitzer made a new appeal today for an end to nuclear weapons tests. He called the continuation of tests "a sin against the future." This matter, he said, has nothing to do with disarmament. "The nations in question will continue to have those weapons which they have now."

President Eisenhower today asked Russia to join the West in setting up an international inspection system for the Arctic zone./ The president noted...in a new letter to Khrushchev...that the Security Council is meeting this week, at the request of the United States, to consider such a program for reducing the fear of surprise attack./ He told Khrushchev that if Russia supported the proposal, it would help to achieve "a significant

→

first step." And he again suggested that technical studies be made on the subject of disarmament inspection and control./ Khrushchev rejected the idea last week...saying that political decisions would have to come first. But Mr. Eisenhower argues, in his new note, that such studies would, in fact, help bring about political accords./ He says the United States is determined...ultimately...to get agreement on the disarmament question.

The Soviet party newspaper Pravda said today that the Western powers should adopt "a businesslike approach"...and allow Poland and Czechoslovakia to join the ambassadorial talks going on in Moscow with regard to a possible summit conference. / Foreign Ministdr Gromyko has refused, so far, to see the American, British and French ambassadors except one at a time. There is speculation that he would allow a joint meeting if the Polish and Czech ambassadors also took part. Gromyko came out on Saturday for their participation in the talks.

The House Armed Services Committee...which is studying President Eisenhower's plan for reorganizing the Defense Department...heard testimony today from General Twining, chairman of the Joint Chiefs of Staff.

→

Twining conceded that the role of the Joint Chiefs could be increased so as to constitute what might conceivably be called a general staff. But he insisted that it would not be a "Prussian-type" general staff...and that numerous checks and balances would continue to assure civilian control.

The United States Court of Appeals in St. Louis today upheld the lower court action...enforcing integration of Central High School in Little Rock. The three-judge Court of Appeals dismissed the suits filed by Governor Faubus...and others...contesting the injunction issued by District Judge Ronald Davies. This was the injunction forbidding Faubus to use National Guard troops to bar Negro students from the school. The Court of Appeals said: "A rule which would permit an official whose duty it was to enforce the law to disregard the very law which it was his duty to enforce...in order to pacify a mob or suppress an insurrection...would deprive all citizens of any security in the enjoyment of their life, liberty and property." The decision of the three-judge court was unanimous.

The United Auto Workers Union today offered to extend its labor contracts with the "Big Three" auto manufacturers until next September. U.A.W. contracts with Ford, General Motors and Chrysler are now due to expire

the end of next month. The union coupled the offer with a proposal that the companies put into effect a "significant and meaningful" price reduction on 1959 models. Union President Walter Reuther said the U.A.W. would then team up with the manufacturers in staging "a gigantic clearance sale" to reduce the inventory of unsold cars. Extension of the present contracts to September means they would run out at just about the time the 1959 model cars go into production...and place the union in a stronger bargaining position. This was pointed out by General Motors tonight, in turning down the union proposal. And similar rejections from Ford and Chrysler are expected.

President Meany of the AFL-CIO said today that the economy is in "dangerous shape." He predicted that "very close to six million persons" will be unemployed in June. And he again called for an immediate tax cut of six to eight billion dollars.

A vote in expected in the Senate later tonight...on the Democratic sponsored bill to regulate union welfare funds. / Another series of Republican amendments...aimed at broadening the legislation...were defeated during the day.

Edward R. Murrow: April 28, 1958. 7.45 p.m.

One of the worst casualties of the recession is an idea. / It is the idea that our economy must expand if we are to maintain our place and power in the world. The recession is making people forget expansion. / Most of them are absorbed simply with things getting back to what they used to be.

Economists may differ as to just how the recession came about, what should have been done to prevent it, and how bad it really is. / But one doesn't have to be an economist to know the harm it is doing us abroad. / It may be our worst defeat since the war. It has undermined faith in our ability to manage a free enterprise economy. / But we have lost more than esteem. / In the race with the Soviet Union, victory is not going to the side with the most or the biggest weapons, but to the side with the best and biggest production, and the highest rate of expansion. / We are falling behind in this race. / Allen Dulles, head of the Central Intelligence Agency, today gave the United States Chamber of Commerce some startling data on this point.

In the first quarter of 1958, Soviet industrial production, he said, rose eleven percent higher than a year ago, while ours declined eleven percent. For the first time in history, the Soviet bloc - including China and the satellites - produced more steel than the United States in the first quarter of /

this year. Russia alone produced seventy-five percent as much steel as we did. / The Soviet output of machine tools is double that of the United States. The Soviet rate of growth, measured by the gross national product, Mr. Dulles said, was increasing at a rate double of our own.

So in the race with the Soviet Union we are not holding our lead, which was considerable. Already we have lost a lap in the race. / And unless the Soviet economy runs into trouble, the lap will be hard to win back. / Indeed, even if our economy expands again at the former rate, we still could find ourselves behind in another twenty years or so. It is the rate of growth that will be decisive. / And the seriousness of the recession is not simply in the comparison with last year's output. / It is its effect on our future.

A look into this future was the feature of the Rockefeller report, drawn up under the chairmanship of Thomas B. McCabe and published last week. His panel of economists would not be content with restoring a four percent rate of growth that kept up for the ten years before the recession. / It wants it stepped up to five percent. And Vice President Nixon, addressing the newspaper publishers last week, adopted the same theme.

The American economy from 1870 to 1930 expanded at an average rate of three percent. Then in the last decade, the average rose to four percent.

To raise it just another percent may not sound impressive, but put in other terms it would be a formidable achievement. The gross national product last year was 434 billion dollars. At a three percent rate of growth for ten years it would rise to 583 billions; at four percent it would be 642 billions; at five percent it would be 707 billions. That is the figure the Rockefeller economists and Mr. Nixon want us to aim at.

In the next twenty years, we must spend twenty billion dollars on electric power, twenty-two billions on hospitals, thirty-one billions for schools, two hundred and fifty billions for residential and non-residential construction and urban renewal. At the same time we must pay the heavy bill for national security, which the Rockefeller Committee estimates at between sixty and seventy billions in 1967. That is close to the total federal budget of last year. The Rockefeller economists said we also must double what we spend for education, social security and health in the next ten years, and do about as much for urban renewal, roads, public works and water supply.

It says the government cannot possibly finance needs of this magnitude if the economy grows only three percent. It can manage it at a four percent rate of growth, if barely minimal needs are met. Only at five percent will we be safe. Living standards then would rise, and real wages could double

in about thirty years.

"With our growing population, rising productivity and the inherent dynamism of our free enterprise economy," the committee says, "there is every reason to face the future with full confidence." That too, was Mr. Nixon's message to the publishers. "We expect" he said, "to come out of the recession with a stronger and more robust economy, which will exceed the records of the past five years."

In these predictions, the accent is not on coming out of the recession, or even regaining the past rate of growth. It is on exceeding it, and expanding faster than we have ever done before. This we are told is what it will take to win back what we are losing, in the world's faith in us, and in our lead as a civilization over the Soviet Union.

Back in a moment—

George Bryan—

Word for Today

Getting things "back to where they used to be" is not good enough. Salvation lies not in standing still but in moving ahead. / Henry W. Longfellow said, "Im this world, a man must be either anvil or hammer." But John Florio counseled, more than 200 years before Longfellow, "When you are an anvil, hold you still. / When you are a hammer, strike your fill."

Goodnight and good luck!

EDWARD R. MURROW WITH THE NEWS
CBS RADIO NETWORK

MONDAY, APRIL 28, 1958
7:45 - 8:00 PM EST

This is the news:

Britain today tested "a nuclear device" at the Christmas Island proving grounds in the Central Pacific. A British announcement says the device was exploded successfully at high altitude...and that according to early indications, the fallout "will again be negligible." Japan has protested the holding of British and American nuclear weapons tests in the Pacific as a health hazard. Russia has announced a suspension of its tests, after conducting a long series of test explosions. And it has threatened to resume testing if the United States and Britain did not follow suit. President Eisenhower has said that further tests will be conducted in order to perfect clean, tactical bombs.

The American scientist, Dr. Linus Pauling said today that radioactive Carbon-14, generated by the explosion of so-called "clean" bombs, can---in the long run---do more genetic damage to the human race than Strontium-90. Dr. Pauling expressed this view at a news conference in Washington. He conceded that the percentage of the earth's population injured by the tests...at this time is extremely small.

Dr. Albert Schweitzer made a new appeal today for an end to nuclear weapons tests. He called the continuation of tests "a sin against the future." This matter, he said, has nothing to do with disarmament. "The nations in question will continue to have those weapons which they have now."

President Eisenhower today asked Russia to join the West in setting up an international inspection system for the Arctic zone. The president noted...in a new letter to Khrushchev...that the Security Council is meeting this week at the request of the United States to consider such a program for reducing the fear of surprise attack. He told Khrushchev that if Russia supported the proposal, it would help to achieve "a significant first step." And he again suggested that technical studies be made on the subject of disarmament inspection and control

Khrushchev rejected the idea last week...saying that political decisions would have to come first. But Mr. Eisenhower argues in his new note, that such studies would, in fact, help bring about political accords. He says the United States is determined...ultimately...to get agreement on the disarmament question.

The Soviet party newspaper Pravda said today that the Western power should adopt "a businesslike approach"...and allow Poland and Czechoslovakia to join the ambassadorial talks going on in Moscow with regard to a possible summit conference. Foreign Minister Gromyko has refused, so far, to see the Amrrican, British and French ambassadors except one at a time. There is speculation that he would allow a joint meeting if the Polish and Czech ambassadors also took part. Gromyko came out on Saturday for their participation in the talks.

The House Armed Services Committee...which is studying President Eisenhower's plan for reorganizing the Defense Department...heard testimony today from General Twining, chairman of the Joint Chiefs of Staff. Twining conceded that the role of the Joint Chiefs could be increased so as to constitute what might conceivably be called a general staff. But he insisted that it would not be a "Prussian-type" general staff...and that numerous checks and balances would continue to assure civilian control.

The United States Court of Appeals in St. Louis today upheld the lower court action...enforcing integration of Central High School in Little Rock. The three-judge Court of Appeals dismissed the suits filed by Governor Faubus...and others...contesting the injunction issued by District Judge Ronald Davies. This was the injunction forbidding Faubus to use National Guard troops to bar Negro students from the school. The Court of Appeals said: "A rule which would permit an official whose duty it was to enforce the law to disregard the very law which it was his duty to enforce...in order to pacify a mob or suppress an insurrection... would deprive all citizens of any security in the enjoyment of their life, liberty and property." The decision of the three-judge court was unanimous.

The United Auto Workers Union today offered to extend its labor contracts

with the "Big Three" auto manufacturers until next September. U.A.W. contracts with Ford, General Motors and Chrysler are now due to expire the end of next month. The union coupled the offer with a proposal that the companies put into effect a "significant and meaningful" price reduction on 1959 models. Union President Walter Reuther said the U.A.W. would then team up with the manufacturers in staging "a gigantic clearance sale" to reduce the inventory of unsold cars. Extension of the present contracts to September means they would run out at just about the time the 1959 model cars go into production...and place the union in a stronger bargaining position. This was pointed out by General Motors tonight, in turning down the union proposal. And similar rejections from Ford and Chrysler are expected.

President Meany of the AFL-CIO said today that the economy is in "dangerous shape." He predicted that "very close to six million persons" will be unemployed in June. And he again called for an immediate tax cut of six to eight billion dollars.

A vote is expected in the Senate later tonight...on the Democratic sponsored bill to regulate union welfare funds. Another series of Republican amendments...aimed at broadening the legislation...were defeated during theday.

One of the worst casualties of the recession is an idea. It is the idea that our economy must expand if we are to maintain our place and power in the world. The recession is making people forget expansion. Most of them are absorbed simply with things getting back to what they used to be.

Economists may differ as to just how the recession came about, what should have been done to prevent it, and how bad it really is. But one doesn't have to be an economist to know the harm it is doing us abroad. It may be our worst defeat since the war. It has undermined faith in our ability to manage a free enterprise economy. But we have lost more than esteem. In the race with the Soviet Union, victory is not going to the side with the most or the biggest weapons, but to the side with the best and biggest production, and the highest

rate of expansion. We are falling behind in this race. Allen Dulles, head of the Central Intelligence Agency, today gave the United States Chamber of Commerce some startling data on this point.

In the first quarter of 1958, Soviet industrial production, he said, rose eleven percent higher than a year ago, while ours declined eleven percent. For the first time in history, the Soviet bloc - including China and the satellites - produced more steel than the United States in the first quarter of this year. Russia alone produced seventy-five percent as much steel as we did. The Soviet output of machine tools is double that of the United States. The Soviet rate of growth, measured by the gross national product, Mr. Dulles said, was increasing at a rate double of our own.

So in the race with the Soviet Union we are not holding our lead, which was considerable. Already we have lost a lap in the race. And unless the Soviet economy runs into trouble, the lap will be hard to win back. Indeed, even if our economy expands again at the former rate, we still could find ourselves behind in another twenty years or so. It is the rate of growth that will be decisive. And the seriousness of the recession is not simply in the comparison with last year's output. It is its effect on our future.

A look into this future was the feature of the Rockefeller report, drawn up under the chairmanship of Thomas B. McCabe and published last week. His panel of economists would not be content with restoring a four percent rate of growth that kept up for the ten years before the recession. It wants it stepped up to five percent. And Vice President Nixon, addressing the newspaper publishers last week, adopted the same theme.

The American economy from 1870 to 1930 expanded at an average rate of three percent. Then, in the last decade, the average rose to four percent. To raise it just another percent may not sound impressive, but put in other terms it would be a formidable achievement. The gross national product last year was 434 billion dollars. At a three percent rate of growth for ten years, it would

rise to 583 billions; at four percent it would be 642 billions; at five percent, it would be 707 billions. That is the figure the Rockefeller economists and Mr. Nixon want us to aim at.

In the next twenty years, we must spend twenty billion dollars on electric power, twenty-two billions on hospitals, thirty-one billions for schools, two-hundred and fifty billiions for residential and non-residential construction and urban renewal. At the same time we must pay the heavy bill for national security, which the Rockefeller Committee estimates at between sixty and seventy billions in 1967. That is close to the total federal budget of last year. The Rockefeller economists said we also must double what we spend for education, social security and health in the next ten years, and do about as much for urban renewal, roads, public works and water supply.

It says the government cannot possibly finance needs of this magnitude if the economy grows only three percent. It can manage it at a four percent rate of growth, if barely minimal needs are met. Only at five percent will we be safe. Living standards then would rise, and real wages could double in about thirty years.

"With our growing population, rising productivity and the inherent dynamism of our free enterprise economy," the committee says, "there is every reason to face the future with full confidence." That too, was Mr. Nixon's message to the publishers. "We expect" he said, "to come out of the recession with a stronger and more robust economy, which will exceed the records of the past five years."

In these predictions, the accent is not on coming out of the recession, or even regaining the past rate of growth. It is on exceeding it, and expanding faster than we have ever done before. This we are told is what it will take to win back what we are losing in the world's faith in us, and in our lead as a civilization over the Soviet Union.

This is Ed Murrow. I'll be back in a moment with the word for today. Now, here is George Bryan.

GEORGE BRYAN: COMMERCIAL

MURROW: Getting things "back to where they used to be" is not good enough. Salvation lies not in standing still but in moving ahead. Henry W. Longfellow said, "In this world, a man must be either anvil or hammer." But John Florio counseled, more than 200 years before Longfellow, "When you are an anvil, hold you still. When you are a hammer, strike your fill."

Goodnight and good luck!

Edward R. Murrow Tues., April 29, 1958

This is the news:

The United Nations Security Council met today to consider the American proposal for an international inspection system in the Arctic. Before the Council could hear Ambassador Lodge speak on the American resolution, Soviet Delegate Sobolev presented a resolution of his own...renewing Russia's demand that the United States be ordered "to refrain from sending its hydrogen bombers toward the frontiers of other states." Sobolev said the question of an inspection system in the Arctic...for the prevention of surprise attack...should properly be taken up at a meeting at the summit, not in the Security Council. Lodge then said what he said last week---that the activities of United States military aircraft represent "purely defensive

→

measures, altogether reasonable and necessary in view of the conditions with which we must cope." The United States, he said, believes that the action it proposes "can swiftly and significantly lessen dangers to world peace." Other members of the Security Council---including Britain, Canada, and France----spoke for the American proposal. / The discussion went on all day. And then, late in the afternoon, Secretary General Hammarskjold abandoned his neutral role and appealed to Russia to accept the United States plan. / Hammarskjold recalled that he recently had occasion to welcome Russia's decision to suspend nuclear tests. / "In the same spirit, and on the same basis," he said, "I wish today to welcome the initiative of the United States." / He said the United States proposal...if treated in good faith, "could provide the first frail basis for the development of some kind of trust." The council adjourned immediately after Hammarskjold spoke, to reconvene at 10 A.M., Friday.

In Moscow today, Foreign Minister Gromyko described the American inspection plan as "a publicity stunt", not worth talking about. / He said the plan calls for the aerial inspection of a large part of the Soviet Union "but not a single square foot of the United States proper." / He said that

→

if an American aircraft violates the Soviet frontier, rockets will be directed at it. "And rockets," he warned, "cannot be turned back."

The United States, Britain and France have drafted a new note to Moscow, rejecting Gromyko's demand that Poland and Czechoslovakia be represented at the current ambassadorial talks...dealing with plans for a possible summit conference. The Western powers, however, say they will go along with Gromyko in his insistence on conferring with the French, British and American ambassadors separately.

The United Arab Republic and representatives of the Suez Canal Company today initialed a compensation agreement in Rome. Under the agreement, about 81-million dollars will go to stockholders of the company...in seven installments, over a period of six years. The money is in compensation for Egypt's seizure of the canal in 1956.

President Nasser of Egypt arrived in Moscow today, for an 18-day state visit...and was warmly received by Soviet President Voroshilov and a large crowd that cheered him and loaded him down with flowers. (I should like to discuss this development further in a few minutes).

In Washington, the government ~~The government~~ reports a drop in unemployment for the first time since the recession began last year. According to the Commerce Department, 78-thousand fewer persons were unemployed in the second week in April than in the corresponding week in March. The drop is attributed largely to the usual Spring pick-up in outdoor work. But the decline still was not as great as it normally is this time of year...and adjusting for seasonal factors the rate of unemployment actually increased.

Senate Democratic Leader Johnson said today that Congress must decide soon whether it wants to cut taxes. He said, "I think we're got to realize that if we don't provide a cure for the recession by public works, there is no other alternative but considered tax revision."

~~The Democratic~~ Advisory Council tonight called for a ~~"substantial"~~ cut in personal income taxes, lower ~~interest~~ rates, and a stepped up public works program that would include a billion dollars a year for education.

The House Rules Committee voted today to send the Democratic bill for extending unemployment compensation benefits to the House floor. The committee stipulated...at the same time...that President Eisenhower's rival

→

extension program may be offered as a substitute to the Democratic measure in the course of floor debate. The President has described the more liberal Democratic plan as a "dole." House Republican Leader Martin assured Mr. Eisenhower today that the House will approve his program in substantially its present form.

The Senate today approved an "incentive pay" program designed to keep highly trained personnel from leaving the armed forces for better paying jobs in private industry. Most officers and enlisted men would get pay raises costing about 570-million dollars the first year the program would be in operation. The measure now goes back to the House, which passed a bill that would cost about 100-million dollars more the first year.

The House Armed Services Committee today continued its hearings on President Eisenhower's plan for reorganizing the Defense Department. General Twining, chairman of the Joint Chiefs of Staff, repeated an earlier statement that the armed forces...as now constituted...could strike back at an enemy within 30 minutes after being attacked. Representative Hebert of Louisiana commented that if this was true, "there would appear to be no need for this legislation to trigger immediate action."

General Motors served notice today that it is terminating its three-year contract with the United Auto Workers Union as of midnight, May 29th. / The union's contracts with Ford and Chrysler...as well as General Motors...are due to expire on that date, but it is usually the union that [redacted] gives G.M. notice of the termination date. / All three companies have turned down a union offer to continue the contracts until September, because they will be more vulnerable in September when going into production on the 1959 model cars. [redacted] Leonard Woodcock, vice president of the U.A.W., says, "G.M. has the legal right to end the agreement, but it has no such right to force the union to strike."

Edward R. Murrow: April 29, 1958. 7.45 p.m.

True coincidences in foreign affairs seldom if ever happen. / It may look like a coincidence that President Nasser agreed to pay former owners of the Suez Canal about ~~forty-five~~ 81 million dollars, at the precise moment that he was taking off for an eighteen-day stay in Moscow. / But it was not a coincidence, it was a case of careful timing. / Nasser himself chose the exact day, but Western diplomats also wanted a settlement before he went to Moscow. They wanted to get on better terms with him, before he worked the other side of the street. And Nasser himself wanted his Soviet hosts to know he was doing nicely with the West.

The settlement with the former canal owners was engineered by Eugene Black of the International Bank. President Nasser had promised compensation when he seized the canal, so that was no hurdle. / But he also laid claim to all other assets of the company. Probably it was just a bargaining point. Anyhow, he dropped that claim.

The State Department now will release Egypt's blocked assets in this country, valued at thirty-three million dollars. / That is one part of the bargain. We also are prepared to turn over two-hundred-thousand dollars' worth of trucks and road-building equipment, and spare parts for jeeps and tmucks. We will permit CARE food packages to go to the United Arab Republic.

Fulbright scholarships will be available to students from that country. We will supply dredges to widen and deepen the canal.

We are willing to go beyond this but on further conditions. We will supply surplus WHEAT on easy terms, and give technical assistance along with it. Ultimately we will help finance specific industrial projects, though nothing as stupendous as the Aswan Dam. The conditions we have laid down have to do mainly with propaganda. We insist that propaganda hostile to us and our Western friends from Cairo and Damascus be stopped. [We also recommend that propaganda against the Arab Federation -- that is, Iraq and Jordan -- and against Saudi Arabia and Lebanon, be stopped. Nasser may resent the demand to drop propaganda against other Arab countries as being none of our business. If he does, the later benefits may not be forthcoming. But the propaganda against this country already has quieted down, as Secretary Dulles told a recent news conference.]

In Moscow, Nasser expects to be offered hard currency for some of the cotton the Soviet bloc has been getting in exchange for arms and roubles. He needs it to pay for other imports on the world market. He also would like Soviet jet planes for the Cairo-Damascus air route, now exclusively flown by American and British aircraft. He wants consumer goods, and also would like

to buy a textile mill.

Nasser has assured Western diplomats that he is fully aware of the dangers in being too intimate with the Soviet Union. He says he proved it by stamping out communist activity in Syria in forming the United Arab Federation. He is confident he has maneuvered himself into the position where he can take help from both sides without committing himself to either. Certainly Washington appears to be willing to pay a price simply to keep him from going over to the Soviet camp. And the Kremlin, which is busily courting the Arab world, is willing to pay Nasser even if he stays neutral.

If this were all there was to it, few would be apprehensive about the Nasser visit. But there is another possibility, which concerns Israel. Nasser is expected to solicit Soviet support for a drive in the United Nations for a harsh settlement with Israel. Soviet support is believed to be available on terms that send shivers through circles friendly to Israel. The Kremlin has secretly hinted it is ready to back a campaign in the United Nations to force Israel back to the borders of the 1947 resolution.

Such a campaign could well end in military resistance by Israel, and a local war would be hard to keep local. That may be why the Soviet Union has never made such an offer formally or openly. So long as the Western countries

stand solidly against dismemberment of Israel, the Kremlin may well hesitate to make it. But Nasser's belief in neutralism, ardent though it may be, is not so ardent as his hostility to Israel. And he can get more help from Moscow to make trouble with Israel than from anybody else.

Today the Russians gave Nasser the full-scale red carpet treatment. It was considerably more delirious than the welcome he would have received in any Western capital. Colonel Nasser is a calm, cool, cynical gambling man -- ambitious and confident. The warmth of his welcome in Moscow may well cause him to believe that there is no danger in the Russian embrace. And he is always conscious that the Russians alone can and may make possible the destruction of Israel, and he remains determined to try that again sometime.

Back in a moment.-

George Burns

Word for Today

Abraham Lincoln once told this story. "Two roughs," he said, "were playing cards for high stakes...when one of them, suspecting his adversary of foul play, straightway drew his bowie knife from his belt and pinned the hand of the other player upon the table...exclaiming, "If you haven't got the ace of spades under your palm, I'll apologize."

Goodnight and good luck!

EDWARD R. MURROW WITH THE NEWS
CBS RADIO NETWORK

TUESDAY, APRIL 29, 1958
7:45 - 8:00 PM EST

This is the news:

The United Nations Security Council met today to consider the American proposal for an international inspection system in the Arctic. Before the Council could hear Ambassador Lodge speak on the American resolution, Soviet Delegate Sobolev presented a resolution of his own...renewing Russia's demand that the United States be ordered "to refrain from sending its hydrogen bombers toward the frontiers of other states." foul play, straightway drew his bowie knife from his belt and pinned the hand of the other player upon the table..exclaiming, "If you haven't got the ace of spades under your palm, I'll apologize."

Goodnight and good luck!

Edward R. Murrow Wed., April 30, 1958

This is the news:

President Eisenhower today held his sixth news conference in as many weeks. / His record is eight consecutive news conferences in the summer of 1954. / Because of his obvious displeasure over some questions put to him last week, a reporter asked the President how he feels about news conferences. / Mr. Eisenhower said that sometimes the questions seem more personal than necessary...but that he regards the news conference as "a fine latter-day American institution." / When the President was asked today about his frequent out-of-town trips, he said he doesn't think any executive can do his best "by just sitting at a desk and putting his

face in a bunch of papers." In answer to other questions, Mr. Eisenhower said he has no intention of resigning in favor of Vice President Nixon. Mr. Nixon is kept informed on all major decisions, but he is not "grooming" anyone as his successor. "There are," he said, "a lot of darn good men in the Republican party."

The President said the American proposal for an Arctic "inspection zone" was made in all sincerity...and that Russia's dismissal of it as "a publicity stunt" is almost silly. The reaction of Soviet Foreign Minister Gromyko causes him more sadness than irritation, and he hopes that the Russians will reconsider their position. Mr. Eisenhower made it clear that he will surrender none of the basic principles in his program for reorganizing the Defense Department. Any retreat from the essentials, he said, would be "inexcusable." Admiral Burke, chief of naval operations, told Congress today that in general he endorses the President's program. But there are places, Burke said, where the language is too broad. When asked by a member of the House Armed Services Committee whether he was concerned lest some future Secretary of Defense might try to eliminate the Navy air arm, or the Marine Corps, Admiral Burke said, "Of course." President Eisenhower told

→

reporters today that the policy of his administration is to have cleaner nuclear weapons. / A member of the joint congressional committee on atomic energy---Democratic Senator Anderson of New Mexico---has said that some military men want "dirtier" bombs. / Mr. Eisenhower said no military officer that he knew of had ever made such a suggestion.

On the subject of the national economy, the President said last night's report of a slight decline in unemployment in April, is further "emphatic evidence" that the recession is "flattening out". / But that, he added, is not to say that we are on the "highroad to an advance." / He believes the question of a tax cut still requires further study.

Secretary of Commerce Weeks told the United States Chamber of Commerce today that "long range, the future looks good." / He said, "I believe we will see a pickup by late summer or early fall."

Walter Reuther, president of the United Auto Workers, testified before the House Banking Committee...and said, "The figures supply no basis for optimism whatsoever." / He proposed an immediate three-month moratorium on withholding taxes, as a means of creating new purchasing power. / As for [redacted] union negotiations with the "Big Three" automanufacturers, Reuther said,

→

"We're not going to strike, or do anything rash", when the industry has a backlog of 850-thousand unsold cars.

The Agriculture Department reports that the prices farmers receive for their products rose one and one-tenths percent in the month ending April 15th. Prices farmers have to pay went up nearly one percent in the same period.

A House subcommitee today revived President Eisenhower's school construction bill in a surprise move to push it through Congress. The measure is identical with that supported by Mr. Eisenhower last year. It would give states 500-million dollars a year, for three years, to help overcome the shortage of classrooms.

The United States today announced that it is releasing about 26-million dollars in Egyptian assets frozen in this country at the time that Egypt seized the Suez Canal. The action follows Egypt's agreement yesterday to compensate stockholders of the old Suez Canal Company. It also comes at a time when President Nasser is conferring with Soviet leaders in Moscow.

The establishment of an Algerian government-in-exile was recommended today by the political leaders of Morocco and Tunisia and representatives of the Algerian Nationalist Liberation Front. The recommendation came in a communique issued after a three-day meeting in Tangier. The setting up of a North African consultative assembly also was called for. And hope was expressed that "certain Western powers" would stop helping France in its prosecution of the Algerian war. The conference in Tangier was not on a governmental level. But since it was attended by leaders of the ruling parties of Morocco and Tunisia, approval by their governments is expected.

A state of public emergency was declared today on the British island of Malta. The action follows a 24-hour general strike called on Monday as a protest against British policy. During the strike, demonstrators

attacked two police stations and set up street barricades. The trial of 15 persons arrested in connection with the violence is scheduled for Friday.

Indonesia charged today that American "adventurers" are flying bombing missions for the Indonesian rebel forces. (JOO-AN'-DA) Premier Djuanda said this is causing indignation among the Indonesian people which...if permitted to develop...will have "a disastrous effect on relations between Indonesia and the United States." Rebel aircraft in the past week have bombed government bases in the Central Celebes and East Borneo. Four ships of foreign registry also were attacked.

Vice President Nixon arrived in Argentina today to attend the inauguration of Arturo Frondizi as president. (FRON-DE'-SE) Mr. and Mrs. Nixon are visiting Latin America on an 18-day goodwill tour. Frondizi will be inaugurated tomorrow as a result of the first free elections in Argentina since the overthrow of Peron in 1955.

Edward R. Murrow: April 30, 1958. 7.45 p.m.

A test of Congressional hostility to some recent rulings by the Supreme Court was assured today. The Senate Judiciary Committee approved a bill to curb the power of the court. / Though the Eisenhower Administration is officially against the legislation, two leading Administration Senators -- Watkins and Dirksen -- voted for it, as did Republicans Butler, Jenner and Hruska. Four Southern Democrats, Eastland, Johnston of South Carolina, McClellan and Erwin, voted for it, as did Senator O'Mahoney of Wyoming. Two Republicans voted against it, Wiley and Langer, as did three Democrats, Kefauver, Carroll and Hennings.

This bill has no provisions that arise from the Supreme Court's famous decision on school integration. / But it <u>is</u> the climax of the opposition to the court that sprung up when that ruling was made. / It continued to rise with each new case in which the Court threw out convictions in subversion cases.

The opposition crystallized in a bill introduced by Senator Jenner of Indiana, which was to be his swansong before retiring at the end of the session. / He demanded outright limitation of the high court's appellate jurisdiction in five types of cases, mainly having to do with security. / Had this measure been adopted, it would have been the most serious setback the

Supreme Court has received in its history.

The bill voted on today is greatly watered down from the Jenner version. But it does limit the jurisdiction of the court in one particular. It takes away its right to rule on cases involving the admission of lawyers to state practise. Senator Jenner today expressed jubilation that a section was retained that limited the court's power. "That" he told reporters, "was the big fight." Senator Hennings today called the bill "one of the most irresponsible pieces of legislation reported by a committee of the Senate since I have been a member. It is a bill" he said, "designed to punish the Supreme Court." And he called the particular section which gave Jenner so much joy: "The first step toward destroying the governmental concept of the separation of powers." He predicted the bill's rejection by the Senate.

A word more about this particular section. One reason it was proposed was because the Supreme Court had thrown out state disbarment cases based on the lawyers having had past communist affiliations. The possibility also arises that a state might disbar a lawyer who represents a negro in an integration case. If the section were to become law, the Supreme Court could not rule such an action unconstitutional.

Senator Dirksen, in voting to retain this section in the bill, served

notice that he and several others reserved the right to vote against the provision on the floor of the Senate. However, when he could have voted to strike it out, on a motion by Senator Watkins, he voted the other way.

The rest of the bill does not seek to limit the jurisdiction of the court, but expresses disagreement with the court's rulings by revising the legislation on which the court had based its findings. These were subversion cases, and the revisions were not part of the original Jenner bill. They were sponsored by Senator Butler. One proposal is to amend existing laws so as to make congressional committees the sole judges of whether questions put to a witness during hearings are pertinent to legislative matters. The Supreme Court had ruled that this might be a matter for court interpretation.

Another proposal would give states the sole power to enforce their own anti-subversive laws. The court had ruled that the Smith Act gave the federal government sole jurisdiction. Another proposal would amend the Smith Act to make it a crime simply to advocate or teach the overthrow of the government. The Court had found that it was not a crime unless advocacy had been in language that incited to action. This was an invocation of the principle that there must be a "clear and present danger" before the right of free speech is curbed. The probability that such a law would be found

unconstitutional may make senators cautious about enacting it.

The bill, though voted on today, will not be sent to the Senate for two weeks. This is to give Senator Hennings time to draft a minority report. It seems likely that the friends of the bill hope to get it through on the plea that most of the Jenner proposals already have been dropped, and if necessary, to drop the one that still remains. The rest of the bill, however, registers disapproval of the court's rulings in security matters, and that is why its proposers hope it will be passed. [The Warren court has been liberal; this is an anti-liberal bill.]

Back in a moment. -

Now a word from Ford

Word for Today

The bill approved by the Senate Judiciary Committee, curbing the power of the Supreme Court, faces strong opposition on the Senate floor. Opponents of the measure could quote Theodore Roosevelt, who said, "You must have the right kind of law." And in the 18th Century, Nicolas Chamfort (CHAN'FOR) acknowledged, "Tis easier to make certain things legal than to make them legitimate."

Goodnight and good luck!

of the measure could quote Theodore Roosevelt, who said, "You must have the right kind of law." And in the 18th Century, Nicolas Chamfort acknowledged, "Tis easier to make certain things legal than to make them legitimate."

Goodnight and good luck!

Edward R. Murrow Thurs., May 1, 1958

This is the news:

The House today passed...and sent to the Senate...President Eisenhower's program for extending unemployment benefits. The final roll-call vote for the Administration bill was 370 to 17. The much broader measure, advocated by Democratic leaders, had been junked earlier in the afternoon, by a vote of 223 to 165...with a coalition of Republicans and Southern Democrats, providing the Administration with its margin of victory. Mr. Eisenhower wanted the time in which insured workers may collect benefits extended by 50 percent. In most states, this amounts to an additional 13 weeks. Mr. Eisenhower also wanted the Federal Government to be

reimbursed for the cost of this operation---either directly by the states or through higher payroll taxes. The House-approved measure gives the President all of this. The only difference between what he got and what he asked for is that a state does not have to take part in the extension program. The Democratic bill...that went down in defeat...would have extended benefits by a flat 16 weeks. It would have applied to jobless workers not covered by the present unemployment compensation program, and it would have had the Federal Government footing the whole cost. President Eisenhower had denounced the Democratic measure as "a dole", which, he said, could "wreck" existing federal-state relationships. The battle is expected to be renewed when the issue is taken up again in the Senate.

Secretary of Labor Mitchell told a news conference today that the decision whether to cut taxes should be made "within the next 30 to 60 days." Mitchell predicts that the unemployment figures for May will be about the same as the figures for April, and he agrees with President Eisenhower that the recession trend is "flattening out".

The Federal Reserve Board reported today that department store sales in March recovered "substantially" from the low February level. The business done by wholesalers also was up in March.

The commandant of the Marine Corps, General Pate, voiced strong criticism today of President Eisenhower's plan for reorganizing the Defense Department. General Pate told the House Armed Services Committee he does not believe that "those now in high office" have any desire to reduce the Marine Corps to impotence. But the language of the bill is such, he said, that some day the Corps "could get the bum's rush" and be reduced to a mere ceremonial unit.

Secretary of Defense McElroy sent the committee a letter today saying that a merger of the armed forces would be expressly ruled out, under the proposed legislation. "The Army, Navy, Air Force and Marine Corps," he assured the committee, "would retain their respective individualities."

The Atomic Energy Commission said today that...in the course of the forthcoming nuclear tests in the Pacific...some American communities may be exposed to a level of radio-activity "many times the normal background." The A.E.C. said, however, that this exposure will be

temporary and well within safety limits.

American scientists participating in the International Geophysical Year today issued preliminary reports based on their satellite research. Data...radioed back to earth from the two "Explorer" satellites...shows that they were subjected to a bombardment of rays "hundreds of times" more intense than scientists had expected. It is speculated that an "unprotected" man traveling in space would receive as much radiation in two hours as he can safety tolerate over the span of a week. It is also calculated that to guard each space passenger adequately in any long flight would require about 100 pounds of lead. The scientists report...on the plus side...that the danger from meteoric particles is "extremely small".

Secretary of State Dulles said today that the United States might "minimize" its flights of hydrogen bombers over the polar region, if Russia would agree to an Arctic inspection system. Mr. Dulles said this in a prepared statement, which he read at his weekly news conference in Washington. The Soviet Union, he said, claims to be worried by these flights. But the United States needs to keep its aircraft aloft "because we are fearful that the Soviets may launch a nuclear attack against us over the top of the world." Mr. Dulles went on to say that if both sides →

"are animated by really peaceful intentions, there is a natural solution. And that," he said, "would be to have international inspection that would allay the fear. / Perhaps we would then feel it safe "greatly to minimize" the flights of which the Soviet Union complains." / Mr. Dulles told reporters that the United States did not present its inspection plan without first making quiet diplomatic approaches to the Soviet government. He was bringing this out, he said, to disprove the Russian contention that the proposal was "a publicity stunt".

At the United Nations today, Secretary General Hammarskjold said he would "under no circumstances" withdraw his support of the United States program for aerial inspection of the Arctic zone. / It is reported unofficially at the United Nations that Poland and Czechoslovakia have asked Russia to yield to the pressure of opinion and support the American plan, possibly with some amendments.

In Moscow today, Russia soft-pedaled the military phase of its annual May Day parade. There were no big rockets, no heavy tanks, and apparently no atomic weapons, and it took the military part of the parade only 15 minutes to pass before the Soviet leaders...standing atop

7

the granite mausoleum in Red Square.

Arturo Frondizi was inaugurated president of Argentina today, as the result of ~~this~~ Argentina's first free elections in more than a decade. Vice President Nixon represented the United States, ~~at the inaugural ceremonies,~~ [redacted] Frondizi warned, in his inaugural address, that the country's economy must be overhauled.

Edward R. Murrow: May 1, 1958. 7.45 p.m.

In India's long struggle for independence, one of the national heroes is the Moslem leader, Sheikh Abdulla, known as the "Lion of Kashmir." He was a friend and disciple of Gandhi and an intimate friend of Nehru. Like them, he spent many years in prison fighting for freedom. When independence was won from the British, he went on fighting the despotic Maharaja of Kashmir. Again he was sent to prison, and from there sent a ringing promise to his followers that he would live to overthrow the Maharaja and divide up Kashmir's big estates. The Maharaja found himself facing a revolt he could not put down, and released Sheikh Abdulla, who then went on to keep both his promises. He forced the Maharaja to abdicate, and he put through his land program, one of the first carried through under democratic control after the war. His name became legend far beyond the confines of India.

But the story of Sheikh Abdulla did not have a happy ending, and his prison days did not end when he became Prime Minister of Kashmir. In 1953 he was unexpectedly arrested, this time by his associates in a democratic India, and the only apparent reason was that he advocated the establishment of an independent Vale of Kashmir, guaranteed by both India and Pakistan. His arrest and detention came shortly after he received a personal visit from Adlai Stevenson. No doubt he told Stevenson his views on Kashmir. But

Indian circles hinted ridiculously that he and Mr. Stevenson had been conspiring to take Kashmir out of the Indian federation.

In the years since 1953, India has swept aside demands for a plebiscite in Kashmir, and incorporated most of the territory in the federation. / And Nehru, who must have assented to the arrest of Sheikh Abdulla, may have been plagued by the spectacle of his old friend in detention. Anyhow, he was released early this year.

But now he is imprisoned again, and for the same reason. / He was too vigorously advocating independence for Kashmir. / How much Nehru had to do with his re-arrest is not disclosed. But the New York Times today published the text of a letter Sheikh Abdulla wrote Nehru on April 10, warning him that Kashmiri Prime Minister Bakshi intended to re-arrest him. / "I am silently watching all this" he said, "to know for myself how Indian democracy functions in that part of the state which is predominantly Moslem." Now he knows. He himself had led the Kashmir Moslems to trust the Indian promise of a plebiscite. No one has ever accused him of playing with communists or Pakistanis. / He wrote to Nehru: "I believe that the only fair and just way of ending this ten-year dispute is by conceding the right of self-determination which you yourself once so ardently supported."

It is not necessary, for an understanding of this case, to dive into the intricacies of the Kashmir dispute. Anyone who does so is likely to come up feeling that this is not a question with two sides but with something like twenty-two. But independence for the Vale of Kashmir, and division of the rest of the disputed territory, which is what Sheikh Abdulla wants, certainly is one of them. It is odd that an Indian Moslem should be imprisoned for advocating it, and ironic that he should be deprived of his freedom by the very Indians who won admiration and sympathy in the world in attaining their own.

Sheikh Abdulla is a man of unusual magnetism and presence. He has the physique of an all-American football end. He is approachable and unaffected. He was reputed to be incorruptible in office. As Prime Minister, after dividing up the land, he threw his energies into providing good schools. He traveled tirelessly from one end of his country to the other. It was a time when his assassination would have had decisive results, but he never took along a bodyguard. Everywhere he stopped, he was besieged by local residents bringing him their complaints and troubles. He listened, took notes, earnestly gave counsel. He was what a democratic leader, in a backward if lovely country, should have been.

The moral of this story, if it has a moral, may be that the fight for freedom is never really finally won. The British are out of India, but Indians seem capable of oppressing each other. Such things happen not only in India. Sheikh Abdulla, in his letter to Nehru, told him: "I feel that the day will come when the conscience of the world will force India to yield to our demand." That was the Lion of Kashmir speaking. He is again caged.

Back in a moment.

George Bryan

Word for Today

It is ironic that the Lion of Kashmir who fought so long for freedom has been jailed again by a freedom-loving state. The Lion exemplifies the spirit of Thoreau, who said, "I was not born to be forced." And Norwin Corwin once wrote, "Freedom isn't something to be won and then forgotten. It must be renewed like soil after yielding good crops."

Goodnight and good luck!

EDWARD R. MURROW WITH THE NEWS
CBS RADIO NETWORK

THURSDAY, MAY 1, 1958
7:45 - 8:00 PM EST

This is the news:

The House today passed...and sent to the Senate...President Eisenhower's program for extending unemployment benefits. The final roll-call rote for the Administration bill was 370 to 17. The much broader measure advocated by Democratic leaders had been junked earlier in the afternoon by a vote of 223 to 165...with a coalition of Republicans and Southern Democrats providing the Administration with its margin of victory. Mr. Eisenhower wanted the time in which insured workers may collect benefits extended by 50 percent. In most states, this amounts to an additional 13 weeks. Mr. Eisenhower also wanted the Federal Government to be reimbursed for the cost of this operation---either directly by the states or through higher payroll taxes. The House-approved measure gives the President all of this. The only difference between what he got and what he asked for is that a state does not have to take part in the extension program. The Democratic bill...that went down in defeat...would have extended benefits by a flat 16 weeks. It would have applied to jobless workers not covered by the present unemployment compensation program, and it would have had the Federal Government footing the whole cost. President Eisenhower denounced the Democratic measure as "a dole," which, he said, could "wreck" existing federal-state relationships. The battle is expected to be renewed when the issue is taken up again in the Senate.

Secretary of Labor Mitchell told a news conference today that the decision whether to cut taxes should be made "within the next 30 to 60 days." Mitchell predicts that the unemployment figures for May will be about the same as the figures for April, and he agrees with President Eisenhower that the recession trend is "flattening out."

The Federal Reserve Board reported today that department store sales in March recovered "substantially" from the low February level. The business done by

wholesalers also was up in March.

The commandant of the Marine Corps, General Pate, voiced strong criticism today of President Eisenhower's plan for reorganizing the Defense Department. General Pate told the House Armed Services Committee he does not believe that "those now in high office" have any desire to reduce the Marine Corps to impotence. But the language of the bill is such, he said, that some day the Corps "could get the bum's rush" and be reduced to a more ceremonial unit.

Secretary of Defense McElroy sent the committee a letter today saying that a merger of the armed forces would be expressly ruled out, under the proposed legislation. "The Army, Navy, Air Focce and Marine Corps," he assured the committee, "would retain their respective individualities."

The Atomic Energy Commission said today that...in the course of the forthcoming nuclear tests in the Pacific...some American communities may be exposed to a level of radio-activity "many times the normal background." The A.E.C. said however, that this exposure will be temporary and well within safety limits.

American scientists participating in the International Geophysical Year today issued preliminary reports based on their satellite research. Data... radioed back to earth from the two "Explorer" satellites...shows that they were subjected to a bombardment of rays "hundreds of times" more intense than scientists had expected. It is speculated that an "unprotected" man traveling in space would receive as much radiation in two hours as he can safely tolerate over the span of a week. It is also calculated that to guard each space passenger adequately in any long flight would require about 100 pounds of lead. The scientists report...on the plus side...that the danger from meteoric particles is "extremely small."

Secretary of State Dulles said today that the United States might "minimize" its flights of hydrogen bombers over the polar region, if Russia would agree to an Arctic inspection system. Mr. Dulles said this in a prepared statement, which he read at his weekly news conference in Washington. The Soviet Union, he said

claims to be worried by these flights. But the United States needs to keep its aircraft aloft "because we are fearful that the Soviets may launch a nuclear attack against us over the top of the world." Mr. Dulles went on to say that if both sides "are animated by really peaceful intentions, there is a natural solution. And that," he said, "would be to have international inspection that would allay the fear. Perhaps we would then feel it safe "greatly to minimize" the flights of which the Soviet Union complains". Mr. Dulles told reporters that the United States did not present its inspection plan without first making quiet diplomatic approaches to the Soviet government. He was bringing this out, he said, to disprove the Russian contention that the proposal was "a publicity stunt."

At the United Nations today, Secretary General Hammarskjold said he would "under no circumstances" withdraw his support of the United States program for aerial inspection of the Arctic zone. It is reported unofficially at the United Nations that Poland and Czechoslovakia have asked Russia to yield to the pressure of opinion and support the American plan, possibly with some amendments.

In Moscow today, Russia soft-pedaled the military phase of its annual May Day parade. There were no big rockets, no heavy tanks, and apparently no atomic weapons, and it took the military part of the parade only 15 minutes to pass before the Soviet leaders...standing atop the granite mausoleum in Red Square.

Arturo Frondizi was inaugurated president of Argentina today, as the result of Argentina's first free elections in more than a decade. Vice President Nixon represented the United States. Frondizi warned in his inaugural address that the country's economy must be overhauled.

In India's long struggle for independence, one of the national heroes is the Moslem leader, Sheikh Abdulla, known as the "Lion of Kashmir." He was a friend and disciple of Gandhi and an intimate friend of Nehru. Like them he spent many years in prison fighting for freedom. When independence was won from the British, he went on fighting the despotic Maharaja of Kashmir. Again he was sent to

prison, and from there sent a ringing promise to his followers that he would live to overthrow the Maharaja and divide up Kashmir's big estates. The Maharaja found himself facing a revolt he could not put down, and released Sheikh Abdulla, who then went on to keep both his promises. He forced the Maharaja to abdicate, and he put though his land program, one of the first carried through under democratic control after the war. His name became legend far beyond the confines of India.

But the story of Sheikh Abdulla did not have a happy ending, and his prison days did not end when he became Prime Minister of Kashmir. In 1953, he was unexpectedly arrested, this time by his associates in a democratic India, and the only apparent reason was that he advocated the establishment of an independent Vale of Kashmir, guaranteed by both India and Pakistan. His arrest and detention came shortly after he received a personal visit from Adlai Stevenson. No doubt he told Stevenson his views on Kashmir. But Indian circles hinted ridiculously that he and Mr. Stevenson has been conspiring to take Kashmir out of the Indian federation.

In the years since 1953, India has swept aside demands for a plebiscite in Kashmir, and incorporated most of the territory in the federation. And Nehru, who must have assented to the arrest of Sheikh Abdulla, may have been plagued by the spectacle of his old friend in detention. Anyhow, he was released early this year.

But now he is imprisoned again, and for the same reason. He was too vigorously advocating independence for Kashmir. How much Nehru had to do with his re-arrest is not disclosed. But the New York Times today published the text of a letter Sheikh Abdulla wrote Nehru on April 10, warning him that Kashmiri Prime Minister Bakshi intended to re-arrest him. "I am silently watching all this" he said, "to know for myself how Indian democracy functions in that part of the state which is predominantly Moslem." Now he knows. He himself had led the Kashmir Moslems to trust the Indian promise of a plebiscite. No one has ever accused him of playing with communists or Pakistanis. He wrote to Nehru: "I

believe that the only fair and just way of ending this ten-year dispute is by conceding the right of self-determination which you yourself once so ardently supported."

It is not necessary, for an understanding of this case, to dive into the intracacies of the Kashmir dispute. Anyone who does so is likely to come up feeling that this is not a question with two sides but with something like twenty-two. But independence for the Vale of Kashmir, and division of the rest fo the disputed territory, wiich is what Sheikh Abdulla wants, certainly is one of them. It is odd that an Indian Moslem should be imprisoned for advocating it, and ironic that he should be deprived of his freedom by the very Indians who won admiration and sympathy in the world in attaining their own.

Sheikh Abdulla is a man of unusual magnetism and presence. He has the physique of an all-American football end. He is approachable and unaffected. He was reputed to be incorruptible in office. As Prime Minister, after dividing up the land, he threw his energies into providing good schools. He traveled tirelessly from one end of his country to the other. It was a time when his assassination would have had decisive results, but he never took along a bodyguard. Everywhere he stopped, he was besieged by local residents bringing him their complaints and trouble. He listened, took notes, earnestly gave counsel. He was what a democratic leader, in a backward if lovely country, should have been.

The moral of this story, if it has a moral, may be that the fight for freedom is never really finally won. The British are out of India, but Indians seem capable of oppressing each other. Such things happen not only in India. Sheikh Abdulla, in his letter to Nehru, told him: "I feel that the day will come when the conscience of the world will force India to yield to our demand." That was the Lion of Kashmir speaking. He is again caged.

This is Ed Murrow. I'll be back in a moment with the word for today, Now, here is George Bryan.

GEORGE BRYAN: COMMERCIAL

MURROW: It is ironic that the Lion of Kashmir who fought so long for freedom has been jailed again by a freedom-loving state. The Lion exemplifies the spirit of Thoreau, who said, "I was not born to be forced." And Norwin Corwin once wrote, "Freedom isn't something to be won and then forgotten. It must be renewed like soil after yielding good crops."

Goodnight and good luck!

Edward R. Murrow Fri., May 2, 1958

This is the news:

Russia today vetoed the American proposal for setting up an international inspection system in the Arctic./ The balloting in the United Nations Security Council...after two days of debate...was 10 to one, with Soviet Delegate Sobolev casting the lone dissenting vote./ This is the 83rd time in the thirteen-year history of the world organization that Russia has exercised its veto power./ American Ambassador Lodge announced at the start of today's Council meeting that the United States would accept a Swedish amendment, suggesting that the inspection plan might be taken up at a summit conference./ Lodge told Sobolev, "If you really mean what you say...about American flights over the Arctic being a danger to

→

world peace...you have but to vote for the United States resolution."

Sobolev replied that the Swedish amendment changed nothing, that the American plan was "a gimmick"---a phrase which President Eisenhower first used in describing the Soviet announcement that it was suspending nuclear tests. Sobolev claimed that Soviet territory would be subjected to inspection but "not an inch" of United States territiry. (Actually, all of Alaska is included in the American proposal). The Soviet delegate criticized Secretary General Hammarskjold for supporting the Western position. He said that Mr. Hammarskjold, by his action, had "not contributed" to the authority of his office. When Sobolev proceeded to veto the American resolution, Lodge noted that...once more...Russia had turned down something constructive. The world, he said, is coming to the conclusion that Moscow is more interested in increasing tensions than in finding ways and means of guarding against surprise attack. He said Russia's latest veto "strongly suggests" an attempt to keep United States aircraft on the ground, where they would be easy targets. And then he asked, "How long can this rigid and intolerant rejection of our offer to discuss the situation in good faith go on?" Nobody but the Soviet Union, he said, can answer that... but the United

→

States for its part will never stop trying. Later, talking to reporters, Lodge said, "It looks to me as if the Soviet Union has deliberately knocked a summit meeting on its head."

The Soviet resolution...asking that the United States be censured for its nuclear flights over the Arctic...was defeated in the Security Council by a vote of nine to one. Sweden abstained.

Secretary of State Dulles left Washington today for next week's meeting of NATO foreign ministers in Copenhagen. But before leaving the country, Mr. Dulles will make a foreign policy speech tonight at Durham, New Hampshire. The occasion will be a meeting sponsored by the State Council on World Affairs at the University of New Hampshire. Dulles said this afternoon...at the Washington airport...that Russia's action today in the United Nations would be "as good a test of their sincerity as anything else." "If the Soviets really want to do away with tensions, that is the time and place to do it."

Secretary Dulles said this, of course, before Russia took its veto action. He will depart from the text of his speech tonight to call Russia's action "frightening" and "tragic". He will say that the world stands to suffer a "great loss", if all of Russia's demands are granted at any summit conference. The demands...which Russia should not be allowed to achieve...

MR. DULLES WILL LIST AS FOLLOWS:

~~will be listed as~~ Permanent domination of the Eastern European satellites, recognition of Red China, dismantlement of NATO, the elimination of controls on shipment of strategic goods to the Communist bloc, and...finally... either the continued partition of Germany, or unification under conditions that would insure Communist domination. / It would be "reckless", Mr. Dulles will say, to let Moscow achieve any of these goals. / The United States is willing to make any "dependable" arrangement, which will...on a fair basis... reduce the risk of surprise or accidental attack. / Mere Soviet "promises" to perform are not enough. / Mr. Dulles will also say that we face ~~[illegible]~~ a long period of ~~[illegible]~~ sacrifice and strain. / "In fact, we may have to do some of the things that we do in war---but without the killing and the being killed." (CBS Radio will carry the secretary's speech later tonight.)

In Paris today, the retiring deputy NATO commander...Field Marshal Viscount Montgomery...warned of the danger growing out of the Soviet economic drive. / For that story, we switch now to my colleague, David Schoenbrun in Paris.

(Tape runs 3:55
Ends on cue: "--to ERM in NY."

The assistant secretary of state for Far Eastern affairs...Walter Robertson...testified before the Senate Foreign Relations Committee today on behalf of President Eisenhower's foreign aid program. / He warned that if drastic cuts are made in the program, "no one except the Communists will rejoice, for they stand poised and eager to step in when and where we step out." / Mr. Robertsen cited Japan as a prime example of why reciprocal trade legislation should be reenacted. He said, "Let us be under no illusions. Japan must trade to live."

Secretary of Agriculture Benson today announced that he plans to visit Russia this summer, as part of the United States-Soviet exchange program. Benson said he is going at the invitation of the Soviet minister of agriculture, and that he will be in Russia about 10 days. / The last cabinet member to visit Russia was former Secretary of State George Marshall, who attended a foreign ministers meeting there in 1947.

The White House announces that President Eisenhower and Secretary Dulles will visit Ottawa for three days, starting July 8th. During the visit, Mr. Eisenhower will address a joint session of the Canadian Parliament.

The Air Force chief of staff...General White...told the House Armed Services Committee today that he "wholeheartedly" supports President Eisenhower's program for reorganizing the Defense Department. He called the program "essential" to the security of the country.

The United States today announced that "certain short-range missiles with nuclear warheads" will be fired during the forthcoming Pacific tests. The announcement...issued by Secretary of Defense McElroy and CHAIRMAN Strauss of the Atomic Energy Commission...said the missiles will be of the "defensive" type.

And the Air Force announces that it is modifying its entire fleet of 14-hundred B-47 jet bombers. The Air Force says deterrent capability will not be affected, since the "modification" will be accomplished on a rotation basis over a period of months. Eighteen B-47 crew members have been killed in five recent accidents. The Air Force says that in the case of at least one of these accidents, "structural failure may have been a direct or contributing factor." The Air Force also wants to adapt the B-47 for low-level operation.

Back in moment. —
George Bryan. —

Again we are warned that we must have the discipline to wage the Cold War on many fronts, over a long haul. Lao-tsze said, "There is no greater evil than taking the enemy lightly." And Will Rogers also made a wise observation. "We would be sitting pretty," he said, "if we all pulled together as much to put over a siege of peace as we do a spell of war."

Goodnight and good luck!

EDWARD R. MURROW WITH THE NEWS

Friday, May 2, 1958
7:45 - 8:00 P.M.

MURROW: ... In Paris today - the retiring Deputy NATO Commander Field Marshal Viscount Montgomery warned of the danger growing out of the Soviet economic drive. For that story we switch now to my colleague, David Schoenbrun, in Paris.

SCHOENBRUN: Field Marshal Viscount Montgomery, of Alamein, delivered his swan song at the Supreme Headquarters today, but it sounded more like the chant of a fighting cock than the song of a swan. The tough little bantamweight British officer who will retire from the Army this Fall, after fifty years of continuous military service, stepped to the briefing platform, out at Supreme Headquarters just outside Paris, to report on his last command exercise, called CPX No. 8. It's a strategy session of top NATO commanders to correlate strategy with practical realities and financial possibilities, to use the language of the briefing paper. The Field Marshal's estimate is that the free world can continue to maintain its strength and preserve the peace but only on condition that it recognizes and lives up to the new challenge. According to the distinguished British soldier, Montgomery, of Alamein, that means in the first instance maintaining NATO's triple deterrent, which he defines as "strong conventional forces, nuclear weapons and the means to deliver them plus the determination to fight if attacked. And for Montgomery "the determination to fight" and to sacrifice is the essential element in the defense of freedom. But, he said, "If we can continue to hold the Communists on the military front and to make aggression too costly in the future, as in the past, that does not mean that we can expect the early dawn of peace. Indeed," said the Field Marshal, "the likelihood ahead is for the cold war to continue for ten years and more." Soviet pressure, he insists, is increasing not decreasing - and there's a real danger of a bloodless victory by the Communists. To meet

this challenge, the West must devise effective deterrents to stop the cold aggression. This, he said, means a unified policy throughout the world and not only in the areas covered by the NATO treaty. He said and I quote, "It is ridiculous to suppose that we can be allies to the north of a certain parallel and pursue our contradictory national policies to the south of the same line." Obviously, the Field Marshal was referring to Allied disputes on such questions as Algeria, Suez, Cyprus, disputes that have found the British, the French and the Americans seriously divided. However, when I asked the Field Marshal to be specific about his proposal, he merely smiled and said "I am a soldier. It's up to the politicians to work this out."

He said the future was in the hands of the statesmen, not the soldiers of NATO, and in his own words "the ball is now in the politicians' court."

The Field Marshal made one other proposal, which will certainly startle the European allies of Great Britain. He said that NATO nations which are also world powers, cannot be expected to make a major contribution to the armed forces of NATO and at the same time carry out their global responsibilities. This sounded very much like an explanation or an apology for the new British cut in their European ground forces this year, and a warning to Europeans that they must raise the bulk of the defense forces on the continent themselves and not count on the United Kingdom or the United States to carry a major load.

The Field Marshal was saying publicly what has been said privately for many months here in Paris, capital of NATO, and that is that the cold war challenge is greater than ever; that the West is losing it; that there's been too great a tendency for Europe to count upon its overseas allies; and another tendency even more dangerous, for the statesmen to let the soldiers carry the ball instead of rising to meet their own chal-

lenge. That must end, the Field Marshal said, as he prepared to leave the playing field himself. The ball is now in the politicians' court and it is up to them to carry it.

This is David Schoenbrun reporting from SHAPE. I return you now to Edward R. Murrow in New York.

MURROW: The Assistant Secretary of State for Far Eastern Affairs, Walter Robertson, testified before the Senate Foreign Relations Committee today, on behalf of President Eisenhower's foreign aid program. Ed. trans. P. O.

GEORGE BRYAN: COMMERCIAL

MURROW: Again we are warned that we must have the discipline to wage the Cold War on many fronts, over a long haul. Lao-tsze said, "There is no greater evil than taking the enemy lightly." And Will Rogers also made a wise observation. "We would be sitting pretty," he said, "if we all pulled together as much to put over a siege of peace as we do a spell of war."

Goodnight and good luck!

Edward R. Murrow Mon., May 5, 1958

This is the news:

The foreign ministers of the fifteen NATO countries met in Copenhagen today, and immediately took up the question of a summit conference. / The secretary general of NATO, Paul Henri Spaak, opened the three-day meeting by declaring...publicly...that the West "cannot afford to neglect any chance of reaching an acceptable arrangement." / So much in these negotiations, he said, is at stake. / He also warned of Russia's offensive on the economic front. / He reviewed the work of NATO in the past year, and noted that "no great progress" had been made toward meeting the Soviet economic threat. / The foreign ministers met twice today behind closed doors. / Secretary of State Dulles spoke at one of these sessions...and cautioned against letting

satellite countries have parity in any East-West talks. By "parity", Dulles meant letting the Russians equate two Communist states like Poland and Czechoslovakia with Britain and France. Russia already has proposed that Poland and Czechoslovakia take part in the ambassadorial negotiations now going on in Moscow, and the United States has rejected the proposal. Dulles said today that allowing such an arrangement would set a dangerous precedent. It would set a precedent, he warned, which might affect international conferences long after a meeting at the summit. French Foreign Minister Pineau is said to have supported Dulles on this point but with some reservation. He reportedly warned against making the question of procedures too great an obstacle. British Foreign Secretary Selwyn Lloyd is also reported to have been less firm than Mr. Dulles on the subject of parity. But both Lloyd and Pineau concurred with Dulles than any summit meeting should be thoroughly prepared. Lloyd suggested that after Russia's defeat in the United Nations last week (on the issue of American bomber flights in the Arctic), the Russians might be losing some of their enthusiasm for a meeting of heads of government. (I should like to discuss this whole question further in a few minutes).

Russia today sent notes to the "Big Three" Western powers, expressing regret that they had not agreed to the inclusion of Poland and Czechoslovakia in preliminary talks looking toward a summit conference. / The contents of the Russian notes were broadcast tonight by the Moscow radio. / They said, according to the broadcast, that the inclusion of Polish and Czech representatives would have "contributed to positive results." Russia expects that all sides will now make the necessary effort to conclude the preparatory work at the earliest possible date/

Red China today attacked Yugoslavia for its deviation from the Moscow line...and called for "an irreconciliable struggle against modern revisionism". The attack on Yugoslavia appeared in the Peiping Peoples Daily at the opening of Red China's party congress. ~~The official organ of the Chinese Communist Party accused Yugoslavia of trying in its political economy "to obliterate the fundamental differences between the capitalist and socialist systems."~~

There are conflicting reports from Indonesia...following the capture by government forces of the rebel capital on Sumatra. The Jakarta radio says Indonesian ~~rebel~~ rebel leaders in the Northern Celebes have asked

→

to negotiate. At the same time, a rebel broadcast was heard...saying that rebel aircraft based in the North Celebes will [illegible] step up their attacks.

In Washington today, the House Armed Services Committee heard testimony [illegible] in support of President Eisenhower's plan for reorganizing the Defense Department. The testimony came from two former chairmen of the Joint Chiefs of Staff---Admiral Arthur Radford and General Omar Bradley. Bradley said that the present system of transmitting commands...through secretaries of the Army, Navy and Air Force...have been outmoded by new concepts of warfare. The Prussian system, he said, cannot be compared with the President's plan for a "unified" staff of officers, representing all SERVICES, [illegible] and serving under the joint chiefs. Admiral Radford said he was in "full accord" [illegible] with the objectives of [illegible] Mr. Eisenhower's plan. He said, "Our basic national security must permit us to take timely advantage of important developments." The cold war could become hot, he warned, "in a matter of hours or even minutes."

The American Iron and Steel Institute today reported steel production up slightly last week for the first time since early March.

A Senate subcommittee has approved legislation which, if passed, would require all new cars to carry labels, listing the retail price suggested by the manufacturer. The labels would also have to show the cost of optional equipment.

The National Association of Manufacturers told Congress today that it opposes increased Federal spending as a recession cure. Milton Lightner, president of the N.A.M., recommended...instead...a gradual five-year cut in income taxes for corporations and individuals. The "crux" of today's unemployment problem, he said, is that unions have won wage increases "far in excess of the growth of national productivity."

The Senate Judiciary Committee today approved the nomination of Gordon Tiffany as staff director of the new Civil Rights Commission. President Eisenhower appointed Tiffany to the job last February, and operation of the commission has been held up, pending Senate confirmation. The chairman of the judiciary committee is Senator Eastland of Mississippi. The nomination now goes to the Senate floor.

The Pulitzer Prize for meritorious public service by a newspaper was awarded today to the Arkansas Gazette of Little Rock. Its editor, Harry Ashmore, received the prize for editorial writing in connection with the Little Rock integration story. The Pulitzer award for an American play was given to Ketti Frings for her adaptation of "Look Homeward Angel" The novel award went to "A Death in the Family" by the late James Agee.

Edward R. Murrow: May 5, 1958. 7.45 p.m.

It pays the United States to take the initiative in making positive peace proposals to the Russians. If the Russians accept them, peace is brought nearer, and we get the credit for leadership. If they reject them, they have to do the explaining. Thus, the Soviet veto of Arctic inspection in the U.N. Security Council was an American success, and a Soviet setback. The Russians themselves gave us the opening, by making sensational use of our bomber flights in the Arctic. But they were leading with their chins. Unless they were willing to accept inspection, they were sure of a beating. And they weren't willing. This happened on the eve of the meeting in Copenhagen of NATO Foreign Ministers, and it cooled off considerable hope among some of the European ministers that the Russians really want a productive summit meeting.

We followed up the victory in the United Nations with another positive peace proposal, President Eisenhower's offer of an international treaty to preserve the Antarctic for peaceful development. If the Russians accept this one, it will help restore President Eisenhower's prestige. If they reject it, they will have difficulty in explaining why. So it was good affirmative policy just to make the proposal.

However there is more to report. We also are in the position of having received a proposal, which we either had to accept or reject. / This is the plan of Polish Foreign Minister Rapacki to set up a de-[redacted]ized zone in Europe. Yesterday we rejected it. / The State Department can take credit for offsetting the effect of this rejection by doing the two positive things first, and no doubt it timed its steps with that in mind.

The rejection of the Rapacki plan on the eve of the opening of the NATO meeting also must have been carefully timed. Some of the NATO ministers like the plan, perhaps not in all its details, but as being a promising first step toward an agreement with Russia. / Europe has been ringing with talk about "disengagement," meaning the withdrawal of foreign troops of East and West from European countries. Disengagement has become a kind of slogan for the opposition in several NATO lands. Both the British Labor Party and the German Social Democrats are committed to it. / And the Rapacki plan is accepted as the way to get started on disengagement. So the American rejection of the Polish plan will have some impact on European opinion not favorable to us.

To recognize this is not to suggest, however, that the Rapacki plan should not have been turned down, and turned down before the NATO meeting got underway. / The ultimate result of disengagement would be the abolition of

NATO, for the thesis is that when all foreign troops are out of Central Europe the need for a defensive alliance in the West will have disappeared. That, of course, is what the Soviet Union wants, almost above anything else. It would swing the balance of power sharply in favor of the Soviet Union, even if a general security treaty took the place of the NATO AND Warsaw pacts.

Western leaders all want a first step toward an agreement with the Soviet Union, but most of them do not believe disengagement is the thing to aim for. For if disengagement in the empty Arctic is impossible -- as the Russian veto has shown it to be -- disengagement in a crowded and troubled Europe can hardly be expected to work. If there is to be a first step, these Western leaders believe it must be in the field of inspection and controls. And while there is some inspection in the Rapacki plan, it is not of the kind that would become a pattern for all other disarmament agreements.

Opinion of NATO ministers about Soviet intentions has undergone considerable change in the last days. Not long ago many of them felt the United States was being pigheaded in insisting on full preparation for a summit meeting. Now doubts are voiced whether the Soviet Union really wants a summit meeting, at any rate any meeting where the West is not making all the concessions, or taking a propaganda beating.

A week ago the prospect of producing Western unity on the subject of a summit meeting was not good. Now, thanks to the play of the hands this past week, it is a lot better. The Copenhagen meeting will now demonstrate how much better. If the Western governments have learned the value of taking the initiative, they will come up with a series of positive proposals which the Russians must either accept or reject. If they are proposals about inspection and control, we obviously hope they will be accepted, for that would be a real start on reducing tensions. But if they are rejected, we need to be sure that world opinion knows who really wants the peace.

Back in a moment.—

George Bryan

Word for Today

The progress made in the field of diplomacy is necessarily piecemeal, with a constant weighing of advantages against disadvantages, and profits against losses as we go. Cervantes said optimistically, "What's lost today may be won tomorrow." But Cicero was on sure ground when he predicted, "Tomorrow will give us something to think about."

Goodnight and good luck!

EDWARD R. MURROW WITH THE NEWS
CBS RADIO NETWORK

MONDAY, MAY 5, 1958
7:45 - 8:00 PM EST

This is the news:

The foreign ministers of the fifteen NATO countries met in Copenhagen today and immediately took up the question of a summit conference. The secretary general of NATO, Paul Henri Spaak, opened the three-day meeting by declaring... publicly...that the West "cannot afford to neglect any chance of reaching an acceptable arrangement." So much in these negotiations, he said, is at stake. He also warned of Russia's offensive on the economic front. He reviewed the work of NATO in the past year and noted that "no great progress" had been made toward meeting the Soviet economic threat. The foreign ministers met twice today behind closed doors. Secretary of State Dulles spoke at one of these sessions...and cautioned against letting satellite countries have "parity" in any East-West talks. By "parity," Dulles meant letting the Russians equate two Communist states like Poland and Czechoslovakia with Britain and France. Russia already has proposed that Poland and Czechoslovakia take part in the ambassadorial negotiations now going on in Moscow, and the United States has rejected the proposal. Dulles said today that allowing such an arrangement would set a dangerous precedent. It would set a precedent, he warned, which might affect international conferences long after a meeting at the summit. French Foreign Minister Pineau is said to have supported Dulles on this point but with some reservation. He reportedly warned against making the question of procedures too great an obstacle. British Foreign Secretary Selwyn Lloyd is also reported to have been less firm than Mr. Dulles on the subject of parity. But both Lloyd and Pineau concurred with Dulles that any summit meeting should be thoroughly prepared. Lloyd suggested that after Russia's defeat in the United Nations last week (on the issue of American bomber flights in the Arctic,) the Russians might be losing some of their enthusiasm for a meeting of heads of government. (I should

like to discuss this whole question further in a few minutes.)

Russia today sent notes to the "Big Three" Western powers, expressing regret that they had not agreed to the inclusion of Poland and Czechoslovakia in preliminary talks looking toward a summit conference. The contents of the Russia notes were broadcast tonight by the Moscow radio. They said, according to the broadcast that the inclusion of Polish and Czech representatives would have "contributed to positive results." Russia expects that all sides will now make the necessary effort to oonclude the preparatory work at the earliest possible date.

Red China today attacked Yugoslavia for its deviation from the Moscow line... and called for "an irreconcilable struggle against modern revisionism." The attack on Yugoslavia appeared in the Peiping Pepoles Daily at the opening of Red China's party congress.

There are cnnflicting reports from Indonesia...following the capture by government forces of the rebel capital on Sumatra. The Jakarta radio says Indonesian rebel leaders in the Northern Celebes have asked to negotiate. At the same time, a rebel broadcast was heard...saying that rebel aircraft based in the North Celebes will step up their attacks.

In Washington today, the House Armed Services Committee heard testimony in support of President Eisenhower's plan for reorganizing the Defense Department. The testimony came from two former chairmen of the Joint Chiefs of Staff--- Admiral Arthur Radford and General Omar Bradley. Bradley said that the present system of transmitting commands...through secretaries of the Army, Navy and Air Force...have been outmoded by new concepts of warfare. The Prussian system, he said, cannot be compared with the President's plan for a "unified" staff of officers representing all services and serving under the joint chiefs. Admiral Radford said he was in "full accord" with the objectives of Mr. Eisenhower's plan. He said, "Our basic national security must permit us to take timely advantage of

important developments." The cold war could become hot, he warned, "in a matter of hours or even minutes."

The National Association of Manufacturers told Congress today that it opposes increased Federal spending as a recession cure. Milton Lightner, president of the N.A,M. recommended...instead...a gradual five-year cut in income taxes for corporations and individuals. The "crux" of today's unemployment problem, he said,is that unions have won wage increases "far in excess of the growth of national productivity."

The Senate Judiciary Committee today approved the nomination of Gordon Tiffany as staff director of the new Civil Rights Commission. President Eisenhower appointedTiffany to the job last February, and operation of the commission has been held up, pending Senate confirmation. The chairman of the judiciary committee is Senator Eastland of Mississippi. The nomination now goes to the Senate floor.

The Pulitzer Prize for meritorious public service by a newspaper was awarded today to the Arkansas Gazette of Little Rock. Its editor, Harry Ashmore, received the prize for editorial writing in connection with the Little Rock integration story. The Pulitzer award for an American play was given to Ketti Frings for her adaptation of "Look Homeward Angel." The novel award went to "A Death in the Family" by the late James Agee.

It pays the United States to take the initiative in making positive peace proposals to the Russians. If the Russians accept them, peace is brought nearer, and we get the credit for leadership. If they reject them, they have to do the explaining. Thus, the Soviet veto of Arctic inspection in the UN.Security Council was an American success and a Soviet setback. The Russians themselves gave us the opening, by making sensational use of our bomber flights in the Arctic. But they were leading with their chins. Unless they were willing to accept inspection, they were sure of a beating. And they weren't willing. This happened on the eve of the meeting in Copenhagen of NATO Foreign Ministers, and it cooled off

considerable hope among some of the European ministers that the Russians really want a productive summit meeting.

We followed up the victory in the United Nations with another positive peace proposal, President Eisenhower's offer of an international treaty to preserve the Antarctic for peaceful development. If the Russians accept this one, it will help restore President Eisenhower's prestige. If they reject it, they will have difficulty in explaining why. So it was good affirmative policy just to make the proposal.

However there is more to report. We also are in the position of having received a proposal, which we either had to accept or reject. This is the plan of Polish Foreign Minister Rapacki to set up an atom free zone in Europe. Yesterday we rejected it. The State Department can take credit for offsetting the effect of this rejection by doing the two positive things first, and no doubt it timed its steps with that in mind.

The rejection of the Rapacki plan on the eve of the opening of the NATO meeting also must have been carefully timed. Some of the NATO ministers like the plan, perhaps not in all its details, but as being a promising first step toward an agreement with Russia. Europe has been ringing with talk about "disengagement" meaning the withdrawal of foreign troops of East and West from European countries. Disengagement has become a kind of slogan for the opposition in several NATO lands. Both the British Labor Party and the German Social Democrats are committed to it. And the Rapacki plan is accepted as the way to get started on disengagement. So the American rejection of the Polish plan will have some impact on European opinion not favorable to us.

To recognize this is not to suggest, however, that the Rapacki plan should not have been turned down, and turned down before the NATO meeting got underway. The ultimate result of disengagement would be the abolition of NATO, for the thesis is that when all foreign troops are out of Central Europe the need for a defensive alliance in the West will have disappeared. That, of course, is what

the Soviet Union wants, almost above anything else. It would swing the balance of power sharply in favor of the Soviet Union, even if a general security treaty took the place of the NATO and Warsaw pacts.

Western leaders all want a first step toward an agreement with the Soviet Union, but most of them do not believe disengagement is the thing to aim for. For if disengagement in the empty Arctic is impossible - as the Russian veto has shown it to be - disengagement in a crowded and troubled Europe can hardly be expected to work. If there is to be a first step, these Western leaders believe it must be in the field of inspection and controls. And while there is some inspection in the Rapacki plan, it is not of the kind that would become a pattern for all other disarmament agreements.

Opinion of NATO ministers about Soviet intentions has undergone considerable change in the last days. Not long ago many of them felt the United States was being pigheaded in insisting on full preparation for a summit meeting. Now doubts are voiced whether the Soviet Union really wants a summit meeting, at any rate any meeting where the West is not making all the concessions or taking a propaganda beating.

A week ago the prospect of producing Western unity on the subject of a summit meeting was not good. Now, thanks to the play of the hands this past week, it is a lot better. The Copenhagen meeting will now demonstrate how much better. If the Western governments have learned the value of taking the initiative, they will come up with a series of positive proposals which the Russians must either accept or reject. If they are proposals about inspection and control, we obviously hope they will be accepted, for what would be a real start on reducing tensions. But if they are rejected, we need to be sure that world opinion knows who really wants the peace.

This is Ed Murrow. I'll be back in a moment with the word for today. Now, here is George Bryan.

GEORGE BRYAN: COMMERCIAL

MURROW: The progress made in the field of diplomacy is necessarily piecemeal with a constant weighing of advantages against disadvantages and profits against losses as we go. Cervantes said optimistically, "What's lost today may be won tomorrow." But Cicero was on sure ground when he predicted, "Tomorrow will give us something to think about."

Goodnight and good luck!

Edward R. Murrow Tues., May 6, 1958

This is the news:

President Eisenhower ~~will~~ tonight will make a new appeal for bipartisan ~~congressional~~ support for his foreign aid program and for his proposals ~~program~~ for reorganizing the Department of Defense. / Mr. Eisenhower will also promise to "stand beside" every Republican candidate who supports these programs...and he predicted a Republican congressional victory in November, "if we will but try." / Mr. Eisenhower will be addressing a dinner, honoring Republican members of Congress. / He will say that from his reorganization program he expects very specific results: "A stronger, more efficient defense---a less costly, more tightly directed defense---and every Spring,

→

come appropriation time, a more rational, less noisy defense." With respect to his foreign aid and reciprocal trade programs, he will warn of Russia's current economic offensive. He will say, "Either we stand idly by and watch this tremendous force funneled into violence, dissolution of orderly government, and Communist exploitation, or we help channel it into better education and improved living standards and thereby strengthen peace and freedom everywhere in the world."

This morning, President Eisenhower spoke off-the-cuff before the annual meeting of the Advertising Council./ He ~~put [illegible]~~ advocated extension of the Reciprocal Trade Act...warning that high tariffs and restrictive import quotas could "ruin" America./ And again he urged approval of his defense reorganization program.

Chairman Cannon of the powerful House Appropriations Committee defended Mr. Eisenhower's reorganization plan today as a "reasonable, sensible, long-delayed, much needed" piece of legislation which should be approved at the earliest possible date./ Cannon said the Defense Department needs to be reorganized to eliminate duplication in spending, put an end to "insane" inter-service rivalry, and save the country from possible military disaster./ He referred to criticism of the President's program by "obtuse admirals" who, he charged, "never learn how to fight the next war."/ Chairman Cannon spoke [illegible] from the House floor./ And Representative Taber of New York, the top Republican on the appropriations

committee, called it "a magnificent speech." / By his action, Cannon split publicly with Chairman Vinson of the House Armed Services Committee, who strongly opposes the reorganization program.
